* The sultan was about five feet ten inches in height, had a short neck and square shoulders; his limbs were slender, feet and hands remarkably small, and nose aquiline. His dress consisted of a jacket of fine white linen, loose drawers of flowered chintz, a crimson girdle, with a handsome pouch slung over his shoulder by a belt of red and green silk.

† This expression, says Col. Wilks, was noticed only by those who saw Tippoo for the first time; it wore off the more speedily owing to his excessive garrulity and harsh, inharmonious voice.

‡ Two officers and several privates were killed.

§ *History of Mysoor*, iii., 269.

|| On the 4th of May, there were in the fort 13,739 regular troops, and 8,100 outside and in the intrenchments, with 120 Frenchmen, under the command of a *chef de brigade*, M. Chapuis. In the assault, 8,000 Mysooreans were killed, including twenty-four principal officers killed and wounded, beside numbers of inferior rank. The total loss of the British, during the siege, was twenty-two officers killed and forty-five wounded (twenty-five of these in the storming of the citadel); rank and file—*Europeans*, 181 killed, 622 wounded, twenty-two missing: *natives*, 119 killed, 420 wounded, and 100 missing. In the fort were found 929 pieces of ordnance (373 brass guns, sixty mortars, eleven howitzers, 466 iron guns, and twelve mortars), of which 287 were mounted on the fortifications: there were also 424,400 round shot; 520 lbs. of gunpowder, and 99,000 muskets, carbines, &c. Within the fortress were eleven large powder-magazines; seventy-two expense magazines; eleven armories for making and furnishing small arms; three buildings with machines for boring guns; four large arsenals, and seventeen other store-houses, containing accoutrements, swords, &c.; and many granaries abundantly filled with provisions of every description.—(Beatson's *War with Tippoo.*)

governor-general, in directing the whole resources of British India to one point, and thus, humanly speaking, ensuring success in a single campaign, he was raised a step in the peerage,* and informed that, by the concurrent authority of his majesty's ministers and the Court of Directors, a portion of the spoils of Seringapatam, to the value of £100,000, would be directed to be appropriated for his use, the remainder to be divided among the troops. Lord Wellesley was far from rich, but he unhesitatingly refused this tempting offer, as an encroachment on the claims of the army, and, moreover, as being an injurious precedent, likely to afford the future arbiters of peace and war, in India, pecuniary temptations to a belligerent policy. A star and badge of the order of St. Patrick, composed of some of Tippoo's jewels, was all that he accepted at the time. In 1801, an annuity of £5,000 was settled on him by the company.

Unfortunately, this memorable example of disinterestedness did not prevent some very discreditable proceedings with regard to the distribution of the prize-money; and the commander-in-chief (Harris) and six general officers (Floyd, Baird, Popham, Bridges, Stuart, and Hartley), were considered by the home authorities to have appropriated to themselves a very undue proportion; General Harris, in particular, having received one-eighth instead of one-sixteenth part of the whole. The command of Seringapatam was entrusted by Harris to Colonel Wellesley, much to the displeasure of General Baird, who exclaimed—"Before the sweat was dry on my brow, I was superseded by an inferior officer!" The governor-general showed his conviction of the propriety of the measure, by subsequently investing his brother with the superintendence of the civil government of Mysoor. As, despite his strong family affection, Lord Wellesley is universally acknowledged to have been distinguished for a judicious and impartial selection of particular men for particular positions, perfect reliance may be placed on his own assertion, that, despite the jealousy to which the appointment made by Harris would give rise among the senior officers, he confirmed, and would himself have originated it if necessary, simply because, from his "knowledge and experience of the discretion, judgment, temper, and integrity" of Colonel Wellesley, he considered him "the most proper for the service."† The generous warmth with which Lord Wellesley cherished the abilities of his younger brothers, was, it may be thought, part of his private rather than public character; but it was closely allied with the active benevolence which formed the mainspring of his whole career. The cadets of the service found themselves, for the first time, the objects of almost parental scrutiny. Talent, zeal, and industry were found to ensure a better welcome at government-house, under an administration celebrated for a singular union of oriental magnificence, patrician refinement, and scholastic lore, than patronage, high birth, or the yet more congenial aristocracy of talent could obtain, unsupported by meritorious service.

The disposition made by Lord Wellesley of the newly-conquered territory, was warmly approved in England, and excited in India a general feeling of surprise at its equity and moderation. The fortress of Vellore, in the Carnatic, was fitted up for the family of Tippoo,‡ and an allowance made for their support, more liberal than that previously assigned by him; his chief officers were all provided for by jaghires or pensions, dispensed with a well-considered munificence, which furnished a striking contrast to the parsimonious dealings of their late master. The affections of the Hindoo population were conciliated§ by an unlooked-for act of generosity. Cham Raj, the pageant-sovereign placed by Hyder on the throne of Mysoor in 1772, died of smallpox in 1796. He had been regularly exhibited in public at the annual feast called the Dussera; but Tippoo chose to dispense with the ceremony of nominating a successor, and caused the son of Cham Raj, a child of two years old, to be removed with his great-grandmother (a woman of above ninety), his grandmother, and other female relatives, from the

* Rather a doubtful advantage in the sight of the receiver, who was wont to allude to the merging of an English earldom into an Irish marquisate, as having changed his English ale into Irish buttermilk.

† Baird could not be trusted with such authority.

‡ Tippoo left three legitimate and seventeen illegitimate children; twenty-four died before him.

§ The chiefs of districts submitted cheerfully to the conquerors. The only opposition offered was that of Dhoondea Waugh, a Mahratta, who after serving under Tippoo, set up for himself as leader of a predatory band, was taken prisoner, and remained in confinement for years in the fortress of Seringapatam. Amid the general confusion of the assault he managed to escape, and soon collected round him a daring band of freebooters; nor was it until after several months' hostilities, that he was at length defeated and slain in a charge of cavalry led by Col. Wellesley.

ancient Hindoo palace to a miserable hovel, where they were found by the English authorities, in 1799, in a state of deep poverty and humiliation. Their sorrow was turned into joy and gratitude on being informed that the conquerors had resolved, not simply to restore them to liberty, but to place the young prince Kistna Raj Oodaveer on the throne* of his fathers, in their ancient capital of Mysoor, with a revenue exceeding that of the former Hindoo kingdom. The English reserved to themselves, by treaty, the right of interposing with paramount authority, in the event of any financial or political questions arising similar to those which had long distracted the Carnatic; but so far from employing their unquestioned supremacy to vest (as had been the case on former occasions) all power and profit in English functionaries, nearly every office, civil and military, was left to be filled by the natives themselves. Poornea, the experienced and trustworthy Hindoo chief minister under the usurping dynasty, was continued in office with the decided approbation of the female guardians of the young rajah. Colonel Wellesley, in all respects, but especially by judicious abstinence from needless interference, justified his selection for military commandant; while the rectitude and abilities as a linguist, of Colonel (afterwards Sir Barry) Close, facilitated his satisfactory fulfilment of the delicate position of political resident. The result was, that the Marquis Wellesley, at the close of his memorable administration, was enabled to declare, that the actual success of the arrangement of Mysoor had realised his most sanguine expectations.

Of the usurpations of Hyder, besides those restored to the Hindoo dynasty, to the value of thirteen lacs of pagodas† per annum; and after liberal provision for the families of Hyder and Tippoo, and their chief officers, a large overplus remained, the division of which, between the English and the Nizam, formed the basis of a new treaty.‡ The former took possession of the fortress, city, and island of Seringapatam, the districts of Canara, including all the sea-coast of Mysoor, together with Coimbatore and Daramporam, the intervening country between the territories of the E. I. Cy. on the Coromandel coast, and on that of Malabar; of the forts and posts forming the heads of the principal passes above the Ghauts, on the table-land of Mysoor, and the district of Wynaad. To the Nizam were given territories yielding an equal revenue with those appropriated by the English in the districts of Gooty, Goorumcondah, and the tract of country situated along the military line of Chittledroog, Sera, Nundidroog, and Colar, but without the forts, which it was considered would strengthen, to a dangerous extent, the position of a fluctuating and doubtful ally. The course to be adopted with regard to the Mahrattas, was a difficult question. The peishwa had wholly failed in his engagements of co-operation against Tippoo;§ nevertheless, the governor-general deemed it politic to offer him a share in the conquered territory on certain conditions, which he looked upon as necessary preliminaries to the establishment of a solid and satisfactory peace; especially the reception of an English subsidiary force, and an amicable adjustment, according to English arbitration, of the claim of chout

* Literally so, for he was seated on the ancient ivory throne, which Aurungzebe is said to have expressly sanctioned his ancestor in using, and which was found in a lumber-room of the palace after the siege. The throne of Tippoo was taken to pieces, its various parts forming splendid trophies of victory. The ascent to the musnud was by small silver steps on each side, its support a tiger, somewhat above the natural size, in a standing attitude, entirely covered with plates of pure gold, the eyes and teeth being represented by jewels of suitable colours. A gilded pillar supported a canopy fringed with pearls; from the centre was suspended an image of the *Uma*, a bird about the size and shape of a small pigeon, formed of diamonds, rubies, and emeralds inlaid in gold, and valued in India at 1,600 guineas. It was presented to King George III., as a fitting tribute to royalty, being generally regarded in the East as the harbinger of victory and sovereign power to the favoured individual whom it deigned to overshadow. By a singular coincidence, a bird of this "august" species (for such, according to M. d'Herbelot, is the meaning of its Persian name) built its nest in a grove of trees, under the shade of which the governor-general dictated his despatches while resident at Madras, for the purpose of more conveniently superintending the conduct of the war. The natives hailed with delight the prosperous omen, and received the tidings of the capture of Seringapatam as confirmation of the victorious augury conveyed by the presence of the Uma, which the marquis was subsequently empowered to add to his crest, with the motto, "*Super Indos protulit Imperium.*"

† A pagoda was then above eight shillings in value.

‡ The whole of Tippoo's annual revenue was estimated at 30,40,000 pagodas. To the rajah of Mysoor was assigned 13,60,000; to Nizam Ali, 5,30,000; to the E. I. Cy. 5,37,000; for the maintenance of the families of Hyder and Tippoo (in charge of the British government), 2,40,000; and for Kummur-u-Deen, commander of Tippoo's cavalry, and his family (in charge of the Nizam), 7,00,00 pagodas.—(Duff, iii., 177.)

§ Bajee Rao had actually accepted a heavy bribe from Tippoo to break faith with the English.—(Duff.)

long urged against the Nizam. These stipulations were peremptorily rejected; and the reserved districts of Harponelly, Soonda above the Ghauts, and others, equal in value to between one-half and two-thirds of the previously described portions, were thereupon shared agreeably to the articles of the partition treaty by the company and Sadut Ali.

A fresh contract was entered into between the latter parties in October, 1800, by which the Nizam, who was notoriously incapable of defending himself against the Mahrattas, purchased the services of additional troops from the company and the promise of their aid against every aggressor, by the cession of all acquisitions made from the dominions of Tippoo, either by the late treaty or that of Seringapatam in 1792. The proposition originated with the minister of the Nizam; and the governor-general prudently hastened to close an arrangement which placed the maintenance of the previously subsidised, as well as additional troops, on a more satisfactory footing than the irregular payments of a corrupt government. The countries thus ceded yielded a revenue of about 1,758,000 pagodas. By this arrangement, says Mill, "the English acquired a small territory, with the obligation of defending a large one." This is not correct, inasmuch as the company were previously bound, both by considerations of honour and policy, to protect their ally in time of need; and by the new compact they did but secure themselves against pecuniary loss in so doing. Circumstances again altered their relative positions; or, to speak more plainly, the British power, increasing in an eddying circle, manifested in this as in other cases, its inherent tendency to absorb the misgoverned and unstable principalities which sought and found in its strength temporary support, being driven by necessity, or induced by ignorance or recklessness, to adopt a procedure calculated to induce eventually their political extinction. Lord Wellesley, like many other great statesmen, anticipated but very imperfectly the result of his favourite measure. He hoped to find the subsidiary system instrumental in mitigating the turbulence of the native states of India, by controlling the sources of dissension, and encouraging and enabling minor chiefs to cultivate the arts of peace in the independent enjoyment of their respective rights.* But, in truth, the first elements of stability were wanting; and although the personal rectitude and ability of a nabob or a rajah, or their chief ministers, might for a time hold together the incongruous elements of Moslem and Hindoo communities, under an efficient rule, distinct, so far as internal regulations were concerned, from the paramount power, provided that were exercised with rigid moderation; yet the more frequent consequence of becoming subsidiary, was utter indifference on the part of the sovereign to the progress of a principality over which he had lost all absolute control; and, on the part of his subjects, contempt and indifference for his diminished power. The oriental idea of authority is identified with despotism; exercised in every variety of form, from the homeliest phase of patriarchal sway, to the unapproached grandeur of Solomon: still the same in essence—the delegated government of God. In the Christian world, despite the blinding influence of our sins and imperfections, we do recognise, by the light of the Gospel, the inestimable worth of civil liberty. The law of the land, apart from the individual who dispenses it, is the basis on which the nationality and independence of every English and American subject rests securely. But to Asiatics this is still a hard saying, and must remain so, until the same source from which we learned to realise its practical importance, be laid open to them also. If British supremacy prove, indeed, the instrument for the spiritual and moral regeneration of India, thrice blessed will be both giver and receiver. Yet whatever be the result, the immediate duty is clear—to spread the Gospel as widely as possible, and to endeavour by good government, by just laws honestly administered, by lenient taxation equitably assessed, to show our native subjects the value of the tree by its fruits.

To return to the affairs of the subsidiary states. The turbulent and dangerous character of Vizier Ali, the rival candidate for the dominion of Oude, rendered it advisable to remove his residence from Benares to Calcutta. The youth remonstrated strongly, but without effect; and while visiting, by appointment, the British resident Mr. Cherry, he spoke in violent terms of the hardship of the threatened coercion. The resident is represented to have behaved with much moderation; but Vizier Ali, giving vent to rage, started up and made a thrust at him with his sword; an example which, according to eastern custom, was immediately followed by his attendants.

* *Wellesley Despatches*, iv., 151.

Mr. Cherry was killed while attempting to escape through a window, and two of his companions shared his fate. The assassins, apparently in the hope of heading a general insurrection, hurried to the residence of the English magistrate,* who, after sending his wife and family to the terrace on the top of the house, seized a long spear, took up his position on a narrow staircase, and delayed their ascent until a party of horse arrived and put them to flight. Vizier Ali sought refuge in the woody country of Bhootwal, and being joined by several disaffected zemindars, soon mustered a considerable predatory force, wherewith to make incursions on Oude. The parsimonious and timid administration of Sadut Ali had rendered him extremely unpopular; and he urgently entreated that the English troops might be stationed immediately about his person to protect him, if need were, against his own army, whose faithlessness and disaffection likewise formed his excuse for not personally taking the field, in co-operation with his allies, against their joint foe. His assistance was not needed; Vizier Ali soon found himself abandoned by his followers, and was, in December, 1800, delivered over by the rajah of Jeypoor to the British government, and detained prisoner in Fort William.†

At the close of hostilities, the marquis pressed on the nabob the propriety of disbanding a force which, by his own showing, was worse than useless. This proposition, Sadut Ali met by a declaration of his desire to resign a position which he found full of weariness and danger. On the further development of his views, it appeared that the abdication in question was to be in favour of his son; and that in quitting the musnud, he intended to carry away the treasures and jewels inherited from Asuf-ad-Dowlah, leaving his successor to pay the arrears due to the E. I. Cy. and the native troops as best he could. These conditions were promptly rejected, and a long discussion ensued, which terminated in the disbandment of all the native troops (their arrears being first wholly liquidated), and the substitution of an additional European force (numbering, in all, 13,000 men), in return for which, the provinces of the Doab and Rohilcund‡ were conceded in perpetuity. To adjust the provisional administration of the ceded districts, three of the civil servants of the company were formed into a board of commissioners, and the Hon. Henry Wellesley nominated president and lieutenant-governor. For this appointment Lord Wellesley was blamed by the directors, as an evidence of partiality towards his brother, at the expense of the covenanted officials; but the propriety of the selection (as in the case of Colonel Wellesley in Mysoor) was amply justified by the result; and the disinterestedness (as far as regarded pecuniary motives) of both nominee and nominator was apparent, from no emolument being attached to the delicate and onerous office. By the late treaty, the tribute paid to the ruler of Oude by the nabob of Furruckabad (the Patan chief of a district in the province of Agra), was transferred to the E. I. Cy., and an arrangement made—it is said with his perfect acquiescence—by which he renounced political power, and was added to the growing list of titled stipendiaries. Several of the more powerful zemindars of the ceded territories resisted the proposed alterations, and made attempts at independence; especially Bugwunt Sing, who possessed the forts of Sasnee and Bidjeghur; the rajah Chutter Sâl; and the zemindar of Cutchoura: but they were all overpowered in the course of the years 1802—1803, and compelled to seek safety in flight.

The character of Sadut Ali was strikingly evinced, in the course of his negotiations with Lord Wellesley, by an attempt to win from the latter a sanction similar to that given to his half-brother (Azuf-ad-Dowlah), for the plunder of the begum, the grandmother of both these hopeful rulers. The intimation was met with merited disdain; but the old lady, fearing to be exposed to continuous indirect persecution, took the prudent step of ensuring the peaceable enjoyment of her personal property, by offering to constitute the company her heir—a proposition which was gladly accepted.

While these changes were taking place in Oude, others of a similar character were carried out in Tanjore and Arcot. Rajah Tuljajee died in 1787, leaving his adopted son and heir, Serfojee, a boy of ten years old, under the public tutelage of his half-brother, Ameer Sing, and the private guardianship of the missionary Swartz. Ameer Sing succeeded for a time in persuading the English authorities to treat the adoption of

* Mr. Davis, father of the present Sir J. Davis.

† Vizier Ali was afterwards removed to Vellore, where his family were permitted to join him. He died there, a natural death.—(Davis's *Memoir*.)

‡ The gross revenues of the ceded provinces were one crore, thirty-five lacs, 23,474 rupees.

his young ward as illegal, and caused him to be confined and cruelly ill-treated. The vigilance and untiring exertion of Swartz* occasioned a searching investigation, and the evidence brought forward on the matter led both Lord Cornwallis and Sir John Shore to consider the claims of Serfojee as well founded. The oppression exercised by Ameer Sing over the widows of the deceased rajah, was accompanied by general maladministration. During the first war with Tippoo, the management of Tanjore had been assumed by the English, as the sole means of rendering its resources available against the common foe; and on the conclusion of peace, a prolonged discussion arose concerning the propriety of restoring to power a ruler whose legal and moral claims were of so questionable a character. The supreme government, fearing to incur the imputation of excessive rigour, replaced Ameer Sing in his former position: but the home authorities do not appear to have approved of this decision; for in June, 1799, they expressly instructed Lord Wellesley not to relinquish possession of the territories of Arcot and Tanjore, which, in the event of hostilities with Tippoo, would "of course come under the company's management," without special orders to that effect. The measure thus taken for granted by the directors, had not been adopted by the governor-general, who deemed the brief and decisive character of the war a sufficient argument against a step the immediate effect of which "would have been a considerable failure of actual resources, at a period of the utmost exigency." The disputed succession afforded a better plea for the assumption of the powers of government; Ameer Sing was deposed, and Serfojee proclaimed rajah, in accordance with the terms of a treaty, dated October, 1799, by which he renounced all claim to political authority, in return for nominal rank, and the more substantial advantage of a pension of one lac of star pagodas, with a fifth of the net revenues. The assertion of complete authority over the Carnatic, was expedited by the discovery, consequent on the capture of Seringapatam, of a secret correspondence, in cypher,† carried on between Mohammed Ali and his successor, Omdut-al-Omrah, with Tippoo, in direct violation of the treaty of 1792. The conduct of the nabob during the late war, in withholding promised supplies, had given rise to suspicions of treachery which were now confirmed. His failing health induced Lord Wellesley to delay the contemplated changes; but on his death, in 1801, the dispositions made by him in favour of his illegitimate son, Ali Hoossein, a minor,‡ were set aside in favour of Azim-ad-Dowlah, a nephew of the late prince, who made over to the company all claim to real power, on condition of receiving the title of nabob, and the allotment of a fifth part of the net revenues of the Carnatic for his support. The company further engaged to provide for the family of the preceding nabobs, and to pay their debts. The government of the extensive and populous, though dilapidated city of Surat, was assumed by the company in 1800; the Mogul nabob, or governor, resigning his claims on receipt of a pension of a lac of rupees annually, in addition to a fifth of the net revenues guaranteed to him and his heirs.

The commencement of the nineteenth

* Swartz spared no pains in implanting religious principles, or in cultivating the naturally gifted intellect of Serfojee. The death of the good missionary, in 1798, prevented him from witnessing the elevation of his grateful pupil, who honoured the memory of his benefactor, less by the erection of a stately monument, than by his own life and character. Bishop Heber, in noticing the varied acquirements of Serfojee, states that he quoted Fourcroy, Lavoisier, Linnæus, and Buffon fluently; that he had "formed a more accurate judgment of the merits of Shakspeare than that so felicitously expressed by Lord Byron," and was "much respected by the English officers in the neighbourhood, as a real good judge of a horse, and a cool, bold, and deadly shot at a tiger."—(*Journal*, ii., 459.)

† The key to the cypher was found among the private papers of the sultan. The English were designated by the term *new-comers;* the Nizam, by that of *nothingness;* the Mahrattas, as *despicable.* In commenting on the disclosure of these proofs of faithlessness on the part of the nabobs of the Carnatic, as favouring the views of the directors, Mill exclaims, "Nothing surely ever was more fortunate than such a discovery at such a time." Yet, although plainly intimating the possibility of fabricating evidence to prove a lie, he is compelled, by his own truthfulness, to bear witness to the character of the great man, against whom he appears to be, on the whole, strangely prejudiced. "With regard to Lord Wellesley," he adds, "even his faults bear so little affinity with this species of vice, and his most conspicuous virtues are so directly opposed to it, that we may safely infer it to be as unlikely in his case as in any that can well be supposed, that he would fabricate evidence to attain the objects of his desire."—(vi., 312.)

‡ The governor-general was disposed to confirm the will of the late nabob in favour of Ali Hoossein, despite his illegitimacy; but his refusal (too late withdrawn) to accept the terms offered on behalf of the E.I. Cy., occasioned his being altogether set aside. He was carried off by dysentery in the following year. Ameer Sing, the deposed rajah of Tanjore, died a natural death in the commencement of 1802.

century, thus strongly marked by the extension of British power in India, is no less memorable for the bold and decisive measures of foreign policy, planned and executed by the governor-general. The threatened invasion of Zemaun Shah had been no vague rumour. A letter addressed by the Afghan leader to Lord Wellesley, peremptorily demanding the assistance of the English and their ally, the nabob vizier, in rescuing Shah Alum from the hands of the Mahrattas, and replacing him on the throne of his ancestors, had furnished ample reason for precautionary measures against the renewed incursions, under any pretext, of the dreaded Afghans. To avert this evil, there appeared no surer method than to form a close alliance with Persia; and for this purpose Captain (afterwards Sir John) Malcolm was dispatched as British envoy, in December, 1799, to the court of Teheran, attended by a magnificent embassy. The result was completely successful. Ali Shah engaged to lay waste the country of the Afghans if ever they should invade India, and to permit no French force to form a settlement on any of the shores or islands of Persia; the English, on their part, promised to aid the Shah in the event of invasion, whether from France or Cabool. Internal dissension between Zemaun Shah and his brother Mahmood, rendered the issue of the above negotiation of less importance as regarded the Afghans, whose turbulence found vent in civil war; but the danger of French encroachments still pressed severely on the mind of the governor-general. The injury inflicted by the privateering force of the Mauritius and Bourbon upon the Indian coasting trade, and even upon that with Europe, was of serious magnitude. Between the commencement of hostilities and the close of 1800, British property, to the amount of above two million sterling, had been carried into Port St. Louis. Lord Wellesley resolved to attempt the extinction of this fertile source of disasters, by the conquest and occupation of the French islands; and, with this intent, assembled at Trincomalee* in Ceylon, a force comprising three royal regiments and 1,000 Bengal volunteers. The project fell to the ground through the pertinacity of Admiral Rainier, who declared that he could not lawfully take part in the proposed expedition, without the express sanction of the king. The favourable opportunity was lost; and French privateers continued, during several subsequent years, to harass and plunder the commercial navigation of the eastern seas. The troops assembled by the zeal of Lord Wellesley, found useful and honourable employ. He had repeatedly suggested to the home government the propriety of dispatching an Indian armament for the reinforcement of the British force in Egypt; and on the receipt of orders to that effect in 1801, 1,600 native infantry were added to the body already raised, and forwarded to Mocha as fast as transports could be provided for them.† Sir David Baird had command of the land troops; Rear-admiral Blankett, of a squadron of the company's cruisers, sent on with a small detachment as an advance guard, but Sir Home Popham was dispatched from England to direct the naval part of the expedition. The struggle was well nigh ended before their arrival, by the defeat of the French in Egypt on the 21st of March, with the loss to the victors of their brave leader, Sir Ralph Abercromby. General Baird marched from Suez to Rosetta, at the head of 7,000 men, in the hope of contributing to the capture of Alexandria; but the treaty of surrender was already in progress; and with its ratification, hostilities were brought to a close. The striking demonstration of the power of England, made by bringing together numerous and effective armaments from the east and west, to fight her battles upon the banks of the Nile, was doubtless calculated to "enhance her renown, and confirm her moral as well as political strength." Still, it is well added by Mill, that had the Anglo-Indian army been permitted to accomplish the purpose for which it was first designed by the governor-general, the conquest of the Mauritius and Bourbon would have been a more substantial though less brilliant service.

Upon the restoration of Pondicherry (in accordance with the treaty of Amiens), measures were taken by Buonaparte which amply proved the wisdom of the energetic precautions of the Marquis Wellesley against attempts for the revival of French influence in India. Seven general, and a proportionate number of inferior officers, were sent from

* Trincomalee was taken from the Dutch in 1796.

† Lord Wellesley, with his usual foresight, gave orders for the occupation of Perim, a small island in the straits of Bab-el-Mandeb, the possession of which would have effectually shut up the French forces in the Red Sea, even had they passed through Egypt. The Earl of Elgin, then ambassador to the Porte, effectively co-operated with the marquis in various ways.

France with 1,400 regular troops, and £100,000 in specie. The renewal of war in Europe afforded a reason for the reoccupation of Pondicherry in 1803, and enabled the E. I. Cy. to direct undivided attention to the complicated hostilities then carried on with the Mahrattas, the only Indian people possessing in themselves resources to maintain unaided a long contest. The most vulnerable part of the British frontier lay contiguous to the country possessed by Sindia. The death of Nana Furnavees, in 1800, left this enterprising chief no formidable rival at the court of Poona; and Bajee Rao the peishwa, appeared little less entirely under his control than the pageant-emperor of Delhi. In the event, therefore, of a struggle for supremacy, arising out of the numerous causes of quarrel abounding on both sides, the Mahratta confederacy, including the rajah of Berar, the representative of the Holcar family in Malwa, and the Guicowar of Guzerat, with other leaders of minor rank, led by Sindia and the peishwa, and aided by the skill and science of French officers, could collect a force against their European rivals which it would require a costly sacrifice of blood and treasure to repel. The best mode of averting this dangerous possibility appeared to be the formation of a strict alliance with one, at least, if not with the whole of the Mahratta chiefs. The error of Hastings, in sanctioning the aggressions of Sindia in Hindoostan Proper, had furnished experience which strengthened the convictions of Lord Wellesley with regard to the policy of forming connexions with native powers, only on conditions calculated to secure an ascendancy, more or less direct, in their councils. Perfect neutrality amid scenes of foreign and domestic warfare, venality, extortion, and bloodshed, could scarcely have been recommended by considerations of duty or of policy; and such a course, even supposing it to have been practicable, must have involved the infraction of old as well as recent treaties, offensive and defensive, with the Nizam and others. As for Lord Wellesley, his clear and statesmanlike view of the case, formed after careful examination of the actual state of British power in India, was never marred by doubt or hesitation in the moment of action. Fettered by the parliamentary denunciation against the extension, under any circumstances, of the Anglo-Indian empire, yet, convinced that its foundations must be largely increased before a state of secure and tranquil authority could be reasonably expected, he was often driven to adduce secondary causes to justify measures, which might have been sufficiently vindicated on the score of political necessity, since they involved no moral wrong. The wretchedness of the people of the Carnatic and Oude, abundantly excuse the steps taken to place them under the immediate superintendence of the company, in preference to employing, or rather continuing to employ, the military force of England in riveting the chains of a foreign despotism, founded on usurpation of the worst kind, that of sworn servants betraying their master in the hour of weakness. There were no lawful heirs to these states; or, if there were, they should have been searched for in the ancient records of the Hindoos: the Mohammedans were all intruders in the first instance, and the existing leaders of every denomination, with few exceptions, rebellious subjects. Why, each one of the African chiefs, whom English colonists and Dutch boors have so unscrupulously exiled from their native territories, had more of hereditary right and constitutional privilege on his side than all the Indo-Mohammedan dynasties put together. The case of the Hindoos is widely different; but in excuse, or rather in justification, of the conduct of the company, it may be urged that they found the great majority of the native inhabitants of India, under Moslem rulers, a conquered and much-oppressed people; and that, if England do her duty as a Christian state, they will, and—with all her errors and shortcomings, it may be added, they have materially benefited by the change.

The Rajpoot states were the only ones which, although brought in collision with the Mogul empire, were never wholly absorbed in it. The Mahratta confederation had been founded on the ruins of the vast dominion won by the strong arm of Aurungzebe, and lost through persecuting bigotry and the exactions consequent on unceasing war. Sevajee and Bajee Rao (the first usurping peishwa, or prime minister) built up Mahratta power. Madhoo Rao I. arrested its dissolution; but Mahadajee Sindia, prompted by overweening ambition, enlarged his chiefdom until its overgrown dimensions exceeded in extent the whole remainder of the Mahratta empire, and threatened speedily to destroy the degree of independence still existing in Rajpootana. Dowlut Rao possessed equal ambition and energy with his

predecessor, but far less judgment and moderation. The retirement to Europe, in 1796, of the experienced and unprejudiced leader of the European trained bands, De Boigne, and the accession to authority of a French leader named Perron, with strong national feelings, gave a decidedly anti-English bias to the counsels of Dowlut Rao. The peishwa Bajee Rao, knew this, and had, in the time of Sir John Shore, courted the protection of the supreme government, as a means of securing to himself some degree of authority. The danger of provoking war, by giving offence to Sindia, induced the refusal of this request. The accession to office of Lord Wellesley was attended with a reversal of the policy of both parties. Perceiving the great advantage to be derived from the permanent settlement of a subsidiary force at Poona, the governor-general formally offered the services of a body of the company's troops, for the protection of the peishwa and the revival of the energies of his government. The very circumstance of the boon, once urgently sought, being now pressed on his acceptance, would have sufficed to ensure its rejection by so capricious and distrustful a person as Bajee Rao: but other reasons—especially the meditated departure of Sindia, to superintend his own disaffected troops in Hindoostan, and the impending war between Tippoo and the English—were not wanting to confirm his determination. The conquest of Mysoor again changed the aspect of affairs; but Bajee Rao, in accordance with the sagacious counsels of Nana Furnavees,* even after the death of the wary minister, continued to reject the alliance pressed on him by the English, until an unexpected chain of events compelled him to look to them exclusively for help and protection.

Sindia and Holcar.—A new actor had recently come forward on the stage of Mahratta politics, whose progress seemed likely to diminish the authority of Sindia, and enable Bajee Rao to exercise unquestioned supremacy at Poona. Of these anticipated results only the former was realised; the predatory chief in question, Jeswunt Rao Holcar, proving strong enough not only to harass but to defeat the troops of Sindia, and drive Bajee Rao from his capital. The founders of the Sindia and Holcar families were, it will be remembered, men of humble origin; they became distinguished as leaders of Pindarries, a class of the lowest freebooters who had from early times infested the Deccan. Bajee Rao I., though always ready to avail himself of their services for the invasion of Mogul provinces, took care to exclude such dangerous subjects from Maharashtra, by habitually stationing them in Malwa, where the power of the two leaders became paramount. The progress and history of Mahadajee Sindia has been incidentally told in previous pages; but of Mulhar Rao Holcar little mention has been made since the battle of Paniput, in 1760, when he was named as one of the few leaders who escaped the carnage of that day. Having retreated into Central India, he employed himself, during the remaining years of his life, in settling and consolidating his possessions in Malwa and the Deccan. He had established considerable influence in Jeypoor, and obtained from the rajah an annual tribute of three lacs and a-half of rupees. A considerable part of the province of Candeish had been allotted to him for the maintenance of his troops; beside which, several villages were granted, by the peishwa and the Nizam, to the females of his family. The only lineal descendant of Mulhar Rao, a vicious youth of unsound mind, succeeded his grandfather in 1766, but survived him only nine months. His mother Ahalya (pronounced *Alea*) Bye, a singularly gifted woman, declared her intention, as the sole representative of both the deceased rulers, to select a successor. Ragoba† attempted to interfere; but Madhoo Rao, with characteristic chivalry, directed his uncle to desist from further opposition to the projects of a person whose right and ability to manage affairs were alike indisputable. With the entire approbation of the leading military commanders in the army of her deceased relatives, Ahalya Bye took the reins of power in her own hands. The Mohammedan custom of rigid seclusion had happily not been imitated by Mahratta females; Ahalya Bye had therefore no conventional impediment of any kind to check the free exercise of

* Nana Furnavees was imprisoned by Sindia; but being released in 1798, on payment of ten lacs of rupees, he accepted office under Bajee Rao.

† When the power of Ahalya Bye became established, the beautiful but wicked wife of Ragoba sent a female attendant to bring her an account of the personal appearance of a princess so highly celebrated, and so universally beloved. The description of a small slight woman, with irregular features, but "a heavenly light on her countenance," set the fair *intrigante* at rest as to any rivalry in the attractions by which she set most store; and, without noticing the last part of the description, Anundee Bye remarked, "But she is not handsome, you say."

her physical or mental powers. Still there were duties inconsistent with a woman's sphere of action; and to ensure their fulfilment, she formally adopted as her son,* and elected as commander-in-chief, Tookajee Holcar, the leader of the household troops; of the same tribe, but no otherwise related to Mulhar Rao. Like our great Elizabeth, the fitness of her ministers proved the judgment of the selector. The conduct of Tookajee, during a period of above thirty years, justified the confidence reposed in him. Ahalya Bye died, aged sixty, worn out with public cares and fatigues, aggravated by domestic sorrows; but without having had, during that long interval, a single misunderstanding with her brave and honest coadjutor. The history of the life of this extraordinary woman, given by Sir John Malcolm, affords evidence of the habitual exercise of the loftiest virtues; and it is difficult to say, whether manly resolve or feminine gentleness predominated, so marvellously were they blended in her character. The utter absence of vanity, whether as a queen or a woman;† the fearless and strictly conscientious exercise of despotic power, combined with the most unaffected humility and the deepest sympathy for suffering; learning without pedantry, cheerfulness without levity, immaculate rectitude with perfect charity and tolerance;—these and other singular combinations would almost tempt one to regard Ahalya Bye as too faultless for fallen and sinful humanity, but for the few drawbacks entailed by her rigid adherence to almost every portion of the modern Brahminical creed, in which, happily, persecution has still no part, though self-inflicted austerities and superstitious observances have gained a most undue prominence. The declining age of the princess was saddened by the resolution taken by her only surviving child, Muchta Bye, of self-immolation on the grave of her husband. The battle-field had widowed Ahalya Bye at twenty; yet—despite the modern heresy of the Hindoos, that the voluntary sacrifice of life, on the part of the bereaved survivor, ensures immediate reunion between those whom death has divided, and their mutual entrance into the highest heaven, she had not been tempted by this lying doctrine to commit suicide, but had lived to protect her children and establish the independence of the Holcar principality. Now, flinging herself at the feet of Muchta Bye, she besought her child, by every argument a false creed could sanction, to renounce her purpose. The reply of the daughter was affectionate but decided. "You are old, mother," she said, "and a few years will end your pious life. My only child and husband are gone, and when you follow, life I feel will be insupportable; but the opportunity of terminating it with honour will then have passed." Every effort, short of coercion, was vainly practised to prevent the intended "*suttee*;"‡ but the unfaltering resolve of the devoted widow remained unshaken, and her wretched parent accompanied the procession, with forced composure, to the funeral pyre: but when the first vivid burst of flame told of the actual consummation of the sacrifice, self-command was lost in anguish; the agonising shrieks of their beloved ruler mingled with the exulting shouts of the immense multitude; and excited almost to madness, the aged princess gnawed the hands she could not liberate from the two Brahmins, who with difficulty held her back from rushing to die with her child. After three days spent in fasting and speechless grief, Ahalya Bye recovered her equanimity so far as to resume her laborious round of daily occupations, including four hours spent in receiving ambassadors, hearing petitions or complaints, and transacting other business in full durbar or court; and she seemed to find solace in erecting a beautiful monument to the memory of those she lamented, and in increasing the already large proportion of the revenues devoted to religious purposes and public works. Her charity was not bounded by the limits of the principality: it began at home (for she fed her own poor daily), but it extended to far-distant lands. The pilgrim journeying to Juggernaut in Cuttack, in the far north amid the snowy peaks of the Himalaya, or south almost to Cape Comorin, found cause to bless the sympathy for individual suffering, as well as the reverence for holy shrines, manifested by Ahalya Bye with royal munificence; while the strange traveller, without claim of creed or country, was arrested

* Although Tookajee always addressed her by the name of "mother," he was considerably her senior.

† A Brahmin wrote a book in her praise. Ahalya Bye, after patiently hearing it read, remarked, that she was "a weak, sinful woman, not deserving such fine encomiums," directed the book to be thrown into the Nerbudda, which flowed beneath her palace window, and took no farther notice of the author.—(Malcolm's *Central India*, i., 193.)

‡ *Suttee* or *sati*, denotes the completed sacrifice.

on his weary, dusty road, by water-bearers stationed at intervals to supply the wants of the passer-by; and the very oxen near her dwelling at Mhysir, were refreshed by cooling draughts brought by the domestic servants of the compassionate princess.

The beasts of the field, the birds of the air, the fishes of the sea, had all their allotted share of her bounty; and however puerile some of her minor arrangements may sound to European ears, or fanatical the habits of a sovereign who never discarded the plain white weeds of Hindoo widowhood, or touched animal food; yet, probably, these very traits of character conspired to add to the reputation her government retains in Malwa as the best ever known, the personal reverence paid to her memory as more than a saint, as an Avatar, or incarnation of the Deity.

A blessing rested on the efforts of Ahalya Bye, despite the fettering power of heathen darkness. Indore grew, beneath her sway, from a village to a wealthy city; bankers, merchants, farmers, and peasants, all throve beneath her vigilant and fostering care. Malcolm states, that he made inquiries among all ranks and classes in the countries she had governed, and could elicit no information calculated to detract, in the judgment of the most impartial inquirer, from the effect of the eulogiums, or rather blessings, poured forth whenever her name was mentioned, except the large sums bestowed on Brahmins, and the expenditure of state funds in the erection and maintenance of public works on foreign soil. The remarks made by one of her chief ministers, when commenting on what Sir John considered misdirected bounty, afford a suggestive text alike to eastern and western potentates. He asked, "whether Ahalya Bye, by spending double the money on an army that she did in charity and good works, could have preserved her country for above thirty years in a state of profound peace, while she rendered her subjects happy and herself adored? No person doubts the sincerity of her piety; but if she had merely possessed worldly wisdom, she could have devised no means so admirably calculated to effect the object. Among the princes of her own nation, it would have been looked upon as sacrilege to have become her enemy, or, indeed, not to have defended her against any hostile attempt. She was considered by all in the same light. The Nizam of the Deccan and Tippoo Sultan granted her the same respect as the peishwa, and Mohammedans joined with Hindoos in prayers for her long life and prosperity."*

After the death of Ahalya Bye, in 1795, the sole authority centred in Tookajee Holcar, who survived his excellent mistress about two years. He left two legitimate sons, Casee and Mulhar Rao. The elder was of weak intellect and deformed person; the younger, able and active. Ahalya Bye and Tookajee had hoped that the example of their unanimity would be followed by the brothers in the joint exercise of authority, but neither of the princes were capable of the self-denial and lofty rectitude necessary for such a course; and preparations for a war of succession were at once commenced, but abruptly terminated by the treacherous interference of Dowlut Rao Sindia, who having inveigled Mulhar Rao to his camp, caused him to be shot through the head; and retaining possession of Casee Rao, not only compelled him to pay the heavy price stipulated for the murder of his brother, but reduced him to the condition of a mere tool. An avenger arose unexpectedly to scourge the unprincipled ambition of Sindia. Two illegitimate sons of Holcar, Jeswunt Rao and Etojee, survived their father; the latter was seized and imprisoned by Sindia and Bajee Rao. He escaped and joined a body of freebooters; but being recaptured, was trampled to death by an elephant in the city of Poona. Jeswunt Rao sought refuge at Nagpoor with Ragojee Bhonslay of Berar. His confidence was betrayed; and through the intrigues of Sindia and the peishwa, he also was made a captive, but succeeded in eluding his guard, and reaching Candeish about a year and a-half after the death of Mulhar Rao. Resolved to make an effort to rescue the possessions of his family from the hands of Sindia, he took the name of assertor of the rights of Kundee Rao, the infant son of Mulhar Rao, then a prisoner at Poona, and assembled a heterogeneous force of Pindarries, Bheels, Afghans, Mahrattas, and Rajpoots. In 1798, he joined his fortunes with those of Ameer Khan, a Mohammedan adventurer, less daring and reckless, but quite as unprincipled as himself, on whom he subsequently conferred the title of nabob. A terrible series of hostilities ensued between Sindia and Holcar. From the appearance of the latter chief, in 1800, the natives of Central India date the commencement of

* Malcolm's *Central India*, i., 189.

an epoch of eighteen years' duration, which they emphatically designate "the time of trouble." The trained battalions of Sindia were defeated, and his capital, Oojein, and other chief places, captured and rifled by Holcar and Ameer Khan, with a barbarity which was horribly revenged on the wretched inhabitants of Indore by the instrumentality of Sirjee Rao Ghatkay, the father-in-law of Sindia, and the prompter as well as executor of his worst actions. Between four and five thousand persons are said to have perished by the sword, or under tortures inflicted by the ferocious Pindarries, for the express gratification of their diabolical leader; and the wells within the limits of Indore were actually choked up by the bodies of females, who had rushed on death to avoid the lust and cruelty which reigned unchecked for a period of fifteen days, and ended only with the slaughter or flight of almost every citizen, and the demolition of every house. Jeswunt Rao, with Indore, lost his only means of giving regular pay to his soldiers. Without attempting disguise, he told them the actual state of the case, and bade such as chose follow his fortunes in quest of plunder. The invitation was accepted with acclamation, and Jeswunt Rao became avowedly the leader of an army of freebooters, whose worst licentiousness he directed rather than curbed, and whose turbulence he bent to his will by the habitual display of the dauntless courage which formed the distinguishing characteristic of his family, and by the coarse humour and inimitable cajolery peculiar to himself.* His declared object was the restoration of Mahratta supremacy over India by a revival of the predatory system of Sevajee; but of this there was never any reasonable prospect. Jeswunt Rao was not the man to found a state even on the most precarious basis; he was "terrible as a destroyer," but powerless to erect or consolidate dominion.

The marauding force increased daily. Sindia renounced the cause of Casee Rao (who became thenceforth a dependent on his half-brother), and would have willingly purchased peace by the surrender of the infant Kundee Rao; but Holcar knew his strength, and had, besides, gone too far to recede with safety. A desperate contest took place between the two chiefs near Poona, in October, 1802, when the personal exertions of Jeswunt Rao, who had staked his all on the event, with the determination of not surviving defeat, resulted in a complete victory. By turning his own guns on the ungovernable Patans of Ameer Khan, who was quite unable to check their violence,† Holcar saved the city from indiscriminate pillage; not, however, from any motive of justice or compassion, but only that he might be enabled to plunder it systematically and at leisure, for the payment of the arrears of his troops and the replenishment of his private coffers. After committing every description of extortion, and giving, in his own person, an example of hard-drinking, by unrestrained indulgence in his favourite liquors, cherry and raspberry brandy, he left Amrut Rao (Ragoba's adopted son) in charge of the government, and marched off to pursue his marauding avocations in Central India.

The triumph of Holcar completely changed the relative position of Bajee Rao and the English. Surrounded by a select body of troops, the peishwa waited the result of the contest; and when it was decided, fled from Poona, leaving with the British resident a draft treaty for the company, requesting the permanent establishment of a subsidiary force within his dominions, and proffering in return the assignment of a certain amount of territory, and a pledge to hold no intercourse with other states, except in concert with the English. The treaty of Bassein, arranged on this basis, was concluded in 1802. It entailed the subjection of the claims of the peishwa on the Nizam, and on Anund Rao Guicowar, the chief of Baroda in Guzerat, with whom the English had recently become closely allied; their interference having been solicited in

* The following anecdote indicates that, with all his vices, Jeswunt Rao was not what a modern writer designates a *sham*. At an early period of his career, the accidental bursting of a matchlock deprived him of the sight of an eye. When told of the irreparable injury inflicted, he exclaimed, in allusion to the Indian proverb that one-eyed people are always wicked—"I was bad enough before, but now I shall be the very Gooroo (high-priest) of rogues." He had no religious scruples, but would plunder temples and private dwellings with equal indifference. The madness in which his career ended, is regarded as the punishment of sacrilege.

† Ameer Khan had little personal courage. After the battle of Poona he came to Jeswunt Rao, who was tying up his wounds, and boasted of good fortune in escaping unhurt; "for, see!" he said, pointing to the feather mounted in silver, which adorned his horse's head, "my khuljee has been broken by a cannon-ball." "Well, you are a fortunate fellow," retorted the Mahratta, with a burst of incredulous laughter; "for I observe the shot has left the ears of your steed uninjured, though the wounded ornament stood betwixt them." — (*Central India*, i., 229.)

favour of the legitimate heir in a case of disputed succession. These concessions involved a heavy sacrifice of political power; but they were slight compared with those which would have been exacted by Sindia or Holcar; and Bajee Rao could scarcely fail to fall into the hands of one or other of these leaders, if not upheld by extraneous support. Like his father, he had few personal friends, and so little deserving the name of a party at Poona, that the governor-general, on discovering his unpopularity, appears to have doubted what course to pursue with regard to his reinstatement on the musnud. The treaty had been entered upon in the belief that the majority of the jaghiredars, and the great mass of the nation, would co-operate with the English for the restoration of the peishwa. But if his weakness or wickedness had thoroughly alienated their confidence, the case was different; and Lord Wellesley plainly declared, that "justice and wisdom would forbid any attempt to impose upon the Mahrattas a ruler whose restoration to authority was adverse to every class of his subjects."

In the absence of any general manifestation of disaffection, Bajee Rao was escorted by an English force to the capital from whence he had fled with so little ceremony. Amrut Rao retired on learning his approach, and eventually became a state pensioner, resident at Benares. Tranquillity seemed restored. There could be no doubt that Holcar, Sindia, and Ragojee Bhonslay of Berar, would all feel mortified by a treaty which gave the English that very ascendancy in the councils of Poona they, or at least Sindia and Holcar, individually coveted. Still Lord Wellesley considered that their mutual deep-rooted enmity would prevent a coalition for so desperate an object as war with the English. Perhaps the result would have realised these anticipations had Bajee Rao been true to his engagements; instead of which, he behaved with accustomed duplicity, and corresponded with both Sindia and Ragojee Bhonslay, to whom he represented his recent voluntary agreement as wholly compulsory, and endeavoured to incite them to hostilities, trusting to the chapter of accidents for the improvement of his own position. Yet, when the moment for action came, his schemes were lost in timidity and indecision: he would not trust others; he could not trust himself.

Holcar had heretofore expressly disavowed any unfriendly feeling towards the English;* and they would willingly have mediated between him and the peishwa, had the rancorous animosity of the latter suffered them to enter upon the negotiation. Sindia courted the co-operation of Holcar through the instrumentality of Ragojee Bhonslay, and went so far as to surrender the child Kundee Rao, and acknowledge Mulhar Rao as the representative of the Holcar family, surrendering to him their territories in Malwa, and recognising his various claims throughout Hindoostan. Despite these concessions, the robber-chief hung back; and when pressed by the confederates to unite his army with theirs in the Deccan, with a view to making war upon the E. I. Cy., he asked who was to take care of Northern India? and withdrew to pillage the defenceless provinces of friend and foe.

The gathering storm did not escape the observation of the governor-general. Hostile preparations were commenced in every part of British India, and a declaration of his intentions demanded from Sindia; who replied curtly, yet candidly, that he could not give any until after an approaching interview with the Bhonslay; but would then inform the resident "whether it would be peace or war." This pledge was not redeemed; the meeting took place, and was followed by vague and general professions of good-will to the British government, mingled with complaints against the peishwa for an undue assumption of authority in signing the treaty of Bassein. The civil expressions of the chiefs ill accorded with the hostile and menacing attitude occupied by their armies on the frontiers of Oude. Major-general Wellesley, to whom his brother had delegated full powers, political as well as military, either for negotiation or war, brought matters to an issue with characteristic frankness, by proposing as a test of the amicable intentions of the two chiefs, that they should respectively withdraw their forces, pledging himself to do the same on the part of the English. The offer being rejected, the British resident was with-

* The day after the taking of Poona, Col. Close, the British resident, was sent for by Holcar, whom he found in a small tent ankle-deep in mud, with a spear wound in the body and a sabre-cut in the head; which last he had received from an artilleryman while leading a charge on the guns of the enemy. He expressed a strong wish to be on good terms with the English, and, with reluctance, permitted the withdrawal of the resident, after which the worst outrages were committed at Poona.

drawn, and preparations made on both sides for an appeal to arms.

Mahratta War.—The governor-general well knew that the finances of his employers were in no condition to endure the drain of protracted warfare, and he resolved to follow out the policy so brilliantly successful in the Mysoor campaign, of bringing the whole force of British India to bear on the enemy; not, however, by concentration on a single point, but by attacking their territories in every quarter at the same time.

The army, by his exertions, was raised to nearly 50,000 men. The troops in the Deccan and Guzerat numbered 35,600, of whom 16,850 formed the advanced force under General Wellesley; in Hindoostan, 10,500 men were under the command of General (afterwards Lord) Lake; 3,500 were assembled at Allahabad to act on the side of Bundelcund; and 5,216 were destined for the invasion of Cuttack. The armies of Sindia and Ragojee were estimated at about 100,000 men, of whom half were cavalry; and 30,000 regular infantry and cavalry, commanded by Europeans, chiefly French, under M. Perron, the successor of De Boigne. Himmut Bahadur, an influential Mahratta chief of Bundelcund,* sided with the English against the rajah, Shumsheer Bahadur. The campaign opened by the conquest, or rather occupation, of Ahmednuggur, the ancient capital of the Ahmed Shahi dynasty, on the 1st of August, 1803. The army under Major-general Wellesley, by whom it was accomplished, after much marching and counter-marching, fought the famous battle of Assaye, so named from a fortified village (near the junction of the Kailna and Juah rivers, 261 miles north-west of Hydrabad), before which the confederates had encamped 21st August, 1803. They numbered 50,000 men, and were supported by above a hundred pieces of artillery. The British counted but 4,500 men; and their leader beheld with anxiety the strength of the foe, even though, on finding the Mahrattas at length drawn up in battle array, the exulting remark re-echoed through the ranks—"They cannot escape us." While the British lines were forming, the Mahrattas opened a murderous cannonade. The 74th regiment sustained heavy loss, and were charged by a body of the enemy's horse. The 19th light dragoons drew only 360 sabres, but they received the order for a counter-charge with a glad huzza; and being manfully seconded by native cavalry, passed through the broken but undismayed 74th amid the cheers of their wounded comrades, cut in, routed the opposing horse, and dashed on at the infantry and guns. The troops of the line pressed on after them, and drove the enemy into the Juah at the point of the bayonet. The victory was complete, but dearly purchased; for one-third of the conquerors lay dead or wounded at the close of this sanguinary action. Of the Mahrattas, 1,200 were slain; the bodies of the fallen were scattered around in dense masses, and ninety-eight pieces of cannon remained on the field. Ragojee Bhonslay fled at an early period of the action, and Sindia soon followed his example. The cavalry evinced little inclination to out-stay their masters; but the infantry behaved with greater steadiness; the artillerymen stood to the last, and eight of the trained battalions of De Boigne manifested unflinching determination. When resistance became hopeless, the majority surrendered.†

In the meantime, success still more brilliant in its results had attended the army under Lake, who was himself the very model of a popular commander, as brave and collected in the front of the battle as in a council of his own officers. The destruction of Sindia's force under Perron, the capture of Agra and Delhi, with the person of the emperor—these were the leading objects to which he was to direct operations; and they were all so perfectly fulfilled, that the governor-general declared, his most sanguine expectations having been realised, he was unexpectedly called on to furnish fresh instructions. General Lake first came in sight of the enemy's cavalry at Coel, near the fort of Alighur, whither they retired after a slight skirmish. Alighur, the ordinary residence of M. Perron, was, in his absence, bravely defended by the governor, M. Pedrons. It was well garrisoned, and surrounded by a

* The ancient Hindoo dynasty of Bundelcund, of which Chutter Sâl was the last efficient representative, was overwhelmed by the Mahrattas about 1786. Shumsheer Bahadur was an illegitimate descendant of the first peishwa, Bajee Rao. Himmut Bahadur, by a not unfrequent combination, was a *gosaen* (religious devotee) and a soldier of fortune.—(*Duff.*)

† The fidelity of these mercenary troops is rendered more remarkable by the fact, that a politic proclamation, issued by the governor-general at the commencement of the war, had had the effect of inducing the British part of the European officers to quit the service of Sindia, on condition of the continuance of the pay previously received from him.

deep and wide moat, traversed by a narrow causeway, which formed the sole entrance to the fort, and for which, by some strange neglect, a drawbridge had not been substituted. One of the British officers who had come over from the service of Sindia, offered to head an attack on the gateway. The daring enterprise was carried out. Of four gates, the first was blown open by troops exposed to a heavy fire; the second easily forced; the third entered with a mass of fugitives; but the fourth, which opened immediately into the body of the place, resisted even the application of a 12-pounder. In this extremity, a party of grenadiers, led by Major M'Leod, pushed through the wicket and mounted the ramparts. Opposition soon ceased, and the British found themselves masters of the fortress, with the loss of 278 men killed and wounded, including seventeen European officers. Of the garrison, about 2,000 perished; many of whom were drowned in the ditch while attempting to escape.

From Alighur, Lake marched to the north-westward, and on the 11th of September, encamped within six miles of Delhi. The tents were scarcely fixed, when the enemy appeared in front. Perron had just quitted the service of Sindia, in consequence of the well-founded jealousy manifested towards him by that chief and the leading native officers. M. Bourquin, the second in command, took his place; and on learning the advance of the British against Delhi, crossed the Jumna with twelve battalions of regular infantry, and 5,000 cavalry, for the purpose of attacking General Lake, whose force, after providing for the safety of his baggage, amounted to about 4,500 men. Bourquin took up a position on rising ground, with swamps on either side, defended in front by seventy pieces of cannon, half-buried amid long grass. From this secure station he was withdrawn by a feint, which, with less highly disciplined troops, would have been very hazardous. Lake advanced to reconnoitre, and after having a horse shot under him, fell back with the cavalry in regular order upon the infantry, who had been meanwhile ordered to advance. The enemy followed the retreating cavalry, until the latter, opening from the centre, made way for the foot to advance to the front. Perceiving the trap into which he had fallen, Bourquin halted, and commenced a deadly fire of grape, round, and canister; amidst which the British troops moved on without returning a shot until within one hundred yards of the foe; they then fired a volley, and charged with the bayonet. Sindia's infantry, unequal to a hand-in-hand encounter, abandoned their guns, fled, and were pursued as far as the banks of the Jumna, in which river numbers perished. The total loss of the Mahrattas was estimated at 3,000; that of the British at 585, including fifteen European officers.

After being seventeen hours under arms, the troops took up fresh ground towards the river, and next morning encamped opposite the city of Delhi. In three days every show of resistance ceased, the fort was evacuated, Bourquin and five other French officers surrendered as prisoners of war, and the unfortunate Shah Alum thankfully placed himself under the protection of the British commander, September 10th, 1803.* General Lake next marched against Agra, where all was strife and confusion. The garrison had been under the command of British officers, who, on the breaking out of the war, were confined by their own troops. Seven battalions of Sindia's regular infantry were encamped on the glacis, but the besieged feared to admit them, on account of the treasure which they wished to reserve for themselves. The battalions were attacked on the 10th of October, and defeated after a severe conflict; three days afterwards, those who remained came over in a body, and were admitted into the E. I. Cy's service. The siege of the fort was then commenced, and a breach effected, when further proceedings were arrested by the capitulation of the garrison, the imprisoned officers being released, in order to make terms with their countrymen. The surrender was accomplished on condition of safety for life and private property, leaving treasure to the amount of £280,000 to be divided among the troops as prize-money.

It is almost impossible to sketch a campaign carried on simultaneously by different widely-separated armies, without losing the thread of the narrative, or interfering with the chronological succession of events. Choosing the latter as the lesser evil, it may be mentioned that, towards the close of October, General Lake quitted Agra in pursuit of a large force, composed of fifteen

* General Lake found Shah Alum seated under a small tattered canopy, his person emaciated by indigence and infirmity, and his countenance disfigured with the loss of his eyes, and bearing marks of extreme old age, joined to a settled melancholy.

regular battalions, dispatched by Sindia from the Deccan to strengthen his northern army; of which there now remained but two battalions, the wreck of the Delhi troops. The total was, however, formidable; being estimated at about 9,000 foot and 5,000 horse, with a numerous and well-appointed train of artillery. Their design was supposed to be the recovery of Delhi; but as the British advanced, the Mahrattas retreated; and Lake, fearing they would escape his vigilance, and suddenly reappear in some unlooked-for quarter, followed with his cavalry by forced marches, until, on the 1st of November, he found himself, after a night's journey of twenty-five miles, in face of an enemy in apparent confusion, but advantageously posted, and refreshed by rest. After an ineffectual and disastrous attempt at attack, the British general was compelled to withdraw his brigade out of reach of cannon-shot, and await the arrival of the infantry. The details of this portion of the action are somewhat vaguely told. The 76th regiment, which was chosen to head the attack, with some native infantry,* who had closed to the front, first reached the point from which the charge was to be made, and stood alone, waiting until the remainder of the column should be formed by their comrades, whose march "had been retarded by impediments in the advance,"† the nature of which is not stated. So galling was the fire opened by the enemy, that Lake, who conducted in person every operation of the day, and had already had one horse shot under him, resolved to lead the van to the assault, sooner than stand still and witness its destruction. At this moment his second horse fell, pierced by several balls. His son, who officiated as aide-de-camp, sprang to the ground, and had just prevailed on the general to take the vacant seat, when he was struck down by a ball. Lake had a singularly affectionate nature; the fall of his child, severely if not mortally wounded, was well calculated to unnerve, or, in his own phrase, "unman" him; but he knew his duty, and loved the troops, who, he writes with unaffected modesty, "at this time wanted every assistance I could give them."‡ Leaving Major Lake on the field, the general rode on with his gallant band, until, on arriving within reach of the canister-shot of the foe, their ranks were so rapidly thinned as to render regular advance impracticable, and tempt the Mahratta horse to charge. But this "handful of heroes," as they were gratefully termed by Lake, himself "*le brave des braves*," repulsed their assailants, who withdrew to a little distance. The order to the British horse to charge in turn, was brilliantly executed by the 29th dragoons. They dashed through both lines of the opposing infantry, wheeled round upon the cavalry, and, after driving them from the field, turned the rear of the enemy's second line. The British foot failed not to take advantage of the opportunity thus afforded. The whole force had by this time arrived on the field of battle, and the issue soon ceased to be doubtful; yet the hardy veterans of De Boigne's regiments, though deprived of almost all their experienced officers, would not surrender. About 2,000 of them were broken, surrounded and made prisoners, but the majority fell with weapons in their hands. "The gunners," writes the victorious general, "stood by their guns until killed by the bayonet: all the sepoys of the enemy behaved exceedingly well; and, if they had been commanded by French officers, the event would have been, I fear, extremely doubtful. I never was in so severe a business in my life, or anything like it; and pray to God I never may be in such a situation again. * * * These fellows fought like devils, or rather heroes."§

The battle of Laswaree was in all respects memorable. It completed the overthrow of the European disciplined brigades, and gave to England undisputed mastery over Delhi and Agra, with all Sindia's districts north of the Chumbul. These advantages were gained at a heavy sacrifice of life. The English loss amounted to 172 killed and 652 wounded: that of the Mahrattas was estimated at 7,000.||

The detached expeditions had likewise successfully accomplished their respective missions. All Sindia's possessions in Guzerat were captured by a division of the Bombay troops under Lieutenant-colonel Woodington. Broach was taken by storm on the 29th of August; and the strong hill-

§ *Idem*, p. 446. General Lake, habitually so ready to praise others, barely notices his own gallant deeds or those of his son: but he mentions, the day after the battle, that parental anxiety rendered him "totally unfit for anything." Happily, Major Lake's wound proved less severe than was at first expected.

|| *Memoir of the Campaign;* by Major Thorn.

fort of Powanghur, which overlooked the town of Champaneer, surrendered on the 17th of September.

The seizure of Cuttack was accomplished by detachments of the Madras and Bengal forces under Lieutenant-colonel Harcourt. The Brahmins of Juggernaut placed their famous pagoda under the protection of the British on the 18th of September; and the fall of Barabuttee, the fort of Cuttack, on the 14th of October, completed the reduction of the whole province.

In the subjection of Bundelcund, Lieutenant-colonel Powell was materially aided by Himmut Bahadur, the Hindoo leader previously mentioned, who joined the British detachment in the middle of September, with a force of about 14,000 men. The army of Shumsheer Bahadur made but feeble resistance, and on the 13th of October was driven across the river Betwa. Their chief eventually became a British stipendiary.

The concluding operations of the war were performed by the army under Major-general Wellesley and Colonel Stevenson. A detachment under the latter leader took possession of Boorhanpoor on the 15th of October, and two days after marched to besiege Aseerghur, called by the natives "the key of the Deccan." The fortress surrendered on the 21st, and with it the conquerors became masters of Sindia's Deccani possessions, including several dependent districts in Candeish. After a short time spent in pursuing the rajah of Berar, who retreated to his own dominions, and in receiving some overtures for peace, of an unsatisfactory character, from Sindia, General Wellesley descended the Ghauts on the 25th of November, with the intention of assisting Stevenson in the projected siege of Gawilghur. The junction was effected on the 29th of August, near the plains of Argaum, where the British commander, on reconnoitring, perceived with surprise the main army of the Berar rajah, comprising infantry, cavalry, and artillery, regularly drawn up, about six miles from the spot where he had himself intended to encamp. Sindia's force, consisting of one very heavy corps of cavalry, a body of Pindarries, and other light troops, supported those of Berar. It was late in the day, and the English were wearied with a long march under a burning sun; yet their leader thought it best to take advantage of the opportunity rarely afforded of meeting the Mahrattas in a pitched battle. Forming two lines of infantry and cavalry, Major-general Wellesley advanced to the attack. A body of 500 foot, supposed to have been Persian mercenaries, rushed upon the 74th and 78th regiments with desperation, and were destroyed to a man. Sindia's horse charged the British sepoys, but were repulsed; after which the ranks of the enemy fell into confusion and fled, pursued by the British cavalry, assisted by auxiliary bodies of Mysoor and Mogul horse. The loss of the victors, in killed, wounded, and missing, was 346 men; that of the Mahrattas is nowhere stated, but must have been very considerable.

The siege of Gawilghur, invested on the 5th of December, involved no ordinary amount of labour and fatigue, in consequence of the difficulty of carrying the guns and stores to the point of attack. The outer fort was taken by storm on the 15th; the inner fort was escaladed by the light company of the 94th, headed by Captain Campbell, who opened the gates and admitted the rest of the assailants.*

The confederate chieftains had by this time become extremely solicitous for the termination of war. The rajah of Berar dispatched vakeels or envoys to the British camp the day after the battle of Argaum; but in consequence of the inveterate manœuvring and procrastination of the Mahrattas, even when really desirous of concluding a treaty, affairs were not finally arranged until the 17th of December. By the treaty of Deogaum, then signed, the rajah consented to surrender the province of Cuttack, including the district of Balasore, to the company, and to relinquish to the Nizam certain revenues extorted from him on various pretences. He further pledged himself to submit all differences which might arise between him and the Nizam or the peishwa to British arbitration, and promised to receive into his service no European or American subject of any state at war with the English, nor even any Englishman, without the express sanction of the governor-general.

Sindia had now no alternative but to

* The defence had been gallantly conducted by two Rajpoot leaders, whose bodies were found amid a heap of slain. Their wives and daughters were intended to have all shared their fate; but the terrible order had been imperfectly performed with steel weapons, instead of by the usual method of fire; and though several died, the majority being carefully tended, recovered of their wounds.—(*Wellesley Desp.*)

make peace on such terms as the conquerors thought fit to grant; and on the 30th of December he signed the treaty of Surjee Anjengaum in the British camp, by which he ceded his rights over the country between the Jumna and the Ganges (including the cities of Delhi and Agra), and to the northward of the Rajpoot principalities of Jeypoor and Joudpoor; also the forts of Ahmedabad and Broach, with their dependent districts. On the south he yielded Ahmednuggur to the peishwa, and some extensive districts to the Nizam. In return, the leading places conquered during the war, not above named, were restored to him. Shortly after this arrangement, Sindia entered the general alliance of which the British government formed the dominant portion, and agreed to receive a subsidiary British force, whose expenses were to be furnished from the revenue of the territories already ceded.

The leading objects of the war had been fully carried out, in accordance with the plans of the governor-general. Among the less conspicuous but important services rendered by Lake, were the formation of alliances with the rajahs of Jeypoor, Joudpoor, Boondi, and Macherry; with the Jat rajah of Bhurtpoor, the rana of Gohud, and Ambajee Inglia, the unfaithful successor of Perron in the service of Siudia.* Lord Wellesley was anxious to maintain the independence of the Rajpoot principalities against Mahratta aggressions, both as a matter of justice and policy. Their territories were guaranteed to them against external enemies, with immunity from tribute; but they were not to receive European officers into their service without the sanction of the British government, and were to defray the expense of any auxiliary force required to repel invaders from their dominions.

War with Holcar.—Despite so many brilliant victories, attended with such substantial results, the British armies could not quit the field. During the recent hostilities, Holcar had remained in Malwa, levying enormous contributions upon the adjoining provinces. The success of the British arms seems to have convinced him of his mistake in neglecting to co-operate with chiefs of his own nation against a power whose efforts were steadily directed to the suppression of the predatory warfare by which he had reached, and could alone expect to maintain, his present position. When too late he bestirred himself to negotiate with the Rajpoots, the Bhurtpoor rajah, the Rohillas, the Seiks, and finally with Sindia, whom he recommended to break the humiliating treaty he had recently formed, and renew the war. But Sindia had suffered too severely in the late hostilities to provoke their repetitiou; and being, moreover, exasperated by the time-serving policy of Holcar,† he communicated these overtures to Major Malcolm, then resident in his camp. The inimical feelings entertained by Holcar, had been already manifested by the murder of three British officers in his service, on a false charge that one of them had corresponded with the commander-in-chief. Still it seemed highly improbable that he could seriously intend flinging the gauntlet at a nation whose military achievements had become the theme of every tongue in India; aud the English authorities, anxious to bring matters to a speedy and amicable conclusion, invited him to send commissioners to their camp, to explain his views and desires. The Mahrattas are ever apt to treat conciliatory measures as symptomatic of weakness; and Holcar was probably influenced by some such consideration in framing the conditions for which his vakeels were instructed to stipulate with General Lake as the terms of peace, and which included leave to collect *chout* according to the custom of his ancestors, with the cession of Etawa and various other districts in the Doab and Bundelcund, formerly held by his family. Holcar had not without reason blamed Sindia for too exclusive attention to the rules of European discipline, and the neglect of the guerilla warfare which Sevajee and Bajee Rao had waged successfully against Aurungzebe. This was the weapon with which he now menaced the English, in the event of non-compliance with his demands. "Although unable," he said, "to oppose their artillery in the field, countries of many coss should be overruu, and plundered, and burnt; Lake should not have leisure to breathe for a moment, and calamities would fall on lacs of human beings in continued war by the attacks of his army, which would overwhelm like the waves of the sea."

* Sindia seized the Gohud province, and gave it in chasge to Ambajee Inglia, who went over to the English. They kept Gwalior, and divided the rest of the province between the rana and Inglia.

† Ameer Khan was actually dispatched by Holcar to co-operate with Sindia; but the news of the battle of Assaye reached him on the march, and he returned as he came.—(Ameer Khan's *Memoirs*.)

Such a menace, from one of the most reckless and powerful marauders by whom the timid peasantry of Hindoostan were ever scourged, was tantamount to a declaration of war—a formality which, it may be remarked, forms no part of Mahratta warfare. Yet it was not till further indications appeared of his intention to commence hostilities at the first convenient moment, that the negotiation, which Holcar desired to gain time by protracting, was broken off, and Lord Lake and Major-general Wellesley directed to commence operations against him both in the north and the south. The governor-general entered on this new war with unaffected reluctance. Once commenced, it could not be arrested by an accommodation such as that entered into with Sindia; for a predatory power must, he thought, be completely neutralised, in justice to the peaceable subjects of more civilised governments. It was important to secure the cordial co-operation of the subsidiary and allied states against the common foe; and this was effected by the declaration of Lord Wellesley—that all territory conquered from Holcar should be divided among the British auxiliaries without reserve.

The opening of the campaign was disastrous. Major-general Wellesley could not advance in consequence of a famine which prevailed in the Deccan. Lake, after storming the fort of Rampoora (16th May, 1804), was compelled to withdraw the main army into cantonments for the rainy season, leaving Colonel Monson, with five sepoy battalions and 3,000 irregular horse, to watch the movements of the foe. The proceedings of this commander were most unfortunate. Though "brave as a lion," he wanted decision of purpose and confidence in the native troops. After making an ill-advised entrance into the dominions of the enemy, he became alarmed at the reported approach of Holcar in person; and fearing the probable failure of supplies before the British could join the Guzerat force under Colonel Murray, he retreated forthwith. A retrograde movement on the part of British troops was proverbially more hazardous in native warfare than the boldest advance. Holcar eagerly followed, attacked and defeated the irregular cavalry left in the rear to forward intelligence of his proceedings, and summoned the main body to surrender. This being indignantly refused, furious and reiterated onsets were made by him on the sepoy battalions at the Mokundra pass, which they resisted with steadiness and success, till, at evening, their assailants drew off a few miles. Monson, not considering his position tenable, continued the retreat; the native troops behaved admirably, and, though harassed by the enemy, and exposed to heavy rains, reached Kotah in two marches.

Kotah was a Rajpoot principality, originally formed of lands separated from Boondi. It remained for above a century and a-half of secondary importance, until it fell beneath the sway of Zalim Sing, a Rajpoot of the Jhala tribe, who governed under the name of regent—it would appear, with the full consent of the rightful prince or rana, Omeida Sing. Zalim Sing played a difficult part with extraordinary ability, and by dint of consummate art, perfect self-control, and unfailing energy, so steered the vessel of state, that while every other Rajpoot principality tottered under the effects of the furious attacks or undermining intrigues of the encroaching Mahrattas, Boondi, though ever first to bend to the storm, raised her head as soon as it had passed over, as if strengthened by the trial. Excessive humility and moderation formed the disguise beneath which the regent attained the position of a general arbitrator in the never-ceasing disputes of neighbouring governments, which he fostered under pretence of mediation. His deep duplicity did not preserve him from incurring strong personal hostility; and Tod, after narrating no less than eighteen attempts at his assassination, represents him as sleeping in an iron cage for security. At the time at which we have now arrived, "the Nestor of India" was about sixty-five years of age. His position was one of peculiar difficulty. To keep peace with Holcar he had paid dearly, both in money and character, having stooped to form an intimate alliance with Ameer Khan as a means of averting the scourge of indiscriminate plunder from the fertile fields of Boondi, great part of which were cultivated for his exclusive benefit; yet Colonel Monson, on his arrival with the weary and half-famished troops, demanded from the regent nothing less than their admission into the city, which could not be granted without creating great confusion and insuring the deadly vengeance of the Mahrattas. To the English, Zalim Sing was yet more unwilling to give offence. Their paramount authority was being daily augmented and consolidated; nor could he

doubt that Kotah, like other native principalities, would eventually do well to find in a dependent alliance on the dominant power, an alternative from complete extinction.* Even now, he was ready to make common cause with the retreating and dispirited troops, or to do anything for their succour, to the extent of his ability, outside the walls of Kotah; but the pertinacity of Monson in demanding admittance was unavailing, and the detachment marched on to Rampoora, through an inundated country barely traversable for the troops, and impracticable for cannon and stores, which were consequently destroyed and abandoned. A reinforcement sent with supplies by General Lake, gave temporary relief to the harassed soldiers, but could not remedy the incapacity of their commander; and after many more struggles and reverses,† attended with a complete loss of baggage on the road to Agra, the confusion of one very dark night brought matters to a climax; the troops fairly broke and fled in separate parties to the city, where the majority of the fugitives who escaped the pursuing cavalry, found an asylum on the 31st of July, 1804.

These proceedings increased the rabble force of Holcar tenfold. Adventurers and plunderers of all descriptions (including the wreck of the armies of Sindia and the Bhonslay) flocked to his standard; and after making the regent of Kotah pay a fine of ten lacs for his partial assistance of the English,‡ the Mahratta chief invaded their territories, at the head of an immense army,§ in the character of a conqueror. At his approach the British troops abandoned Muttra with its stores; but the fort was reoccupied by a detachment sent by General Lake, who had marched hastily from Cawnpore, in hopes of bringing the enemy to action. He was, however, completely outwitted by Holcar, who occupied the attention of the British general by manœuvring his cavalry; while his infantry, by a rapid movement, succeeded in investing Delhi. The city, ten miles in circumference, had but a ruined wall, with scarcely more than 800 sepoys, for its defence; nevertheless, these troops, headed by Lieutenant-colonels Ochterlony and Burn, after nine days' operations, compelled a force of 20,000 men to raise the siege.‖ Holcar, with his cavalry, withdrew to the Doab, whither he was followed by Lake, who, after a long pursuit, by marching fifty-three miles in twenty-four hours, eventually came up with the enemy on the 17th of November, under the walls of Furruckabad. The Indian horse never could stand a charge in the field; their leader knew this, and was himself the first to fly, followed by his panic-struck adherents, of whom 3,000 were cut to pieces by the victors, and the rest escaped only by the superior swiftness of their horses. The Mahratta chief made his way to Deeg, a strong fort belonging to Runjeet Sing of Bhurtpoor, a Jat leader, who, after the defeat of the detachment under Monson, had quitted the English, and joined the opposite interest.

The determined proceedings of Lake induced the confederate chiefs to evacuate Deeg and retreat to Bhurtpoor, a city not very formidable in appearance, of six to eight miles in circumference, defended by a high mud wall, and a broad ditch not easily fordable. But the rajah was skilful and desperate. Holcar had little to boast of; for while himself heading a defeated army in the field, his strongholds, in various quarters, had been reduced by the English; and a detachment of troops from Guzerat had occupied Indore, and were preparing to intercept his retreat. Still he was a marauder by profession, whose kingdom was in his saddle; whereas the Jat rajah truly declared he had no home but in his castle—every hope was bound up in its battlements. The defence was most determined; and even when a practicable breach had been effected, attempts to take the place by storm were neutralised by the ready inven-

* When Colonel Tod was employed in forming an alliance between the supreme government and the Kotah principality, he took an opportunity of assuring Zalim Sing that the English desired no more territory. The old politician smiled, as he answered—"I believe you think so; but the time will come when there will be but one sicca (stamp of sovereignty on coin) throughout India. You stepped in at a lucky time; the *p'foot* (a sort of melon, which bursts asunder when fully matured) was ripe, and you had only to take it bit by bit. It was not your power so much as our disunion that made you sovereigns, and will keep you so."—(*Rajast'han*, i., 766.)

† When the younger European officers were heart-sick, and well-nigh sinking with fatigue, the sepoys were frequently heard bidding them be of good cheer; for they would carry them safely to Agra.—(Duff.)

‡ Zalim Sing and Holcar (both one-eyed men) met in boats on the Chumbul, each fearing treachery.

§ According to Malcolm, Holcar's army comprised 92,000 men (66,000 cavalry, 7,000 artillery, 19,000 infantry), with 190 guns.—(*Central India*, i., 238.)

‖ The sepoys were on duty day and night. To keep up their spirits under incessant fatigue, Ochterlony had sweetmeats served out, and promised them half a month's pay when the enemy was repulsed.

tion of the besieged. Stockades and bulwarks rose as if by magic to blockade the breach; the moat was rendered unfordable by dams; and, during the attack, pots filled with combustibles, and burning cotton-bales steeped in oil, were flung upon the heads of the assailants. The British were four times repulsed, with a total loss of 3,203 men in killed and wounded; nor did even their highly-prized military reputation escape unimpaired. On one occasion, the famous 76th, in conjunction with the 75th, refused to follow their officers after the 12th Bengal sepoys had planted the colours on the top of the rampart. The bitter reproaches of their general recalled them to a sense of duty, and, overpowered with shame, they entreated to be led to a last attack, in which they displayed much desperate but unavailing courage. The operations of the siege were for a time intermitted to procure further reinforcements. The rajah, convinced that his destruction, however temporarily retarded, was but a question of time, offered twenty lacs of rupees, with other concessions, as the price of peace, and the proposal was accepted, although at the risk of leaving on the minds of the natives a dangerous example of successful resistance. The advanced state of the season, the fear of the hot winds, together with the menacing attitude of Sindia, then under the influence of his father-in-law, the notorious Shirjee Rao Ghatgay, were sufficient reasons for refraining from engaging the flower of the British army, at a critical period, in a contest with a desperate man, who, if mildly treated, might be neutralised at once. The son of the rajah of Bhurtpoor was therefore taken as a hostage for the fidelity of his father, and the restoration of the fortress of Deeg held forth as its reward. The force of Holcar had been reduced by desertion, more than by actual loss, to less than a fourth of its number at the opening of the campaign. The separate treaty entered into by the rajah of Bhurtpoor left him no hope but in the co-operation of Sindia, who affected to be desirous of mediating with the British government on his behalf. The power of both chiefs was, however, broken, and few obstacles remained towards a general pacification, on terms very advantageous to the English; when their whole policy was abruptly changed by the passing of the office of governor-general from the hands of the Marquis Wellesley into those of Lord Cornwallis, in 1805.

As early as January, 1802, Lord Wellesley had signified to the Court of Directors his desire of quitting India. The motives for the proffered resignation were various. They included several acts, on the part of the directory, which the marquis deemed derogatory to the reputation of himself and his brothers, as well as to that of his stanch coadjutor, Lord Clive, the governor of Madras; but the chief ground of complaint was the disfavour shown to his favourite scheme of founding a college at Calcutta, for the express instruction of young civilians in the description of knowledge absolutely requisite for the fulfilment of their allotted duties. The glaring ignorance of native languages evinced by European rulers, had long been a manifest hindrance to the good government of the people of India, as well as a bar to the kindly intercourse which might otherwise have subsisted. It was this primary defect which the marquis hoped to rectify, and at the same time to infuse into the youths of the service something of the *esprit de corps*, which he remembered with such vivid pleasure to have existed at Eton. The *College of Fort William* was his favourite project. The company did not deny the want of systematic instruction, which was daily more painfully felt; but they could not be brought to consent to the expenditure which Lord Wellesley deemed absolutely needful to fulfil the double object of educating Europeans and affording encouragement to native talent. The Board of Control supported the views of Lord Wellesley; but the project was, after all, but very imperfectly carried out, so far as the Indian population was concerned: for the instruction of civilians destined to serve the E. I. Cy., a college (Haileybury) was founded in England a few years later. Another cause which rendered the governor-general unpopular with his employers, was his deliberate and avowed opinion in favour of the extension of trade with England to India-built shipping, instead of confining it solely to the chartered vessels of the E. I. Cy. Despite the obvious policy, as well as justice, of this measure, as the only means of preventing Indian commerce from finding its way to Europe by more objectionable channels, "the shipping interest," then greatly predominant in the counsels of the company, violently opposed any alteration which should trench on their monopoly, and contrived, in many ways, to render Lord Wel-

lesley sensible of their unfriendly feelings. Nevertheless, his proffered resignation was deprecated by an entreaty to remain at least another year, to settle the newly-acquired territories, and concert with the home authorities the foundation of an efficient system for the liquidation of the Indian debt. The renewal of war with the Mahrattas, despite the brilliant success with which it was attended, could not but involve an increase of immediate expenditure, though compensated by a more than proportionate augmentation of territory. But the investments were impeded; and a failure in the annual supplies was ill borne by the company, however advantageous the promise of ulterior advantages; consequently, a clamour arose against the marquis as a war-governor, which decided his recall at the time when all material obstacles were removed, and his whole energies directed towards the attainment of a solid and durable peace. He had been sent out for the express purpose of eradicating French influence, an object which he had completely accomplished, though, of necessity, at the cost of much war and more diplomacy.*

The Wellesley administration—from 1798 to 1805—formed a new era in the annals of the E. I. Cy. Principles of honour and public spirit were engrafted which bore much fruit in after days; and many a friendless cadet of the civil and military service found in rapid promotion the direct reward of talent and integrity. Nay, more; there are honoured veterans still with us, who, after the lapse of half a century, delight to attribute their success to the generous encouragement or kindly warnings of the good and gifted Marquis Wellesley.†

Perfect toleration was his leading rule; nevertheless, he did not hesitate to interfere for the suppression of such heathen customs as were manifestly incompatible with the spirit of a Christian government; such as the frightful amount of infanticide annually committed at the mouth of the Ganges. Neither was he withheld, by timid or sectarian views, from affording liberal encouragement to the able and zealous men (Buchanan and Carey, for instance) who had devoted themselves to the office of Christian missionaries. To all around him engaged in the cause of religion or good government, he extended cordial sympathy as fellow-workers; and if a shadow of blame can be cast on his ever-discriminating praise, it would be that of having been sometimes too liberally bestowed. But the full measure of love and confidence he gave so freely, was returned into his own bosom. Military and civil officials, of all ranks and classes—from the Earl of Elgin, at Constantinople, and Lord Clive, at Madras, to the humblest clerk—vied in affording the fullest and most correct information for the use of the governor-general; and the merchants and bankers seconded his measures in the most effective manner by furnishing government loans on the lowest possible terms. At the close of the administration of Sir John Shore, it had been difficult to raise money on usurious interest; but the Marquis Wellesley, on the eve of a hazardous war, found men who could appreciate the policy of his measures, and make them practicable, even at considerable pecuniary risk.‡

The general feeling in India was, unhappily, not appreciated or shared in England. The marquis returned, after an arduous and brilliantly successful administration, to find the uncertain tide of popular feeling turned against him. The British public were well acquainted with the aggressive and grasping policy of Hastings, and the manner in which he had made the weakness or wickedness of native princes conduce to the aggrandisement of his employers or his own personal interest. It was a very natural conclusion to be arrived at by persons ignorant of the general disorganisation of India, that a governor who had added hun-

* Into his minor measures, especially the restrictions placed on the liberty of the press, it is not practicable to enter: the motives for some of them were purely political—to check the conveyance of dangerous information, or lying rumours to foreign states; while the edict forbidding the publication of newspapers on Sundays, had the double object of reverence for the sabbath and a desire to show the nations, that not only the missionaries, but the Europeans in general had a religion—a fact which might well have been doubted.

† The rising talent of the civil service was called out in a peculiar manner by Lord Wellesley. The youths of the three presidencies, who had distinguished themselves in their examinations at the college of Fort William, were placed in the secretary's office of the governor-general, and educated under his immediate care for the respective departments, for the duties of which they were best fitted. Of those thus brought forward, three (Metcalfe, Adams, and Butterworth Bayley) became acting governors-general; and the majority attained high positions in India and in England.

‡ Mr. (afterwards Sir Charles) Forbes, the head of the well-known firm at Bombay, was the chief of those who, by taking up government paper at par, as well as furnishing supplies, restored the confidence of the wealthy natives in the stability of the E. I. Cy.

dreds of miles and thousands of subjects to an empire, which Hastings had been stigmatised as an usurper and oppressor for increasing by units and tens, must have been guilty of the same sins in an aggravated degree. Besides, the augmentation of territory and population had been effected in the teeth of a parliamentary prohibition of the most decided character. The oldest and ablest Indian politicians vainly strove to show the utter impracticability of neutrality, and argued that England, now the dominant power, could not relinquish her high position in measure, but must, of necessity, abandon territorial sovereignty and commercial advantage in almost equal degree. The company were smarting beneath the expenses of a war, which a little patience would have brought to the most satisfactory conclusion, by the prostration of the predatory power, which was equally opposed to all regular governments, foreign or native. But no! an immediate compromise was the order of the day; the withdrawal of the plundering Mahrattas from the company's territories was a relief to be obtained upon any terms, even by a direct violation of the pledge voluntarily given to the Rajpoot states to maintain their independence against their marauding foes. What matter if all Rajast'han were overrun by these eastern Goths. The company's investments would go on meanwhile; and when Sindia and Holcar had quite exhausted all outside the magic circle, it would be time enough to devise some other sop wherewith to engage them. This selfish policy, disguised by the few who understood the real state of the case by much abstract reasoning regarding the admitted justice of non-interference in general, deceived many good men and raised a strong, though short-lived clamour, against the champion of the opposite system. The feeling of certain leaders in the directory, joined with party politics of a very discreditable description in the ministry, found a channel in the person of a *ci-devant* trader named Paull, who, having accumulated a large fortune in India, came to England and entered parliament in the character of impeacher of the Marquis Wellesley, to whom, by his own account, he owed heavy obligations, and entertained, in common with the generality of Anglo-Indians, "the highest respect." The leading accusations were aggressions on native states: extravagance and disregard of home authorities,—at peculation or venality, not even calumny dared hint. The first charge regarding Oude was thrown out by the House of Commons, and the accuser died by his own hand, prompted by vexation or remorse. Lord Folkstone strove to carry on the impeachment by moving a series of condemnatory resolutions, which were negatived by a majority of 182 to 31, and followed by a general vote of approbation. Thus ended, in May, 1808, a persecution which cost the noble marquis £30,000, and excluded him from office during its continuance; for, with rare delicacy, he refused repeated solicitations to re-enter the service of the Crown until the pending question should be satisfactorily settled. He lived to see the general recognition of the wisdom of his policy; and on the publication of his *Despatches* in 1834–'5, the E. I. Cy. made the *amende honorable*, by the unusual procedure of the erection of his statue in the E. I. House,* a grant of £20,000, and the circulation of his *Despatches* for the instruction and guidance of their servants in India. He died beloved and honoured, aged eighty-three; having twice filled the office of viceroy of Ireland —been secretary of state for foreign affairs; beside other distinguished positions. This is not the place to tell of the efficient manner in which the illustrious brothers worked together for the defeat of the national foe, Napoleon: here we have to do with the marquis as an Indian governor; in that character let the pen of the historian of the E. I. Cy. speak his merits. "The Marquis Wellesley was ambitious; but his ambition sought gratification not in mere personal aggrandisement, but in connecting his own fame with that of the land to which he belonged, and of the government which he administered,—in the diffusion of sound and liberal knowledge, and the extension of the means of happiness among millions of men who knew not his person, and some of them scarcely his name. That name is, however, stamped for ever on their history. The British government in India may pass away—its duration, as far as human means are concerned, will depend on the degree in which the policy of the Marquis Wellesley is maintained or abandoned—but whatever its fate, or the length of its existence, the name and memory of the greatest statesman by whom it was ever administered are imperishable."†

* Lord Wellesley remarked, that to witness this compliment (rarely paid until after death), was "like having a peep at one's own funeral."

† Thornton's *India*, iii., 575.

Second Administration of Lord Cornwallis.—The new governor arrived at Fort William in July, 1805, and immediately assumed the reins of office. The interval of thirteen years between his resignation and resumption of authority in India, had told heavily on his strength of mind as well as of body, and the once indefatigable commander-in-chief returned to the scene of his former successes a worn and weary man, fast sinking to the grave under the infliction of chronic dysentery. Yet the English authorities, in accordance with popular opinion, declared him to be the only man fit to curb and limit the too extensive dominion obtained by the late administration in conjunction with the gallant Lake, whose services, though their effects were denounced, had been acknowledged by a peerage.

Lord Cornwallis had given proof of moderation by suffering Tippoo to purchase peace with a third of his revenues, and had rather relaxed than straitened the connexion of the E. I. Cy. with various native states. Despite the unsatisfactory results of his arrangements, and still more so of those formed by Sir John Shore, the Directory and Board of Control agreed in reverting to the non-intervention system, and urged the arduous office of effecting an immediate and total change of policy upon the ex-governor-general with so much vehemence, that he, from self-denying but mistaken views of duty, would not suffer failing health to excuse the non-fulfilment of what, with strange infatuation, was pressed on him as a public duty. It is not easy to understand the process of reasoning by which Lord Cornwallis was led to adopt such extreme opinions regarding the measures to be taken towards Sindia and Holcar. He had warmly approved the arrangements of the Marquis Wellesley regarding the occupation of Seringapatam and the complete suppression of the usurping dynasty; yet, now the arrogant and aggressive Sindia, and the predatory Holcar were to be conciliated, not simply by the surrender of a succession of dearly-purchased conquests, but by the renunciation of alliance with the Rajpoot and other states, who had taken part with the British forces against the marauding Mahrattas in the late crisis.

Sindia had suffered, if not caused, the English residency attached to his camp to be attacked and plundered by a body of Pindarries, and had himself detained Mr. Jenkins; yet no reparation was to be demanded for this outrage: and the governor-general, in his impatient desire to conclude a peace, would even have waived insisting upon the release of the resident; but from this last degrading concession the English were happily saved by the intervention of Lord Lake. Nothing could exceed the indignation of the brave and honest general on learning the nature of the proposed treaty, which he felt to be based on the unworthy principle of conciliating the strong at the expense of the weak. The territories conquered from Holcar had been distinctly promised to be divided among the allies of England; instead of which, they were all to be restored to the defeated chief; and the breach of faith thus committed towards the only power able to resent it, was to be repaired at the expense of the powerless rana of Gohud, who had made over Gwalior to the English on being enrolled among the list of subsidiary princes. He was now to be reduced to the condition of a mere stipendiary, dependent on his hereditary foe for subsistence; for all Gohud, including Gwalior, was to be given to propitiate the favour of Sindia—"an act," writes the governor-general, "entirely gratuitous on our part." Equally so was the renunciation of our connexion with the numerous rajahs, zemindars, jaghiredars, and other chiefs on the further side of the Jumna, for whose protection the British faith had been solemnly pledged. Lord Lake, who had been mainly instrumental in forming the majority of these alliances, and had, in his capacity of commander-in-chief, received material assistance from several of the parties concerned, addressed an earnest remonstrance to the governor-general against the proposed repudiation, declaring that the weaker allied princes never could be induced by any argument or temporary advantage to renounce the promised support of the E. I. Cy., and that the bare proposition would be viewed "as a prelude to their being sacrificed to the object of obtaining a peace with the Mahrattas." This communication bore date the day following that on which Lord Cornwallis expired. For some time before his death, he passed the morning hours in a state of weakness amounting to insensibility; but the evening usually brought him sufficient strength to hear despatches read, and even to dictate replies. Had the energetic appeal and arguments of Lake been sent a few days earlier, they might perhaps have been instrumental in delaying and modifying the

ungenerous and selfish measures which cost England so dearly in character and blood and treasure, by strengthening the predatory power it was alike her duty and her interest to abase. It is hardly possible that the man who steadily befriended the rajah of Coorg, even at the hazard of renewing a perilous war with Tippoo, could seriously intend to abandon the Rajpoot and other princes to the shameless marauders against whom they had recently co-operated with the English, unless prejudice and ignorance, aided by mental debility, had blinded him to the plain facts of the case. But whatever effect the honest exposition of Lake was calculated to produce on the mind of Lord Cornwallis, can be only surmised from his habitual conscientiousness. He had been extremely desirous of personally superintending the progress of the negotiations, and hoped by short and easy stages to reach headquarters; but at Ghazipoor near Benares, an accession of weakness stopped his journey, and after lingering some time in the state previously described, he died there October 5th, 1805, aged sixty-six years.

No provision had been made by the home government to meet this highly probable event.* Sir George Barlow, the senior member of council, on whom the chief authority temporarily devolved, had been associated with Lord Wellesley throughout his whole administration, and cordially seconded his lordship's views regarding subsidiary alliances. During the last illness of Lord Cornwallis, while hourly expecting his own accession to power, Sir George had expressed in writing "his confident hope that an accommodation would be effected with Sindia and with Holcar, on terms not differing essentially from those to which he was aware that Lord Wellesley was prepared to accede." Most certainly his lordship would never have consented to an accommodation which involved a direct breach of faith with numerous weak states. Sir George must have known this; but his conduct was in perfect accordance with the principle which enabled a certain well-known individual "to live and die vicar of Bray." The result was, however, less satisfactory; for though the E. I. directors were inclined to reward implicit obedience to their mandates with the highest position in their gift, the ministers of the crown were not equally compliant; and although they also were desirous of purchasing peace on any terms, the recent appointment was neutralised, and a rule laid down that thenceforth no servant of the company should fill the office of governor-general. Sir George was placed in charge of Madras; but before his removal from Calcutta he had contrived to neutralise, as far as possible, the effects of the measures which he had assisted in enacting; his avowed expectation being that the native states, when left to themselves, would forthwith engage in a series of conflicts which would, for the present at least, keep them fully employed, and prevent the renewal of hostilities with the English. Sindia† and Holcar received the proffered concessions with unmixed astonishment at the timidity or vacillation of their lately dreaded foe. The Rajpoot and other princes indignantly remonstrated against the renunciation of an alliance pressed upon them by the British government in her hour of need. The rajah of Jeypoor, who had especially provoked the vengeance of the Mahrattas, felt deeply aggrieved by the faithlessness with which he was treated, and his bitter reproaches were conveyed to Lord Lake through the mouth of a Rajpoot agent at Delhi. Disgusted at being made the instrument of measures which he denounced, and at the almost‡ total disregard manifested towards his representations, Lord Lake resigned his diplomatic powers in January, 1806, and after about twelve months spent in completing various necessary arrangements regarding the forces, and settling, agreeably to the instructions of the government, the claims of various native chiefs, he quitted India, leaving behind him a name that will be honoured and beloved so long as the Indian army shall subsist.§ He died in England, 21st February, 1808, aged 64.

* Lord Grenville publicly stated, that it had been generally supposed in London that Lord Cornwallis would not bear the voyage; and, in any case, could not long survive his arrival in India.—(Thornton.)

† One of the few concessions demanded from Sindia was the exclusion from office of his father-in-law; but even this was eventually renounced, and Shirzee Rao became again paramount. Happily his audacity at length grew offensive to Sindia, and an altercation took place which enabled the attendants, under pretence of securing the person, to take the life of a miscreant whose memory is still execrated in Poona for the cruel oppression practised there.

‡ Lord Lake was so far successful, that his representations against the immediate danger, as well as faithlessness, of dissolving the alliance with the rajahs of Macherri and Bhurtpoor, induced Sir George to delay the execution of a determination which he nevertheless declared to be unchanged.

§ Major-general Wellesley, after receiving a

Little difference of opinion now exists regarding the accommodation effected with the Mahrattas. The non-intervention policy was soon abandoned; but its results justify the declaration of Grant Duff, that the measures of Sir George Barlow were no less short-sighted and contracted than selfish and indiscriminating. His provisional administration terminated in July, 1807,* its concluding event being an alarming mutiny among the native troops in the Carnatic. The immediate cause was the enforcement of certain frivolous changes of dress, together with other orders trivial in character, but involving a needless interference with the manners and customs of the soldiery, which had been introduced without the knowledge of Lord William Bentinck, the successor of Lord Clive in the government of Madras. "The new regulations required the sepoys to appear on parade with their chins clean shaved, and the hair on the upper lip cut after the same pattern, and never to wear the distinguishing mark of caste, or their earrings when in uniform. A turban of a new pattern was also ordered for the sepoys."†

These ill-advised changes might possibly have been accomplished without occasioning any serious disturbance, had a cordial understanding subsisted between the British and the native officers. But this was not the case; and the consequence of the alienation existing between them was, that the sons of Tippoo Sultan, then resident at Vellore, took advantage of the princely income and unusual degree of liberty allowed them as state prisoners, to assemble a large band of adherents, who made it their business to inspire the soldiery with aversion to their foreign masters, on the ground that the newly-devised turban, and its concomitants, though ostensibly ordered for the sake of convenience and unanimity, were really the tokens and forerunners of a forcible conversion to Christianity. The assertion was an utter absurdity. The Hindoos themselves, whose creed makes no provision for converts, were scarcely more devoid of proselytising zeal than the English had shown themselves, despite the opposite tendency of a religion which directs its professors "to preach the gospel to all nations." The military officers had, as a body (for there were exceptions), no need to defend themselves against any imputation of over-anxiety to manifest the excellencies of their faith in their lives and conversation, or by any encouragement of missionary labours. Of Christianity the natives in the vicinity of Vellore knew nothing, and were consequently ready to believe just anything, except that its divine Founder had enjoined on all his disciples a code so fraught with humility, chastity, and brotherly kindness, that if observed it must infallibly render Christians a blessing to every state, whether as rulers or as subjects.

Rumours of the growing disaffection were abroad, but excited little attention in the ears of those most concerned. Unmistakable symptoms of mutiny appeared, and were forcibly‡ put down, until, on the 10th of July, 1806, the European part of the Vellore garrison were attacked by their native colleagues, and Colonel Fancourt and 112 Europeans had perished or been mortally wounded, before Colonel Gillespie, at the head of a body of dragoons, terminated a contest which involved the destruction of about 350 of the mutineers, and the imprisonment of 500 more. Lord William Bentinck became the sacrifice of measures adopted without his sanction, and was recalled, together with the commander-in-chief, Sir John Cradock. The obnoxious orders were repealed, the allowances of the sons of Tippoo were diminished, their place of imprisonment changed from Vellore to Bengal; and, by slow degrees, the panic wore off. The captive insurgents were gradually set at liberty; the cheerful obedience of the men, and their customary fidelity to those whose salt they ate, returned; and the British officers "ceased to sleep with pistols under their pillows."§

knighthood of the Order of the Bath, quitted India in 1805, ill-pleased with the manner in which the services of his brother and himself were received.

* Mill's *History of British India* terminates with the peace with the Mahrattas. In an able, but prejudiced, and without the comments of Prof. Wilson, misleading summary of the commercial results of the Wellesley administration, the revenues are shown to have been raised from £8,059,880, in 1805'–6, to £15,403,409; but the war expenditure, with the interest on the increased debt, which had been tripled, caused the annual charges to exceed the receipts by above two million. This was a temporary addition, but the revenues of the conquered territories were a permanent gain, viewed as so certain, that Barlow held forth the prospect of a million sterling as the annual surplus, to follow immediately on the restoration of peace.

† Auber's *India*, ii., 432.

‡ The severe coercion employed may be conjectured from the fact that 900 lashes each were inflicted upon two grenadiers for refusing to wear the "hat-shaped" turban.

§ Bentinck's *Memorial.*

ADMINISTRATION OF LORD MINTO—1806 to 1813.—The new governor-general (formerly Sir Gilbert Elliot) came to India strongly prepossessed in favour of a neutral policy, but was speedily compelled to modify his views.

Holcar, on his return to Malwa, found occupation in quelling the disturbances arising from the non-payment of arrears to his turbulent followers, who made use of the boy, Kundee Rao, to intimidate his uncle into the liquidation of their claims. The object being accomplished, the child became, as he had himself predicted, the victim of the wrath of Jeswunt Rao; and Casee Rao died suddenly soon after, having been likewise, it was supposed, assassinated to prevent the possibility of the rights of any legitimate descendant of Tukajee being brought into collision with those of Jeswunt Rao. These and other atrocities were the fore-runners of madness, which appeared in temporary paroxysms, with intervals of partial sanity, employed by Jeswunt in making extensive military preparations, especially in casting cannon, a work which he superintended night and day, using stimulants to supply the place of food and rest. It soon became necessary to confine him; and twenty to thirty men with difficulty succeeded in binding the despot fast with ropes, like a wild beast. His fierce struggles gradually subsided into speechless fatuity, and, at the expiration of three years, during the greater part of which he was fed like an infant with milk, the dreaded freebooter died a miserable idiot in his own camp, on the 20th of October, 1811.* Before his insanity, Holcar had taken advantage of the withdrawal of British protection to ravage and pillage the states of Rajast'han, especially Jeypoor or Amber, under the old pretext of exacting arrears of chout. The quarrels of the Rajpoot princes gave full scope for his treacherous interference. The hand of Crishna Kumari, the high-born daughter of the rana of Oodipoor, was an object of dispute between Juggut Sing of Jeypoor, and Maun Sing of Joudpoor. Holcar was bought off by Juggut Sing, but this arrangement did not prevent him from suffering his general, Ameer Khan, to hire his services to the opposite party. The chief commenced his task by ridding the rajah of Joudpoor of a rebellious feudatory, named Sevaee Sing, whom he deluded, by oaths and protestations of friendship, into visiting his camp. The intended victim entered the spacious tent of the Patan with a body of friends and attendants, and was received with every demonstration of respect. Ameer Khan invented a plausible pretext for a short absence, and caused the cords of the tent to be suddenly loosened; then, taking advantage of the confusion, he ordered a sharp fire of musketry and grape to be poured indiscriminately on the whole of the crowded assembly. The massacre was complete; and not only the companions of the betrayed Rajpoot, but those of Ameer Khan himself, with a party of dancing-girls and musicians, were mercilessly sacrificed. The rana of Oodipoor was seriously alarmed by the enmity of so unprincipled an adversary. He vainly appealed to the British government, as possessing the paramount authority in India, to interfere for the protection of their oppressed neighbour: his entreaties, like those of Zalim Sing, were disregarded, and the proud representative of the Surya race (the offspring of the sun) was compelled to fraternise with the infamous Patan adventurer by the exchange of turbans, as well as to subsidise his troops at the cost of a fourth of the revenues of the principality. This was in itself deep abasement, but worse remained behind. Ameer Khan, in conjunction with Ajeet Sing, a Rajpoot noble, whose memory is, for his conduct on this occasion, execrated throughout Rajast'han, succeeded in convincing the unhappy rana, that the death of his child was absolutely necessary to save the principality from destruction at the hands of the rival suitors. With his consent, poison was mixed with the food of the princess; but she ate sparingly, and its murderous purpose was not accomplished. The high-spirited girl, on discovering the design thus temporarily frustrated, bade her father attempt no more concealment, since, if his welfare and the safety of the state required it, she was ready to die by her own act. Accordingly, having bathed and dressed, as if for a nuptial feast, she drank off the poison. The first two draughts proved harmless, for nature revolted, and the noxious beverage was rejected; but the third time a more insidious preparation was administered, and Crishna

* Holcar was of middle height, remarkably strong and active. A small but handsome mausoleum was erected to his memory near Rampoora, and his favourite horse ranged in freedom around it. Tod describes this animal with enthusiasm, as the very model of a Mahratta charger, with small and pointed ears, full protruding eyes, and a mouth that could drink out of a tea-cup.—(*Rajast'han*, ii., 720.)

slept to wake no more in this life. Her mother died of grief; her father survived to endure the galling reproaches of some of his most faithful chiefs; and Oodipoor, so far from benefiting by the unnatural crime, lost from that hour its remaining glories.*

Ameer Khan, elated by success, grew more daring in his plans; and, attended by large bodies of Pindarries, undertook, in 1809, an expedition against the indolent and effeminate rajah of Berar. Lord Minto became alarmed by the probable subversion of the principality, and, departing from the non-intervention policy, sent a strong detachment for the defence of Nagpoor, and notified to the invader that the territories of the rajah were under British protection. A blustering and defiant reply was returned, upon which Colonel Close marched into Malwa, and occupied Seronje, the capital of Ameer Khan, with other of his possessions. The strict commands of the home authorities, together with considerations of finance, prevented the governor-general from following up these vigorous measures by the complete overthrow of "one of the most notorious villains India ever produced;"† and the immediate safety of Berar having been secured, Ameer Khan was suffered to escape with undiminished powers of mischief. Before the close of his administration, Lord Minto had reason to repent this mistaken lenity. Berar was again invaded, and one quarter of the capital burnt by the Patan and Pindarry freebooters, a party of whom proceeded to set at nought British authority, by an irruption into the fertile province of Mirzapoor. The advisability of reverting to the bold and generous policy of the Marquis Wellesley became evident; and Lord Minto, whose term of office had nearly expired, urged upon the directors the necessity of vigorous measures. Indeed, the leading acts of Lord Minto himself were neither of a strictly defensive nor neutral character. Sir George Barlow's withdrawal of protection from the petty chiefs south of the Sutlej, had tempted a neighbouring potentate, with whom the company had heretofore no connexion, to extend his conquests in that direction. The leader in question was the famous Runjeet Sing, rajah of Lahore, a Seik chief of Jat descent. To prevent further aggression, the minor Seik powers menaced by him were declared under British supremacy, and a strong force assembled for their defence. Runjeet Sing, unwilling to provoke a contest, concluded a treaty with the company, by which he consented never to maintain a larger body of troops on the left bank of the Sutlej than was needful to support his authority already established in that quarter. As a further guarantee for his good faith, a detachment, under Sir David Ochterlony,‡ took up a permanent station at Loodiana, on the eastern side of the river.

The multiplied aggressions of France on the vessels of the E. I. Cy., and the fear of attempts to regain a territorial position in India, induced the dispatch of embassies to Persia§ and Cabool, for the sake of forming a more intimate alliance with those kingdoms. The Mauritius, Bourbon, and the Moluccas were captured by the British in 1810; and Java, with its dependencies, was conquered by Lord Minto, in person,|| in 1811. Of these valuable acquisitions, Bourbon, the beautiful island of Java, and the Moluccas, were relinquished at the general pacification in 1815.

Some few remaining incidents of importance, which occurred in the time of Lord Minto, remain to be chronicled. The first of these is the death of the aged emperor Shah Alum, in 1806, aged eighty-

* Malcolm's *Central India*, i., 340. Tod's *Rajast'han*, i., 466. Malcolm states, that the circumstances attending the death of the princess excited loud and bitter wailing throughout the city of Oodipoor. An aged chief, named Sugwan Sing, having heard of the intended sacrifice, mounted his horse and rode with breathless haste to the palace, He found the rana and his counsellors seated in solemn silence; and to his impetuous inquiry, whether Crishna were alive or dead, Ajeet Sing, the instigator of the tragedy, replied by an injunction to respect the affliction of a bereaved parent. Sugwan Sing unbuckled his sword and shield, and laid them at the feet of the rana, saying, "my ancestors have served yours for more than thirty generations, but these arms can never more be used on your behalf;" then turning to Ajeet Sing, he reproached him with having brought ignominy on the Rajpoot name, adding, as he quitted the assembly, "May the curse of a father light upon you—may you die childless." The malediction excited considerable attention, and the successive deaths of all the children of the guilty noble, were viewed as its fulfilment.

† Tod's *Rajast'han*, i., 468.

‡ Sir David Ochterlony and Runjeet Sing, like Holcar and Zalim Sing, were both one-eyed men.

§ Sir John Malcolm was sent to Persia by E. I. Cy.; Sir Harford Jones and Sir G. Ouseley, by the Crown.

|| Lord Minto had been compelled to visit Madras in 1809, in consequence of the strong dissatisfaction which prevailed among the European officers, arising from reduced allowances; but greatly aggravated by the dogged and tyrannical proceedings of the governor, Sir George Barlow. By a judicious blending of firmness and conciliation, Lord Minto succeeded in allaying an alarming tumult.

three. He was succeeded in his titular authority by his eldest son, Akber Shah, who made some feeble attempts at the acquisition of real power, but soon renounced the futile endeavour. The exertions of the Travancore authorities in 1809, to throw off the yoke of the E. I. Cy., involved some destruction of life, but terminated in the principality becoming completely dependent on Fort St. George. The tribute exacted from Cochin was also largely increased.

The last feature was an impending rupture with the Goorkas, a tribe who had come into notice about the middle of the eighteenth century, and had gradually assumed a dominant influence over the whole of the extensive valley of Nepaul. During the second administration of Lord Cornwallis, they had completed the attainment of territory (less by violence than by fraud and corruption) which presented, on the side of the English, a frontier of 700 miles. Disputes had arisen between the Goorkas and certain chiefs, who, through the cessions made by the vizier of Oude, or other arrangements, had become British feudatories. The so-called pacific policy of Lord Wellesley's successors had emboldened aggression in all quarters; and the seizure of Bhootwal (a border district of the ancient viceroyalty of Oude) was followed by renewed invasion; until, in 1813, a new turn was given to affairs by the demand of the English authorities for the immediate surrender of the usurped territories. Before an answer could arrive from the court of Nepaul, the reins of government passed from the hands of Lord Minto, who returned to England, where he died (June, 1814), aged sixty-five. He was an able and energetic man; and the removal of his prejudices paved the way for a similar change of feeling on the part of his countrymen.*

Moira, or Hastings' Administration, 1813 to 1823.—Lord Moira reached Calcutta in October, and, in the following month, received the tardy reply of the Goorkalese sovereign to the demand of Lord Minto for the evacuation of Bhootwal and Sheoraj. It was complimentary in manner, but uncompromising in substance. There were many reasons for avoiding immediate hostilities in this quarter, and attempts were made to settle the question by amicable negotiation; but the persistance of the commissioners from Nepaul in reviving points previously settled, being at length silenced by a positive refusal to enter on such discussions, the British agent was warned to quit the frontier; and the envoys were recalled to Katmandoo, the capital of Nepaul. Lord Moira was too anxious to avert a frontier war, to give place to hasty resentment; and he addressed a remonstrance to the Nepaulese government regarding the insulting manner in which the late negotiation had been broken off. No answer being returned to this communication, a detachment was sent from Goruckpoor to occupy the disputed lands, an object which was effected without opposition. The British troops placed the direction of affairs in the hands of native officials, and withdrew, congratulating themselves on the easy fulfilment of an unpromising task.

The position of the northern mountaineers was but very imperfectly understood by the Calcutta functionaries, who now wielded the sceptre of the Mogul. During the palmy days of the empire, while the reins of government were held by too firm a hand for servants to appropriate to themselves the delegated sway of the sovereign, the plains at the foot of the mountains, between the river Teesta on the east and the Sutlej on the west, had been possessed by numerous petty Hindoo rajahs, who became tributary to the emperor, and received, in return, protection from the aggressions of the lawless hill-chiefs, most of whom maintained their independence, though some were content to own a sort of vassalage to the empire, in return for the possession of a portion of the magnificent forest of *Sál* trees, and of the rich plain called the *Turaee*, lying between them and Hindoostan. The old highland rajahs, whose families had warred with their lowland countrymen from time immemorial, held their own during the continuance and after the decline of Mohammedan power, until one of themselves, an aspiring chief, named Prithi Narayan Sah,† rajah of the small state of Goorka, to the north-west of Nepaul, incited by the early victories of the English in Bengal, armed and disciplined a body of troops after the European fashion, and proceeded to absorb the surrounding states, in a manner described as closely

* In 1813, an attempt to impose a house-tax occasioned great excitement in the holy city of Benares: the people practised a singularly combined, and eventually successful system, of passive resistance.

† According to Col. Kirkpatrick, the Goorka dynasty claim descent from the ranas of Oodipoor. Hamilton states, they belong to the Magar tribe, which has but very partially yielded to Brahminism.

resembling that which had rendered the nation he imitated masters of India. The nabob of Moorshedabad, Meer Cossim Ali, attempted to interfere on behalf of some of the weaker chiefs in 1762-'3, but sustained a signal defeat; and an expedition sent by the Bengal government, in 1767, to succour the rajah of Nepaul, proved equally unsuccessful. Prithi Narayan died in 1771, but his successors carried on the same scheme of conquest, crossed the Gogra river, seized Kumaon, and even strove to gain possession of the rich valley of Cashmere. The lowland rajahs, when transferred by the cession of the vizier of Oude from Mussulman to British rule, were suffered to retain undisturbed possession of their territories on payment of a fixed land-tax. The Goorkalese, on the contrary, as each hill-chieftain was successively vanquished, exterminated the family, and, with the conquered possessions, took up the claims and contests of their former lords, and were thus brought in contact with numerous rajahs and zemindars, actually occupying the position of British subjects. The complaints laid before the supreme government by these persons were generally but lightly regarded; and, unless under very peculiar circumstances, the Goorkalese were treated as good neighbours, whom it was desirable to conciliate. Under a strong government at Calcutta, outrages on the frontier were of comparatively rare occurrence, and, when firmly demanded, reparation was usually made; but the unfortunate measures of Sir George Barlow incited aggressions which were not to be so easily checked as heretofore. The rajah (a prince with a long string of names, differently given by different authorities)* was a minor. The chief authority rested in the hands of a military aristocracy, headed by a powerful family called Thappa, of whom one member, Bheem Sein, exercised the office of prime minister, with the title of general, while his brother, Umur Sing, held command of the army. The expediency of war with the English was much canvassed by the Goorkalese chiefs. The decision arrived at was, that their native fastnesses would always afford an invulnerable position, and by issuing thence on predatory incursions, a state of hostility could be made more advantageous, than peace purchased at the sacrifice of their favourite system of encroachment. The British, on their part, viewed the approaching struggle with little apprehension. The Bengal officers, especially, made sure of victory. From the days of Clive to those of Lake, with scarcely an exception, they had but to take the field and march straight against the enemy, to ensure his precipitate flight. The uncontested occupation of Bhootwal and Sheoraj, seemed the natural effect of their military reputation, and considerable surprise was excited by tidings that the Goorkalese had set them at defiance, by taking advantage of the withdrawal of the troops to surround the three police-stations in Bhootwal, where after killing and wounding twenty-four of the defenders, the superior local officer of the British had been murdered in a very barbarous manner. The governor-general demanded from the court of Katmandoo the disavowal of any share in this outrage, and the punishment of its perpetrators; but received a menacing reply, which precluded further hope of an amicable arrangement, and occasioned the issue of a declaration of war by Lord Moira in November, 1814.

The army destined for the invasion of the enemy's frontier, formed four divisions, of which the first, under Major-general Marley, comprised 8,000 men, and was intended to march against Katmandoo. The other three divisions, under Maj.-generals Wood, Gillespie, and Ochterlony (4,500, 3,500, and 6,000 strong), were directed to attack different portions of the hostile frontier; besides which, Major Latter was furnished with a body of 2,700 men for the defence of the Purneah frontier, to the eastward of the Coosy river.† The campaign opened with the siege of the petty fortress of Kalunga or Nalapanee, situated on an insulated hill, a few miles from Dehra, the chief town in the Doon (or valley.) The garrison consisted of about 600 men, headed by a nephew of Umur Sing. The English expected to carry the place by storm according to custom, and the gallant Rollo Gillespie, with fatal impetuosity, led an assault, in which, while waving his hat to cheer the troops, he was shot through the heart. The siege was discontinued pending the arrival of a battering train from Delhi;

* Styled by Fraser, Jirban Joodeber Bheem Sah; by Prinsep, Maharajah Kurman Jodh Bikram Sah Bahadur Shumsheer Jung. His father was assassinated by his own brother in full durbar, in 1805. The fratricide was slain in the ensuing barbarous affray, in which most of the chief nobles perished, and the royal family was nearly extinguished. The present rajah (then an infant) was secreted in the zenana.

† Major (now General) Latter rendered good service by his negotiations with the rajah of Sikkim (a hill state east of Nepaul), and his small detachment "accomplished more than it was destined to attempt."

but even when a breach had been effected, the soldiers, dispirited by their former repulse, could not be induced to advance. It was not until the assailants had sustained a loss, in killed and wounded, considerably beyond the entire number of the garrison, that measures were taken to shell the fort, and cut off the supply of water obtained without the walls. The besieged were compelled to evacuate the place on the 30th November, 1814. The conquerors found in the mangled bodies of hundreds of men and women, dead or dying of wounds and thirst, fearful evidence of the determination of the foe with whom they had now to deal. This inauspicious commencement seems to have inspired three out of four of the leaders of the British army (including Martindell, the successor of Gillespie) with a degree of timidity and distrust, which can scarcely be disguised beneath the name of prudence; and General Marley was struck off the staff for neglect and incompetency. General Ochterlony displayed a quickness and energy which, combined with discretion, enabled him to cope with difficulties of a new and unexpected order, and, although opposed by Umur Sing in person, to obtain triumphs to counterbalance the disasters which attended the other divisions. He had formed from the first a just estimate of the character of the enemy, whom he met with their own weapons, especially by the erection of stockaded posts, before unknown in Anglo-Indian warfare. The opening movements of the English veteran were cautious and laborious. The making of roads, and diplomatic proceedings with wavering chiefs, occupied much time before his masterly policy could be developed; but its effects were manifested by the reduction of the Ramgurh and other forts, and by the withdrawal of Umur Sing, with his entire force, to the strong position of Maloun. The stone fort thus named, and that of Soorajgurh, formed the extremities of a line of fortified posts, erected on a lofty and difficult ridge projecting into the Sutlej. Of the intervening peaks, all were occupied by stockades except Ryla peak and Deothul. Of these two, Ochterlony, on his approach, succeeded in obtaining possession; the first without difficulty, the second after a sanguinary conflict on the 15th April, 1815. Bhukti Thappa, a famous leader, above seventy years of age, who commanded at Soorajgurh, represented to Umur Sing the necessity of dislodging the British from Deothul; and on the morning of the 16th, an attack was made by the flower of the Goorkalese army on all accessible sides.* Happily, the previous night had been spent in throwing up defences in expectation of a renewed struggle. The enemy came on with such furious intrepidity, that several men were bayoneted or cut to pieces within the works; and their fire was directed so effectively against the artillerymen, that at one time three officers and one bombardier alone remained to serve the guns. A reinforcement, with ammunition from Ryla peak, arrived at a critical moment, and the British, after acting for two hours on the defensive, became in turn assailants; Bhukti was slain, his followers put to flight, and a complete victory obtained, at the cost of 213 killed and wounded. The enemy left about 500 men on the ground before Deothul. The event afforded a great triumph to the native troops, by whom it was almost wholly achieved. It was followed by the evacuation of Soorajgurh, and the concentration of the hostile force in Maloun, against which place a battery was raised by the end of the first week in May.

In the meantime, the governor-general had been actively employed in initiating a series of spirited operations on the side of Rohilcund. While visiting the north-western provinces, he had learned that the inhabitants of Kumaon were held in rigorous subjection by the Goorkalese, who frequently seized and sold their wives and children to enforce the most arbitrary exactions. To supply the place of regular troops, levies were made from the warlike Patans of Rohilcund, under the auspices of two commanders (Gardner and Hearsey), who had come over from Sindia at the time of the Mahratta war. The corps organised by Major Hearsey was dispersed by the enemy, and its leader made prisoner; but Lieutenant Gardner succeeded in making his way into the heart of the province of Kumaon, and took up a position in sight of Almora, the capital, where a force of regular infantry and artillery, under Colonel Nicholls, joined him in

* The Goorkalese displayed throughout the campaign an unexpected amount of chivalry, and exhibited, in many ways, their confidence in the good faith of the British. After the battle of Deothul, they asked for the body of Bhukti Sing, whose loss they loudly bemoaned, declaring that the blade of their sword was broken. Ochterlony complied with the request, and sent the gory corpse, wrapped in rich shawls, in acknowledgment of the bravery of the fallen chief. His two widows sacrificed themselves on the funeral pile next day, in compliance with his injunction.—(H. T. Prinsep's *Trans. in India*, i., 170.)

the middle of April. The Setolee heights, distant from the fort about seventy yards, were gained after a severe contest; and the governor, thus closely menaced, and straitened for want of supplies, signed terms of surrender for the whole province, and for the retirement of the Goorkalese troops to the east of the Kalee river—articles which were duly executed.

Tidings of the fall of Almora facilitated the conquest of Maroun. The dispirited Goorkalese entreated Umur Sing to make terms for himself and his son Runjoor, whom General Martindell had ineffectually besieged in the fort of Jythuk. The old chief refused, declaring, that the rainy season, now close at hand, would compel the British to withdraw; and he used the most severe coercion to retain the allegiance of the troops. But in vain: the majority of both officers and men came over to the British camp as prisoners of war; and Umur Sing, with but 250 remaining adherents, beheld the batteries ready to open upon the walls of Maloun. Convinced of the hopelessness of prolonged resistance, the proud chief resigned his last stronghold, together with all the territory from Kumaon westward to the Sutlej, including, of course, Jythuk. Thus a campaign which, in January, promised nothing but disaster, terminated in May with the conquest of the whole hilly tract from the Gogra to the Sutlej, a country hitherto deemed impenetrable to Europeans. The triumph was, in fact, mainly due to native troops; of whom, with the exception of a few artillerymen, Ochterlony's division was exclusively composed. It is important to add, that this force was extremely well officered, and that its operations were materially facilitated by the ability of the field engineer, Lieutenant Lawtie, who died, aged twenty-four, of fever, brought on by excessive fatigue and exposure endured before Maloun.*

Ochterlony received a baronetcy, and a pension of £1,000 a-year in acknowledgment of his services. The governor-general was rewarded by a step in the peerage, being created Marquis of Hastings. Various important arrangements attended the conclusion, or rather interruption, of hostilities. Many of the Goorkalese entered the British service, and were formed into what were termed the *Nuseeree* battalions; a provincial corps was also raised for civil duties in Kumaon, which now became a British province. The Doon was retained, and ultimately annexed to the Seharanpoor district. The remaining hill country was restored to the several chiefs from whom it had been wrested by Umur Sing, with the exception of a few military posts; and the whole territory was declared under British protection.

The Katmandoo government was not, however, yet sufficiently humbled to accept the terms of peace offered by Lord Hastings. Umur Sing and his sons strenuously advocated the renewal of war, in preference to suffering a British resident and military establishment to be stationed at the capital. Another object of dispute was the fertile but insalubrious Turaee and the adjacent Sâl (*shorea robusta*) forest, of which, according to a Goorkalese saying, "every tree is a mine of gold."† The proposed treaty was therefore rejected, and Sir David Ochterlony again took the field in January, 1816, at the head of nearly 17,000 effective men, including three European regiments. All the known passes through the first range of hills had been carefully fortified by the enemy; but, happily, a route was discovered through a deep and narrow ravine, by which the Cherea heights were gained without resistance, and the position of the Goorkalese completely turned. The British general marched on to the beautiful valley of the Raptee, and was moving up to Mukwanpoor, when a skirmish of posts paved the way to a general action, in which he obtained a signal victory; whereupon the royal red seal was hastily affixed to the rejected treaty of Segoulee, and a duly qualified envoy presented it on his knees at the durbar of General Ochterlony, in presence of all the vakeels in the camp.

By a politic concession, a part of the Turaee was surrendered to the Nepaulese. The portion skirting the Oude dominions was retained, and, together with Khyreegurh, a pergunnah of Rohilcund, was made over to Ghazi-oo-deen, in payment of a second loan of a crore of rupees obtained from him during the war, and furnished out of the hoards of his father, Sadut Ali, the late nabob-vizier, who died in 1814.

During the Goorkalese war, indications

* General Ochterlony deeply lamented his brave coadjutor. The whole army went into mourning, and afterwards erected a monument to the memory of Lieut. Lawtie in the cathedral church of Calcutta.

† The timber is used in ship-building, though far inferior to the teak of Malabar and of the Burman empire. The elephant, rhinoceros, and buffalo abound in the forest, and ravage the plain.

of a desire to take advantage of any symptom of weakness in the British government were not wanting on the part of Sindia, or even of the peishwa, who now began to think himself strong enough to stand alone, and was well inclined to kick aside the ladder by which he had risen to fortune. The triumphant conclusion of the late hostilities checked the development of these feelings, and left Lord Hastings at liberty to direct his chief attention to the suppression of the predatory bands of Pindarries and Patans, who had arisen, "like masses of putrefaction, out of the corruption of weak and expiring states."* The chief difference between them was, that the Patans were military mercenaries, associated for the purpose of invading or plundering such states as they could overpower or intimidate; while the Pindarries were cowardly and desperate banditti, whose object was universal rapine. Against both these descriptions of marauders the English authorities were compelled to be continually on the alert. The most effectual defensive measure was considered to be the establishment of subsidiary troops in Berar. The death of Ragojee Bhonslay appeared likely to facilitate this arrangement; for his only son Pursajee, being paralysed and an idiot, the nephew of the late rajah Moodajee, commonly called Appa Sahib, assumed the regency; and the better to establish his ascendancy, sought the recognition of the English at the cost of entering upon the defensive alliance which they particularly desired. Appa Sahib was, at heart, decidedly opposed to the establishment of foreign influence at Nagpoor, and no sooner felt himself firmly seated on the *gadi*, than he sought the means of recovering the purchase-money of his position by entering into negotiations with the court of Poona, then the nucleus of a powerful confederacy forming against the English—a proceeding which he accompanied by the precaution of causing his young and afflicted ward to be strangled in the night of February 1st, 1817.

Before this event, the incursions of the Pindarries had alarmingly increased, and in 1816 they remained twelve days within the British frontier, during which time they were ascertained to have plundered 339 villages, put 182 persons to a cruel death, severely wounded 505, and subjected 3,603 others to different kinds of torture.† The losses sustained by individuals at Guntoor (in the Northern Circars) and elsewhere, were estimated at about £100,000 sterling. The peishwa, Sindia, and the divided authorities on whom the management of the Holcar principality had devolved, affected to desire the suppression of these enormities; but as it was notorious they favoured the perpetrators, it became necessary to take steps against such deceitful governments.

The policy pursued by the peishwa toward his English patrons, had become evidently hostile since the accession to office, in 1815, of one Trimbukjee Dainglia, a menial servant, who had found the path to power by promoting the gratification of his master's ill-regulated desires. The assassination of Gungadhur Shastree,‡ the representative of the Guicowar chief, who had come to Poona to settle a question of finance, under the express protection of the English, justified the resident (Mountstuart Elphinstone) in demanding the removal from office of the instigator of the crime. Bajee Rao, with characteristic indecision, first surrendered his favourite, and then unceasingly solicited his deliverance from the imprisonment which was the only punishment the English authorities desired to inflict. Artifice effected the deliverance of the prisoner. The Mahratta groom of one of the British officers in the garrison of Tanna, in the island of Salsette, while engaged in exercising his master's horse, sang beneath the window of Trimbukjee what appeared to be one of the monotonous ballads of the country, but which really communicated to the captive a plan of escape, of which he took advantage on the evening of the 12th of September, 1816. Having made an excuse for

* Malcolm's *Central India*, i., 431. Sir John, on the authority of the Pindarry leader, Kureem Khan, gives the etymology of the term Pindarry—from *Pinda*, an intoxicating drink which they were constantly imbibing. Kureem Khan was a Rohilla.

† No fewer than twenty-five women drowned themselves to escape violation; many sacrificed also their young children. The ordinary modes of torture inflicted by the Pindarries were—heavy stones placed on the head or chest; red-hot irons applied to the soles of the feet; tying the head of a person into a tobra or bag for feeding horses, filled with hot ashes; throwing oil on the clothes and setting fire to them; besides many others equally horrible. Their favourite weapon was the long Mahratta spear.

‡ Gungadhur was the name of the ambassador; Shastree, a title denoting intimate acquaintance with the Shastras, a portion of the sacred writings of the Hindoos. Bajee Rao was himself supposed to have sanctioned the murder, to revenge an affront given by the Shastree in refusing to allow his wife to visit the palace of the peishwa, then the scene of licentiousness unparalleled during the sway of any of his predecessors.—(Duff's *Mahrattas*, iii., 374.)

quitting his rooms, he reached an embrasure, and lowered himself into the ditch by means of a rope, secured to a gun by one of his accomplices. This adventure greatly increased the reputation of Trimbukjee with his own countrymen, and he began to assemble troops on the Mahadeo hills to the north of the Neera. The military preparations of the peishwa, and his secret correspondence, and even interviews, with a subject against whom he affected to desire the co-operation of British troops, left little doubt of his perfidious intentions; and the governor-general considered himself justified in adopting a very summary mode of diminishing the power which he expected to see employed in counteracting his plans for the destruction of the Pindarries. Bajee Rao was treated as an avowed enemy, and required, as the only means of averting war, to surrender Trimbukjee, to renounce the right of supremacy over the Mahratta confederation, and to surrender certain territories in Malwa, Guzerat, and the Deccan, for the purpose of supporting a force of 5,000 cavalry and 3,000 infantry, to be maintained in lieu of the previous British contingent. Other humiliating concessions were exacted from Bajee Rao, by the treaty of Poona ratified in June, 1816, which in fact reduced him from the position of an independent prince to that of a mere vassal. The treaty of Bassein had been censured for the sacrifices it entailed on the peishwa; and "the extension of the subsidiary system in 1805, had led the way to the retirement of the most enlightened statesman who had ruled in India."* By this time the weathercock of public opinion had veered round, and the Court of Directors expressed themselves well satisfied with the course of events, and convinced "of the irrepressible tendency of our Indian power to enlarge its bounds and to augment its preponderance, in spite of the most peremptory injunctions of forbearance from home, and of the most scrupulous obedience to them in the government abroad."†

The sanction of the E. I. Cy. was likewise given to offensive operations to the extent requisite to drive the Pindarries from their haunts on the Nerbudda and from Malwa. The views of the Marquis of Hastings were more comprehensive: he considered that the peace of Central India demanded the total extermination of these predatory bands; and to that end "did not hesitate boldly to assume the principle that, in the operations against the Pindarries, no power could be suffered to remain neutral, but all should be required to join the league for their suppression."‡

At this period (1817) the Pindarries, under their respective leaders, were stated, by the lowest computation, at 15,000 horse, 1,500 foot, with twenty guns. Other writers carried the estimate as high as 30,000; but authorities agreed, that when joined by volunteers and adventurers from other native armies, they often exceeded the latter amount. The Patans, under Ameer Khan, were estimated at 12,000 horse, 20,000 foot, and 200 guns. Supposing the contemplated confederation between the four Mahratta leaders (the peishwa, Sindia, Holcar, and the Bhonslay), the Nizam, Ameer Khan,§ and the Pindarries, to have been carried out, a force of above 130,000 horse, 87,000 foot, and nearly 600 guns might have been brought into the field to dispute British supremacy.‖

Measures had been already taken to diminish the danger of hostility on the part of the peishwa, and the subsidiary alliance lately formed with Berar was expected to ensure neutrality in that quarter. The plan of the campaign, therefore, was principally formed with relation to the independent states of Sindia, Holcar, the Rajpoots, the nabob of Bhopal, and the chiefs of Bundelcund. Something after the fashion of the old "circular hunts" was to be attempted, by assembling armies round these countries which should, by simultaneous movements, close in so as to encompass the Pindarries and their abettors at all points, provision being made for the defeat of the project through the strength or cunning of the enemy, as well as for the defence of the

§ Among the malcontents assembled under Ameer Khan was Dya Ram, a refractory *talookdar*, or zemindar of the Doab, who, in 1816, had been expelled by British troops from his fort of Hatras.

‖ The peishwa had command over 28,000 horse; 13,800 foot; 37 guns. Sindia—14,250 horse; 16,250 foot; 140 guns. Holcar—20,000 horse; 7,910 foot; 107 guns. Bhonslay—15,766 horse; 17,826 foot; 85 guns. Nizam—25,000 horse; 20,000 foot. The Nizam himself was too weak and indolent, if not incapable, to be suspected of any intention to intrigue against the English; but his sons were turbulent youths, whose vicious practices it had been necessary to assist their father in restraining; and it was difficult to judge what might be the conduct of the numerous armed population of Hyderabad, in the event of reverses attending our arms.

British territory. The forces destined to carry out this extensive scheme comprised above 91,000 regular troops, and 23,000 irregular horse,* divided and subdivided in accordance with the plan of the campaign. On the 20th October, 1817, the marquis, in person, assumed command of the grand army at Secundra (near Kalpee), and after crossing the Jumna by a bridge of boats, proceeded to occupy a position south of Gwalior, where Sindia had established his permanent camp;† while another division of the Bengal troops took up its station at Dholpoor. Undoubted evidence had been obtained that Sindia had not only pledged himself to support the Pindarries, but had even attempted a treacherous correspondence with the Nepaulese. His intercepted communications proved him to be only wanting a favourable opportunity to take the field, and thus give an example which would assuredly have been followed by the open appearance in arms of Ameer Khan and his Patans, who were at present inclined to hold back from their Pindarry friends. Sindia had inherited the ambition without the judgment or decision of his predecessor. He had not anticipated the skilful movement by which he found himself menaced by a formidable force in front and in the rear. To bide the event of a siege in Gwalior, or to repair to his distant dominions and join the Pindarries, with the chance of being intercepted and compelled to risk the event of a general engagement, were both humiliating and dangerous measures, which he thought best to avoid by agreeing to the demands of the English. These involved active concurrence against the Pindarries, and the temporary surrender of the forts of Hindia and Asserghur, as a pledge of fidelity. The treaty exacted from Sindia was followed by the submission of Ameer Khan, who agreed to disband his army, if confirmed in possession of the territory of which he was in the actual tenure under grants from Holcar. As this notorious chief was a mere adventurer, whose demands could only be conceded by legalising the usurpations on which they were founded, it may be doubted whether temporary expediency, rather than justice, was not the actuating motive in the arrangement entered upon with him. Treaties with Zalim Sing of Kotah, and other minor potentates, were made in a spirit similar to those formed by Lake under the auspices of Lord Wellesley; and the nabob of Bhopal, especially, entered cordially into the intended expedition against the despotic freebooters from whose ravages his small territories had sustained almost irremediable damage.‡

The Pindarry chiefs, meanwhile, aware of the extensive preparations made against them, employed themselves during the rains in recruiting their respective *durrahs* or camps. The want of cordiality between the principal leaders—namely, Cheetoo, Kureem Khan, and Wasil Mohammed—prevented their forming any combined plan of resistance. With the exception of some *luhburs*, or plundering expeditions dispatched against the unprotected territory of the British or their allies, little attempt at opposition was made; and losing their usual activity, the majority of the Pindarries retreated passively before the advancing foe, fixing their last hope on the secret assurances of support received from Poona.

The governor-general does not appear to have anticipated any struggle on the part of the peishwa to recover his lost authority. Mr. Elphinstone, in his capacity of resident, had seen ample reason to take precautions against this highly probable event; but Bajee Rao, in an interview with the political agent, Sir John Malcolm, had conducted himself so plausibly, that Sir John, completely duped by professions of grateful attachment for early support, mingled with sad complaints of the harsh policy recently adopted, forgot the character of the arch-hypocrite with whom he had to deal, and actually advised the peishwa to continue

* The Deccan force, under Sir Thomas Hislop (including a reserve corps, the Guzerat division, and the troops left at Poona, Hyderabad, and Nagpoor) numbered 57,000 regulars, of whom 5,255 were cavalry. The Bengal force comprised 34,000 regulars, including 5,000 cavalry.—(Col. Blacker.)

† Sindia seized Gwalior upon the death of Ambajee Inglia, in 1808, and established his army in the neighbourhood, where he remained until his own demise in 1827. A city sprang up there which soon rivalled Oojein, if not in the costliness of its structures, at least in the amount of population.

‡ In 1797, two Pindarry leaders, named Heeroo and Burrun, who were also brothers, offered the services of themselves and their 5,000 followers to the state of Bhopal, as auxiliaries in the war then carried on with Berar. Being rejected, they went off and made a similar proposition to Ragojee Bhonslay, who received it favourably, and bade them lay waste Bhopal, then in a most flourishing condition. The order was obeyed with cruel and lasting effect. The chiefs were plundered by their employer the Berar rajah. Heeroo, the father of Wasil Mohammed, died in prison; Burrun at Aseerghur.

enlisting recruits for the laudable purpose of co-operating with his good friends the English. Thus encouraged, Bajee Rao openly levied troops from all quarters, and secretly endeavoured to induce the British sepoys stationed at Poona to desert their colours. The native officers and regulars were, without exception, proof against these solicitations, which in many instances were made known to their commanders. But the irregular battalions, under Major Ford, contained a large proportion of Mahrattas, and these were naturally more subject to temptation. It is asserted that the peishwa desired, before proceeding further, to be rid of the resident by assassination; but that Bappoo Gokla, the chief Mahratta leader, positively refused to suffer the perpetration of so base a crime, the more especially since he had received peculiar kindness from the intended victim. Happily, Mr. Elphinstone was on his guard alike against national and individual hostility, and waited anxiously the first symptom of undisguised hostility, in anticipation of which a regiment had arrived from Bombay. Thinking the cantonment in Poona too exposed, the station was changed to the village of Kirkee, four miles distant; a step which, being attributed to fear, greatly encouraged the Mahrattas, who began to plunder the old cantonments. At length, on the 4th of Nov., 1817, Moro Dikshut, the minister of the peishwa, actuated by personal attachment, warned Major Ford to stand neuter in the coming struggle, and thus save himself and his family from the destruction which was shortly to overwhelm the whole British detachment. Up to this moment the major, though in daily communication with the city, had been so completely hoodwinked by Bajee Rao, as to entertain no suspicion of intended treachery. On the following day, news of the approach of a light battalion from Seroor, determined the irresolute peishwa to defer the attack no longer. Efforts were continued to the last to throw the British off their guard; and an emissary, bearing some frivolous message from the court, had scarcely quitted the residency, before intelligence arrived that the Mahratta army was in movement. Mr. Elphinstone and his suite had just time to mount and retire by the ford of the Moola river, to join their comrades at Kirkee, before the enemy arrived and took possession of the residency, which was speedily pillaged and burned.

The British brigade, leaving their cantonments, advanced to the plain between Kirkee and the city, to meet the Mahratta troops. The peishwa, disconcerted by this daring movement, sent word to Gokla not to fire the first gun. Gokla, seeing the messenger, and suspecting the nature of his errand, waited not his arrival, but commenced the attack by opening a battery of nine guns, detaching a strong corps of rocket camels, and pushing forward his cavalry to the right and left. A spirited charge was made under his direction by Moro Dikshut, with a select body of 6,000 horse, bearing the *Juree Putka* or swallow-tailed golden pennon of the empire. They came down like a torrent on the British front, but were steadily encountered by the 7th battalion. Colonel Burr had "formed and led" this corps; and now, though completely paralysed on one side, he took his post by its colours, calm and collected. One ball went through his hat, another grazed the head of his horse, two attendants were shot by his side; but the infirm officer, unhurt and undismayed, continued to cheer and direct his men. The advance of the assailants was happily impeded by a deep slough (the existence of which was not previously suspected by either party), situated immediately in front of the British line. The cavalry, while scrambling out of the mire, were exposed to the reserved fire of Burr's detachment; Moro Dikshut was killed, the force of the charge broken, confusion spread through the Mahratta ranks, and the advance of the English proved the signal for a general retreat. The battle of Kirkee must ever remain conspicuous among the hard-fought fields of India, for the great disproportion of the combatants. The Mahratta force comprised 18,000 cavalry and 8,000 foot: their loss was 500 men in killed and wounded;* beside which, a considerable number of their valuable and highly-cherished horses were disabled. The whole number of the British troops engaged in this affair, including Major Ford's battalion (part of which deserted), was 2,800 rank and file, of whom 800 were Europeans. Their loss was 186 killed and fifty-seven wounded.

During the engagement, the peishwa remained on the Parbuttee hill, with a guard of 7,000 men. At the first outbreak of hostilities, his orders were vindictive and ferocious in the extreme;† but he became

* Moro Dikshut was mortally wounded by a shot from a gun attached to Captain Ford's battalion.

† Several Europeans were killed in cold-blood;

alarmed by the unexpected turn of events, and gave over all power into the hands of Gokla, who was anxious to continue the contest. "We may have taken our shrouds about our heads," he said, "but we are determined to die with our swords in our hands."* This was not, however, the general feeling of the Mahrattas. They had little cause for attachment to the grasping and incapable Bajee Rao; and he displayed an utter want of confidence in their will or ability to protect him, by taking the approach of a British reinforcement, under General Smith, as the signal for a midnight retreat towards Sattara. Poona, thus a second time deserted by its sovereign, surrendered on the following day; and the necessary arrangements having been made for its retention, General Smith started off in pursuit of the peishwa, who, though a fugitive, was still at the head of a formidable army. He was further strengthened by the open adhesion of Appa Sahib, the rajah of Berar, between whom and the British force, under Colonel Scott, a severe conflict took place on the heights near Nagpoor, on the night of the 26th of November. The rajah being defeated, made terms of peace, for the fulfilment of which he was himself to be the guarantee, as a sort of prisoner in his own palace; but Mr. (afterwards Sir Richard) Jenkins, learning that Appa Sahib was only waiting an opportunity of escape, seized and sent him strongly escorted towards Benares. The captive, though treated heretofore without much ceremony, was suffered to choose his own escort; the result of which was, that the British officer on guard, having been made to believe that his charge was an invalid, gave a hasty glance at the bed on which Appa Sahib usually slept, and turned away after this slack performance of his nightly duty, without discovering that a pillow had been made to take the place of a person who was already many miles distant.

General Smith followed the peishwa through the Ghauts, but failed in bringing him to action. This much-desired object was, however, unexpectedly accomplished on the 1st of January, 1818, by a detachment proceeding to support Colonel Burr in resisting an expected attack on Poona. Captain Staunton, with one battalion of N. I. 600 strong, 350 irregular horse, and two 6-pounders, manned by twenty-four Europeans, after a long night march, reached the hills above Corygaum, a village overhanging the steep bank of the Beema river, and beheld with surprise the whole force of the peishwa, estimated at 25,000 to 28,000 men, encamped on the opposite bank. Both parties pushed on for the village, and succeeded in occupying different portions; but the British gained possession of a small *choultry*, or place of refreshment, which had originally been a temple. Here the detachment remained, under a burning sun, cut off from the water from noon to nine o'clock, disputing every foot of ground, and repulsing repeated attacks with the bayonet. The peishwa ascended an adjoining eminence, and, with the rajah of Sattara by his side, awaited what seemed a certain victory. Gokla and Trimbukjee (who had now joined his master) directed the attacks; and the Arab mercenaries, whose superior courage was acknowledged by superior pay, at one time became masters of the choultry, but it was soon recaptured. The struggle seemed hopeless, but surrender was not thought of. "See," said Captain Staunton, pointing to the headless trunk of Lieutenant Chisholm, lying beside a gun, "the mercy of the Mahrattas!" The troops, though some were fainting and others nearly frantic with thirst, declared that sooner than fall into the hands of their foes, they would die to a man: and the result seemed probable. Happily, towards nightfall, a supply of water was procured. The firing gradually ceased; and at daybreak, when the brave band prepared to renew the conflict, the enemy was descried moving off on the road to Poona, in consequence of the rumoured advance of General Smith. Captain Staunton, who was unhurt, retreated to Seroor; and the government, in commemoration of this gallant affair, raised the corps engaged† to the much-coveted rank of grenadiers, and added "Corygaum" to the name of "Mangalore," previously borne by the first regiment of Bombay native infantry.

Sattara was besieged by a combined force under generals Smith and Pritzler, on the 9th of February, and capitulated on the following day. A manifesto was issued by Mr. Elphinstone, on behalf of the British government, taking formal possession of the dominions of the peishwa, with the view of

and the families of the native troops who fell into the hands of the Mahrattas were cruelly maltreated

* Duff's *Mahrattas*, iii., 429.

† The battalion (2nd of 1st Bombay N. I.) lost 153 killed and wounded; the artillerymen (26 in all), 18; cavalry, 96; officers, 5 out of 8, including 2 surgeons.

retaining all except a small tract to be reserved for the rajah of Sattara, who, with his family, was still in the hands of Bajee Rao. General Smith again started off in pursuit, and came up with the Mahratta force at Ashtee, to the north-westward of Sholapoor. Bajee Rao, as usual, thought only of making good his retreat, and left Gokla, with a body of eight or ten thousand horse, to fight the English. General Smith,* though in other respects a good officer, is said to have been ignorant of the art of manœuvring cavalry, and he was opposed by a leader of unrivalled skill in that favourite branch of Mahratta warfare. The English chief was cut down, and some confusion ensued; of which before Gokla could take advantage, he was himself slain—falling, as he had promised, sword in hand. There was no one capable of taking his place, and the Mahrattas fled in wild dismay, leaving elephants, camels, and baggage of all descriptions, to the victors.† The rajah of Sattara, with his mother and two brothers, voluntarily threw themselves on British protection; and being placed under the care of Mr. Elphinstone, and assured of the favourable intentions of the British government, the rajah assumed the state of a sovereign. The wound of General Smith did not prove dangerous, and he was soon enabled to resume the pursuit of Bajee Rao, which the excessive heat of the weather rendered an extremely arduous and depressing task. The men fell beneath sun-strokes more surely and speedily than in the recent engagements, and the hospitals became crowded. The fugitive peishwa had long been desirous to make terms of peace; and at length, when his intended passage across the Nerbudda was intercepted by Sir John Malcolm, he made proposals which that officer considered as affording satisfactory ground for an arrangement. The terms finally agreed to were the complete renunciation of every political right or claim by Bajee Rao, in return for an allowance of not less than eight lacs of rupees a-year. Beithoor, a place of sanctity near Cawnpore, was appointed for his future residence. Trimbukjee was soon after captured in his lurking-place by a party of irregular horse under Lieutenant Swanston (one of the victors at Corygaum), and sent prisoner to the fort of Chunar, in Bengal.

To revert to the operations simultaneously carried on against the Pindarries. Soon after the signing of the treaty of alliance with Sindia, on the 5th of Nov., 1817, the army under Lord Hastings was overtaken by a violent pestilence, since known as cholera,‡ which traversed the whole of India, from Nepaul to Cape Comorin. The year was one of scarcity, the grain of inferior quality, and the situation of the British cantonments low and unhealthy. For ten days the whole camp was an hospital; and the deaths in that short period amounted to a tenth of the total number collected. Towards the end of the month the troops removed to a healthy station at Erich, on the Betwa, and the epidemic had evidently expended its virulence. Notwithstanding this calamity, the object of Lord Hastings in advancing to Gwalior, was fully answered by the prevention of any co-operation between Sindia and the Pindarries. The latter, after being expelled from their haunts in Malwa, were compelled to retreat in various directions, and annihilated or dispersed, with the exception of those under Cheetoo, who being pursued by Sir John Malcolm, took refuge in the camp of Holcar, near Mahidpoor. The government of the Holcar principality at this time rested in the hands of Toolsae Bye, the favourite mistress of the late Jeswunt Rao, who had exercised the chief authority during his insanity. After his death, she placed on the musnud his infant son Mulhar Rao, and proceeded to give vent to all the cruel caprices which could suggest themselves to the imagination of a woman of thirty years of age, handsome and of fascinating manners, but of an imperious and merciless temper and most licentious morals. Her last favourite, who assumed *ex officio* the reins of government, was the Dewan, Gunput Rao. He wavered between fear of the English and a desire to take part with the peishwa, then in arms. The commanders of battalions, especially the Patans, were adverse to entering upon any treaty by which their consequence was likely to be lowered; and fearing that the force under Malcolm, to which the division under Sir Thomas Hislop

* Afterwards Sir Lionel Smith, govr. of Jamaica.

† The British loss amounted to only nineteen killed and wounded; that of the enemy, to 200.

‡ *Transactions in India*, 1813 *to* 1823, i., 107—111. Mr. Prinsep was present at head-quarters, and lost seven servants and a *moonshee* in four days. During one week, 764 soldiers and 8,000 camp followers perished. Total deaths of Europeans in camp in Nov.—148. The epidemic, called by the natives the "black death," visited Calcutta in September, 1817, and for a long time destroyed above 200 per diem in that city.—(Prinsep: Wilson, ix., 253.)

had since been added, would overawe their vacillating rulers into submission, they threw Gunput Rao into prison, enticed away the child, Mulhar Rao, from the tent before which he was playing, and carried off Toolsae Bye, by night, to the banks of the Seepra, where, despite her cries, she was decapitated, and the body thrown into the river.*

On the following day (21st of December, 1817), a pitched battle took place, in which the British were completely successful, though at the cost of nearly 800 in killed and wounded. The enemy lost 3,000 men, chiefly in the flight to Mundissoor. The mother of the child Mulhar Rao, though a woman of inferior rank, being now the acknowledged regent of the Mahratta state, made full submission to the English; and in return for the cession of all claims in Rajast'han and south of the Sautpoora range, was confirmed in the actual possession of the remaining territories of the principality, at the court of which a British resident was to be established. Many of the old leaders repudiated this engagement, and set off to join Bajee Rao—an attempt in which some succeeded, but others were intercepted, and cut off or dispersed.† The ministers, under the new order of things, "did not deplore an event which disembarrassed a bankrupt state of a mutinous soldiery, and cancelled a number of old and troublesome claims."

The struggles of the Pindarries were nearly ended; Kureem Khan, and other chiefs, surrendered on the promise of pardon and a livelihood, and received small grants of land. Wasil Mohammed poisoned himself. Cheetoo for some time contrived to elude pursuit, but was surprised in Dec., 1817, with the main body of his followers, and dispersed by a detachment from the garrison at Hindia. The Bheels (aboriginal peasantry) and the Grassias (native landowners), remembering the outrages they had long passively sustained, now spared not a Pindarry who fell into their hands; but Cheetoo, with about 200 followers, still remained at large.‡ Though driven from place to place, the daring freebooter bore up against misfortune with a spirit worthy a better cause; till he suddenly disappeared—none, not even his son and few remaining followers, knew how or where; for they had parted from him to hunt the forest for food. After some days, his horse was discovered grazing near the jungles of Aseerghur (where Appa Sahib had sought refuge), saddled and bridled: at a little distance lay a heap of torn and blood-stained garments, and a human head, the remains of a tiger's feast. It was a fitting death for the last of the Pindarries—the last that is deserving the name; for these bold marauders, deprived of their leaders, without a home or a rendezvous, never again became formidable. After the termination of the war with the peishwa, they gradually merged into the ordinary population, following the example of their leaders. Many of them settled in the Deccan and Malwa, as cultivators; and some, employing their energies to a right use, became distinguished as active, improving farmers. The remaining Patan troops were conciliated or dispersed without further bloodshed.

The flight of Appa Sahib caused much anxiety, which terminated with the fall of the fortress of Aseerghur (April, 1819), whence the ex-rajah escaped disguised as a fakeer, and soon sank into a state of insignificance, from which he never emerged. An infant grandson of Ragojee Bhonslay was chosen to bear that name and fill the vacant *gadi*, or throne of Berar, with the title of rajah, under the nominal regency of his grandmother, the British resident being vested with the actual control of affairs during the minority. The remaining operations of the war were chiefly directed to the expulsion

* The career of Toolsae Bye resembles that of the heroine of a romance. She passed as the niece, but was generally supposed to be the daughter, of Adjeeba, an ambitious priest, who, though a professed mendicant, rose to rank and influence. He spared no pains in the education of Toolsae; and she, Malcolm not very gallantly remarks, was "tutored in more than the common arts of her sex." Jeswunt Rao became enamoured with the fair *intrigante* at first sight. She was married, but that mattered little. In a few days the lady was in the palace of Holcar, her husband in prison, from whence he was released and sent home to the Deccan with some presents. Toolsae Bye had an artful waiting-maid, double her own age, who, after having attained high station and amassed large sums by extortion (thereby exciting the envy of the minister on whom the fleeting affections of her mistress for the moment rested), was flung into prison, cruelly tortured, and driven to end her agonies by taking poison.—(Malcolm.)

† An excellent account of the Mahratta and Pindarry campaigns of 1817-'18-'19, has been given by an officer engaged therein—Lieutenant-colonel Blacker.

‡ Conditions of surrender were discussed on behalf of Cheetoo, but his terms were extravagant: moreover, he feared treachery and transportation; and even when dreaming, used to talk with horror of the sea, the hateful *Cala pani*, or black water. After his tragical end, a few fields were allotted for the subsistence of his son, a youth of weak intellect.

of various Arab garrisons from Candeish, a province which, though professedly under the sway of the Poona government, had been gradually usurped by Arab colonists. Malligaum, the strongest fort in the Candeish valley, was gained after an obstinate siege in June, 1819, at a cost to the successful besiegers of 200 killed and wounded.*

The E. I. Cy. evinced their sense of the conduct of the governor-general during the late "glorious and successful wars," by granting him the sum of £60,000 from the territorial revenues of India, for the purchase of an estate in the United Kingdom. Few remaining events in the administration of Lord Hastings need here be mentioned. Its commencement was marked by the renewal of the company's charter for twenty years; by the opening of trade with India to the nation at large; and by the formation of an ecclesiastical establishment for British India.† The occupation of Singapore, in 1817, was effected through the efforts of Sir Stamford Raffles, to whose zeal and discernment may be attributed the possession of the British portion of the Indian Archipelago. Protracted negotiations were carried on with Holland by Mr. Canning, then President of the Board of Control, which terminated in the Netherlands' treaty of 1824, by which the Dutch settlements on the continent of India, with Malacca, and the undisputed right to Singapore, were ceded to England in exchange for Sumatra, which was needlessly surrendered.

The financial dealings with Oude have been noticed. The pecuniary loans of the nabob aided in enabling him to assume the title of vizier without the sanction of the emperor; and, in 1819, the style of vizier was changed for that of king—an indiscreet admission on the part of the E. I. Cy. The chief blot upon the character of Lord Hastings' administration, was caused by the countenance lent by him to the nefarious transactions of certain persons who, under pretence of mercantile dealings, obtained the sanction of government to the most shameless and usurious practices, carried on at the expense of the weak and incompetent Nizam. It was in fact a new version of the "Carnatic debt," conducted in the name of Messrs. Palmer and Co., one of the confederates or partners being Sir Thomas Rumbold, who stood almost in the position of son-in-law to the governor-general, having married a niece whom his lordship had brought up from infancy, and for whom he avowedly cherished the feelings of a father. Strong domestic attachment and excessive vanity conspired to induce Lord Hastings to defend a course into which he had been misled by the artifice of covetous men; and when his late secretary, Charles Metcalfe, on entering upon the duties of British resident at Hyderabad, set forth in very guarded and moderate language, the necessity of introducing a better order of things, the marquis manifested great annoyance, and subsequently addressed a most intemperate letter to the directory, in return for their very just animadversions on the nature of a firm which, without office or establishment, carried on "dealings to the extent of nearly £700,000, occurring under an imperceptible progress."‡ Payments for real or imaginary loans, at sixteen to eighteen per cent., were made by the Hyderabad government, by cash and by assignments of revenue; notwithstanding which, £600,000 were claimed by Messrs. William Palmer and Co., as the balance of accounts with the Nizam in 1820.

During the course of his prolonged administration, the Marquis of Hastings, involved in numerous and intricate military operations, found little opportunity to study with success questions connected with the civil administration of the empire, and the complicated and anxious question of revenue.§ His lordship resigned his office into the hands of the senior member of

* In the course of the Mahratta war, considerable service was rendered by Sir Thomas Munro, who, with a few hundred men, was deputed to take possession of the country ceded by the treaty of Poona, which was effected with some fighting, but chiefly by conciliation. Sir David Ochterlony likewise played a conspicuous part in the Pindarry war. His death, in 1825, occurred under painful circumstances. He was twice appointed resident at Delhi, and removed each time against his inclination: on the last occasion, vexation of spirit increased the morbid melancholy which hastened the close of his eventful career; and his last words, as he turned to the wall, were—"I die disgraced."—(Kay's *Life of Metcalfe*, ii., 132.)

† The first Bishop of Calcutta (Middleton) came out in 1814. He died in 1822, and was succeeded by Reginald Heber, who was cut off by apoplexy in 1826. Bishop James died in 1828. Turner in 1830.

‡ Auber, ii., 558 to 566. Thornton, iv., 583.

§ Sir Thomas Munro was sent to Madras in 1814, at the head of a commission formed for the purpose of revising the judicial system. He exerted himself very efficiently in the decision of arrears of causes which had been suffered to accumulate to a shameful extent. In 1821, he became governor of Madras, and carried out a settlement with a portion of the individual cultivators, called the ryotwar assessment, by which each small holder was not simply put in

council, Mr. Adam, and quitted India in January, 1823.* Though nearly seventy years of age, pecuniary embarrassments prevented him from spending his remaining days in his own country; and he was appointed governor of Malta, where he died, in consequence of a fall from his horse, in 1826.†

For six months the supreme authority rested in the hands of Mr. John Adam, an honest and able man, but somewhat prejudiced. He had uniformly dissented from the conduct adopted by the late governor-general with regard to the house of Palmer and Co.; and he was ready and willing to carry out the orders of the court for making the large advance to the Nizam necessary to free him from the hands of his rapacious creditors, who were forbidden to have any further dealings with the court of Hyderabad. The circumstances of the case are involved in mystery; but it is certain that the failure of the concern created a great commotion in Calcutta, many persons being secretly interested in these transactions whose names were never made public. The proprietors of East India stock called for documents calculated to throw light on the whole affair; and, after much tedious discussion during the next twenty years, political influence procured a decision more favourable to the claims of the European money-lenders, against various native debtors in Oude, than was consistent with the honour of the British government.

This provisional administration was marked by the deportation of Mr. Silk Buckingham, the editor of the *Calcutta Journal*, for a breach of the regulation forbidding editorial comments on public measures. The successful efforts of Mr. Adam for the reduction of expenditure, especially of the interest of the Indian debt, were highly meritorious, as were also his unavailing attempts for the extension of native education.

AMHERST ADMINISTRATION: 1823 TO 1827.—The place of Lord Hastings was at first destined to be filled by Mr. Canning; but the changes in the cabinet, consequent upon the death of the Marquis of Londonderry, opened more congenial employment to the newly-appointed governor-general, and he remained at home in charge of the foreign office. Lord Amherst was selected for the control of Indian affairs, and arrived in Calcutta in August, 1823. The first object pressed on his attention was the open hostility in which a long series of disputes with the Burman empire abruptly terminated. The power of the Burmese was of comparatively recent growth. The people of Ava, after being themselves subject to the neighbouring country of Pegu, revolted under a leader of their own nation, in 1753. Rangoon, the capital of Pegu, surrendered to the Ava chief, who assumed the title of Alompra,‡ and the style of a sovereign; and during the succeeding eight years, laid the basis of an extensive state, which was subsequently enlarged by acquisitions on the Tenasserim coast taken from Siam, and by the annexation of the previously independent states of Arracan, of Munnipoor, and of Assam. Proceedings connected with the conquest of Arracan, brought the Burmese in contact with the British government; for, at the close of the eighteenth century, many thousand persons of the tribe called Mughs, sought refuge from the insufferable persecution of their oppressors in the British province of Arracan. The numbers of the immigrants excited apprehension, and attempts were made to prevent any more of them from crossing the boundary line formed by the Naaf river. But this was impracticable by means consistent with

the position of a mere yearly tenant, but was compelled to pay a fluctuating amount assessed annually at the pleasure of the collector for the time being, whose chief object was naturally the realisation of an immediate amount of revenue, without regard to the permanent welfare—indissolubly united—of the governors and the governed. This system, much praised at the time, reduced the Madras ryots to a state of extreme depression. Munro died of cholera near Gooty, in 1827.—(*Vide Life*, by Gleig.)

* The revenues of India rose from £17,228,000, in 1813–'14, to £23,120,000 in 1822–'3; but a considerable share of this increase is attributable to the accession of territory made under the Wellesley administration. The more than proportionate augmentation of military expense is no less clearly ascribable to the unjustifiable measures of Lord Cornwallis and Sir G. Barlow, and especially to the sufferance long extended to the ferocious Pindarries and the encroaching Mahrattas. For five years (1817 to 1822), the average annual military expenditure was £9,770,000. In 1822–'3, the expenses still reached £8,495,000. The Indian debt increased from £27,002,000, in 1813–'14, to £29,382,000 in 1822–'3; showing an augmentation of £2,380,000. An able and comprehensive summary of the Hastings administration is given by Josiah Conder, whose history terminates at this point.

† Lord Hastings married Flora Campbell, Countess of Loudon, who lived with him in India in the full blaze of vice-regal splendour. In 1827, the sum of £20,000 was granted to the young marquis.

‡ Alompra (correctly, *Alaong-b'hura*), a term applied by the Buddhists of Ava to an individual destined to become a Budd'ha, and attain the supreme felicity of absorption into the divine essence.

ordinary humanity. In 1798, not fewer than 10,000 Mughs rushed to the frontier in an almost frenzied state, and were followed by another body still more numerous, leaving the capital of Arracan nearly depopulated. They had fled through wilds and deserts without any preconcerted plan, leaving behind them abundant traces of their melancholy progress in the dead bodies of both old and young, and of mothers with infants at the breast. The leader of one party, when told to withdraw, replied that he and his companions would never return to Arracan: they were ready to die by the hands of the English, or, if forcibly driven off, would seek refuge in the jungles of the great mountains, the abodes of wild beasts. The wretched multitudes attempted no violence, but sustained life as best they could on "reptiles and leaves," numbers daily perishing, until the British government, taking pity upon their misery, provided the means of sustenance, and materials for the construction of huts to shelter them from the approaching rains. Extensive tracts of waste lands, in the province of Chittagong, were assigned to the refugees, whom, perhaps, it would have been advisable to have settled in a more central position, since a colony of 40,000 persons, established under such circumstances, would, as they grew stronger, be very likely to provoke hostilities with the already incensed and barbarous sovereign of Ava.

The surrender of the Mughs was repeatedly demanded by this potentate, but the Marquis Wellesley returned a decided refusal; qualified, however, by an offer to give up any proved and notorious criminals, and by a promise to prohibit any renewed immigration of Burmese subjects. Some communications took place of little importance; and the discussion might have passed off without producing further hostility, but for the restless spirit of the Mughs, and their natural longing to regain possession of their ancient rights and former homes. A chief, named Khyen-bran (miscalled Kingberring), arose among them inspired with an insatiable desire of vengeance against the Burmese, which he manifested by annual irruptions into Arracan. The Calcutta government strove to check these aggressions, and Lord Hastings gave leave to the Burmese to pursue the depredators to their haunts in Chittagong; but this concession did not appease the King of Ava, who attempted to form a confederacy with Runjeet Sing and other Indian princes, for the expulsion of the English from India. After the death of Khyen-bran, in 1815, the border warfare greatly diminished, and the British authorities, considering the chief cause of contention removed, maintained a very conciliatory tone, which being interpreted by the nameless* majesty of Ava as significant of weakness, only rendered his representatives more insolent and overbearing. Still no actual rupture took place until September, 1823, when a thousand Burmese landed by night on the small island of Shahpoori, at the entrance of the Tek Naaf, or arm of the sea dividing Chittagong from Arracan. The islet was little more than a sandbank, affording pasturage for a few cattle. The guard consisted only of thirteen men, three of whom were killed, four wounded, and the rest driven off the island.

An explanation of this conduct was demanded, and given in the form of a vaunting declaration, that Shahpoori rightfully belonged to the "fortunate king of the white elephants, lord of the seas and earth," and that the non-admission of the claim of "the golden foot" would be followed by the invasion of the British territories. The threat was carried into execution, and a Burmese force actually took post within five miles of the town of Sylhet, only 226 miles from Calcutta. The governor-general entered upon the war with unfeigned reluctance, and its commencement was materially impeded by ignorance of the country, its routes, and passes. The advance from Bengal was at one time intended to have been made through Arracan, but this plan was set aside from regard to the health of the troops; and the main part of the force designed for the campaign, comprising about 11,000 men,† of whom one-half were Euro-

* The names of the kings of Ava, like those of the zamorins of Calicut, were kept secret until their deaths. The style of the Ava court, was to speak of "the golden presence," to address "the golden ear," or lay petitions before "the golden foot;" and on state occasions, the royal head was literally oppressed with the weight of a golden pyramid, and the body clothed in wrought gold.—(Trant's *Two Years in Ava*, 270; Havelock's *Ava*, 245.)

† This included the combined strength of Madras and Bengal; but the excessive repugnance manifested by the native troops in the service of the latter presidency to forsake their families and forfeit caste by embarking on board ship, rendered it impossible to employ any considerable portion of them. It appears, moreover, that great neglect existed on the part of those entrusted with the charge of the commissariat, as in the case of the refusal to march

peans, assembled in May, 1824, at Port Cornwallis, in the Great Andamans. Major-general Sir Archibald Campbell took command of the land, and Commodore Grant of the marine portion of the expedition, but the latter commander was speedily compelled, by ill-health, to give place to Captain Marryat. The forces safely reached Rangoon, the chief port of Ava, which was evacuated after a very feeble attempt at resistance.* On the 10th of June, a successful attempt was made on the fortified camp and stockades at Kemendine, on the Irawaddy river. The outwork was taken by storm; the first man to gain the summit being Major (afterwards Sir Robert) Sale. These conquests were followed by a disastrous expedition, which involved not only loss of life, but of character. A Burmese detachment had formed stockades, under cover of a fortified pagoda, at Kykloo, fourteen miles from Rangoon, and a body of Madras infantry was dispatched to drive them off, under Lieutenant-colonel Smith. The Burmese suffered the English to approach within sixty yards of the pagoda, and then opened their reserved fire with deadly effect. The sepoys may well be excused for quailing before the foe when British officers fairly lost all self-control, and lay down to screen themselves from danger. Colonel Smith ordered a retreat, which soon became a flight, and many lives would doubtless have been sacrificed had not the approach of reinforcements arrested the progress of both pursuers and pursued. A strong force was sent by Sir A. Campbell to drive the Burmese from Kykloo, but they had previously absconded. This affair, which occurred in October, 1824, was not calculated to cheer the army, or encourage them in a position daily becoming less endurable. No consideration of pity for the unfortunate people of Rangoon had prevented the complete devastation of the country by its sovereign, and the invaders were consequently disappointed in their hopes of obtaining supplies of fresh meat and vegetables, and compelled to feed on putrid meat and bad biscuit. The influence of dense jungle and pestilential swamp, aggravated by intense heat and deluges of rain, spread fever and dysentery through the camp: scurvy and hospital gangrene followed in their train; and by the end of the monsoon scarcely 3,000 men were fit for active duty. The King of Ava relied on the proverbial unhealthiness of Rangoon to aid the efforts of his ill-disciplined troops, and facilitate the performance of his command to drive the invaders into the sea, or bring them to the capital to suffer torture and ignominy. Notwithstanding this vaunting language, his majesty of the golden foot became extremely uneasy on witnessing the pertinacity of the English, and despite much affected rejoicing at their having fallen into a trap by taking up a position at Rangoon, he compared himself, in an unguarded moment, to a man who, having got a tiger by the tail, knew not whether to hold on or let go.† He is said to have been encouraged in "holding on," by an odd tradition (if any such did really exist) that the capital would remain invincible until a magical vessel should advance against it without oars or sails!‡

The *Diana* steamer, which accompanied the flotilla on the Irawaddy, though possessed of no magic power, did great service in capturing and destroying the war-boats and fire-rafts sent out by the Burmese. The arrival of reinforcements and supplies from Bengal restored the number of troops at Rangoon to about their original amount, and infused new life into the survivors, and spirit to resist the repeated but ill-

against the Burmese, made by the 47th regiment (about 1,400 in number), at Barrackpoor, in 1825. The men entreated to be dismissed and suffered to return to their homes, but without effect. The regiment was paraded, and the refusal of the men to march or ground their arms (which they held unloaded, though furnished with forty rounds of ammunition), was punished by a murderous discharge of artillery, which killed numbers of them. About 200 were taken prisoners, of whom twelve were hanged, and the remainder condemned to labour in irons. The court of inquiry appointed to report on the whole affair, declared the conduct of the unhappy soldiers "to have been an ebullition of despair at being compelled to march without the means of doing so."—(Thornton's *India*, iv., 113.) How military men can reconcile their consciences to such proceedings as these, is perfectly incomprehensible.

* Crawfurd's *Embassy to Ava in* 1827: App., p. 65.

† The Shwe-da-gon, a Buddhist temple of great size and remarkable sanctity, being deserted by its priestly guardians, was used by Sir A. Campbell as a military outwork. The building was of solid brickwork, elaborately decorated, and coated with gilding, whence its name—the Golden Pagoda. The portion deemed peculiarly sacred, was a solid cone 300 feet high, which was supposed to enshrine, or rather entomb, relics of the four last Budd'has—the staff of Krakuchunda, the water-pot of Gunaguna; the bathing-robe of Kasyapa, and eight hairs from the head of Gautama, or Sakyasinha.—(Wilson's Mill, ix., 50. Also Hough, Symes, Snodgrass, Trant, and Havelock.)

‡ Auber gives the tradition upon the authority of Col. Hopkinson, who commanded the Madras artillery in the Burmese war.—(ii., 579.) Trant also mentions it.—(*Two Years in Ava*, 241.)

directed attempts of the various forces dispatched against them from Ava.

The provinces of Assam and Cachar were captured by troops sent from Hindoostan, with the aid of native auxiliaries. In January, 1825, 11,000 men were assembled in Chittagong, and dispatched, under General Morrison, to Arracan, with instructions to reduce that province, and then join Sir Archibald Campbell on the Irawaddy. The first object of the mission was fulfilled; but ignorance of the Aeng Pass rendered the Youmadoung mountains an impracticable barrier, and prevented the performance of the latter order. By the close of the rainy season one-fourth of the men were dead, and more than half the survivors in hospital, from the unhealthiness of the climate. The remainder were therefore recalled, with the exception of a few divisions left on coast stations. Happily the war had been more successfully prosecuted in Ava. The whole of Tenasserim was conquered by detachments from Rangoon* before the close of 1824; and in the following February, General Campbell prepared to advance, by land and water, against Prome, the second city of Ava. On the 25th of March, the troops came in sight of Donabew, a fortified place, where the flower of the Burmese army lay encamped. Our flotilla was attacked without success. Bandoola, the ablest and most popular of the Burmese commanders, was killed by a shell; upon which Donabew was abandoned by the enemy and immediately occupied by order of General Campbell, who advanced against Prome, which was evacuated on his approach. The King of Ava had not yet lost hope: levies were raised in every part of the kingdom; and in November, a heterogeneous force marched under the command of the prime minister for the recovery of Prome. An engagement took place on the 1st of December, which terminated in the death of the Burmese leader and the dispersion of the entire force. The British general prepared to follow up his victory by marching on the capital, but his progress was delayed by overtures of peace, which proved to be mere pretexts to gain time. The same stratagem was repeated more than once; and even at the last, when the evident futility of resistance seemed to attest the sincerity of the defeated Burmese, the boast of a military adventurer, that he would be answerable for the discomfiture of the invaders if enabled to lead an army against them, induced the renewal of offensive operations by the King of Ava. Troops to the number of 16,000 were assembled under the new leader, who was dignified by the name of Nuring Thuring, prince of Sunset (which our troops, being poor linguists, translated as prince of Darkness), and entrusted with the charge of covering the capital against the approach of the British army. The so-called "retrievers of the king's glory" encountered about 1,300 men, under Colonel Campbell (two brigades being absent on duty), and were dispersed with greater loss than had been sustained by their predecessors on any previous occasion. Their brave, though boastful leader, ventured to prostrate himself before the golden throne, and solicit a more powerful force, but was immediately put to death by the enraged and humiliated sovereign. No time could be spared now for procrastinating schemes if Ava were to be saved from the grasp of the English army, which marched on to Yandaboo, only forty-five miles distant. Two American missionaries (Messrs. Price and Judson), "the only negotiators in whom the king had any confidence," were dispatched to the British camp to conclude peace. General Campbell made no increase on the terms already stipulated for, and a treaty was finally concluded in February, 1826, by which the King of Ava ceded Arracan and Tenasserim to the English; agreed to pay them a crore of rupees (about a million sterling), to receive a resident at his court, and to grant to their ships the privileges enjoyed by his own. He likewise renounced all claim upon Asam, Jyntia, Cachar, and Munnipoor, which were to be placed under princes named by the British government.

The "peacock signet" was affixed to the treaty, the provisions of which were fulfilled, including the money stipulation, after some delay and discussion; and thus ended the first Burmese war. The dangers, disasters, and heavy cost of life and treasure involved therein, afforded strong arguments to both parties in favour of a durable peace.

* Among the expeditions sent against the English at Rangoon, was one under the immediate superintendence of the king's two brothers, and numerous astrologers. A band of warriors termed "invulnerables" by their countrymen, accompanied the princes, and were remarkable for the elaborate tattooing of their bodies, which were covered with figures of animals, and literally inlaid with precious stones. Despite their name, and real though ill-directed valour, they fled before European musketry.

The main body of the invading force returned as they came, by the line of the Irawaddy; but a body of native infantry succeeded in finding a practicable route to the Aeng Pass, and thus clearly proved that nothing but ignorance of the geography of the country had, humanly speaking, been the sole means of preventing "a portion of General Morrison's army from wintering in Ava, instead of perishing in the mountains of Arracan."*

Before the termination of the Burmese war, proceedings had occurred in another quarter which involved a fresh appeal to arms. The successors of Runjeet Sing of Bhurtpoor, had faithfully observed the treaty of 1805. The latter of these rajahs, Baldeo Sing, had taken pains to ensure the protection of the supreme government for his son, Bulwunt Sing, a child of five years old, by entreating the political agent at Delhi, Sir David Ochterlony, to invest the boy with a *khelat*, or honorary dress, which was the form prescribed by Lord Wellesley as the official recognition necessary to legal succession on the part of all subsidiary and protected princes. The request of the rajah was granted early in 1824, in consideration of his infirm health; and his death a year after, not without suspicion of poison, was followed by a train of events which proved the justice of the precautions adopted on behalf of the heir. For about a month the reins of government rested quietly in the hands of the guardian and maternal uncle of the young rajah; but at the expiration of that time, the citadel was seized, the uncle murdered, and the boy made prisoner by Doorjun Sal (a nephew of the late Baldeo Sing), who assumed the direction of affairs. This daring usurpation involved a defiance to the British government, which Sir David Ochterlony felt keenly; he also knew on how slender a thread hung the life of the boy, for whose protection the honour of England had been solemnly pledged. An immediate demand for the surrender of Bulwunt Sing was refused; but the promptitude and determination with which it had been made, probably prevented another name from being added to the long list of Indian princes born too near a throne to escape death by a poisoned opiate, or the dexterous hand of an athlete. Sir David was anxious to waste no time in inconclusive negotiation: he wished to march at once against Bhurtpoor, before the enemy should have opportunity to take measures of defence. With this intent, the veteran general, then in his sixty-eighth year (fifty preceding ones having been spent in India), set on foot the necessary preparations, which were arrested by counter-orders from the supreme government. The heavy pecuniary cost, and numerous disasters attendant on the early stages of the Burmese war, combined with mortifying recollections of the issue of the former siege of Bhurtpoor, rendered Lord Amherst reluctant to enter on an undertaking which, if unsuccessful, might, it was feared, add to existing embarrassments—that of "hostilities with every state from the Punjab to Ava."† The successful defence of this Indian fortress against Lake, was still the favourite vaunt of every secret and open foe to English supremacy: the repetition of such an event was to be avoided at any cost. The annulment of the recent measures may be vindicated as a necessary act; but there can be no excuse for the harsh and peremptory manner in which it was enforced, to the bitter mortification of Ochterlony, who after being before deprived of the position of Delhi resident by Sir George Barlow, was now compelled to tender his resignation, which he survived only a few months.‡

Doorjun Sal attributed the conduct of the British government to fear, and was consequently emboldened to drop the submissive tone which he had adopted while military preparations were in progress, and assert his claims, not as regent, but as rajah. The new Delhi resident, Sir Charles Metcalfe, advocated the same policy as that which had cost his predecessor so dearly; and his representations, in conjunction with the warlike proceedings of Doorjun Sal, induced the supreme government to resolve on espousing the cause of Bulwunt Sing. An attempt at negotiation having failed, an army, comprising about 21,000 men and above a hundred pieces of heavy ordnance, marched against Bhurtpoor in December, 1825, under the direction of Lord Combermere. The garrison was believed to comprise 20,000 men, chiefly Rajpoots and Jats, with some Afghans; but the best defence of the fortress consisted in its thick high walls of indurated clay, rising from the edge of a broad and deep ditch, flanked by thirty-five tower-bastions, and strengthened by the

‡ *See* Note to p. 421

outworks of nine gateways. Of these fortifications several had been added since 1805: one in particular, termed the Bastion of Victory, was vauntingly declared to have been built with the blood and bones of Englishmen there laid low. On the previous occasion the besieged had, nevertheless, enjoyed advantages far superior to those on which they now relied. An immense number of troops, stated, doubtless with exaggeration, at 80,000,* were then assembled within the walls, whence they could issue at pleasure to draw supplies from the adjacent country; for the limited number of Lord Lake's force confined his operations to a single point. Moreover, the English at that time trusted too exclusively to hard fighting, and neglected the resources of engineering skill, especially the construction of mines—a measure now adopted by Lord Combermere, at the suggestion of Major Galloway† and Lieutenant Forbes of the engineers, who was on duty at the siege. The communication between the moat of the fortress and the extensive piece of water by which it was supplied, was cut off, the ditch nearly emptied, and mines were carried across and above it; while the operation of powerful batteries covered the approaches and kept down the fire of the enemy. By the middle of January the walls had been effectively breached, and the army impatiently waited the order to storm. It was given on the 18th, the appointed signal being the springing of a mine containing 10,000 lbs. of powder. The foremost of the storming party, in their anxiety to advance immediately after the explosion, crowded too near the opening, and the quakings of the earth, and the dull tremulous sound beneath their feet, came too late to save several of them from sharing the fate of numbers of the enemy assembled to defend the breach, who perished in the convulsion which darkened the air with dense clouds of dust and smoke, and hurled disjointed masses of the hardened ramparts in all directions. The fate of their comrades gave a momentary check to the ardour of the assailants; but the order to advance was issued and obeyed—the troops scaled the ramparts, and after overcoming a resolute resistance at different points, gained possession of the town and outworks, at the cost of about 600 killed and wounded. The loss of the enemy was estimated at 14,000, of whom 8,000 were slain in the assault; many being cut off by the British cavalry while attempting to escape through the gates on the western face of the fortress. The citadel surrendered in the afternoon. At the commencement of the assault, Doorjun Sal had quitted the fortress with his wife and two sons, escorted by forty horsemen, and sought refuge in an adjoining wood, where he remained for several hours, and then endeavoured to escape unperceived. The attempt failed; the fugitives were overtaken by a troop of native cavalry, and secured without opposition. Doorjun Sal was sent as a prisoner of state to Allahabad, and the young rajah reinstated on the throne of his ancestors; but though the nominal regency was made over to the principal widow of Baldeo Sing, and the partial management of affairs entrusted to his leading ministers, the paramount authority was vested in a British resident permanently appointed to Bhurtpoor. The army appropriated booty to the amount of about £22,000. Before the fall of Bhurtpoor, the conduct of the Ava war, though not entirely approved, procured an earldom for Lord Amherst. Lord Combermere was created a viscount. The diplomatic arrangements made during this administration were of some importance. In 1824, Malacca, Singapore, and the Dutch possessions on the continent of India, were ceded by the King of the Netherlands in exchange for the British settlement of Bencoolen, in Sumatra. Dowlut Rao Sindia died in March, 1827, leaving no son. His favourite, but not principal wife, Baiza Bye, was, in accordance with his wish, suffered to adopt a child and assume the regency—a procedure for which the consent of the company was solicited and obtained, provision for the continued maintenance of a British contingent being made by the advance of a loan or deposit of eighty lacs of rupees, the interest of which, at five per cent., was to be employed in the support of the troops.

Lord Amherst visited the titular king of Delhi early in 1827, and then repaired to Simla on the lower range of the Himalaya, which from that time became the favourite retreat of the governors-general of India, from its beauty and salubrity. While there, hostilities broke out between Russia and Persia, and the latter and of course much weaker power demanded the aid of the Calcutta government, in accord-

† Better known as Major-general Galloway, the author of a valuable work on the mud forts of India.

ance with the treaty concluded at Tehran in 1814. The point at issue regarded the boundary line between the two countries. The cabinet of St. Petersburg positively refused to accept the arbitration of British officers; and the result was, that a struggle ensued, in which the British took no part; and the Persians, being worsted, were compelled to make peace with Russia by the surrender of the contested territory, in February, 1828.

In the same month Lord Amherst resigned his position, and returned to England. The restoration of tranquillity had enabled him to pay some attention to civil matters; and the diffusion of education had been promoted by the formation of collegiate institutions at Agra and at Delhi, as also by the establishment of schools in various provincial towns. The pressure of financial difficulties impeded the full execution of these as well as of other measures required to lighten the burdens and stimulate the commerce of the people of India. The war with Ava had necessitated heavy disbursements. In two years (1824 and '25), the sum of nineteen million sterling had been raised; and at the close of the Amherst administration, "the financial prospects of the country were of a most alarming complexion."* Nearly eighteen months elapsed before the arrival of a new governor-general, and during that time the supreme authority rested in the able hands of the senior member of council, Butterworth Bayley, who busily employed himself in laying the foundation of various internal reforms, which were carried out during the ensuing—

Bentinck Administration, 1828 to 1835. —After his recall from the government of Madras, in 1807, Lord William Bentinck had remonstrated forcibly against the injustice of making him the victim of measures adopted without his cognizance; and his arguments being seconded by influential family connexions (with Mr. Canning and the Portland family), he eventually obtained the appointment of governor-general, and in July, 1828, arrived in Calcutta. At that time unaccustomed tranquillity prevailed throughout India, and the character of Lord William Bentinck was considered the best guarantee against its disturbance by any aggressive or domineering spirit on the part of the English. A vivacious French traveller (Jacquemont) declared that the actual possessor of the sceptre of the Great Mogul thought and acted like a Pennsylvanian quaker: yet some of the acts of this administration would certainly not have been sanctioned by the great American coloniser. The influence of Lady Bentinck was unquestionably of the best description; and the improved tone of thought and feeling which pervaded the society of government-house, diffused itself throughout Calcutta and the British presidencies.† All the support derivable from a manly and conscientious spirit, was needed by one who came out burdened with the execution of immediate and sweeping retrenchments. No opposition was made to the extensive reduction of the army; but the old question of *batta* (extra pay) which had called forth the energies of Clive, became afresh the source of bitter discontent. The total diminution, on the present occasion, did not exceed £20,000 per annum; but it fell heavily on individuals: and although the governor-general could not avoid enforcing the accomplishment of stringent orders, he was thereby rendered permanently unpopular with the military branch of the service. The press commented freely on the *half-batta* regulations, and the discontented officers were wisely suffered to vent and dissipate their wrath in angry letters. The same forbearance was not manifested when the excessive flagellation, which at this period disgraced the discipline of the army, became the theme of censure; for Lord W. Bentinck, "though a liberal to the very core," held, as had been proved at Vellore, very stern notions on military affairs; and in this, as also in some other cases, showed himself decidedly "inclined to put a gag into the mouth of the press."‡

In 1829, a regulation was enacted, by which the practice of *suttee*—that is, of burning or burying alive Hindoo widows —was declared illegal, and the principal persons engaged in aiding or abetting it, became liable to trial for culpable homicide, and were punishable with imprisonment and fine. This enactment was far from exciting the expected degree of opposition. The same unlooked-for facility attended another measure (denounced still more de-

† The altered tone of Calcutta society may be conjectured, from the fact of Jacquemont's going on Sunday to the house of the chief justice, Sir Charles Grey, to hear some music, play chess, and seek a refuge from the general devotion of the English.—(*Letters from India*, i., 101.)

‡ Kaye's *Life of Metcalfe*, ii., 253.

cisively) in prospect, as a perilous innovation, not on "the rights of women" only, but on those of the entire Hindoo community; namely, the abrogation of the intolerant laws which decreed the forfeiture of all civil rights as the penalty of conversion to Christianity. The convert not only became an outcast, but an outlaw; incapable of inheriting personal or family property. The wonder was that a Christian government had not sooner put a stop to such bigotry. Now, the necessary steps were taken with much caution, and the alterations were so mixed up with other ordinances, as to create little commotion or excitement even when first published.

In 1831, active measures were adopted for the extirpation of the numerous and formidable gangs of depredators, known by the name of Thugs or Phansi-gars; the former term (signifying a cheat) being the more common, the latter (denoting the bearer of a noose or phansi, wherewith to commit murder by strangulation) the less general, but equally appropriate designation. The lasso was not, however, necessary to these miscreants, whose horrible dexterity enabled them, with a strip of cloth, or an unfolded turban, to destroy the unwary traveller speedily and surely;—the dead body was then buried in the ground, and every trace of the crime carefully obliterated. Hundreds upon hundreds of husbands and fathers perished none knew how, save the members of this horrible confederacy, who, whether of Hindoo or Mohammedan origin, were usually thieves and murderers by hereditary descent. Of the doctrines of the Koran they were wholly ignorant, and of Brahminism they knew nothing but its worst superstitions; which are those connected with the sanguinary worship of the goddess Doorga or Cali, the wife of Siva, whom they regarded as their peculiar patroness, and looked to for guidance and counsel, which they believed to be communicated through the medium of the flight and utterance of birds, beasts, and reptiles. Fearful oaths of secrecy were interchanged; and the difficulty of detection was enhanced by the consummate art which enabled the stealthy assassin to maintain the bearing of an industrious peasant or busy trader. Remorse seems to have been well-nigh banished from this community by the blinding influence of the strange predestinarian delusion that they were born to rob and kill their fellow-men—destined for this end by Providence by a law similar to that which impels the savage beast of the forest to slay and devour human beings. "Is any man killed from man's killing?" was their favourite argument. "Are we not instruments in the hand of God?" The mysterious workings of that almighty and ever-present power, which controls the actions, but leaves the will free, was unthought of by these unhappy men, whose excesses rendered them a by-word of fear and loathing throughout India. Lord Hastings made some efforts for their suppression by military detachments, but with little effect. Summary and organised measures of police were adopted by Lord Bentinck, and ably carried out by Mr. Smith, Major Sleeman, and other functionaries. In the course of six years (1830 to 1835) 2,000 Thugs were arrested and tried at Indore, Hyderabad, Saugor, and Jubbulpoor, of whom about 1,500 were convicted and sentenced to death, transportation, or imprisonment. The strange *esprit de corps* which for a time sustained them, at length gave way; many purchased pardon at the expense of full and free confession: formidable gangs were thus reduced to a few scattered and intimidated individuals; and the Thugs became a bugbear of past times.

The most exceptionable feature in the Bentinck administration was the deposition of the rajah of Coorg, Veer Rajundra Wudiyar, and the conversion of his mountainous principality into a province of the Madras presidency. The immediate occasion appears to have been a domestic quarrel with his sister and her husband, which led them to seek the protection of the British resident at Mysoor. The rajah was described as fierce, cruel, and disposed to enter on intrigues against the supreme government with the rajah of Mysoor. These vague charges, together with some angry letters, demanding the surrender of his fugitive relations, and the imprisonment of a servant of the company, were considered to justify the dispatch of a powerful force for the subjugation of Coorg. The British advanced in four divisions, and entered the principality from as many quarters. The alleged unpopularity of the rajah was contradicted by the determination of his defenders, despite a proclamation offering protection to person and property as the price of neutrality; but the efforts of the brave mountaineers were rendered unavailing, less by the overwhelming superiority of

numbers and discipline on the part of the invaders, than by the avowed disinclination of Veer Rajundra to organised opposition against the powerful protectors of his ancestors. Merkara, the capital of Coorg, was captured in April, 1834, and the rajah, with his family, surrendered unconditionally. A committee of inquiry was instituted into the charges adduced against him, and the search made after the seizure of Merkara, brought to light the bodies of seventeen persons, including three relatives of the rajah, who had been put to death by decapitation or strangling, and thrown into a pit in the jungle. This was a melancholy revelation; but such severities are unhappily quite consistent with the ordinary proceedings of despotic governments; and it may well be doubted whether, even if proved beforehand, they could warrant the interference of a foreign state for the deposition of the prince by whom they were committed, in opposition to the will of the people he governed. Certainly the assumption of sovereignty over the Coorgs could be excused only by the most rigid adherence to the promise given, "that their civil rights and religious usages should be respected, and that the greatest desire should invariably be shown to augment their security, comfort, and happiness. How far these objects have been effected," adds Professor Wilson, "may admit of question; but the province has remained at peace, and the Coorgs have shown no disposition to reassert their independence."*

The rajah became a pensioner on the E. I. Cy. Some few years ago he came to England, bringing with him a daughter, a lady-like and intelligent child, to be educated as a Christian. Queen Victoria, by a graceful act of spontaneous kindness calculated to endear her to the vast Indian population beneath her sway, officiated in person as godmother to the young stranger, who, it is to be hoped, will live to merit and enjoy a continuance of the royal favour. The rajah himself has no trace, either in countenance or bearing, of the insane cruelty ascribed to him; and the satisfactory arrangement of the pecuniary question† now at issue between him and the E. I. Cy. is desirable, as the best means of strengthening the confidence of Indian princes in the good faith of the nation in general.

Whatever view may be taken of the conduct of Lord W. Bentinck in this case, and of certain complex arrangements, of comparatively small interest, with Oude, Mysoor, Nagpoor, Jeypoor, and other Indian states, there can be no doubt that the general result of his administration was highly beneficial to the cause of religious civilisation.‡ Public institutions, whether for educational or charitable purposes, were warmly encouraged; and the almost exclusive agency of European functionaries, which had been the radical defect of the Cornwallis system, was to some extent remedied by the employment of natives in offices of trust and emolument,—not, indeed, to the extent which they have a right to expect eventually, but as much perhaps as the circumstances of the time warranted. The opening of the "overland route" by way of the Red Sea, Egypt, and the Mediterranean, and the consequent reduction of the length of transit from four or five months to forty or fifty days (an immense boon to the Anglo-Indian community), was effected mainly through the instrumentality of the late Lieutenant Waghorn, R.N.

The navigation of the Ganges by steam-vessels was attempted, and proved entirely successful.§ Measures were adopted to procure the unobstructed navigation of the Indus, with a view to the extension of British trade with the countries to the westward as far as the Caspian Sea, and also in the hope of establishing a commanding influence on the Indus, in order to counteract the consequences which might be anticipated from the complete prostration of Persia, and its subservience to the designs of Russia against British India. The orders of the cabinet of St. James were positive, and Lord W. Bentinck must therefore be acquitted of blame for the complex relations formed with the Mohammedan states of Bahawulpoor, Sinde, and Afghanistan, and especially with the wily and ambitious Seik, Runjeet Sing, to whom a present of several

* Continuation of Mill's *India*, ix., 359.

† Relating to the proprietary right to a large sum of money invested by the prince and his family in the Anglo-Indian funds, the interest of which had been regularly paid to the rajah, Veer Rajundra, up to the time of his deposition, which the E. I. Cy. now appear disposed to regard as confiscated.

‡ The efforts of Lord W. Bentinck were especially directed to the diffusion of the English language among the natives—a measure difficult indeed, but highly desirable in the sight of all their well-wishers.

§ The first voyage between Bombay and Suez, made by the *Hugh Lindsay* in 1830, occupied thirty days; the second, in the same year, only twenty-two. The passage between England and India now requires fewer weeks than it formerly did months.

English horses, of unusual size and stature, were presented by Lieutenant Burnes, in the name of William IV., in October, 1831.

The renewal of the charter of the E.I. Cy. for the term of twenty years (1833 to 1853), was attended with a complete change in the constitution of that powerful body, which, after commencing in a purely commercial spirit, now consented to place in abeyance its exclusive privileges of trade with China as well as with India, but retained its political rights; and, in conjunction with the Board of Control, continued to direct the affairs of Hindoostan. The fixed dividend guaranteed to the shareholders, and charged upon the revenues of India, the means of redeeming the company's stock, with other arrangements then made, are set forth in the opening page of this history. Lord William Bentinck resigned his position on account of ill-health, and quitted India early in 1835. The brief provisional sway of Sir Charles Metcalfe was distinguished by a measure which procured him much exaggerated applause and equally indiscriminate censure. This act was the removal of the restrictions on the public press of India, which, though rarely enforced, were still in existence. It is worthy of remark, that the liability to government interference was confined to Europeans; for native editors could publish anything short of a direct libel: and after the banishment of Mr. Silk Buckingham by Mr. Adam, his paper was continued by a successor of mixed race, an Anglo-Indian, whom the law did not affect. The views of Sir Charles Metcalfe, with regard to the precarious nature of our Indian empire, were of a decidedly exaggerated and alarmist character. In 1825, he had declared the real dangers of a free press in India to be, "its enabling the natives to throw off our yoke;" and a minute recorded by him in October, 1830, expressed, with some sharpness, the inconvenience attendant on the proceedings of government finding their way into the newspapers. Despite some apparent inconsistency, the strenuous advocacy of the freedom of the press, at all hazards, would have been a proceeding worthy his frank and manly character; but it would be difficult to justify his conduct in enacting a measure, however laudable in itself, in opposition to the will, and, as it was generally supposed, to the interests of his employers. The change could scarcely have been long delayed; for now that Englishmen were to be suffered to settle at pleasure in India, it was not likely they would tamely submit to have summary deportation held over them as the penalty of offending against the prerogative of a despotic governor, in a time of external and internal tranquillity.

Auckland Administration: 1835 to 1842.—The person first nominated as the successor of Lord William Bentinck was Lord Heytesbury; but the brief interval of power enjoyed by the Tory ministry having expired before his lordship could quit England, the appointment was cancelled, the large sum granted as usual for outfitting expenses being forfeited by the E. I. Cy.

The restored Whig cabinet, under Lord Melbourne, bestowed the Indian vice-royalty on Lord Auckland, a nobleman of amiable character and business habits, who, it was generally supposed, might be safely entrusted with the charge of the supreme government, which had certainly never been assumed by any preceding functionary under more favourable circumstances. Perfect tranquillity, a diminishing debt, and increasing commerce, seemed to promise an easy and honourable administration; unhappily, it proved the very reverse. The first event of importance was one which, though vindicated by an author whose impartiality reflects equal credit on himself and the E. I. Cy.,* nevertheless appears to the writer of the present work an act of cruel injustice, the blame of which rests chiefly on the Bombay authorities; for the new governor-general gave but a tardy and reluctant assent to their decision. The measure in question was the deposition of the rajah of Sattara, the legitimate successor of Sevajee, who had been placed on the musnud in 1819. The policy or impolicy of his reinstatement need not be discussed. Pertab Sein, then twenty-seven years of age, showed unbounded delight at his restoration to what he undisguisedly viewed as real power, and diligently set about improving his little sovereignty. Successive residents at his court—Grant Duff, generals Briggs and Robertson, and Colonel Lodwick—bore witness to the general excellence of his administration from 1819 to 1837–'8, the last gentleman with some qualification, the specified drawback being the new feature of weakness of mind manifested by an excessive addiction to Brahminical superstitions, and the employment

* Mr. Edward Thornton, head of the statistical department at the India House.

of women in the management of elephants, as guards, and in other unusual offices. These complaints were the first indication of an altered tone on the part of the local authorities, and were probably the earliest results of a conspiracy formed against the rajah in his own palace. The favourable nature of the testimony regarding his conduct previously sent to England, had drawn from the Court of Directors repeated expressions of warm and generous praise. In 1829 he was declared to be "remarkable among the princes of India for mildness, frugality, and attention to business;" in 1831, "his disposition and capacity for government" are again noticed; and in December, 1835, a letter was addressed to him, lauding the "exemplary fulfilment" of his duties as "well calculated to promote the prosperity of his dominions and the happiness of his people," and acknowledging "the liberality displayed in executing various public works of great utility, which has so justly raised your reputation in the eyes of the princes aud people of India, and gives you an additional claim to our approbation, respect, and applause." This testimony was accompanied by a handsome sword, the most marked tribute of respect which could be offered to a Mahratta. The letter and sword were arbitrarily detained by the Bombay government, and never presented to the rajah, whose feelings about this time became irritated by a controversy with them regarding certain jaghires to which he laid claim. A conspiracy was, it is believed, concocted against him by a vindictive, ungrateful, and profligate brother, and the rajah was accused of endeavouring to procure the overthrow of British power by three extraordinary measures:—first, by striving to corrupt the entire Anglo-Indian army through two native officers of a regiment stationed at Sattara; second, by inducing the Portuguese at Goa to land 30,000 European troops in India, who were to be marched overland for the purpose; third, by corresponding with the fugitive ex-rajah of Nagpoor, who had neither character, influence, nor ability,—not a shilling, nor an acre of territory,—and was himself dependent on charity. The seals of the rajah were forged, pretended correspondence produced, and other artful schemes successfully carried through. There was at this time a vague feeling of alarm throughout India relative to a general rising against British supremacy: the press at home and abroad gave countenance to the idea; and Sir Charles Metcalfe declared he should not be surprised "to wake some fine morning and find the whole thing blown up." Sir Robert Grant, then governor of Bombay, and some officials around him, fell into the trap, and despatches of several hundred paragraphs were written regarding the alleged application of the rajah for the aid of 30,000 Portuguese soldiers, when, at that time, *thirty* would have been an impossibility; and great alarm was professed lest 200,000 British soldiers—Mussulmen as well as Hindoos, who had ever proved themselves true to their salt—should be seduced from their allegiance by this petty prince, who was no warrior, but an excellent farmer and landlord. The supreme government of India at first treated the affair with the contempt it merited: but reiterated calumnies began to take effect; and the alarm once given, the most absurd stories, many of which carried with them the proof of their falsehood,* were believed by men who were afterwards ashamed to confess their credulity. Sir R. Grant died, and Sir James Carnac, then chairman of the Court of Directors, succeeded him. He went to Sattara in 1839, and required the rajah to acknowledge his guilt, sign a new treaty, and all would be forgiven. Pertab Sein refused to declare himself a traitor to the British government; asked for a copy of the charges against him, and demanded a fair hearing and a public trial. Sir J. Carnac was a kind and moderate man; but the strong prejudices—not to use a harsher term—of his associates warped his judgment, and led him to view the conduct of the rajah as the continued contumacy of a rebel, instead of the offended feelings of an innocent man. A body of troops marched at midnight into the palace, led by the successful plotter, Appa Sahib: the rajah was made prisoner in his bed, all his property seized; and ere morning

* Since the deposition of the Sattara rajah, on the evidence of forged documents and perjured witnesses, a similar case has come to light. Ali Morad, one of the Ameers of Sinde, having been convicted of forgery, had a large portion of his territories confiscated by the British government. The accuser, Sheik Ali Hussein, had been prime minister of the chief, and was dismissed for malpractices: at his death (8th May, 1853), he confessed that all he had sworn against Ali Morad was untrue, and that he had given false evidence for purposes of revenge.—(*Bombay Gazette*, 10th May, 1853.)

dawned, the victim of a foul conspiracy was ignominiously hurried away as a prisoner to Benares, where he died. The brother who had caused his ruin was placed on the throne. After a few years of profligacy and indolence Appa Sahib died, leaving no son, and the little principality of Sattara devolved, in default of heirs, upon the British government. The whole transaction is painful, and reflects little credit on any concerned therein: time, the revealer of truth, has exposed the folly and injustice of the procedure; and had the ex-rajah survived, some measure of justice would probably have been reudered him.*

The next and all-absorbing feature of the Auckland administration is the Afghan war, to understand the origin of which it is necessary to explain the condition of the territories on our western frontier. Zemaun Shah, the Afghan ruler of Cabool, against whom a treaty was negotiated with Persia in 1801, by Sir John Malcolm, was deposed and blinded in the same year by his brother Mahmood—treatment precisely similar to that bestowed by him on his immediate predecessor, Humayun. Mahmood was, in turn, displaced by a fourth brother, named Soojah-ool-Moolk. With unwonted clemency the conqueror refrained from inflicting extinction of sight, which, though not a legal disqualification to sovereign power, usually proves an insuperable bar to the claims of any candidate. Soojah could not keep the throne he had gained; but being expelled by the reviving strength of Mahmood, sought refuge with Runjeet Sing, who plundered him of all his valuables, including the famous Koh-i-Noor (the gem of the English Exhibition of 1851), and made him prisoner. By the exertion of an unexpected amount of skill and resolution, Shah Soojah succeeded in making his escape in the disguise of a mendicant, and reached the British station of Loodiana in September, 1816, whither his family, together with Zemaun Shah, had previously found refuge. Mahmood did not, however, possess the throne in peace. His vizier, Futteh Khan, an able chief, who had been mainly instrumental in carrying out the late revolution, evinced indications of a desire to elevate his numerous brothers to almost exclusive authority, and to make the Barukzye clan, of which he was hereditary chief, the governing class. The youngest of his brethren, the afterwards famous Dost Mohammed, treacherously occupied the fortress of Herat, committed great excesses there, and even profaned the harem by seizing the ornaments of its inmates, and especially by violently tearing away a jewelled girdle from the person of one of the royal princesses.

The insulted lady sent the torn robe to her relative, Prince Kamran, the son of Mahmood Shah, with a demand for vengeance. Dost Mohammed fled to Cashmere, where his brother, Azim Khan, was governor. Futteh Ali was made prisoner, and blinded by the dagger of Kamran. Subsequently, on his refusal to call upon his brothers to surrender, the unfortunate vizier was literally hacked to pieces by the courtiers in attendance on the king and prince.

Dost Mohammed raised an army, and made himself master of the city of Cabool, in 1818. Shah Mahmood and Kamran established themselves in Herat, and the usurper turned his attention to the affairs of government, and proved a much better ruler than either of his predecessors. He had many difficulties to contend with, including the jealous intrigues of his brothers, several of whom became in fact independent princes. Their hostility encouraged Shah Soojah to attempt regaining possession of Cabool, but without effect. At the commencement of Lord Auckland's administration, Dost Mohammed reigned over the chief remaining portion of the Doorani kingdom founded by Ahmed Shah, which, at the time of the death of that ruler, extended from the west of Khorassan to Sirhind, and from the Oxus to the sea. Of the seventeen provinces it then comprised, only six now remained—namely, Cabool, Bameean, Ghoreband, Ghuznee, Candahar, and Jellalabad. Beloochistan had become independent, under a chief named Mohammed Khan, in 1802; Khorassan had been recovered by Persia; Herat was retained by Prince Kamran, after the death of Mahmood; Balkh was taken by the King of Bokhara, in 1823; and the Punjab, Mooltan, Dera Ghaza Khan, Dera Ismael Khan, and lastly Peshawur, fell to the share of Runjeet Sing. Sinde was still nominally dependent on Cabool; but its rulers—three brothers

* Sir Charles Forbes, Bart., Mr. John Forbes, M.P., and several leading directors of the E. I. Cy., with Mr. Joseph Hume, M.P., Arthur Lewis, of the chancery bar, and many other members of the Court of Proprietors, who were the warm friends of the ex-rajah, never ceased to seek a hearing and trial for him, and entertained a strong and permanent conviction of his innocence.

who governed conjointly under the title of "the Ameers"—generally needed the presence of an army to compel the payment of their arrears of tribute. Cabool itself, and a considerable portion of the Hazerah country, was under the immediate sway of Dost Mohammed; Candahar, and the adjacent territory, was held by his three brothers, Kohen-dil-Khan, Rehem-dil-Khan, and Mehir-dil-Khan, under the name of sirdars or governors.

The divided and independent governments beyond the Indus were in a condition well calculated to secure our power, without any infraction of the strict neutrality which the English rulers so ostentatiously declared it their desire to preserve, when, in 1838, an attack was made on Herat by the Shah of Persia, with the aid of Russian officers.* Herat has been called the key of Afghanistan: it is also the gate towards which all the great roads from Central Asia to India converge; and the Calcutta authorities became exceedingly alarmed at the probability of its falling under the influence of Russia. They became very solicitous that Afghanistan should maintain entire independence, and reject the proffered alliance with the Muscovite court. Lieutenant Burnes was dispatched on an embassy to Dost Mohammed, or "the Dost," as he was commonly called; but although the instructions of Burnes were explicit regarding the non-reception of Russian envoys, and other demands to be exacted on the part of the English, he had nothing beyond idle professions of regard to offer in return; not even mediation with Runjeet Sing for the restoration of Peshawur, which the Seik conqueror was willing to surrender to any one except to the ruler of Cabool, from whom it had been taken.

The contrast between the magnificent presents brought by Mountstuart Elphinstone to Afghanistan, on a former occasion, with the pistol and telescope, pins, needles, and playthings, now offered to the Dost for himself and the inmates of the zenana, could not but be painfully felt; yet the chief knew the value of British protection, and was not disposed to take offence lightly. But he could not afford to reject the direct offers of assistance, in men and money, made by the secretary of the Russian legation, without some clear guarantee against the evil effects of such rejection; and as this was positively refused, he had literally no alternative but to accept the Russo-Persian alliance. It would have been only common prudence, on the part of the supreme government, to have waited the issue of the siege of Herat, before proceeding further; but Lord Auckland was unhappily enjoying the cool breezes of Simla, away from his legitimate advisers at Calcutta, and was, it is said, considerably under the influence of two or three clever and impulsive men, who may have been excellent secretaries and amusing table-companions, but were very ill-adapted for wary counsellors.† It would have been an easy matter to convert Dost Mohammed, the sirdars of Candahar, and the whole Barukzye clan, into firm allies; nevertheless, Lord Auckland, in an hour of weakness and indecision, was induced to seek the co-operation of Runjeet Sing for the restoration of Shah Soojah; and, although the defeat of the Persian army, and its withdrawal, after a ten months' siege,‡ secured the independence of Herat, and removed one main incentive to war, the projected invasion was carried out despite the apathy of the Seik ruler (now fast sinking to his grave, under the combined influence of age and the most hateful excesses) and the scarcely disguised distrust of Soojah, who could not comprehend why the assistance repeatedly refused by Lord W. Bentinck, was bestowed unasked by Lord Auckland.

Perhaps so perilous an enterprise was never more rashly and needlessly undertaken. It was wrong in principle, weak in execution, and appalling in its results. Shah Soojah was not even presumptive heir to the usurped dominions of his grandfather; for Kamran, the son of the elder brother Mahmood, had a prior claim. The professed object of the Tripartite Treaty now formed, viz., to restore a legitimate sovereign to the throne from whence he had been wrongfully expelled, was therefore absolutely false; and as if to make the spirit of the whole transaction more evident, Runjeet Sing affixed his signature to the treaty at Lahore, June, 1838, with the ill-gotten Koh-i-Noor gleaming on his arm.§ In return for furnishing a few thousand troops

‡ Lt. Eldred Pottinger cheered, counselled, and fought with the garrison throughout the weary siege.

§ This famous stone is said by several modern writers on the Afghan war to have formed part of

to be paid by Shah Soojah, Runjeet Sing was to be confirmed in possession of all the territories (including Peshawur) wrested by him from Cabool.* As to the English, they were willing to lavish men and money on the trappings of war, and to get up "a grand military promenade," for the sake of terrifying Russia by a formidable demonstration of our power and energy. Those† who ventured to speak of the dreary defiles, inclement climate, and, above all, of the warlike temper of the people upon whom a rejected yoke was to be reimposed by English bayonets, were censured as timid, prejudiced, or misinformed; and the assembling of the "army of the Indus" was a source of agreeable excitement, fraught with promotions and appointments, commissariat contracts, and honours from the Crown; for, despite the neutral policy urged by the home authorities, it was pretty evident that a brilliant campaign was no less certain to procure for its promoters rank and emolument, than to inflict new burdens on the Indian revenues, and increase the pressure of taxes which it was alike the duty and the interest of the government to mitigate.

A declaration of war was issued from Simla, in 1838, and a British force was speedily gathered of 28,350 men, partly from Bengal, partly from Bombay. It was deemed advisable by the governor-general that the Shah should "enter Afghanistan surrounded by his own troops;" and, for this end, about 4,000 camp followers‡ were levied from the E. I. Cy.'s military stations, and placed under the nominal command of Timur, the eldest son of Soojah-ool-Moolk; the whole being led by British officers, and paid from the British treasury. Runjeet Sing was to supply a contingent of 6,000 men, and to station 15,000 men as an army of observation in Peshawur. The commissariat arrangements were extremely deficient, and the enormous number of camp followers, amounting to nearly 100,000 persons, imparted new difficulties to a march of extraordinary length, through an almost unexplored and hostile territory. The invading force had only physical difficulties, and the depredations of certain mountain tribes, to encounter on the road to Candahar. It was expected that the Ameers of Sinde would offer opposition on the score of the manifest infraction of the treaty of 1832, by which the E. I. Cy., when desirous to open the navigation of the Indus, expressly declared that it would be employed by them solely for mercantile uses. The Ameers, however, saw the folly of remonstrating with a powerful force thirsting for the plunder of the rich city of Hyderabad. They paid £100,000 as an instalment of the £280,000 demanded by Shah Soojah on the favourite plea of arrears of tribute, and surrendered the fortified island of Bukkur in the Indus, the possession of which was deemed necessary to the security of the English force. The army of the Indus

Shah Jehan's peacock throne, which was carried off from Hindoostan by Nadir Shah; but there does not seem evidence to support the statement. Several diamonds of extraordinary value were seized by different invaders, and one in particular was given by the exiled Humayun to his ungracious host the Shah of Persia.—(*See* p. 91.)

* The concessions made to Runjeet Sing at this period were no less undignified than unwise. At the meeting which took place with Lord Auckland at Ferozepoor, caresses were lavished on the "lion of the Punjab," who though now a decrepit and paralysed old man, continued to outrage public decency by the practice of shameful sensualities. There he sat in his golden chair, shaped like a hip-bath, with his attenuated limbs gathered beneath him, and his single restless eye flashing in rivalry of the Koh-i-Noor (the only ornament he wore, except a string of 300 pearls of the finest water and the size of small marbles), listening to the civilities of the English authorities, which happily did not extend to compliance with his previous demand for an English wife.—(Osborne's *Court and Camp of Runjeet Sing*, 199.) The fact that the old debauchee entertained some at least of his official visitors with the "burra tomacha" (great fun) of intoxicating "nautch" girls, for the sake of seeing them beat and abuse one another, gives force to the remark of a British officer, who, commenting on the indulgence evinced to the vices of Runjeet Sing, writes—"It was impossible not to feel that this complaisance was carried a little too far, when he was exhibited in the character of a Bacchus or Silenus, in the presence of an assemblage of English gentlewomen, and when their notions of decency were further outraged by the introduction, to whatever extent sanctioned by culpable usage in other parts of India, of bands of singing and dancing courtesans."—(Havelock's *War in Afghanistan*, i., 87.) After all the Seiks were not conciliated: they watched the Feringhees (foreigners) with extreme suspicion; and when their infirm old chief, in his anxiety to examine a present of two howitzers, fell prostrate before them, the accident was regarded as a fearful omen.

† In October, 1838, the author, deeply convinced of the unjust and perilous nature of the war, drew up a memorandum, which the Marquis Wellesley transmitted to Sir John Cam Hobhouse, then President of the Board of Control. His lordship addressed a subsequent communication to Sir John against the Afghan war, predicting that "our difficulties would commence where our military successes ended." The Duke of Wellington, Elphinstone, Edmonstone, Metcalfe, and other Indian statesmen took the same view of the question.

‡ Col. Dennie's *Campaigns in Afghanistan*, 51.

traversed the weary Bolan Pass, and the dangerous and difficult Kojuck defile with success, but at a fearful cost of life,* especially on the part of the camp followers, from heat and want of water. Candahar (the capital of Western Afghanistan), was occupied without resistance by Shah Soojah and his allies, in April, 1839. Kohun-dil-Khan and his brother sirdars fled as the foe advanced; and English gold scattered lavishly on all sides, enabled the returning monarch to win the temporary suffrage of several Barukzye chiefs. In the following June the army under Sir John Keane and Shah Soojah left a garrison at Candahar and set out for Ghuznee. This ancient fortress proved stronger than had been expected; but a nephew of Dost Mohammed deserted from the garrison, and betrayed the important secret, that an entrance called the Cabool gate had not, like the rest, been built up with stone, but had been left slightly barricaded in the expectation of supplies. The besiegers, acting on this information, fastened bags of gunpowder upon the wooden door at night, and by setting them on fire effected a practicable breach, through which a storming party, led by Colonel Dennie, immediately secured an entrance, captured the town, and, after some hours' resistance, the citadel also, receiving little loss, but slaying 1,000 Afghans: 3,000 more were wounded or captured. Among the prisoners were about fifty fanatics of all ages, who had assumed the name of *Ghazee*, in right of being engaged in holy warfare against infidels. These men, the first taken in arms against Shah Soojah, "were hacked to death with wanton barbarity by the knives of his executioners."†

So much for the magnanimity of the restored monarch in his short hour of triumph. The campaign thus successfully opened, was to some extent overshadowed by tidings of the death of Runjeet Sing, in 1839; but notwithstanding the jealous dislike evinced towards the English by the new authorities at Lahore, the Seik contingent, wretchedly insufficient as it was, became serviceable in the hands of Colonel Wade; and this energetic officer, with his nominal coadjutor the Shahzada (Prince Timur), who was "an absolute cypher," contrived, partly by fighting, partly by diplomacy, to traverse the formidable Khyber Pass, at the head of a motley assemblage of Hindoos, Seiks, and Afghans. Akber Khan, Dost Mohammed's favourite "fighting son," was recalled from his camp near Jellalabad, to join his father at Cabool, and the path being left open, Wade marched on and seized Jellalabad.

The position of Dost Mohammed was daily rendered more perilous by the desertion of his relatives and followers. Very shortly after the taking of Ghuznee, he attempted to compromise matters by offering to submit to the restoration of Shah Soojah, on condition of his own nomination to his late brother Futteh Khan's position of vizier. This proposition was of course rejected; for so far from being inclined to delegate authority to his opponent, Shah Soojah desired nothing better than to "hang the dog"—a procedure which the British envoy, Mr. Macnaghtan, does not appear to have considered otherwise than advisable, provided they could catch him.‡

The Dost desired to give the invaders battle at Maidan, on the Cabool river, but treachery and disaffection surrounded him on every side, and his camp at Urghundeh fairly fell to pieces. The venal Kuzzilbashes (or Persian guard) forsook the master whose salt they had eaten thirteen years. In vain he entreated them to stand by him in one charge against the Feringhees, that he might die with honour,—the spirit-stirring appeal fell on the listless ears of men determined to purchase safety by desertion; and, attended by a few faithful followers, Dost Mohammed in despair turned his horse's head towards the Hindoo-Koosh, leaving his guns standing.

Cabool opened its gates with "sullen, surly submission;" and Shah Soojah entered the Balla Hissar or palace-citadel in triumph, while his British allies sounded a long loud note of triumph, the European echoes of which were destined to die away in the very saddest cry of anguish and humiliation ever uttered by the proud conquerors of India. The authorities at Cabool soon discovered that the foreign bayonets and foreign gold which had been the means of replacing Shah Soojah on the throne of Afghanistan, were likewise the sole method of keeping him there. Lord Auckland desired the return of the entire "army of the Indus;" but the unpopularity of the Shah was too evident to admit of such a step, unless we were willing to confess the whole affair a

* Of 100,000 camp followers, only 20,000 reached Candahar.—(Capper's *Three Presidencies*, p. 212.)

failure, and escort his majesty back to Loodiana, or if he thought fit, leave him to take his chance among his own countrymen. An open confession of error, however mortifying, would have been incalculably wiser than following up one false step with a multitude of others. In 1839 a portion of the troops returned to Calcutta. The commander-in-chief, Sir John Keane, immediately proceeded to England, where he was elevated to the peerage by the title of Baron Keane of Ghuznee, and further remunerated by a pension of £2,000 per ann. for himself and his two next heirs male. The governor-general, from a baron, was made an earl. Mr. Macnaghten was created a baronet, and orders of the Bath were bestowed, not with the most discriminating hand.*

The winter of 1839 passed in tolerable tranquillity. The British took military possession of the country by establishing garrisons in the cities of Cabool and Candahar, and in the principal posts on the main roads to Hindoostan—viz., Ghuznee and Quettah on the west, Jellalabad and Ali-Musjid on the east. Some minor detachments were left in various other isolated positions; thus dividing a force which, united, was scarcely sufficient for its own protection. Moreover, the military authorities in Cabool, instead of retaining their position in the Balla Hissar, were induced to build costly and indefensible cantonments on the adjacent plain, in compliance with the scruples of Shah Soojah, who soon began to feel his throne somewhat too closely hedged in by foreign troops. The first flush of triumph over, he could not but find it a weary thing to live shut up in a fortress, despised by his own subjects; and as he looked forth from the Balla Hissar on the city beneath, he said "everything appeared to him shrunk small and miserable; and that the Cabool of his old age in no respect corresponded with the recollections of the Cabool of his youth."

The yearnings of romance were soon swallowed up in real dangers. Insurrections took place in various quarters. Dost Mohammed again appeared in arms, and several sharp encounters took place in the course of the year 1840; but the Afghans, despite some partial successes, offered no combined or systematic resistance. The Dost, after making a brave and successful stand at Purwan in November, thought the time had arrived when he might, with a good grace, surrender himself to the English (into whose hands the ladies of his family had already fallen.) Turning from the field of battle in despair, he galloped towards Cabool, and twenty-four hours spent on the saddle, brought him face to face with the British envoy, who was returning homeward from an evening ride. Dost Mohammed sprang to the ground, tendered his sword, and claimed protection as a voluntary captive. The kindly peace-loving nature of Sir William had been sadly warped since he had exchanged the ordinary routine of official duties and scholarly recreations for the arduous post of counsellor to Shah Soojah; and immediately before this unlooked-for greeting, he had been inquiring with regard to the Dost—"Would it be justifiable to set a price on this fellow's head?" for "it appears that he meditates fighting with us so long as the breath is in his body." But the chivalrous bearing of the defeated Ameer banished all harsh thoughts. Sir William refused the proffered sword; and when the Dost was sent as a state prisoner to Hindoostan, actually advocated his being provided for by the British authorities "more handsomely than Shah Soojah had been," for the following memorable reason:—"The Shah had no claim upon us. We had no hand in depriving him of his kingdom; whereas, we ejected the Dost, who never offended us, in support of our policy, of which he was the victim." Lord Auckland tacitly admitted the fact by receiving the deposed ruler with extreme courtesy, and burdening the Indian population with a new pension of two lacs, or about £20,000 per ann. for his support. At this time the revenues of Cabool, gathered by force of arms, did not exceed fifteen lacs, and barely paid the ordinary expenses of government. The Anglo-Afghan treasury was well-nigh exhausted, and there were grounds for doubting whether the E. I. Cy. would not think a million and a quarter a-year too dear a price to pay for the maintenance of their nominee at Cabool. The reduction of outgoings was attempted by the diminution of the "black mail" paid to certain Khilji chiefs for checking the excesses committed by the predatory tribes who infested the passes. The experiment proved very dangerous; the Khiljies assumed a haughty tone; the Kojucks, and many tribes of whose very names the English had until now remained in happy ignorance, rose in

* Dennie's services at Ghuznee were overlooked.

what was misnamed "rebellion" against Shah Soojah. In Kohistan and the Khyber, that region of snowy precipices and roaring torrents, where every man is a good marksman behind his native rock, more than usual excitement prevailed. The British envoy, considering with some reason the state of Afghanistan to be at the best of times one of chronic unrest, paid too little heed to the numerous signs of an approaching crisis which alarmed Shah Soojah. The noses of the Dourani Khans (or lords) had, Macnaghten said, been brought to the grindstone, and all was quiet, from Dan to Beersheba.* Impressed with this agreeable conviction, he prepared to resign his position, and return to Hindoostan to fill the honourable station of governor of Bombay. His intended successor, Sir Alexander Burnes, had long ardently desired the office of envoy; but from the conflicting and contradictory character both of his official and private statements, it is difficult to say what his actual opinions were concerning the condition of the country and the feelings of the people. He must have known that the military occupation of Afghanistan (of necessity sufficiently unpopular) had been rendered peculiarly hateful and galling by his own unbridled licentiousness, and by that of other officers, whose example was closely imitated by the mass of the European soldiery. Lady Macnaghten, Lady Sale, and other Englishwomen resided within the cantonments, yet their presence did not check the excesses, the terrible retribution for which they were soon to share. Shah Soojah, whom Macnaghten declared to be "the best and ablest man in his dominions,"† and whose fidelity was evinced by the warnings he repeatedly gave the English authorities of the impending danger, and his entreaties that they would take up their abode in the Balla Hissar, remonstrated forcibly against the immorality of the officers, and pointed out the indignation which it excited among his countrymen. "I told the envoy," writes the Shah to Lord Auckland, January, 1842, "what was going on, and was not listened to. I told him that complaints were daily made to me of Afghan women being taken to Burnes' moonshee (Mohun Lal), and of their drinking wine at his house, and of women being taken to the chaonee, and of my having witnessed it."‡ Kaye states, "the scandal was open, undisguised, notorious. Redress was not to be obtained. The evil was not in course of suppression. It went on till it became intolerable; and the injured then began to see that the only remedy was in their own hands."§

That remedy was the death of the leading offender, and the expulsion of the English from Afghanistan. Warnings of various kinds were not wanting; but they passed unheeded. The week fixed for the departure of the envoy arrived, and preparations were made for his journey, and for the comfort of his successor in office, and of the other functionaries during the coming winter, which was expected to pass like the two former ones, in a succession of pastimes, including shooting, card-playing, drinking,|| and various amusements, innocent or otherwise, according to the tastes and habits of those concerned. On the evening of the 1st November, 1841, Burnes formally congratulated Macnaghten on his approaching departure during a period of profound tranquillity.¶ At that very time a party of chiefs were assembled close at hand discussing in full conclave the means of redressing their national and individual wrongs. At daybreak on the following morning, Burnes was aroused by the message of a friendly Afghan, informing him of approaching danger, and bidding him quit the city and seek safety in the Balla Hissar or the cantonments. The vizier of Shah Soojah followed on the same errand, but all in vain; the doomed man sent to ask mili-

* News had arrived at Cabool, in the course of the summer, which greatly relieved the apprehensions of Macnaghten and Burnes, both of whom had a tendency to look out for dangers from afar, rather than guard against those by which they were immediately surrounded. The raising of the siege of Herat had only temporarily allayed their fears of Russian aggression, which were soon aroused by the dispatch of a powerful force, under General Peroffski, ostensibly directed against the man-stealing, slave-holding principality of Khiva, but it was believed, intended to act offensively against the English. Whatever the true design may have been, it was frustrated by the intense cold and inaccessible character of the country, which, together with pestilence, nearly destroyed the Russian army, and compelled Peroffski to turn back without reaching Khiva.

† Kaye, i., 533. ‡ *Idem*, ii., 364. § *Idem*, i., 615.

|| Dost Mohammed prohibited the sale of a fiery spirit distilled from the grape. The English restored the Armenian manufacturers to full employment.

¶ It is asserted, that on the same day, intelligence so clear and full of a hostile confederacy had been given to Burnes, that he exclaimed the time had come for the British to leave the country. Burnes was impulsive, vacillating, ambitious, and unprincipled. It is possible that he deceived himself sometimes: it is certain that he constantly misled Macnaghten.

tary support, and persisted in remaining in his own abode, which adjoined that of Captain Johnson, paymaster of the Shah's forces. This officer was absent in cantonments, but the treasury was under the care of the usual sepoy guard, and they were ready and even desirous to fire on the insurgents. Burnes refused to give the necessary orders, in the hope of receiving speedy succour; meanwhile the crowd of stragglers grew into an infuriated mob, and his attempted harangue from the balcony was silenced by loud clamours and reproaches. Two officers had slept that night in the house of Sir Alexander: one of them, Lieutenant Broadfoot, prepared to sell his life dearly, and it is asserted, slew no less than six of his assailants before a ball struck him to the ground a corpse; the other, Lieutenant Charles Burnes, remained beside his brother while the latter offered redress of grievances, and a heavy ransom to the populace as the price of their joint lives. But in vain; the outraged Afghans loved vengeance better than gold; and after setting fire to the stables, a party of them burst into the garden, where they were fired upon by the sepoys under Lieutenant Burnes. Sir Alexander disguised himself in native attire, and strove to escape, but was recognised, or rather betrayed by the Cashmerian who had induced him to make the attempt. A fearful shout arose from the party in the garden on discovering his presence — "This is Secunder (Alexander) Burnes!" and in a few moments both brothers were cut to pieces by Afghan knives. The sepoys in charge of the treasury fought desperately, and surrendered their charge only with their lives. Massacre followed pillage; every man, woman, and child (Hindoo and Afghan) found in the two English dwellings perished:* finally, the buildings were fired; and all this with 6,000 British troops within half-an-hour's march of the city. The only energetic attempt made to check the insurrectionary movement emanated from the Shah, and was performed by one of his sons; but it proved unsuccessful, and the British authorities displayed an apathy quite inexplicable, even supposing the outbreak to have been directly occasioned by the ill conduct of its chief victim. General Elphinstone, the commander-in-chief, was an officer of high character, and of brave and kindly bearing; but increasing physical infirmities pressed heavily on him; and before the catastrophe he had applied for his recall from Afghanistan, where, indeed, he ought never to have been sent. Between him and Macnaghten no sympathy existed: they could not understand each other, and never acted in concert. The one was despondent and procrastinating, the other hopeful and energetic, but too much given to diplomacy. The consequence of this tendency was the adoption of various compromising measures when the occasion loudly called for the most active and straightforward policy. Post after post was captured from the British in the immediate vicinity of Cabool, and it soon became evident that the out-stations were in extreme peril; for the insurrection, from being local, speedily became general. The "frightful extent" of the cantonments (erected before Elphinstone's arrival), the loss of a fort four hundred yards distant, in which the commissariat stores had been most improvidently placed, together with the deficiency of artillery, so disheartened and unnerved the general, that he suffered day after day to pass without any decisive effort to gain possession of the city, and began to urge on Macnaghten the propriety of making terms with the enemy. The king remained shut up in the Balla Hissar, "like grain between two millstones." He was a man of advanced age and weak purpose, and the hostility of his subjects being avowedly directed against the Feringhees, he strove to keep his crown upon his head, and his head upon his shoulders, by a trimming policy, which rendered him an object of distrust to both parties, and cost him eventually life as well as honour. Avarice had grown on him, and he beheld with extreme annoyance the sums of money lavished by the British envoy in the futile attempt to buy off the more influential of the confederate chiefs. The urgent solicitations of Elphinstone, the growing difficulty of obtaining supplies for the troops, the unsatisfactory results of daily petty hostilities, and the non-arrival of the reinforcements of men and money solicited by Macnaghten from Hindoostan, at length induced him to offer to evacuate Afghanistan on honourable terms. The tone adopted by the chiefs was so arrogant and offensive, that the conference came to an abrupt termination; both parties being resolved to resume hostilities sooner than abate their respective pretensions. During the interview a strange

* Moonshee Mohun Lal, who did "the dirty work of the British diplomatists," made his escape.—(Kaye.)

scene took place outside the cantonments. Thinking that a treaty of peace was being concluded by their leaders, the British and Afghan soldiery gave vent to their joy in mutual congratulations. The Europeans lent over the low walls (misnamed defences), conversing familiarly with their late foes, and even went out unarmed among them, and thankfully accepted presents of vegetables. The result of the meeting between the envoy and the chiefs was the renewal of strife, and the men whose hands had been so lately joined in friendly greetings, were again called on to shed each other's blood for the honour of their respective countries. The English troops showed so little inclination for the work, that Macnaghtan angrily designated them a "pack of despicable cowards," and was soon compelled to reopen his negotiations with the enemy. Affairs were in this precarious condition when Akber Khan returned to Cabool, after more than two years of exile and suffering. His reappearance caused no additional anxiety to the beleagured English; on the contrary, the fact that the ladies of the family of the young Barukzye were, with his father, prisoners in Hindoostan, inspired a hope that he might be made the means of procuring favourable terms from the hostile leaders who, on their part, welcomed the return of the favourite son of the Dost with extreme delight. Akber (styled by Roebuck the "Wallace of Cabool") was, beyond doubt, a favourable specimen of an Afghan chief, strikingly handsome in face and figure, full of life and energy, joyous in peace, fearless in war, freedom-loving, deeply attached to his father and his country, susceptible of generous impulses, but uneducated and destitute of self-control. For some time he took no leading part against the English, and neither aided nor opposed the dominant party in formally setting aside the authority of Shah Soojah, and proclaiming as king in his stead the Nawab Mohammed Zemaun Khan, a cousin of the late Cabool chief. The selection was fortunate for the English, the Nawab being a humane and honourable man, well inclined to grant them acceptable terms of evacuation; and his turbulent and quarrelsome adherents were, after much discussion, induced to sign a treaty, the stipulations of which, mutual distrust prevented from being fulfilled by either party. The English consented to surrender the fortresses they still retained in Afghanistan, and their cannon, on condition of receiving a supply of beasts of burden from the enemy, to facilitate their march. Shah Soojah was to be allowed to return with them or to remain in Cabool, with the miserable stipend of a lac of rupees per annum; and one moment he resolved on accompanying the retreating army, while the next he declared it his intention to remain where he was, and wait a new turn of events. In either mood, he declaimed, with reason, against the folly of his allies in divesting themselves of the means of defence, asking indignantly whether any people in the world ever before gave their enemies the means of killing them? The officers in charge of Candahar and Jellalabad (Nott and Sale) took the same view of the case; and, arguing that the order of surrender must have been forcibly extorted from General Elphinstone, positively refused to abandon their positions. The treaty was thus placed in abeyance, and the troops in cantonment lived on from day to day, frittering away their resources, and growing hourly more desponding; while Macnaghten, Elphinstone, and the second in command, Brigadier Shelton, passed the precious hours in angry discussion. The ill-health of the general, increased by a painful wound caused by a musket-ball, obliged him to delegate many duties to Shelton, an officer of great personal courage, but overbearing and prejudiced, with the especial defect of being unable to sympathise with the sufferings, or appreciate the noble devotion of the much-tried native troops. The civilian is said to have been the truest soldier in the camp; but he had no confidence in his colleagues, and his own powers of mind and body were fast sinking beneath the load of anxiety which had so suddenly banished the delusion (sedulously cherished by the unhappy Burnes to the last day of his life) of the tranquil submission of Afghanistan to a foreign yoke. Never had day-dreamer a more terrible awakening. Incensed by the refusal of the holders of inferior posts to obey his orders, and by the non-fulfilment of the promises made by the Barukzye chiefs of carriage cattle, Macnaghten, chafed almost to madness, was ready to follow any *ignis fatuus* that should present a hope of escape for himself and the 16,000 men whose lives trembled in the balance. Although ostensibly bound by treaty with the Barukzyes, he was ready to side with Doorani or Populzye, Khilji or Kuzzilbash, or, in a word, to join any native faction able to

afford cordial co-operation. In this mood he lent a willing ear to a communication made to him on the evening of 22nd Dec., 1841. The proposal was that Akber and the Khiljies should unite with the British for the seizure of the person of Ameen-oollah Khan, a leading Barukzye chief, and a party to the late agreement, whose head, for a certain sum of money, would be laid at the feet of the envoy. Happily for his own honour and that of his country, Macnaghten rejected the proposition so far as the life of the chief was concerned,* but was prepared to aid in his capture without the preliminary measure of declaring the treaty void. The envoy gave a written promise for the evacuation of Afghanistan in the coming spring; Shah Soojah was to be left behind, with Akber for his vizier; and the representative of the British government further guaranteed to reward the services of Akber by an annuity of £40,000 a-year, and a bonus of no less than £300,000.

On the following morning Macnaghten sent for the officers of his staff (Capts. Lawrence, Trevor, and Mackenzie), and, in an excited but determined tone, bade them accompany him to a conference with Akber: lastly, he informed the general of his intentions, desiring that two regiments might be got ready for service, and, to some extent, explaining the matter in hand. Elphinstone asked what part Nawab Zemaun Khan, and other leading Barukzyes, were expected to take? "None," was the reply; "they are not in the plot." The old general was scrupulously honest, and the word grated on his ear. But Macnaghten would listen to neither remonstrance nor entreaty. Impatiently turning aside from the feeble but chivalrous veteran, he exclaimed—"I understand these things better than you;" and rode off to the fatal interview,—not, however, without some misgiving as to its result; for he declared to his companions, that come what would, a thousand deaths were preferable to the life he had of late been leading. The meeting commenced in apparent courtesy; Macnaghten offered Akber a noble Arab horse, which the young chief accepted with thanks, at the same time acknowledging the gift of a pair of double-barrelled pistols, sent on the previous day, which he wore at his girdle. The whole party, English and Afghans, dismounted, and seated themselves on cloths spread on some snow-clad hillocks, near the Cabool river, and about 600 yards from the cantonments. Macnaghten stretched himself at full length on the bank; Trevor and Mackenzie seated themselves beside him; but Lawrence knelt on one knee, ready for action. There was abundant cause for suspicion: the presence of a brother of Ameen-oollah, the excited and eager manner of the Afghans, and the numbers gathering round the English, drew from Lawrence and Mackenzie a remark that such intrusion was not consistent with a private conference. "They are all in the secret," said Akber; and, as he spoke, the envoy and his companions were violently seized from behind. Resistance was hopeless: their slender escort of sixteen men galloped back to cantonments to avoid being slain, save one who perished nobly in attempting to join his masters; the three *attachés* were made prisoners; but Macnaghten commenced a desperate struggle with Akber Khan, and a cry being raised that the troops were marching to the rescue, the young Barukzye, in extreme excitement, drew a pistol from his girdle, and shot the donor through the body. A party of fanatical Ghazees came up, flung themselves on the fallen envoy, and hacked him to pieces with their knives. Trevor slipped from the horse of the chief who was bearing him away captive, and shared the fate of his leader; and the other two officers were saved with difficulty by Akber Khan, who, remorseful for his late act, "drew his sword and laid about him right manfully"† for the defence of the prisoners against the infuriated crowd.

While the mangled remains of the victims were being paraded through the streets and great bazaar of the city, the military leaders remained in their usual apathetic state; nor was it until the morrow that authentic information was received of the catastrophe. Major Eldred Pottinger, on whom the office of political agent devolved, entreated the authorities assembled in

* The same right principle had not been invariably adhered to during the Afghan war, and the chiefs had good grounds for suspecting that blood-money had been offered for their lives. John Conolly (one of three brothers who followed the fortunes of their uncle, Sir W. Macnaghten, and like him, never lived to return to India), addressed from the Balla Hissar repeated injunctions to Mohun Lal, to offer from ten to fifteen thousand rupees for the heads of certain leading chiefs; and, in the cases of Abdoollah Khan and Meer Musjedee, the rewards were actually claimed but not accorded; nor do the offers of Conolly appear to have been made with the concurrence or even cognizance of Macnaghten, much less with that of Elphinstone.—(Kaye, ii., 57—104.)

† Capt. Mackenzie's words.—(Lt. Eyre's *Journal*.)

council, either to take refuge in the Balla Hissar, or endeavour to force a way to Jellalabad, and there remain until the arrival of reinforcements from India, tidings of which arrived within two days of the massacre. But his arguments were not regarded, and new terms were concluded, by which the representatives of the Indian government engaged to abandon all their forts, surrender their guns, evacuate Afghanistan, restore the deposed Dost, and pay a ransom of £140,000 in return for the supplies necessary for the retreat. Hostages were demanded and given for the performance of these humiliating conditions; but Lawrence and Mackenzie were released. Akber Khan desired that the English ladies should be left behind, as security for the restoration of the female members of his family; but the married officers refused the advantageous offers made from head-quarters to induce them to consent, and "some (says Eyre) declared they would shoot their wives first." On the 6th of January, 1842, though deep snow already lay on the ground, the troops quitted the cantonments, in which they had sustained a two months' siege, to encounter the miseries of a winter march through a country of perhaps unparalleled difficulty, swarming with mountain tribes predatory by profession, and bitterly incensed against the foreign invaders. The records of that terrible journey are written in letters of blood. No circumstances could possibly have occurred under which regularity and discipline were more needed to ensure the safety of the retreating force; yet even the semblance of it was soon abandoned in one general attempt to keep on with the foremost rank: to lag behind was certain death from Afghan knives or Afghan snows. In the dark and terrible pass of Koord Cabool, five miles in length, through which a roaring torrent dashed on between blocks of ice, while its heights were crowned by the pitiless Khiljies, 3,000 persons perished. The Englishwomen rode through, on horseback or in camel-paniers, uninjured, except Lady Sale, who received a bullet in her arm; but, brave-hearted as they were, it seemed scarcely possible they and their infant children could long continue to bear up against the intense cold and incessant fatigue.* The only alternative was to accept the protection of Akber Khan, who, it is said, promised to convey them to Peshawur; and to him the whole of the married Englishwomen, their husbands, and children, with Lady Macnaghten and her widowed companions, were confided. It was a tempting opportunity for barbarian revenge. The wives and babes of the proud Feringhees were at the mercy of the Afghans; yet there is no record of any insult having been offered to them, or any attempt to separate them from their natural protectors, now defenceless as themselves. On the contrary, Akber Khan earnestly craved the forgiveness of Lady Macnaghten, assuring her he would give his right arm to undo what it had done; while, in many ways, he strove to alleviate the hardships of the march by bearing the weaker of the party over fords on his own steed, binding up the wounds of the officers with his own hands, and suffering the ladies to encumber the march with the costly baggage which two or three of them still retained. The voluntary surrender of such a prize was of course not to be expected while his father, brothers, and wives were retained in exile. As it was, his "guests," as they were termed, had every reason to rejoice at finding in temporary captivity an alternative for the loss of life. On the very next day (10th January), the remnant of the doomed force was intercepted on the road to Jellalabad, in a narrow gorge between the precipitous spurs of two hills, and the promiscuous mass of sepoys and camp followers were hewn down by the infuriated Afghans. Elphinstone sent to Akber Khan, who, with a body of horse, still hovered on the flanks of the retreating force, to entreat him to stop the massacre; but he replied, that it was impossible,—at such times the Khiljies were uncontrollable even by their immediate chiefs: there was but one chance for the English—an immediate and unconditional surrender of arms. The general sadly resumed his march to the Jugdulluck

* Some of them had just become, or were about to become mothers. The widow of Capt. Trevor had seven children with her, and an eighth was born at Buddeeabad. The idea of a grand military promenade was certainly carried out, when not only ladies and children, but a pack of foxhounds, and one of Broadwood's best pianos, were brought through the Bolan Pass.—(Fane's *Five Years;* Ex-political's *Dry Leaves.*) The troops in Cabool, though in many respects needlessly encumbered, do not seem to have been attended by a single chaplain; an omission which tends to justify the description given by a Beloochee of the Feringhee force, of whom one sort (the Hindoos) were idolaters; the white (English) had no religion at all; but the third were good Mussulmen, "and say their prayers as we do."—(*Idem.*)

heights, and there the troops who remained—of ranks all but destroyed by death and desertion—found a brief respite, and strove to quench their burning thirst with handsful of snow, and to still the cravings of hunger with the raw and reeking flesh of three newly-killed bullocks. The night was spent at Jugdulluck; on the following day Akber Khan requested a conference with the General, Brigadier Shelton, and Captain Johnson. It is strange, with the recollection of the Cabool plot fresh in their minds, that the three military authorities should have accepted this significant invitation; but they did so, were courteously received, refreshed with food, provided with a tent, and—made prisoners. They entreated their captor to save the survivors of the force, and he really appears to have exerted himself for that purpose, but in vain. Captain Johnson, who understood the Persian language, heard the petty chiefs of the country between Jugdulluck and Jellalabad declaiming, as they flocked in, against the hated Feringhees, and rejecting large sums as the price of a safe conduct to Jellalabad. On the evening of the 12th, the wreck of the army resumed its perilous march. The sepoys had almost wholly perished, and of the Europeans only 120 of the 44th regiment and twenty-five artillerymen remained; but their movements were still impeded by a comparatively large mass of camp followers, who "came huddling against the fighting men," thus giving free scope to the long knives of the Afghans. The soldiers, after some time, freed themselves from the helpless rabble, turned against their foes with the bayonet, drove them off, and pursued their way to the fatal Jugdulluck Pass, where their sufferings and struggles found a melancholy termination. A barricade of boughs and bushes arrested further progress; officers, soldiers, and camp followers desperately strove to force a passage, though exposed to the deliberate aim of the "jezails" (long rifles) of the enemy. Anquetil, Thain, Nicholl, and the chief of the remaining leaders fell here. About twenty officers and forty-five European soldiers cut their way through, hoping to gain Jellalabad; but weak and wounded, with only two rounds of ammunition left, they could not make head against the armed villagers who came crowding forth against them from every hut. The majority fell at Gundamuck; a few escaped and struggled onwards: but even they fell—one here, one there; until a single European (Dr. Brydon), wounded and worn out by famine and fatigue, mounted on a jaded pony, alone survived to announce to the gallant garrison of Jellalabad the total annihilation of the force of 16,500 men which had quitted Cabool only seven days before.*

The terrible tidings reached Lord Auckland at Calcutta while awaiting the arrival of his successor in office. He had previously seen reason to regret bitterly that ever British troops had crossed the Indus: he knew that the E. I. Cy. had consistently opposed the Afghan war, and that the Peel cabinet, now in power, were of the same opinion; and he therefore refused to follow up the abortive attempts already made for the relief of the beleaguered garrisons by any efficient measures, lest his proceedings should controvert the views and embarrass the projects of his expected successor. The arrival of Lord Ellenborough, at the close of February, released Lord Auckland from his painful position, and he quitted India in the following month, leaving on record a finance minute which proved the war to have already inflicted a burden of eight million on the Indian treasury. The only remaining circumstances which occurred under his sway, were the annexation of the little principality of Kurnoul† and of Cherong, a fortified place in Bundelcund.

ELLENBOROUGH ADMINISTRATION: 1842 TO 1844.—The opinions held by the new governor-general were well known. His lordship had been for years president of the Board of Control: he was a conservative, and agreed with his party and the majority

* A few straggling sepoys and camp followers afterwards found their way to Jellalabad.

† The Nawab (or nabob) of Kurnoul was suspected of entertaining hostile intentions against the English; the chief, though not very satisfactory evidence of which rests on his having accumulated a large quantity of warlike stores. He was likewise said to be a very oppressive ruler. At the close of the year 1848, the capital was seized by a British force without opposition, and the nabob, who had abandoned the place, was pursued, taken prisoner, and became a dependent on the British government. He retired to Trichinopoly, and became a frequent attendant on the mission church. On the last occasion he was mortally stabbed by one of his Mohammedan followers. His eldest son, Uluf Khan, received a pension of £1,000 a-year until his death in 1848. The English enjoy the entire revenues of Kurnoul, estimated, in 1843, at £90,000 per annum, and control over a territory between 2,000 and 3,000 square miles in extent, with a population stated in a Parl. return for 1851, at 273,190.—(Thornton's *Gazetteer.*)

of unbiassed men, in considering the Afghan invasion "a blunder and a crime;" but he had likewise declared, that "India was won by the sword, and must be kept by the sword." These opinions, coupled with his adoption of an axiom of unquestionable truth, that "in war reputation is strength," served to convince the Indian public that his policy would probably aim at the complete and speedy evacuation of Afghanistan, performed in such a manner as to prove beyond question that England voluntarily resigned a position which an erroneous view of the feelings of the Afghans had induced her to assume; and this object, despite some glaring errors and inconsistencies, was, in the main, carried through by Lord Ellenborough. The first event in his administration was the surrender of Ghuznee, by Colonel Palmer, to Shums-oo-deen Khan, nephew to Dost Mohammed, on the 6th of March; the fear of a failure of water and provisions being the reasons alleged for the relinquishment of this strong fortress and the surrender of the officers,* who were treated with faithless cruelty by the conqueror. Nott and Sale still held their ground at Candahar and Jellalabad, against bitter cold, scarcity of fuel and provisions, and repeated though unskilful assaults, as did also the little garrison of Kelat-i-Khilji, under Captain Craigie. At Jellalabad, repeated minor shocks of earthquake were succeeded on the 10th February by a terrible convulsion, which levelled with the ground the defences which had been erected and rendered efficient at the cost of three months' intense labour of mind and body. Akber Khan, with the flower of the Barukzye horse, was at hand, ready, it was expected, to enforce the fulfilment of Elphinstone's order of surrender. But "the illustrious garrison," as Lord Ellenborough justly styled the brave band, did not abate one jot of hope or courage. The spade and pickaxe were again taken in hand, and the work of restoration went forward so rapidly that Akber, deceived as to the extent of the damage sustained, declared that English witchcraft had preserved Jellalabad from the effects of the mighty shock. The Afghans, having little inclination for a hand-to-hand encounter with Sale's brigade, contented themselves with striving to maintain a rigid blockade; but the garrison sallied forth under Dennie, and swept away sheep and goats in the very front of the foe. The political agent, Capt. Macgregor, an able and energetic man, contrived to establish a system of intelligence far superior to that generally maintained by the English. Tidings arrived on the 5th of April, that General Pollock, with 12,000 men and supplies of all kinds, was fighting his way to their rescue through the Khyber Pass, opposed by Akber Khan. The garrison gallantly resolved to assist their countrymen by issuing forth to attack the Afghan camp. This unlooked-for enterprise was attended with complete success. The blockading troops were completely routed, and fled in the direction of Lughman. The victors lost only thirteen men; but that number included the gallant Colonel Dennie, who fell at the head of the centre column. On the 11th April, the army under General Pollock reached Jellalabad, and the garrison, whose five months' beleaguerment had been already so brilliantly terminated, sent the band of the 13th light infantry to meet the troops, and marched them in to the fort to the tune of an old Jacobite song of welcome, of which the refrain runs, "Oh! but ye've been lang o' coming." General England was not successful in his early attempts to succour Nott and his "noble sepoys"† at Candahar. Having been repulsed in an attack on the Kojuck Pass, he fell back upon Quetta, and commenced fortifying that town; but General Nott imperatively demanded his renewed advance, and sent the best part of his force to aid England through the pass, who thus assisted, marched to Candahar, which place he reached with little loss; for the Afghans, though strongly posted at Hykulzie (the scene of his former discomfiture), were rapidly dispersed by a vigorous attack, and did not muster in any force to oppose his further progress.

No impediment now remained to the junction of the forces under Nott and England with those of Pollock and Sale. The only consideration was, what to do with them. Lord Ellenborough had wisely re-

* Kaye says—"If there had been any one in Ghuznee acquainted with the use and practice of artillery, the garrison might have held out till April." He adds, "That among the officers of Nott's army [by whom the place was reoccupied in September], the loss of Ghuznee was considered even less creditable than the loss of Cabool."—(ii., 428–'9.)

† "My sepoys," Nott writes to Pollock in April, "have behaved nobly, and have licked the Afghans in every affair, even when five times their number." In the same letter he states that they had had no pay since the previous December. The fidelity and privations of the native troops throughout the Afghan war well deserve a special narration.

solved on the evacuation of Afghanistan; but he left to the military authorities the choice of "retiring" by the line of Quetta and Sukkur, or by that of Ghuznee, Cabool, and Jellalabad. Nott chose the latter alternative; and in communicating his resolve, repeated with quiet sarcasm his lordship's phrase of "retiring" from Candahar to India by way of Ghuznee, Cabool, and Jellalabad; the said retirement, says Kaye, being like a man retiring from Reigate to London *viá* Dover and Canterbury. Pollock entirely sympathised with General Nott. The former marched to Cabool, which he reached on the 5th Sept., after having encountered and put to flight the Afghans under Akber,* in the valley of Tezeen and the adjacent passes of Koord Cabool, where the English had been slaughtered in the previous January. General Nott proceeded to Ghuznee, which was evacuated on his approach; and after destroying the town as well as citadel by fire, he proceeded to the tomb of Mahmood, in obedience to the special instructions of the governor-general, to bear away the famous idol-destroying mace of the conqueror, suspended above the tomb, and a pair of sandal-wood gates, embossed with brass, which were said to have been carried away by him from the temple of Somnauth, in Guzerat, A.D. 1024. Burdened with these trophies, the general proceeded to Cabool, which city Pollock had entered unopposed on the 15th Sept., and planted the union-jack on the Balla Hissar.†

In the interval between the evacuation and reoccupation of the capital of Afghanistan by the English, another melancholy tragedy had been enacted. Shah Soojah, abandoned by his allies, for some months contrived to maintain himself in the Balla Hissar; but his position becoming at length insupportable, he resolved to attempt to join Sale at Jellalabad. Early on the morning of the 5th of April, the Shah left the citadel, escorted by a small party of Hindoostanees, intending to review the troops and quit Cabool; but his passage was opposed by a body of Afghans, who opened a volley upon the royal *cortége*, which struck down the bearers of the state chair, and killed the king himself. Throughout his whole career, Shah Soojah had been a pompous man, speaking and thinking ever of "our blessed self." Now his lifeless body was stripped of its costly array, of its sparkling head-dress, rich girdle, and jewelled dagger, and flung into a ditch. His eldest son, Prince Timur, then about twenty-three years of age, was with the British at Candahar. The next in succession, Futteh Jung, was courted by the Barukzye chiefs, who hoped to find in him a shield from the vengeance of the advancing foe. The prince listened with undisguised distrust to the protestations made to him by the Seyed deputies; and in reply to offers of allegiance, to be sworn on the Koran, caused several exemplars of the sacred volume to be placed before them, bearing the seals of the Barukzye, Dourani, Kuzzilbash, and Kohistanee chiefs, with oaths of allegiance to his murdered father inscribed on the margin. "If there be any other Koran sent from heaven," he said bitterly, "let the Barukzyes swear upon it: this has been tried too often, and found wanting." The ambassadors were dismissed; but Futteh Jung, unable to maintain his ground, soon fell into the hands of the chiefs he so avowedly mistrusted, and after being robbed of the treasure which his father had contrived to accumulate, made his escape, and joined General Pollock at Gundamuck on the 1st of September, with only two or three followers.

The next feature in the campaign was a joyful one—the recovery of the captives. The ladies and children were alive and well, but General Elphinstone had expired in the month of April, worn out by incessant bodily and mental pain. On learning the approach of Pollock, Akber‡ confided his unwilling guests to the care of one

* The Goorkalese infantry fought most manfully, clambering undauntedly the steepest ascents, beneath the iron rain poured on them from Afghan jezails.—(Kaye, ii., 579.) It must have been a strange sight to see these daring, sturdy, but diminutive men, driving before them their stalwart foes; but stranger still the thought, how recently these valuable auxiliaries had done battle on their native hills, against the people for whom they were now shedding their life-blood, and ably wielding the British bayonet.

† *Balla Hissar*, the Persian for High Fort.

‡ The trials of the captives began when Akber became again a fugitive, and could no longer retain them under his immediate protection. About this time an accident occurred which placed them in jeopardy. A servant in attendance on the chief, wounded him in the arm by the accidental discharge of a musket. No difference took place in the conduct of Akber himself; and even when weak and wounded, he gave up his litter for the accommodation of the ladies on their removal from Budeeabad. His countrymen, more suspicious, attributed the disaster to English treachery; and had the young Barukzye died, the lives of all the male captives and hostages would probably have been sacrificed as an act of retribution. Ameen-oollah Khan, especially,

Saleh Mohammed, who was directed to deliver them to the charge of a neighbouring Usbeck chief, styled the Wali of Kooloom, who had proved a stanch friend to Dost Mohammed. Saleh Mohammed had formerly been a subahdar in the service of the E. I. Cy., but being (by his own account) disgusted with the abusive language used towards natives by the European officers, he deserted with his company to the Dost. It was not a difficult matter to induce him to play the traitor over again, provided the risk were small and the temptation great. Tidings of the progress of the English army calmed his fears; and offers on behalf of government, backed by the written pledge of the captives to pay him 1,000 rupees a-month for life, and a present of 20,000 rupees, stimulated his hopes: from gaoler he turned confederate; and the soldiers (250 in number) were, by the promise of four months' pay as a gratuity, metamorphosed from guards to servants. Eldred Pottinger assumed the direction of affairs, levied contributions upon some merchants passing through Bamian, and hoisted an independent flag on the fort the party had entered as prisoners. To remain at Bamian was, however, deemed even more perilous than to attempt to join the army at Cabool; and on the 16th of September, the officers, ladies, and children set forth on their march. The next day Sir Richmond Shakespear, at the head of 600 Kuzzilbash horse, met the fugitives, who thus escorted, joyfully pursued their route, till, on the 20th, near Urghundeh, the column sent by Pollock to support Shakespear appeared in sight, and its veteran commander, Sir Robert Sale, came galloping on to embrace his wife and widowed daughter.*

The objects of the campaign were fully accomplished: the beleaguered garrisons had been relieved, the captives rescued; the last of them (Captain Bygrave) being voluntarily released by Akber; and the orders of the governor-general were stringent for the return of the entire English force to Hindoostan without incurring any unnecessary peril. The various Afghan chiefs, whose blood-feuds and factious dissension had prevented any combined action, now earnestly deprecated the vengeance of the Feringhees. The hostages left at Cabool were restored,

said that he knew a reward of a lac of rupees had been offered by Macnaghten for his life. Mohammed Shah Khan, and a "young whelp," his son, took advantage of the absence of Akber to pillage the captives, and is said to have obtained from Lady Macnaghten alone, shawls and jewels to the value of £20,000; but the jewels were soon voluntarily restored (Johnson and Eyre.) Considering that the daughter and sister of the plunderers (Akber's wife) had been carried into exile by the countrymen of Lady Macnaghten, there was nothing very extraordinary in their thus seeking means to carry on the war. Before the late crisis, the captives had enjoyed advantages very unusual for even state prisoners in Afghanistan. Five rooms in the fort of Budeeabad, furnished by Mohammed Shah Khan for his own use, were vacated for their accommodation. During the three months spent here four European infants were born. The elder children passed the time in blindman's-buff and other games befitting their age; their parents in writing long letters to India and England, carrying on a great deal of cypher correspondence with Sale's garrison, and playing backgammon and drafts on boards of their own construction, and cards, by means of two or three old packs preserved among their baggage. From "a Bible and Prayer-book picked up on the field at Boothauk," the services of the established church were read every Sunday, sometimes in the open air; and this observance was, we are told, not lost on their guards, who, wild and savage as they were, seemed to respect the Christian's day of rest, "by evincing more decorum and courtesy than on the working-days of the week."—(Kaye ii., 489.) Who that really desires the spread of vital Christianity, can read this account without regretting that the captives of Budeeabad had not been inspired with more of the devotional spirit which burned so strong and clear in the bosoms of two other English captives, then dying by inches in filth and misery at Bokhara, but evincing such unmistakable indications of true piety, that sorrow for the suffering is lost in veneration for the enduring faith of Colonel Stoddart and Arthur Conolly. The former I deeply respected on the ground of personal knowledge; the latter I know only by the touching records made public since his execution. The history of both is yet fresh in the minds of the existing generation. Colonel Stoddart had gone in an official position to Bokhara, and was detained by the Ameer, who had been angered by some real or apparent slight shown him by the British authorities; Conolly sought to procure the release of Stoddart, but was condemned to share his imprisonment. The touching letters written at this period, and forwarded to India through the intervention of a faithful servant, still remain to attest the patience in adversity of these illustrious sufferers. Stoddart, in a moment of weakness, after being lowered down into a deep dark well, tenanted by vermin, was forced into making a profession of belief in the false prophet; but Conolly never wavered. On the 17th of June, 1842, the two friends were brought forth to die, clothed in the miserable rags which five months' incessant wear had left to cover their emaciated and literally worm-eaten frames. The elder captive was first beheaded, and an offer of life was made to his companion as the price of apostasy, but without effect. "Stoddart," he said, "became a Mussulman, and you killed him: I am prepared to die." The knife of the executioner did its work, and another name was added to the glorious army of martyrs—the true soldiers of the Cross.—(Kaye, Wolfe, &c.)

* The widow of Lieutenant Sturt, of the engineers, a very active officer, who was mortally wounded by the Khiljies in the Koord Cabool Pass.

and bore testimony to the good treatment they had received from the nabob, Zemaun Shah. The "guests" of Akber Khan told the same tale; and Colonel Palmer and Mohun Lal* were almost the only complainants;—the one having fallen into the hands of the instigator of the murder of Shah Soojah, the unworthy son of Nawab Zemaun Khan; the other having provoked personal vengeance by repeated offers of blood-money for the heads of the leading Barukzyes. The principal Cabool leaders proposed that a younger son of the late king's, named Shahpoor (the son of a Populzye lady of high rank), should be placed on the throne; and to this the British authorities consented. The object of the proposers was not accomplished; they hoped to turn away the vengeance of the invaders, but in vain. The military leaders pronounced that the destruction of the fortresses of Ghuznee, Jellalabad, Candahar, Khelat-i-Khilji,† Ali-Musjid, and many others of inferior note,—the sacrifice of thousands of villagers armed and unarmed, the wanton destruction of the beautiful fruit-trees (which an Afghan loves as a Kaffir does cattle, or an Arab his steed), with other atrocities almost inseparable from the march of an "army of retribution," were all too trifling to convey a fitting impression of the wrath of the British nation at the defeat, disgrace, and ruin which had attended its abortive attempt at the military occupation of Afghanistan. It is idle to talk of the savage ferocity‡ of the Khiljies, as displayed in the horrible January massacre, since that very massacre had been wantonly provoked. The English originally entered those fatal passes as foes; they marched on, in the pride of conquerors, to rivet a rejected yoke on the neck of a free, though most turbulent nation: their discipline and union were at first irresistible; yet subsequently, strife and incapacity delivered them over into the hands of their self-made enemies. They had (to use an Orientalism) gone out to hunt deer, and roused tigers. What wonder that the incensed people, heated with recent wrongs, should crush with merciless grasp the foe in his hour of weakness, under whose iron heel they had been trampled on so recently. It was a base and cruel thing to slay the retreating legions; but have civilised nations—France and England, for instance—never done worse things in Africa or the Indies, and vindicated them on the plea of state necessity? The defeated invaders fell with weapons in their hands: they fought to the last—at a heavy disadvantage, it is true; but still they did fight; and the physical obstacles which facilitated their overthrow, surely could not make the difference between the combatants greater than that which has enabled nations acquainted with the use of cannon to reduce to slavery or deprive of their land less-informed people.

The English refused to surrender, and paid by death the penalty of defeat, which would, in all probability, have been inflicted by them in a similar case. The captives and hostages were, generally, remarkably well used; even the little children who fell into the power of the Khiljies were voluntarily restored to their parents.§

Yet now the military authorities, not content with the misery wrought and suffered in Afghanistan,|| gravely deliberated on the most

* Moonshee Mohun Lal was educated at the Delhi college, where the experiment of imparting secular education, without any religious leaven, was being tried by the British government. The same system is now in force throughout India. Mohun Lal was one of its first-fruits, and his cleverly-written work on Cabool is well worthy of the attention of all interested in tracing the effects of purely secular instruction. Shahamet Ali (author of the *Sikhs and Afghans*), the fellow-student of Mohun Lal, was a different character, and not a Hindoo, but a Mohammedan. His new acquirements were not, therefore, likely to have the effect of producing the same flippancy and scepticism which was almost sure to be occasioned by proving to such men as Mohun Lal, that modern Brahminism was the offspring of superstition and ignorance, without inculcating a knowledge of those doctrines which Christians hold to be the unerring rule of life, the only wisdom.

† Kaye, ii., 599. Khelat-i-Khilji, or "the Khilji Fort," situated between Candahar and Ghuznee, must not be confounded with the famous Khelat-i-Nuseer near the Bolan Pass, taken by Major-general Willshire in November, 1839, and in the defence of which the Beloochee chief, Mehrab Khan, with hundreds of his vassals, perished. Several women were slain to prevent their falling into the hands of the enemy: others fled on foot with their infants.

‡ The author of one of the numerous *Narratives* of the war, relates an anecdote of an Afghan boy of six years old, being found by an English soldier striving to decapitate the corpse of a colour-sergeant who had fallen some time before when Pollock fought his way through the Khyber Pass. The soldier came behind the child, "coolly took him up on his bayonet, and threw him over the cliff." Lieut. Greenwood narrates this incident in "the war of retribution" as evidence of *Afghan* ferocity.—(176.)

§ The daughter of Captain Anderson, and the son of Captain Boyd, fell into the hands of the Afghans in the Boothauk Pass.

|| Lord Brougham sternly denounced the destruction of the "hundred gardens" of Cabool, by "our incendiary generals."

efficient mode of perpetuating in the minds of the Cabool chiefs the memory of deeds which all parties might have been glad to bury in oblivion. The peaceable inhabitants of the city had been induced to return and resume their occupations; and when they beheld the son of Shah Soojah on the throne, and the English in daily intercourse with the leading chiefs, and making avowed preparations for final departure, they might well think that the worst was over. But it was yet to come. General Pollock considered the death of the envoy still unavenged, and resolved on the total destruction of the Great Bazaar and the Mosque. These orders were executed, but with difficulty, owing to the massiveness of these magnificent buildings, which it was found impossible to destroy in any reasonable time without the use of gunpowder. As might have been expected, the victorious soldiery and licentious camp followers did not content themselves with fulfilling their destructive commission, but rushed into the streets of the city, applied the firebrand to the houses, and pillaged the shops; so that above four or five thousand people (including many Hindoos who had been enticed into the town by express promises of protection) were reduced to utter ruin. The excesses committed during the last three days of British supremacy in Cabool, were far more disgraceful to the character of England, as a Christian nation, than the expulsion and extermination of the ill-fated troops to her military reputation.

Popular feeling, both in India and in England, was strongly expressed against the needless injury done to the Afghans by the razing of the Great Bazaar, and especially against the extensive destruction of trees, by order of the commander-in-chief, by deeply ringing the bark, and leaving them to perish. Lord Ellenborough appears to have regretted these outrages; but this and all other drawbacks were for the time forgotten in the grand display with which he prepared to welcome the returning army. The homeward march commenced on the 12th of October, and proved singularly peaceful and uneventful. The old blind king, Zemaun Shah, with his nephew Futteh Jung, and the chief part of the family of the late Shah Soojah, accompanied the troops. The gates of Somnauth were not forgotten; and the governor-general gave vent to his delight at their attainment in a proclamation, in which he declared the insult of 800 years to be at length avenged, and desired his "brothers and friends," the princes and chiefs of Sirhind, Rajwarra, Malwa, and Guzerat, to convey the "glorious trophy of successful war" with all honour through their respective territories, to the restored idolatrous temple of Somnauth.

For this strange "song of triumph," as the Duke of Wellington styled the effusion, Lord Ellenborough may perhaps be excused, in remembrance of the honest and manly recantation of error which he published on behalf of the Indian government on the 1st of October, 1842, when directing the complete evacuation of Afghanistan,—this announcement being made from Simla precisely four years after the famous warlike manifesto of Lord Auckland. The whole of the Afghan captives were released. Dost Mohammed returned to Cabool to take possession of the throne vacated by the flight of Shahpoor immediately after the departure of the British force; Akber joyfully welcomed home his father and family; the Persians again besieged Herat; and all things returned to much the same position they occupied before thousands of lives (including that of the forsaken Shah) and about fifteen million of money had been wasted, in an abortive attempt at unauthorised interference. The only change effected was, that instead of respect and admiration, the Afghans (generally, though perhaps not justly, considered an unforgiving race) learned to entertain towards their powerful neighbours emotions of fear and aversion, excited by the galling memories inseparably connected with the march of a desolating army, whose traces were left everywhere, "from Candahar to Cabool, from Cabool to Peshawur."*

The annexation of Sinde—the next event in Anglo-Indian history—has been termed by its chief promoter "the tail of the Afghan storm." Such is the light in which Sir Charles Napier avowedly desires to place it; and his brother, General William Napier, in his account of the *Conquest of Sinde*, plainly declares the open encroachment on the in-

* Kaye, ii., 669. Among other authorities examined, in writing the above sketch of the Afghan war, may be named Eyre's *Cabool*, Havelock's *Narrative*, Dennie's *Campaigns*, Outram's *Rough Notes*, Hough's *British at Cabool*, Fane's *Five Years in India*, Osborne's *Court of Runjeet Sing*, Taylor's *Scenes*, Nash's *Afghanistan*, Barr's *Cabool*, Burnes' *Cabool*, Allen's *Diary*, Thornton's *India*.

dependence of the Ameers, made by order of Lord Auckland, to have been a measure of which "it is impossible to mistake or to deny the injustice." Major (now Col.) Outram, the political Resident at Hyderabad, to some extent defends the proceedings which, though occasionally under protest, he was instrumental in carrying through; and brings forward a considerable body of evidence to prove that Sir Charles Napier, when vested with complete military and diplomatic authority in Sinde, while denouncing the unauthorised aggression committed by Lord Auckland, used the despotic power vested in him by Lord Ellenborough to sap the resources of the Ameers, and then drive them to desperation; the results being their ruin, the annexation to British India of a fertile and valuable boundary province, and the gain to the invading army of prize-money to an enormous extent—the share of Sir C. Napier (an eighth) amounting, it is asserted, to £70,000. Taken together, the admissions and accusations respectively made and preferred by the two leading authorities, can scarcely fail to leave on the mind of the unprejudiced reader a conviction that the Ameers were very illused men, especially the eldest and most influential of them, the venerable Meer Roostum. They were usurpers; but their usurpation was of above sixty years' standing: and the declaration of Lord Ellenborough is not equally correct, that what they had won by the sword they had lost by the sword; inasmuch as their earliest and most important concessions were obtained amid "a sickening declamation about friendship, justice, and love of peace;" which declamation was continued up to the moment when Meer Roostum, bending under the weight of eighty-five years, and his aged wife (the mother of his eldest son) were driven forth into the desert, not by English bayonets, but by English diplomacy.

Such at least is the account given by Napier of the opening negotiations with Sinde, and by Outram of their abrupt termination. To enter into the various points of dispute would be manifestly incompatible with the brief sketch of the leading features attending our occupation of the country, alone consistent with the objects and limits of the present work: even that sketch, to economise space, must be given in small type.

In the beginning of the 18th century, the Kalloras, military fanatics from Persia, became dominant in Sinde, and though compelled to pay tribute to the Dourani conqueror of Afghanistan, retained their position as rulers until about 1771, when a conflict arose between them and the chiefs of the Beloochee tribe of Talpoors, who had come from the hills to settle in the fertile plains. After some years' fighting the Talpoors became undisputed masters of Sinde. Their head, Meer Futteh Ali, assigned portions of the conquered territory to two of his relations, and thus gave rise to the separate states of Khyrpoor and Meerpoor. The remaining part of Sinde, including the capital Hyderabad, he ruled until his death, in amicable conjunction with his three brothers. The Talpoors, like their predecessors the Kalloras, evidently dreaded the encroaching spirit of the powerful Feringhees, and quietly but firmly opposed their early attempts at commercial intercourse. At length, in 1832, the pertinacious resolve of the English to open up the navigation of the Indus, prevailed over their prudent reserve, and a new treaty was formed through the intervention of Colonel (now Sir Henry) Pottinger, by the fifth article of which the contracting parties solemnly pledged themselves "never to look with the eye of covetousness on the possessions of each other." The very words betrayed the apprehensions of the Ameers; and that these were shared by their subjects is proved by the exclamation recorded by Burnes, as uttered in the previous year by the witnesses of his approach—"Alas! Sinde is gone since the English have seen our river!"

The prediction was soon verified. In 1836, the ambitious designs of Runjeet Sing gave the Anglo-Indian government an opportunity of interference, which was availed of by the proffer of British mediation. At this time the original Talpoor rulers were all dead, and their sons reigned in their stead. Noor Mohammed wore the puggree or turban of superiority, and was the acknowledged rais or chief at Hyderabad; Sheer Mohammed at Meerpoor, and Meer Roostum at Khyrpoor, in Upper Sinde. Meer Roostum was eighty years of age, and was assisted in the government by his numerous brothers. He was, however, still possessed of much energy; and so far from fearing the hostility of Runjeet Sing, or desiring the dangerous aid of the English, he exclaimed confidently—"We have vanquished the Seik, and we will do so again." It was, however, quite another thing to compete with the united forces of Runjeet Sing and the English; and the intimate connexion so unnecessarily formed between these powers in 1838, proved pretty clearly that the choice lay between mediation or open hostility. The Ameers chose the former, and consented to the permanent residence at Hyderabad of a British political agent, with an armed escort. Two months after the conclusion of this arrangement, the Tripartite Treaty was signed at Lahore, and involved a new question as to the route to be taken for the invasion of Afghanistan. Runjeet Sing, stimulated by his distrustful durbar or court, would not suffer his sworn allies to march through the Punjab. Advantage was therefore taken of the weakness of the Ameers to compel them to sanction the passage of the British troops; and the island-fortress of Bukkur was obtained from Meer Roostum, to be held "during the continuance of the war." These concessions paved the way for fresh exactions, and the Ameers were next required to contribute towards the expenses of the expedition. The demand was first urged on the plea of arrears of tribute claimed by Shah Soojah as their suzerain, but this was refuted by

the production of a formal release made by the Shah of all claims upon Sinde or Shikarpoor. The next pretext for oppression was, that the Ameers had tendered professions of submission to Persia, the evidence being a document of doubtful authenticity, ostensibly addressed by Noor Mohammed to the Persian monarch, and which, when freed from Oriental hyperbole, contained little more than expressions of unbounded respect for the Shah of Persia as the head of the Sheiah sect of Mohammedans. It was so improbable that the Ameers would comply with the present demands, except under the sternest compulsion, that preparations were made to punish their refusal by the storming of Hyderabad, and the army of the Indus turned out of its way for the express purpose, and menaced Sinde at four different points. Sir John Keane designated the anticipated siege of the capital, "a pretty piece of practice for the army;" and the officers generally indulged in sanguine expectations of pillage and prize-money. The Ameers were divided in opinion; and one of them proposed that they should defend themselves to the last, and then slay their wives and children, and perish sword in hand—the terrible resolve carried out not many months later by Mehrab Khan, of Khelat-i-Nuseer. More temperate counsels prevailed. Meer Roostum confessed that in surrendering Bukkur he had given the heart of his country into the hands of the foe; and the Ameers, with utter ruin staring them in the face, consented to the hard terms imposed by the treaty signed in February, 1839, which bound them to receive a subsidiary force, and contribute three lacs (afterwards increased to three and a-half) for its support, to abolish all tolls on the Indus, and provide store-room at Kurrachee for military supplies. In return, the Anglo-Indian government promised not to meddle with the internal affairs of the Ameers, or *listen to the complaints of their subjects* (a very ominous proviso.) These concessions, together with a contribution of £200,000, half of which was paid immediately, did not satisfy Lord Auckland. Kurrachee had been taken possession of during the war; and he now insisted on its permanent retention, despite the promises made by his representatives.

The Ameers had no alternative but to submit: yet, says General Napier, "the grace with which they resigned themselves to their wrongs, did not save them from the cruel mockery of being asked by Colonel (Sir H.) Pottinger, 'if they had the slightest cause to question the British faith during the last six months?' and the further mortification of being told, 'that henceforth they must consider Sinde to be as it was in reality a portion of Hindoostan, in which the British were paramount, and entitled to act as they considered best and fittest for the general good of the whole empire.'"

Colonel Pottinger, created a baronet, continued Resident in Sinde until the beginning of 1840. He was succeeded by Major Outram, who, by the death of his coadjutor, Mr. Ross Bell, became political agent for the whole of Sinde and Beloochistan. Major Outram found the Ameers in precisely the state of feeling which might have been expected;—deeply irritated against the English, disposed to rejoice at any misfortune which might overtake them, and ready to rise up and assert their independence if the opportunity offered; but constantly let and hindered by the fear of consequences, and by the divided counsels arising from separate interests. With anxious care the Resident watched their feelings and opinions—warning one, counselling another, reasoning with a third; and in the perilous moment when General England fell back on Quetta, after a vain attempt to succour Nott at Candahar, Outram strained every nerve to prevent the rulers of Sinde from making common cause with their Beloochee countrymen against the invading army. "Even their negative hostility," he writes, "evinced by withholding supplies, would have placed us in a position which it is fearful even to contemplate." The recollection of past wrongs did not, however, prevent the majority of the Ameers from actively befriending the troops in their hour of need; but some of them were suspected of being concerned in hostile intrigues; and though Meer Roostum behaved with accustomed candour, his minister, Futteh Mohammed Ghoree became implicated in certain suspicious proceedings. Towards the conclusion of the Afghan war, Major Outram proposed to Lord Ellenborough (the successor of Lord Auckland) a revision of the existing treaties, which were very vaguely worded, urging that precautions should be taken against the possible machinations of such of the Ameers as had betrayed hostile intentions during the late crisis, and advised that Shikarpoor and its dependencies, with Sukkur and the adjacent fortress of Bukkur, should be demanded in complete cession, in return for the relinquishment of the yearly tribute of £350,000, and of arrears due of considerable amount.

Lord Ellenborough was not content with this arrangement: he desired to reward the good service done to the forces in the late war by a neighbouring prince, the Khan of Bhawalpoor,* by the restoration of certain territories captured from him some thirty years before by the Ameers, who were considered to have rendered themselves "most amenable to punishment." To this Major Outram assented; but when his lordship proceeded to write denunciatory letters to the Ameers, threatening them with punishment for past offences, should any such be clearly proved, the Resident withheld these communications, believing that their delivery would gravely imperil the safety of the troops still scattered in isolated positions in dreary Afghanistan. The governor-general admitted the discretion of this procedure; but he had taken up, with the energy of a strong though often prejudiced mind, the popular notion of the day against political agents; and the prudence displayed by Colonel Outram did not exempt him from the sweeping measures enacted for the supercession of political by purely military functionaries.

Sir Charles Napier had just arrived in India, and to him was entrusted the task of gaining the consent of the Ameers to concessions amounting to their virtual deposition.† The sudden recall of the Resident, and the arrival of a military leader, at the head of a powerful force, alarmed the Ameers, and they strove to deprecate the impending storm by every means in their power. The testimonies of many British officers and surgeons are brought forward by Major Outram, to confirm his own evidence with regard to the characters of the unfortunate chiefs of Sinde, whom he describes as decidedly favourable specimens of Mohammedan princes, ruling after a very patriarchal fashion,—merciful, accessible to complainants, singularly temperate, abstaining not only from drinking and smoking, but likewise rigidly eschewing the accursed drug, opium, even as a medicine.‡ The

* *Vide* Shahamet Ali's *History of Bahawalpoor.*

† Thornton's *India*, vi., 423.

‡ Outram's *Commentary*, 529. Dr. Burnes' *Sinde.*

mere fact of so many chiefs living and bearing sway in the domestic fashion described by Pottinger, Burnes, and Outram, was a strong argument in their favour; yet Sir Charles Napier unhappily lent a credulous ear to the mischievous rumours which a longer residence in India would have taught him to sift narrowly, or reject wholly: and his entire conduct was in accordance with his undisguised opinion, that the Ameers were "thorough ruffians" and "villains," drunken, debauched, capable of fratricide, "any one of them," and determined to assassinate him and "Cabool" the troops. Accustomed to the courtesy of British officials (one of whom had stood unshod in their presence, some ten years before, to crave permission to open the navigation of the Indus), they were now startled by the tone of contemptuous distrust with which they were treated by the dark-visaged little old man, who, despite his unquestioned courage in the field of battle, avowedly suffered personal fear of treachery to prevent his according a friendly hearing to the "benign and grey-headed monarch who had conferred the most substantial benefits on the English nation."

Major Outram states that Sir Charles Napier scrupled not to add exactions to the treaties not desired by Lord Ellenborough: and further, that he incited the most ambitious and able of the Khyrpoor brothers (Ali Morad), to intrigue against their venerated rais or chief, Meer Roostum, who, perceiving the offensive and threatening attitude assumed by the British forces, asked the advice of the general what to do to preserve peace, and offered to take up his residence in the camp. Sir Charles Napier advised, or rather commanded him to join his brother. The aged rais complied, and the result was his being first, as Sir Charles said, "bullied" into resigning the puggree to Ali Morad, and then induced, by artfully-implanted fears of English treachery, to seek refuge with his family in the wilderness. This step was treated as an act of hostility, and immediate preparations were made for what was vauntingly termed "the conquest," but which was expected to be little more than the occupation of Sinde. The customary form of a declaration of war was passed over; and it being suspected that the fugitives had taken refuge in Emaunghur, Sir Charles marched, with 400 men mounted on camels, against that fortress in January, 1843. Emaunghur belonged to a younger brother of Roostum—Mohammed of Khyrpoor, one of the reigning Ameers, who had never "been even accused of a single hostile or unfriendly act,"* but who had the unfortunate reputation of possessing treasure to the amount of from £200,000 to £360,000, stored up in Emaunghur.† No such prize awaited the general; he found the fort without a living inhabitant, but well supplied with grain, of which the troops took possession, razed the walls, and marched back again.

At this crisis, Major Outram returned to Sinde, at the especial request of both Lord Ellenborough and Sir Charles Napier, to aid as commissioner in settling the pending arrangements. Having vainly entreated the general not to persist in driving the whole of the Ameers of Upper Sinde to open war, by compelling them to take part with Meer Roostum and his fugitive adherents, Major Outram centred his last efforts for peace in striving to persuade the Ameers not yet compromised by any manifestation of distrust, to throw themselves at the feet of the English, by signing the required treaty. The task is best described in the words of the negotiator:—"I was called upon to obtain their assent to demands against which I had solemnly protested as a positive robbery: and I had to warn them against resistance to our requisitions, as a measure that would bring down upon them utter and merited destruction; while I firmly believed that every life lost, in consequence of our aggressions, would be chargeable on us as a murder."‡

The arguments of Major Outram succeeded in procuring the signature of the chiefs of Lower Sinde; but the prohibition he had received against any promise of protection for Meer Roostum, however clearly his innocence might be proved, excited uncontrollable indignation on the part of the Beloochee feudatory chiefs; and but for the efforts of the Ameers, the commissioner and his party would have been massacred on their return to the Residency. Major Outram was warned to quit Hyderabad. The vakeels or ambassadors dispatched to the British camp to offer entire submission, failed to procure even a hearing; and they sent word to their masters—"The general is bent on war—so get ready." In fact, Napier had been so long preparing to meet a conspiracy on the part of the Ameers, that he seems to have been determined either to make or find one, if only to illustrate his favourite denunciation of—"Woe attend those who conspire against the powerful arms of the company: behold the fate of Tippoo Sultan and the peishwa, and the Emperor of China!" Therefore he continued his march; and the terrified Ameers, on learning their last and deepest humiliations had been endured in vain, gave the rein to the long-restrained fury of their followers,—just fifty-three days after the commencement of hostilities by General Napier. On the 15th of February, a horde of armed Beloochees attacked the residence of the British commissioner. After a few hours' resistance, Major Outram and his escort evacuated the place, and retreated in marching order to meet the advancing army, which continued its progress to a village called Meanee (six miles from Hyderabad), which he reached on the 17th. Here the Ameers had taken up their position, with a force stated by Sir C. Napier at 25,862 Beloochees, hastily assembled and ill-disciplined; but than whom, he says, "braver barbarians never gave themselves to slaughter." And very terrible the slaughter was; for, if General W. Napier may be trusted, the Ameers "were broken like potsherds," and 6,000 men "went down before the bayonets of his (brother's) gallant soldiers, wallowing in blood." The English lost 254 killed and wounded.

Immediately after the battle, Meer Roostum and two others of the Khyrpoor family, with three of the Ameers of Hyderabad, influenced by the representations of Major Outram, abandoned all intention of defending Hyderabad, and delivered themselves up as prisoners; and on 20th of Feb., Napier entered the capital as a conqueror. Although there had been no declaration of war, and no sign of defence,—not a shot fired from the walls,—the prize-agents immediately set about the plunder of the city, in a manner happily unparalleled in the records of Anglo-Indian campaigns. The ladies of the imprisoned Ameers were exposed to the insulting search of one of the most abandoned of their own sex, the concubine of an officer on duty in Sinde. Everything belonging to them, even to the cots on which they slept, were seized and sold by public auction;§ and several of

* Outram's *Commentary*, 39. † First Sinde *B. B.*, 469.

‡ Outram deemed himself "bound to vindicate his (Napier's) conduct in my communications with his victims."—(*Commentary*, 325.) § *Idem*, 439.

these unfortunates, driven to desperation, fled from the city barefoot, overwhelmed with shame and terror.

On the 24th of March, the army marched from Hyderabad against Sheer Mohammed, Ameer of Meerpoor, with whom a pitched battle took place near that city, in which the British were victorious, but lost 267 men in killed and wounded. Meerpoor was occupied without resistance, and the desert fortress of Amercot (the birthplace of Akber, conquered by the Ameers from the Rajpoots) surrendered at the first summons. The brothers Shah Mohammed and Sheer Mohammed were defeated in the month of June, by detachments respectively commanded by captains Roberts and Jacob; and the success of these officers in preventing the junction of the brothers, and defeating them, materially conduced to the triumphant conclusion of the campaign; for had their forces been able to unite and retire to the desert, and there wait their opportunity, heat, pestilence, and inundation (in a land intersected by canals), would have been fearful auxiliaries to the warfare of predatory bands, against an army already reduced to 2,000 effective men, who could only move in the night, and were falling so fast beneath climatorial influences, that before the intelligence of Captain Jacob's victory, orders had been issued for the return of all the Europeans to head-quarters.

The Ameers were sent as prisoners to Hindoostan, and stipends were eventually granted for their support, amounting in the aggregate to £46,614. Ali Morad was rewarded for his share in sending his aged brother to die in exile, by an addition of territory, which was soon afterwards taken away from him, on a charge of forgery urged against him, and it was thought clearly proved, by a vengeful minister. The rest of the province was annexed to British India, and divided into three collectorates—Shikarpoor, Hyderabad and Kurrachee. There is some consolation in being able to close this painful episode, by stating that the latest accounts represent the country as improving in salubrity, the inhabitants (considerably above a million in number) as tranquil and industrious, canals as being reopened, waste land redeemed, new villages springing up, and even the very mild form of slavery which prevailed under the Ameers, as wholly abolished. This is well; for since we are incontestably usurpers in Sinde, it is the more needful we be not oppressors also.*

The sword had scarcely been sheathed in Sinde before it was again drawn in warfare against the Mahratta principality formed by Mahadajee Sindia. The successor of Dowlut Rao, and the adopted son of Baiza Bye, died childless in 1843. His nearest relative, a boy of eight years of age, was proclaimed Maharajah, with the sanction of the British government; and the regency was nominally entrusted to the widow of the late prince, a wayward and passionate, but clever and sensitive girl of twelve years of age. Great disorders arose in the state; and the turbulence of the mass of 40,000 soldiers, concentrated at Gwalior, rendered them an object of anxiety to the governor-general. The doctrine openly inculcated by Lord Wellesley—of the rights and obligations of the British government, as the paramount power in India—was urged by Lord Ellenborough as the basis of his proposed movements with regard to Gwalior. An army was assembled at the close of 1843; and while one division, comprising about eight or nine thousand men, marched from Bundelcund, and crossed the Sinde river at Chandpoor, the main body, about 14,000 strong, under the command of Sir Hugh Gough, accompanied by the governor-general, crossed the Chumbul near the town of Dholpoor, and on the 26th of December encamped at Hingona, twenty-three miles north-west of the fort of Gwalior. Marching thence on the 29th, the British force came in front of a Mahratta host, about 18,000 in number, encamped fifteen miles from Gwalior, near the villages of Maharajpoor and Chonda. The details of the ensuing engagement are unsatisfactorily recorded. That the British came unexpectedly on the enemy, is proved by the fact that Lord Ellenborough (not a military man, as he sorrowfully said) was on the field, and also the ladies of the family of the commander-in-chief. The conflict was desperate, and the English suffered severe loss from the numerous and well-served artillery of the foe; but they prevailed, as usual, by sheer hard fighting, marching up under a murderous fire to the mouths of the cannon, bayoneting the gunners, and driving all before them. Flinging away their matchlocks, the Mahrattas fell back on Maharajpoor, where they held their ground, sword in hand, until General Valiant, at the head of a cavalry brigade, charged the village in the rear, and dispersed the foe with much slaughter. The survivors retreated to Gwalior, leaving on the field fifty-six pieces of artillery, and all their ammunition waggons. The total loss of British troops was 106 killed and 684 wounded. On the same day, Major-general Grey encountered 12,000 Mahrattas at Puniar, twelve miles south-west of Gwalior, captured all their artillery, and slew a large number of them, his own loss being twenty-five killed and 189 wounded. The victorious forces met beneath the walls of the ancient stronghold, which, on the 4th of January, 1844, was taken possession of by the contingent force commanded by British officers. At the base of the temple stood the Lashkar, or stationary camp, where about 5,000 Mahrattas, being amply

SIR R. SALE.

LORD HARDINGE.

LORD GOUGH.

SIR H SMITH.

supplied with artillery, held out until the offer of liquidation of arrears, and three months' additional pay, induced them to surrender their arms and ammunition, and disperse quietly.

The native durbar attempted no further opposition to the views of the governor-general, and a treaty was concluded on the 13th Jan., 1844, by which the Maharanee was handsomely pensioned, but excluded from the government; and the administration vested in a council of regency, under the control of the British Resident, during the minority of the Maharajah. The fortress of Gwalior was ceded in perpetuity, and the sum of twenty-six lacs, or an equivalent in land, was demanded by Lord Ellenborough, in payment of long-standing claims; the subsidiary force was increased, and the maximum of the native army fixed at 9,000 men, of whom not more than one-third were to be infantry. The good conduct of the young rajah led to his being permitted to assume the reins of power before the expiration of the stated interval, and at its close, in 1853, he was formally seated on the musnud, and confirmed in the authority he had previously exercised on sufferance.*

The hostilities carried on with China, however important in themselves, have no place in the already overcrowded history of India; but it would be unjust to Lord Ellenborough, to omit noticing his vigorous and successful exertions for the dispatch of troops and stores to the seat of war. The reasons for his recall by the E. I. Directory in July, 1844, were not made public; and it would be superfluous to speculate upon them in a work the object of which is to state facts, not opinions.

Hardinge Administration: 1844 to 1848.—Lord Ellenborough's successor, Sir Henry Hardinge, employed the brief interval of tranquillity enjoyed by the Anglo-Indian government in promoting public works, in improving the discipline of the army, ameliorating the condition of the native troops, and endeavouring to produce a more friendly spirit between the military and civil services.

The progress of much-needed reforms was soon arrested by the outbreak of war on the north-western frontier, which was met by the governor-general in a firm and decisive spirit. Upon the death of the old Lion of the Punjab—the mighty robber-chief who had raised himself from the leadership of a small Jat tribe to the rank of Maharajah of the Seiks,—the kingdom he had founded was shaken to its base by a series of durbar intrigues and midnight assassinations, exceeding in atrocity the worst crimes committed at the worst periods of Hindoo or Mohammedan history. Kurruck Sing, the successor, and, it was generally believed, the only son of the deceased ruler, was deprived, first of reason and then of life, by the hateful machinations of the minister Rajah Dehra Sing and his profligate and abandoned son Heera (the pampered minion of Runjeet), the leading members of a powerful family, generally known as the Lords of Jummoo, a principality conquered from the Rajpoots.† The incremation of Kurruck Sing was scarcely ended, when some loose bricks fell on the head of his son No Nehal Sing, who was placed in a litter and carried off by the arch plotter Dehra, before the extent of the injury could be ascertained by the bystanders, and kept from the presence of his family until the crime had been completed, and the young rajah was a corpse. Murder followed murder: men and women, the guilty and the innocent, the vizier in the council-chamber, the general at the head of the army, the lady at her toilette, the babe in its cradle, were by turns the victims of unscrupulous ambition, covetousness of wealth, lust, cowardice, or vengeance. Dehra and

* Churut Sing founded the fortunes of his family by establishing a sirdaree or governorship, which his son, Maha Sing, consolidated by the capture of the fort and town of Ramnuggur, from a strong Mohammedan tribe called Chettas. Maha Sing died in 1780, leaving one son, a child then four years old, the afterwards famous Runjeet Sing. The mother and mother-in-law of the young chief ruled in his name until the year 1793, when Runjeet became impatient of control, and sanctioned, or (according to Major Smyth) himself committed the murder of his mother, on the plea of her shameless immorality—a procedure in which he closely imitated the conduct of his father, likewise a matricide. The conquest of Lahore, in 1798, from some Seik chiefs by whom it was conjointly governed, was the first step of the ladder by which Runjeet mounted to power. Moultan and Peshawur were captured in 1818; Cashmere in the following year; and Runjeet's career of plunder and subjugation ceased not until a wall of impenetrable mountains closed its extension northward, in a manner scarcely less decisive than the check to his progress southward and eastward, previously given by the English, when their prudent interference compelled him to find in the Sutlej a barrier as impassable as the Himalayas themselves.—(Prinsep's *Seiks;* Smyth's *Reigning Family of Lahore;* Shahamet Ali's *Seiks and Afghans;* Hügel's *Travels in Cashmere and the Punjab.*)

† The almost independent power which Runjeet Sing suffered the Lords of Jummoo and other favourite chiefs to assume, was one of the causes of the fierce civil war for which his death gave the signal.

Heera Sing fell, each at a different crisis, while holding the office of vizier. Sheer Sing, the son of one of Runjeet's wives, obtained for a time the throne; but was murdered in 1843, after which a state of wide-spread anarchy prevailed throughout the Punjab, the chief remaining semblance of authority being vested in the person of Ranee Chunda, a concubine of the late Runjeet Sing, and the mother of a boy named Duleep Sing, who, though notoriously not the son of the Maharajah, had been in some sort treated by him as such. Dehra Sing, wanting a puppet, had drawn this child from obscurity; and his mother, under the title of regent, became the head of a faction, the opposers of which took their stand by declaiming truly against the spurious origin of Duleep Sing, and the shameless immorality of Ranee Chunda; and untruly, with regard to her alleged efforts to intrigue with the English against the independence of the Seik nation. Now, in fact, the only point upon which the various Seik parties had ever shown any degree of unanimity, was that of enmity to the British; and much evidence has gradually been brought to light of the actual treachery, as well as passive breach of treaty committed by them during the Afghan war. The intemperate language of Sir Charles Napier in Sinde, and his undisguised anticipation of war in the Punjab, had been published, doubtless with exaggeration, throughout that kingdom; and the general feeling of the Seiks was anxiety to assume an offensive position, and meet, if not anticipate, the expected invasion. The French officers in the Seik service (Ventura and M. Court), appear to have borne little part in the past commotions; but their exertions, together with those of Allard and the Neapolitan Avitabile, on whom Runjeet conferred the government of Peshawur, had been sedulously and successfully employed in casting cannon, organising artillery, and disciplining troops after the European fashion.

The preparations made at Lahore for the passage of the Sutlej by a Seik army, could not long be concealed from the governor-general, who, with all practicable expedition and secrecy, concentrated 32,000 men and sixty-eight guns in and about Ferozepoor, Loodiana, and Umballa. Towards the middle of December, the Seiks crossed their boundary, bringing with them large quantities of heavy artillery; and one body of 25,000 regulars and eighty-eight guns, took up a position near the village of Ferozshah; whilst another force of 23,000 men and sixty-seven guns, encamped opposite Ferozepoor. Both divisions commenced throwing up earthworks around their camps, and preparing for a vigorous contest.

The governor-general had hastened to the frontier to superintend the necessary preparations at the various cantonments. On learning the passage of the Sutlej by the Seiks, in direct contravention of existing treaties, he issued a declaration of war, and, in conjunction with the commander-in-chief, Sir Hugh Gough, advanced with the main column from Bussean (the military depôt) towards Ferozepoor. On reaching the village of Moodkee (18th December, 1845), tidings were received of a hostile encampment some three miles off, comprising a large body of troops, chiefly cavalry, supported by twenty-two guns. It was mid-day, and the English were weary with marching; nevertheless they started forward, after a brief interval for refreshment. The Seik artillery being advantageously posted behind some low jungle, fired briskly upon the advancing columns, but could not hinder the approach of the British horse artillery and light field batteries, which opened on them with steady precision, and caused a degree of confusion in their ranks, soon utterly broken by a sweeping charge of cavalry, closely followed by a continuous discharge from the muskets of the infantry. The Seiks were driven off by the bayonet whenever they attempted to make a stand, and fled leaving seventeen guns and large numbers of their dead comrades on the field. The slaughter would have been greater but for the weariness of the victors and the gathering darkness. The British returned to their camp at midnight, with the loss of 216 killed and 648 wounded, out of a force of 1,200 rank and file. Among the slain was Sir Robert Sale, who fell with his left thigh shattered by grapeshot. The victory was followed up by an attack on the intrenched camp of the enemy at Ferozshah. The Seiks were estimated at 35,000 rank and file, and eighty-eight guns; while the British numbered less than 18,000 men, and sixty-five guns. The disparity was sensibly felt, for the Seiks had proved themselves far more formidable opponents than had been expected; and their artillery (thanks to the labours of Ventura, Allard, Avitabile, and Court, and to the policy of encouraging foreign adventurers to enter

the service of native princes, and prohibiting Englishmen from a similar proceeding) excelled ours in calibre as much as in number, was in admirable order, and thoroughly well served. The British advanced from Moodkee, and reached the hostile encampment about eleven o'clock on the 21st of December. The engagement commenced with an attack by the artillery on the Seik lines, which extended nearly a mile in length and half a mile in breadth. An order was given to the infantry to seize the enemy's guns; and the terrible task was effected with so much success, that the battle seemed almost gained, when the sudden fall of night obliged the combatants to cease fighting, because they could no longer distinguish friend from foe. The main body of the British forces was withdrawn a few hundred yards, and while resting under arms, some of the Seik guns which had not been taken possession of, were brought to bear on the recumbent troops. The governor-general mounted his horse and led the gallant 80th, with a portion of the 1st Bengal Europeans, against the hostile guns, carried them at a charge, caused them to be spiked, and returned to his previous station. The remainder of the night was one of extreme anxiety to the British commanders: their loss had been most severe; and the reserve force, under Sir Harry Smith, had been compelled to retire; while reinforcements were believed to be on their way to join the Seiks. The "mettle" of the troops and of their dauntless leaders was never more conspicuous: at daybreak they renewed the attack with entire success, secured the whole of the seventy-six guns opposed to them, and cleared the entire length of the hostile works; the enemy falling back on the reserve, which arrived just in time to prevent their total destruction. Thus strengthened, the vanquished Seiks were enabled to recross the Sutlej without molestation. The English found full and melancholy occupation in burying their dead and nursing the wounded. Nearly 700 perished on the field; and of above 1,700 placed in hospital at Ferozepoor, 600 died or were disabled from further service.

The great loss thus sustained, and the want of a battering train, prevented the conquerors from marching on Lahore, and bringing the war to a summary conclusion. Many weeks elapsed before the arrival of reinforcements enabled Sir Hugh Gough again to take the field; and in the interval, the Seiks threw a bridge of boats across the Sutlej, and encamped at Sobraon, on the left bank of the river, where, under the direction of two European engineers, they constructed an almost impregnable *tête-du-pont*. Another body crossed the river and took post at the village of Aliwal, near Loodiana. Sir Harry Smith was dispatched from Ferozepoor to relieve Loodiana, which having effected, he marched against Aliwal with a force of about 10,000 men, and advanced to the attack on the 28th Jan., 1846, with his entire line. A brief cannonade and a cavalry charge was followed by the onset of the infantry: the village was carried by the bayonet, the opposing guns captured, and the foe driven with great slaughter across the river. Smith returned to Ferozepoor on the 8th of February, and on the following day the long-expected heavy guns reached the British camp. Before daybreak on the 10th the troops marched forth to attack the formidable intrenchments of an enemy estimated at 54,000 men, and supported by seventy pieces of artillery. The British numbered 16,000 rank and file, with ninety-nine guns. They advanced under a murderous fire from cannon, muskets, and camel guns, and in more than one place were repeatedly forced back, but the charge was invariably renewed. Line after line was carried, in the accustomed manner, by the bayonet, and the victory was completed by the fierce onslaught of a body of cavalry, under General Thackwell. The Seik guns, camel swivels, and standards were abandoned, and the retreating mass driven over their bridge of boats across the river, hundreds perishing by the fire of the horse artillery, and many more being drowned in the confusion. The English lost 320 killed (including the veteran Sir Thomas Dick, with other officers of note), and the wounded amounted to 2,063. The victorious army marched to Lahore; and there, beneath the city walls, dictated the terms of peace. The governor-general was disposed to recognise the claims of the boy Duleep Sing as Maharajah, and 10,000 men were left at Lahore (under the command of Sir John Littler) for his support and the preservation of peace. The Seik government, or durbar, consented to defray the expenses of the war, amounting to a million and a-half sterling, and agreed to the disbandment of their turbulent soldiery, of whom the majority had been already temporarily dispersed. Sir Henry Hardinge returned to England, and was rewarded for zealous and successful service by eleva-

tion to the peerage; a similar mark of royal favour was conferred on Sir Hugh Gough.

DALHOUSIE ADMINISTRATION: 1848 TO 1855.—The recent Seik treaty was not carried out, and appears to have been merely signed as a means of gaining time. A new series of crimes and intrigues commenced; and, as before, hatred of the English was the only common feeling of the various leaders of factions. The first signs of open hostility appeared in the ancient city of Mooltan, the capital of a petty state between the Indus and the Sutlej, conquered by Runjeet Sing in 1818. The British assistant Resident (Mr. Vans Agnew) and Lieutenant Anderson of the Bombay army, were assassinated in the fortress by Moolraj the governor, against whom hostile operations were immediately commenced; the earlier of which were characterised by a remarkable display of energy and judgment on the part of Major Herbert Edwardes, then a subaltern, "who had seen but one campaign."* The strong fortress of Mooltan was besieged in August, and would probably have been captured in the following month, but for the treacherous defection of a large body of Seik auxiliaries, which, with other unmistakable indications of hostility, left (in the words of Lord Dalhousie) "no other course open to us than to prosecute a general Punjab war with vigour, and ultimately to occupy the country with our troops."

In November, 1849, a British army, under Lord Gough, again took the field, and marched from Ferozepoor to Ramnuggur, near the Chenab, where a Seik force lay encamped. The attack of the British proved successful, but their loss was heavy, and included the gallant General Cureton, Colonel Havelock, and Captain Fitzgerald. The Seiks retreated in order towards the Jhelum, while Lord Gough prepared to follow up his victory by an attack on Lahore. The siege of Mooltan, conducted by General Whish, was brought to a successful issue on the 2nd of January, 1849. The fortress was most vigorously defended, until its massive fortifications were completely undermined, and several practicable breaches effected. Orders had been given to storm the citadel at daybreak, and the troops were actually forming, when Moolraj presented himself at the chief gate, and proceeding straight to the tent of the English general, surrendered the keys and his own sword.

A garrison was left in Mooltan, and the remainder of the army marched off to join the commander-in-chief, but arrived too late to share the peril and the glory of the much-criticised battle of Chillianwallah. Events so recent are hardly fit subjects of history. It is seldom until the chief actors have passed away from the stage that the evidence brought forward is sufficiently clear and full to enable the most diligent investigator to form a correct judgment on their merits and demerits.

Early in January, Lord Gough proceeded towards the Chenab, and found, as he expected, the Seiks strongly posted near Chillianwallah, with their artillery planted in a commanding and safe position, under cover of some low but dense jungle. The British marched to the attack, as they had often done before, amid a storm of grape and shell, and after a long and sanguinary engagement, which lasted till after nightfall, carried the murderous guns with the bayonet, and purchased victory with the loss of 757 killed and above 2,000 wounded. The carnage among the Seiks must have been yet more terrible; nevertheless, being joined by a body of Afghan horse, they prepared to renew the contest. The final struggle took place on the 21st of February, a few miles from the town of Gujerat. The battle was opened by Lord Gough with a fierce cannonade, which was maintained without intermission for nearly three hours. At the expiration of that time the Seiks made a retrograde movement, upon which the whole British force rushed forth on the foe, and with bayonet, lance, and sword completed the overthrow commenced by the heavy guns. Chutter Sing, Sheer Sing, and other leaders, surrendered to the victors; the Afghans fled across the Indus; the Seik forces were disbanded; and there being in truth no legitimate heir to the usurpations of Runjeet Sing, the Punjab was unavoidably annexed to British India. Its present satisfactory and improving condition will be found described in an ensuing section.

*Second Burmese War.*—Nearly two years were passed by the governor-general in active usefulness, without any interruption of the general tranquillity; the only occasion for military interference being to suppress the inroads of the Afredees and other predatory tribes in the vicinity of Peshawur. The sole quarter from which hostility was anticipated was Burmah, the very one from which it was most earnestly to be depre-

cated by all inclined to take warning by past experience.

The Earl of Dalhousie was deeply impressed with this conviction, and scrupled not, with characteristic frankness, to declare his opinion, that "conquest in Burmah would be a calamity second only to the calamity of war."* The deeply disordered finances of India had been rapidly improving under his peaceful and able administration, and he looked forward with sincere repugnance to a contingency which would assuredly produce "exhausted cash balances and reopened loans."† Nevertheless, a series of unfortunate events produced the renewal of war. The treaty of Yandaboo had been preserved inviolate by the sovereign with whom it was made; but his deposition, in 1837, gave a new turn to affairs. His usurping brother, known to the English as a military leader by the name of Prince Therawaddi, manifested great annoyance at the presence of a political agent at Ava, and the residency was in consequence removed to Rangoon, and subsequently altogether withdrawn from Burmah. The British continued to trade with Rangoon for the following twelve years; and during that time many complaints of oppression and breach of treaty were brought against the Burmese government, but none of these were deemed of sufficient extent or significancy to call for the interference of the Calcutta authorities, until the close of 1851, when the commanders of two British vessels laid before Lord Dalhousie a formal statement of oppressive judgments delivered against them by the governor of Rangoon in his judicial capacity. Commodore Lambert was dispatched from Calcutta with full and very clear instructions regarding the course to be pursued—namely, first to satisfy himself regarding the justice of these allegations, and then to demand about £900 as compensation.

On reaching Rangoon, numbers of resident traders (styled by Lord Ellenborough the Don Pacificoes of Rangoon) pushed off in their boats with a strange assortment of complaints against the governor; whereupon Commodore Lambert, without waiting to consult Lord Dalhousie on the subject, broke off all intercourse with the local functionary, and commanded him, in very peremptory language, to forward a letter to the King of Ava, stating the object of the British mission, and demanding the disgrace of the offending intermediary. The letter was dispatched, and an answer returned, that the obnoxious individual had received his dismissal, and that the required compensation would be granted. A new governor arrived at Rangoon, whose conduct induced the commodore to doubt the sincerity of the professions made by the Burmese authorities; and so far he was probably correct. But, unfortunately, his peculiar position as a Queen's officer,‡ is alleged to have given him a sort of independence, which induced the violation of Lord Dalhousie's express injunction, that no act of hostility should be committed by the British mission, however unfavourable its reception, until definite instructions had been obtained from Calcutta. The refusal of the governor to receive a deputation sent by the commodore at mid-day on the 6th Jan., 1852,—offered by the Burmese attendants on the plea that their master was asleep, according to custom, at that hour (and afterwards excused on the plea that the deputies were intoxicated, which has been wholly denied),—was immediately resented by a notice from the commodore for all British subjects to repair to the squadron—an order which was obeyed by several hundred men, women, and children. No opposition was made to their embarkation, but those who remained behind were thrown into prison. The next and wholly unauthorised measure was to take possession of a painted war-hulk, styled the "yellow ship," belonging to the King of Ava, which lay at anchor a little above the British vessels. This procedure, which has been almost universally censured, produced a declaration from the governor of Rangoon, that any attempt to carry away the property of the king, would be forcibly resisted. The British persisted in towing the vessel out of the river; and on passing the great stockade, or battery, a fire was opened on them, but soon silenced by a broadside from the squadron, which "must have done great execution."§ Commodore Lambert declared the coast of Burmah in a state of blockade, and left in a steamer for Calcutta, to seek other instructions than those he had violated in ill-judged retaliation.

The notoriously hostile spirit of the Burmese government, probably induced Lord Dalhousie to confirm the general proceedings of Lambert, despite his undisguised disapproval of the seizure of the "yellow ship."

§ Lambert's Despatch. Further Papers, 41.

The previous demand for compensation was reiterated and received with a degree of evasion which was deemed equivalent to rejection; and both parties made ready for an appeal to arms. The British commander-in-chief, Lord Gough, was absent at Simla; but though a brave soldier, he was a man of advanced age; and the ability of Lord Dalhousie and his council abundantly sufficed to overcome all deficiencies, including those encountered in the raising of the Madras contingent, through the insubordination of the governor, Sir Henry Pottinger, who tacitly opposed Lord Dalhousie at every point,—not through any conscientious feeling regarding the war, but simply from personal irritation, caused by some petty jealousy of office.* The Bombay authorities, aided by the head of the Indian navy (Commodore Lushington) and his able subordinates, captains Lynch and Hewett, bestirred themselves actively in the preparation of the steam fleet, and on the 2nd of April the Bengal division arrived at the mouth of the Rangoon river; the previous day having been fixed by the governor-general as that on which the King of Ava was to decide whether he would avoid war by the payment of £100,000 in consideration of the expenses incurred by the British, and sanction the residence of an accredited agent at Rangoon, in compliance with the treaty of Yandaboo. The steamer dispatched to Rangoon to receive the reply of the Burmese government, was compelled to retreat under a shower of shot from the stockades lining the river; and the campaign commenced. Martaban was stormed with little loss, and occupied by a strong garrison. The Madras division arrived soon after; and the united forces amounted to about 8,000 men, commanded by General Godwin, an active and fearless veteran, who had served under Campbell in the previous war, but whose projects were sadly fettered by an exaggerated respect for the proceedings of his predecessor. Rangoon was blockaded on the 10th of April, 1852, and the following day (Easter Sunday) witnessed a desperate and prolonged struggle. The intense heat, under which many officers dropped down dead, impeded operations; and it was not until the 14th that the fall of the Golden Pagoda completed the capture of Rangoon, which was obtained with the loss to the victors of about 150 killed and wounded. Bassein (once the head-quarters of the Portuguese in Eastern India) was carried with ease in June, and strongly garrisoned; but the dilapidated city of Pegu, which next fell into the hands of a British detachment, though evacuated on their approach, was abandoned by them, owing to insufficiency of troops. General Godwin sent to Calcutta for reinforcements, and especially for light cavalry, horse artillery, and a field battery. These were assembled and dispatched with all possible celerity; and the governor-general, probably dissatisfied with the progress of hostilities, himself visited the seat of war. Prome was taken possession of in July, but abandoned, like Pegu, for want of men, upon which the enemy returned, and made preparations for its defence. The reinforcements which reached the British cantonments in September, raised the army under General Godwin to nearly 20,000 efficient troops, and might, it was considered, have amply sufficed for more extensive enterprises than were attempted. Prome was recaptured, with little difficulty, in October, and Pegu in November; and both places were permanently occupied. An effort was made for the recovery of Pegu by the Burmese, which proved ineffectual; and an engagement with a body of the enemy, near Pegu, was chiefly remarkable for the gallantry displayed by the irregular Seik horse, who proved valuable auxiliaries to their late conquerors.

In December, 1852, the governor-general declared the province of Pegu annexed to the British empire, and intimated that no further hostilities would be pursued by the Anglo-Indian government, if the Burmese were content to submit quietly to the loss of territory which, it must be remembered, they had themselves acquired by usurpation. A new revolution at Ava, caused by the deposition of the king, Therawaddi, by one of his brothers (a procedure similar to that by which he raised himself to the throne), occasioned a cessation of foreign hostilities,† which has lasted up to the present time (1855), but really amounts to nothing more

* *See* an able article entitled "Annals of the Bengal Presidency for 1852," *Calcutta Review*, Mar., 1853.

† The assassination of Captain Latter, the deputy commissioner at Prome, in December, 1853, has been variously attributed to the treachery of the Burmese government, and to the vengeance of a petty chief, in whose subjugation to British authority he was personally instrumental. The murder was committed in the dead of night, and nothing but life was taken. The assertion that a woman's garment was found on the body, though often repeated, has been authoritatively denied; and of the whole mysterious affair nothing is certain but the death of a brave, scientific, and energetic officer.

than an armed neutrality, resting on a precarious basis.

The next event in the administration of Lord Dalhousie was the deposition of Ali Morad, the only remaining Ameer of Sinde, from the position of a dependent prince, to that of an ordinary subject holding a large jaghire. The death of Rajah Ragojee of Nagpoor or Berar (the successor of Appa Sahib), in December, 1853, without issue or male heir, was followed by the unopposed annexation of the principality to British India. In Hyderabad (the Deccan), certain portions of territory were surrendered about the same time by the Nizam to the British government, and the revenues of the districts thus obtained are to be applied to the reduction of the heavy outstanding debt, and the maintenance of the stipulated military contingent. Beside these troops the Nizam lavishes sums, ill-spared from revenues which probably do not largely exceed a million sterling, in the maintenance of a turbulent armed force of Arab, Patan, and Rohilla mercenaries,—the terror of surrounding districts, but especially of the more peaceful of his own subjects.

In Oude, the progress of annexation will probably not long be stayed. The notorious misgovernment which has prevailed in that kingdom, under successive rulers, and its general and undisputed disorganisation, produced a distinct intimation from Lord Auckland, in 1842, on the occasion of the accession of Surya Jah to the musnud, that unless the reforms necessary to the tranquillity and welfare of the country were forthwith instituted, its affairs would be taken under British management. This declaration has had no effect in rendering the present sovereign a better ruler than his predecessors; on the contrary, he is said to have "perhaps even surpassed them in weakness and profligacy." A religious war is, by our last accounts, now raging between the Hindoos and Mohammedans: under these circumstances, it is hardly to be expected that the English government will persist in upholding the despotic authority of a worthless and immoral dynasty.

The incursion of several hill tribes on the north-western frontier, especially of the Momunds, have occupied the troops at different periods. In the present year (1855), the Sonthals, an aboriginal race located near the Rajmahal hills in Bahar, have risen in insurrection. Their cause of complaint is variously stated to have originated in the tricks of Bengal money-lenders, and the oppressions of certain minor railway officials who have recently come among them. The Sonthals, though quite uncivilised, have been heretofore peaceable and well-disposed; and now that the late disturbances are passing away, it is to be hoped efforts will be made to promote the material and spiritual welfare of these and other *pariahs* or outcasts of the population, as the best and most legitimate means of ensuring the general tranquillity.

The failing health of Lord Dalhousie has conduced to give a term to an administration which has proved no less honourable to himself than beneficial to India. His lordship left his native land with a high reputation for practical ability gained as President of the Board of Trade and of the railway department: he returns still in the vigour of manhood, with matured experience and unsullied integrity. His seven years' tenure of office has borne fruit abundantly throughout the vast territories comprised in British India. In the Punjab, Pegu, and Berar, annexed by him, the basis of an effective government has been laid, and there, as in our older possessions, the progress of freedom and civilisation, so slow even in Christian Europe, has extended with comparative rapidity. The establishment of railways at the three presidencies and in Sinde, of telegraphic communication between the chief cities, of cheap and uniform postage, the increase of the means of conveyance and irrigation, the reduction of import dues, the creation of a loan for public works, and the open discussion of governmental projects and acts;—these improvements, together with an energy and dispatch in the executive department before unknown, the character and efforts of the governor-general have had no small share in producing. The personal investigation of the condition of every Indian province, enabled him to gain unusual acquaintance with their peculiar and widely different requirements; while the charm of a frank and generous spirit, heightened by easy yet refined eloquence, procured for him, as for his great exemplar Lord Wellesley, the zealous co-operation of the best talent of the military and civil service. Lord Canning (the son of the distinguished statesman appointed in 1822 to take his place in the list of Anglo-Indian viceroys, but arrested by the offer of ministerial employment at home) has been nominated to succeed Lord Dalhousie.

[a] In the fifty days during which the siege was protracted, the British loss in defeating the attempt to storm was only four Europeans killed and two sepoys wounded.

[b] This number includes the sick; the number that actually repulsed the storm on the 14th November amounting to 80 Europeans and 120 sepoys.

[c] On the 14th November; there are no means of ascertaining previous casualties.

[d] Of these 150 were French.

[e] The powers of the governor and council of Calcutta, in civil and commercial affairs, were preserved to them, but in all military matters Clive was invested with independent authority.

[f] Some say 35,000 infantry, 15,000 cavalry; also forty Frenchmen with four light pieces of artillery.

[g] One of the remarkable events of this battle was the capture of Monsieur Law, who, with a few French troops, had hitherto been the chief support of the native armies against the English.

[h] Worked by 170 Europeans.

[i] Exclusive of large bodies of irregular cavalry.

[j] Of these 2,000 were drowned in the Caramnassa.

[k] This includes sixteen missing.

[l] The number is stated between 40,000 and 50,000.

[m] This was the whole force employed in the siege; the two divisions which carried the place did not number more than 4,000 men.

[n] These numbers include the casualties during the whole period of the siege, from 4th April to 4th May.

[o] The number estimated to have fallen in the assault.

[p] Exclusive of the Rajah of Berar's infantry and Sindia's irregular corps.

| — | — | — | 25,000 | — | 17 | 2 | 19 | 1 | 55 | 11 | 67 | 50 | 0 | — | Lieutenant-colonel C. B. Burr. |

[q] A large number of the wounded were scattered over the country.

[r] The amount of the British force is not stated; it must, however, have been considerable, as a junction had been effected between the forces of General Wellesley and Colonel Stevenson. The force placed at the disposal of the former, at the commencement of the campaign, amounted to 9,000; that of the latter to 8,000 men.

[s] Major-general Fraser's force consisted of H.M's. 76th regiment, the Company's European regiment, and four battalions of sepoys, exclusive of two battalions left for the protection of the baggage. The strength of the four battalions and the two European regiments engaged in the attack, may be estimated at the amount stated in the Table.

[t] Thorn says twenty-four battalions of infantry, besides a considerable body of horse. Captain Thornton states that the cavalry, swelled by numerous adventurers, amounted to 60,000, to which were added 15,000 well-disciplined infantry. The numbers specified in the Table are those of the infantry alone.

[u] Besides a large number drowned in a morass.

[v] This number has reference only to the strength of the storming party. Lord Lake appears to have been present with his whole army, which consisted of upwards of 10,000 men.

[w] The enemy's extensive intrenchments were occupied by a large force, but the numbers are not stated. The troops are represented to have consisted of several of the Rajah of Bhurtpoor's battalions, and the remaining infantry of Holcar.

[x] This number comprises only the storming party. *See* Note to Deeg.

[y] The Bombay division, consisting of four battalions of sepoys, H.M's. 86th regiment, eight companies of the 65th, with a troop of Bombay cavalry, and 500 irregular horse, had now joined Lord Lake's force before Bhurtpoor.

[z] Sir David Ochterlony had a force of near 20,000 men, including three European regiments. He divided this force into four brigades, with two of which he marched to Muckwanpoor.

[a] In Col. Blacker's *Memoir*, p. 18, Holcar's force is estimated at 20,000 horse and 8,000 foot.

[b] The numbers here given have reference to the strength of the cavalry. In addition to this, there appears to have been a detachment of horse artillery.

[c] The force consisted of 1,000 native cavalry, a troop of horse artillery, a company of European foot artillery, 3,000 native infantry, 2,000 irregular horse, with three 18-pounders, four brass 12's, six howitzers, and twelve 6-pounders.

[d] Native garrison.

[e] This was the number of men of which the storming party was composed.

[f] The British force present at the conclusion of the siege, consisted of—horse artillery, one troop and a-half; native cavalry, eight squadrons; foot artillery, five companies; European infantry, two battalions and a-half; native infantry, eleven and a-half battalions; irregular horse, 5,000; sappers and miners, thirteen companies: and probably exceeded, in the aggregate, the amount stated in the Table.

[g] The strength of the storming party.

[The above Table was prepared by order of the Court of Directors, at the request of the Author. The particulars which should appear in the columns left blank, cannot be furnished with perfect accuracy.]

# CHAPTER II.

TOPOGRAPHY—MOUNTAINS AND PASSES—RIVERS—PLATEAUX—PROVINCES AND CHIEF TOWNS—CLIMATE AND DISEASES—GEOLOGY—SOIL—MINERALOGY.

Asia, — the largest and most diversified quarter of the globe, has for its central southern extremity a region of unsurpassed grandeur, comprising lofty mountains, large rivers, extensive plateaux, and wide-spread valleys, such as are not to be found within a like area in any other section of the earth. This magnificent territory, known under the general designation of India,* is in the form of an irregular pentagon, with an extreme extent, from north to south and from east to west, of 1,800 miles; a superficial area of 1,500,000 square miles; and a well-defined boundary of 9,000 English miles.†

The geographical position of India possesses several advantages. On the north, it is separated from China, Tibet, and Independent Tartary, for a distance of 1,800 miles, by the Himalayan chain and prolongations termed the Hindoo-Koosh, whose altitude varies from 16,000 to 27,000 feet (three to five miles), through which there is only one pass accessible to wheeled carriages (Bamian.) This gigantic wall has at its base an equally extended buttress, the sub-Himalaya and Sewalik hills, with, in one part, an intervening irregular plateau (Tibet) of 90 to 150 miles wide: on the *West*, the Hindoo-Koosh is connected by the low Khyber ranges with the lofty Sufied-Koh, and its conjoint the Suliman mountains, which rise 10,000 feet, like a mural front, above the Indus valley, and have a southerly course of 400 miles; the Suliman are connected by a transverse chain with the Bolan mountains, which proceed nearly due south for 250 miles, and become blended with the Keertar, Jutteel, and Lukkee hills; the latter terminating in the promontory of Cape Monze, a few miles to the north-west of the Indus mouth. This *western* boundary of 900 miles, supports the table-lands which constitute a large part of Afghanistan and Beloochistan: to these there are four principal ascents—the Khyber, Gomul, Bolan, and Gundava passes, readily defensible against the strategetic movements of any formidable enemy. On the *East*, an irregular series of mountains, hills, and highlands, extend from the source of the Brahmapootra, along the wild and unexplored regions of Naga, Munneepoor, and Tipperah, through Chittagong and Arracan to Cape Negrais (the extremity of the Youmadoung range), at the mouth of the Irawaddy river; to the southward and eastward of Pegu and Martaban, the Tenasserim ridge commences about one hundred miles distant from the coast, and prolongs the boundary to the Straits of Malacca, along the narrow strip of British territory which fronts the Bay of Bengal. The length of this *eastern* frontier is 1,500 miles, and it forms an effectual barrier against aggression from the Burmese, Siamese, or Malays, with whose states it is conterminous. On the *South*, the shores of the above-described territory are washed by the Bay of Bengal, the Straits of Malacca, the Indian Ocean, and the Arabian Sea, for 4,500 miles. The natural frontiers of this extensive region may be thus summarily noted:—north, along the Himalaya, 1,800; west, along Afghanistan, &c., 900; east, along Burmah, Siam, &c., 1,800: total by land, 4,500; by sea, 4,500 = 9,000 English miles.

No pen-and-ink description can convey an adequate idea of India as a whole; the mind may comprehend separate features, but must fail to realise at one view a complete portraiture, especially if devoid of unity of configuration: in several countries a mountain ridge and a main conduit form an outline, around which the chief topographical peculiarities may be grouped; but the region before us contains several lines of great length and elevation, with diverse axis of perturbation, and declinations to three of the cardinal points, causing numerous rivers, flowing S.W. (Indus); S.E. (Ganges); S. (Brahmapootra and Irawaddy); W. (Nerbudda, Taptee, and Loonee); E. (Godavery, Kistnah, Cauvery, and Mahanuddy); and in

* *See* p. 13 for origin of word: old geographers designate the country as India *within* (S.W. of), and *beyond* (S.E. of) the Ganges.

† The reader is requested to bear in mind throughout this work, that round numbers are used to convey a general idea, easy to be remembered; they must be viewed as approximative, and not arithmetically precise. Indian statistics are still very imperfect.

other directions according to the course of the mountain-ranges and the dip of the land towards the ocean, by which the river system is created and defined.

Irrespective of the circumscribing barriers, and of the bones and arteries (hills and streams) which constitute the skeleton of Hindoostan, three features, distinctively delineated, deserve brief notice. The snowy ranges on the north give origin to two noble rivers, which, as they issue from the lesser Himalaya, are separated by a slightly elevated water-shed, and roll through widely diverging plains—the one in a south-easterly direction to the Bay of Bengal, the other south-westerly to the Arabian sea; each swollen by numerous confluents which, altogether, drain or irrigate an area equal to about half the superficies of India Proper. The Gangetic plain is 1,000, that of the Indus (including the Punjab), 800 miles in length; the average breadth of either, 300 miles; the greater part of both not 500 feet above the sea; the height nowhere exceeding 1,000 feet. Intermediate, and bifurcating the valleys of the main arteries, there is an irregular plateau, extending from north to south for 1,000, with a breadth varying from 300 to 500 miles, and a height ranging from 1,500 to 3,000 feet above the sea-level. Midway between Cape Comorin and Cashmere, this table-land is bisected from west to east, for 600 miles, by the narrow Nerbudda valley: the *northern* section, of an oblong shape, comprising Malwa, East Rajpootana, and Bundelcund, has for its south-eastern and north-western buttresses the Vindhya and Arravulli ranges, and a declination towards the Jumna and Dooab on the north-east, and to the Guzerat plain on the south-west: the *southern* section, constituting what is erroneously* termed the Peninsula, contains the Deccan, Mysoor, Berar, and adjoining districts; forms a right-angled triangle,† supported on the north by the Sautpoora mountains, and on either side by the Western and Eastern Ghauts and their prolongations; the declination is from the westward to the eastward, as shown by the courses of the Godavery and Kistnah.

These prominent physical characteristics may be thus recapitulated. 1st. The extensive mountain circumvallation, east to west, from the Irawaddy to the Indus. 2nd. The two great and nearly level plains of the Ganges and Indus. 3rd. The immense undulating plateau, of 1,000 miles long, in a straight line from the Jumna to the Cauvery. To these may be added a low coast-line of 4,500 miles, skirted on either side of the Bay of Bengal, and on the Malabar shore of the Indian Ocean, by receding *Ghauts* and other lofty ranges, backed by inland ridges of hills, and mountains traversing the land in diverse directions, such as the Vindhya, Sautpoora, and Arravulli. These salient features comprise many varieties of scenery; but for the most part wide-spread landscapes extend on the east,—teeming with animal and vegetable life; sandy wastes on the west, where the wild ass obtains scanty provender; on the north, an arctic region, whose snowy solitudes are relieved from perpetual stillness by volcanic fires bursting from ice-capt peaks; on the south, luxuriant valleys, verdant with perpetual summer; a rocky coast at Kattywar, swampy sunderbunds at Bengal, jungly ravines in Berar, and fertile plains in Tanjore;—*here* Nature in sternest aspect,—*there* in loveliest form,—*everywhere* some distinctive beauty or peculiar grandeur: while throughout the whole are scattered numerous cities and fortresses on river-bank or ocean-shore, adorned with Hindoo and Moslem architecture, cave temples of wondrous workmanship, idolatrous shrines, and Mohammedan mausoleums, wrought with untiring industry and singular artistic skill; cyclopean walls, tanks, and ruins of extraordinary extent, and of unknown origin and date; but whose rare beauty even the ruthless destroyer, Time, has not wholly obliterated. These and many other peculiarities contribute to render India a land of romantic interest, which it is quite beyond the assigned limits of this work to depict: all within its scope‡ being a brief exposition of the various mountain-ranges and passes, the plateaux, the river system, coast-line, islands, &c., with an enumeration of the principal cities and towns, which are more numerous and populous than those of continental Europe.§

* There is no partial insulation—no isthmus.

† The northern and western sides are about 900 miles in length; the eastern 1,100.

‡ A full description of the geography of India would require a volume to itself; but the tabular views here given, and now for the first time prepared, will, with the aid of the maps, enable the reader to trace out the topography of the country.

§ Autumnal tourists, in search of health, pleasure, or excitement, and weary of the beaten paths of the Seine and Rhine, might readily perform, in six months (September to March), the overland route to and from India,—examine the leading features of this ancient and far-famed land, judge for themselves of its gorgeous beauty, and form some idea of the manners and customs of its vast and varied population.

*Mountain Chains of India, their Extent, Position, Elevation, &c.*

| Name. | Extent and Position of Extremities. | Elevation above the Sea. | Remarks. |
|---|---|---|---|
| HIMALAYA, or *"abode of Snow."* | This stupendous mass extends in an irregular curve over 22° of lon., from the defile above Cashmere, where the Indus penetrates into the plains of the Punjab, lon. 73° 23', to the S. bend of the Sanpoo, lon. 95° 23'. It is 1,500 m. long, with an avg. breadth of 150 m. | 1. Dairmal, 19,000 ft.; 2. Bal Tal, 19,650; 3. Ser and Mer, 20,000; 4. Hanle, 20,000; 5. Gya, 24,764; 6. Porgyal, 22,600; 7. Raldang, 20,103; 8. St. Patrick, 22,798; 9. St. George, 22,654; 10. The Pyramid, 21,579; 11. Gangoutri, 22,906; 12. Jumnoutri, 21,155; 13. Kedarnath, 23,062; 14. Badrinath, 22,954; 15. Kamet, 25,550; 16. Nanda Devi, 25,749; 17. Gurla, 23,900; 18. Dhawalagiri, 27,600; 19. Goosainthan, 24,740; 20. Junnoo, 25,311; 21. Kinchinjunga, 28,176; 22. Chomiomo, 19,000; 23. Kanchan Jhow, 22,000; 24. Chumalari, 23,929; 25. Three peaks on lower bank of Deemree, 21,000; 26. Kailas, 22,000. Average elevation, 18,000 to 20,000 ft. | Limit of perpetual snow, or congelation, on S. slope, 15,000 to 18,000 ft. Deep narrow valleys, separated by ranges running either parallel or at right angles with the main ridge, contain the numerous sources of the rivers flowing into the Ganges, the Indus, and the Brahmapootra.* The steep face is towards the plain, and to the N. the chain supports the lofty table-land of Tibet. The greater part of the giant peaks, which rise to an elevation of 25,000 or 28,000 ft., are situate not on the central axis, but to the south of it. Viewed from Patna, at a distance of about 150 miles, these mountains present a long line of snow-white pinnacles, which, on a nearer approach, are seen towering above the dark line of lower but still lofty mountains.† With the exception of a strip of land at the foot of the mountains, the whole of Bootan presents a succession of the most lofty and rugged mountains on the surface of the globe. It is a series of ridges, separated only by the narrow beds of roaring torrents. |
| HINDOO-KOOSH,‡ *Kouenlun, or Mooz Taugh.* | About 850 m. long. From Kara-korum, lat. 35°, lon. 77°; to Bamian,‖ lat. 34° 50', lon. 67° 48'.¶ | 1. Hindoo-Koosh, 35° 40', 68° 50', 21,000 ft.; §2. Summit N. of Jelalabad, 20,248; 3. Koushan Pass, 15,200; 4. Khawak Pass, 13,200; 5. Akrobat, 10,200 feet. Laram Mountains, 35° 20', 62° 54'; about 60 m. from N.E. to S.W., dividing the valley of Suwat from that of Panjkora; and Laspissor Mountains, S. of, and subordinate to, Hindoo-Koosh, about 50 m. from E. to W., 36°, 70°—little known. | Limit of perpetual snow on S. slope (lat. 37°), 17,000 ft. The most remarkable feature of Hindoo-Koosh is, that to the S. it supports the plains of Kabool and Koh-Damaun, 6,000 to 7,000 ft.; while to the N. lies the low tract of Turkestan. Koondooz town, distant in a direct line 80 m. N. of Hindoo-Koosh, only 900 ft. above the sea. The Hindoo-Koosh is a distinct mountain system, its parallelism being from S.W. to N.E., while that of the Himalaya is from S E. to N.W. ** |
| KOH-I-BABA . . . . . . | About 60 m.,—along lat. 34° 30', between lon. 67° 30', and 68° 30'. At the S.W. extremity of Hindoo-Koosh, with which it is connected by the transverse ridges of Kalloo and Hajeguk. | Variously estimated. According to Burnes and Lady Sale, 18,000 ft.; Outram, 20,000 ft.; Humboldt, 2,800 toises, or 17,640 ft.; the most probable is 16,000 ft. Highest accessible point, 34° 40', 67° 30'; 13,200 ft. Hajeguk Pass, 11,700 ft. | It is a vast rounded mass, the culminating ridge ascending in lofty peaks, covered with perpetual snow, stretching as far as the eye can reach—further to the W. it sinks into the mazy mountains forming the Huzareh highlands. Supposed to be the Parapamissus of the Greeks. |
| SUFIED-KOH, *Snowy or White Mountains.* | Near Attock, lon. 72° 16' W. to lon. 69° 36', proceeding nearly along the parallel of lat. 33° 50'; then sinking into a maze of hills stretching to the Kohistan of Kabool. | There are three ranges, running nearly parallel to the S. of the Kabool River; they rise in height as they recede from the river, the highest between 69° 40', and 70° 30', attaining an altitude of 14,000 ft. | Covered with perpetual snow. Generally of primary formation, consisting of granite, quartz, gneiss, mica-slate, and primary limestone. The Soorkh Rood, the Kara Su, and many other shallow but impetuous streams rush down its northern face, and are discharged into the Kabool river, which conveys their water to the Indus. The two lowest ranges are covered with pine forests; the highest and most distant has a very irregular outline, is steep and rocky, yet furrowed by many beautiful vales.†† |
| PUGHMAN, or *Pamghan Range.* | Subordinate to Hindoo-Koosh, running along its S. base, generally from N.E. to S.W. | Estimated at 13,000 ft. Oona Pass, 34° 23', 68° 15'; 11,320 ft. Erak Summit, 34° 40', 68° 48'; 12,480 ft. | Always covered with snow. Its south-eastern brow overhangs the delightful region of Koh-Damaun and Kabool; its northern face forms the southern boundary of the Ghorbund valley. |

| | | | |
|---|---|---|---|
| Kurkutcha Mountains | Separate valley of Kabool from plain of Jelalabad; and connect Hindoo-Koosh with Sufied-Koh. | From 1,000 to 2,000 ft. above Kabool, and the highest part, 34° 25', 69° 30'; 8,000 ft. above the sea. | Four routes over this range; practicable only for a man and horse at Lattabund Pass, 4,000 British troops were destroyed in their retreat, in 1842. Cold intense in winter, the frost splitting the rocks into huge shattered fragments. |
| Khyber Mountains | Length, about 50 m.; breadth, about 20 m. Between 33° 30' and 34° 20', and 71° 10' and 71° 30'. They connect Hindoo-Koosh with Sufied-Koh. | Tatara summit, highest point, 4,800 ft. Summit of Khyber Pass, 3,373 ft. | Appear at first irregularly grouped, but the distinct arrangement of a chain is afterwards observable. Four passes through this range. The hills generally consist of slate and primary limestone, with overlying sandstone. |
| Goolkoo Mountains | Lat. 33° 22', lon. 67° 50'; 30 m. S.W. from Ghuznee. | Estimated at 13,000 ft. | |
| Amran Mountains | Lat. 30° 50', lon. 66° 30'. | General elevation, about 8,000 ft. Highest part, 30° 50', 66° 30'; about 9,000 ft. Kojuck Pass, 7,457 ft. | Bounds the table-lands of Shawl and Pisheen on the W., as the Hala range does to the E. |
| Toba Mountains | Length, 150m. Between 30° 40' & 32° 40', and 66° 40' and 68° 20'; extending N.E. from the N. side of Pisheen valley. | General elevation, 9,000; above Pisheen, 3,500 ft. Tukatoo Hill, 30° 20', 66° 55'; 11,500 ft. | Country, though generally rugged, fertile. |
| Pubb Mountains | Length, about 90 m. From C. Monze to lat. 26°. | Supposed to equal those of W. Scinde, viz., 2,000 ft. Highest part, about 25° 30'. | In 25° 3', 66° 50', they are crossed by the Guncloba Pass, described as stony, and of easy ascent and descent. |
| Scinde Ranges, viz.— I. Jutteel. | 60 to 70 m. S.W. from Sehwan to Dooba. Between 25° 32', 26° 20', and 67° 48', 68° 8'. | Steep—in few places less than 2,000 ft. | The road from Sehwan to Kurracheo lies between them, and Keertar more to the W. |
| II. Keertar | Parallel with the Jutteel, more to the W., between 25° 50', 26° 40', and about 67° 40'. | Average height, probably below 2,000 ft. | Imperfectly explored. |
| III. Lukkee | Length, about 50 m. From Jutteel, S.E. towards Hydrabad. Centre of range, 26°, 67° 50'. | Highest part, 1,500 to 2,000 ft. Between Lukkee and Sehwan, the mountains have a nearly perpendicular face, towards the Indus, above 600 ft. high. | They are of recent formation, containing a vast profusion of marine exuviæ. Huge fissures traverse this range, and hot springs and sulphureous exhalations are of frequent occurrence. |
| Hala, *Brahoowk*, or *Bolan Range*. | Length, about 400 m. From Tukatoo to Arabian Gulf, forming the E. wall of Beloochistan table-land. | Average height, 5,000 to 6,000 ft. Kurklekee Mountains, that part which borders on the Bolan Pass, from 29° 20' to 30° 10', 67° to 67° 30', where the crest of Bolan Pass intersects them, 5,793 ft. | The range is crossed by the Bolan Pass, through which the route lies from Shikarpoor to Kandahar and Ghuznee, which though very important in a military point of view, is inferior in commercial interest to the Goolairee, farther N. |
| Suliman Range | Length, about 350 m. From 33° 40', they run nearly S. in the 70th merid. of lon., to the mountains about Hurrund and Kahun, in lat. 29°. | Highest elevation, Takht-i-Suliman, called also Khaissa-Ghar, lat. 31° 35'; 11,000 ft. | E. face dips rather steeply to the Indus, but the W. declivity much more gradual, to the table-land of Sewestan. Sides of mountains clothed nearly to the summits with dense forests; valleys overgrown with a variety of indigenous trees, shrubs, and flowers. |
| Kala, or *Salt Range* | Stretch from the E. base of Suliman Mountains to Jhelum River, N.E. to S.W., in lon. 32° 30', to 33° 30'. | Highest elevation, 2,500 ft. | Vegetation scanty, and the bold and bare precipices present a forbidding aspect. About 32° 50', 71° 40', the Indus makes its way down a narrow rocky channel, 350 yards broad; and the mountains have an abrupt descent to the river. |
| Sewalik Range | Length, 155 m., greatest breadth, 10 m. From Hurdwar to Roopur, S.E. to N.W. | From 3,000 to 3,500 ft.; highest part, 30° 17', 77° 50', between the Timli and Lal Derwaza Passes. | In many places each hill might be represented by a right-angled triangle, the base resting on the pass, perpendicular facing towards the plains; hypothenuse sloping towards the Dhooos, in the opposite direction. |
| Nepaul Mountains, and Table-land. | 500 m., breadth from 90 to 150 m. From Kumaon to Sikhim. | Diversified by several inhabited valleys, from 3,000 to 6,000 ft. above the plains of Bengal. The hills rise towards the culminating ridge of the Himalayas. Katmandoo, 4,628 ft. above sea, in a valley surrounded by stupendous mountains.‡‡ Bynturee, 29° 35', 79° 20'; 5,615 ft. | Hills consist of limestone, hornstone, and conglomerate. Notwithstanding its low latitude, Nepaul, from its elevation, enjoys a climate resembling that of S. Europe. Snow lies on the mountain-chain which surrounds the capital, in winter, and occasionally falls in the valley. The whole is well-watered. |

| Name. | Extent and Position of Extremities. | Elevation above the Sea. | Remarks. |
| --- | --- | --- | --- |
| Abravulli Range . . . . | Length, 200 m.; average breadth, 10 to 15 m. Extend from 22° 40′, to 26° 50′, and from lon. 74° to 75°. | Average 3,000 ft. Highest elevation, Mt. Aboo, 5,000 ft. Crest of Koulmair Pass, 3,353 ft. Twelve m. from Beawr; country one mass of hills, intersected by small vales. | Forms the western buttress of the plateau of Central India. The mountains at Pokur are of a roso-coloured quartz, displaying bold pinnaces and abrupt rocky sides. The geological formation of Mt. Aboo is granitic. |
| Kattywar Mountains . . | The peninsula lies between 20° 42′, 23° 10′, 69° 5′, 72° 14′; area 19,850 sq. m. | The Gir, a succession of ridges and hills, some 1,000 ft.; elevation diminishing towards N. Girnar, a granitic peak, 3,500 ft. Palithana Mt., 1,500 ft. Group near Poorbunder, 2,000 ft. Low ridge running from Choteyla to Gir, 400 ft. The centre of peninsula is the highest, and here all the rivers take their rise. | Caverns, deep ravines, and other fastnesses, very numerous in the Gir. The base of Girnar Mt. is clothed with jungle, diversified with black rocks, which appear through the vegetation. After this, the mount rises an immense bare and isolated granite rock, the face being quite black, with white streaks; and the N. and S. sides nearly perpendicular scarps.§§ |
| Vindhya Chain. . . . . | From Guzerat on the W. to the basin of the Ganges on the E.; and comprised between the 22nd and 25th parallels of latitude. | Avg. height 1,500 to 2,000 ft. Chumpaneer, 22° 31′, 73° 41′; 2,500 ft. Crest of Jam Ghaut, 2,300 ft.‖‖ Mountain in Bhopal, 2,500 ft. Mahadeo Mountains, between 21° 30′ 22° 40′, 78° 80′: Doulagheree, said to be the highest; Ambarmarph, estimated at 2,500 ft. Chindwarra, 2,100 ft.; and Patchmaree, vaguely stated to be 5,000 ft.; but this is probably an exaggeration; Dokgur, stated to be 4,800 ft.; Putta Sunka, and Choura Doo, the highest, conjectured at 5,000 ft. Amarkantak, a jungly table-land, computed to be 3,463 ft. Leela, a summit in Lanjhee hills, 21° 55′, 80° 25′, 2,300 ft.; another of the same hills, in 21° 40′, 80° 35′, 2,400 ft. | The chain forms the southern buttress of the plateau of Malwa, Bhopal, &c. In the Saugor and Nerbudda territories, its crest is but the brow of this table-land; but in the western part, it rises a few hundred feet above the high land on its northern side. The passes that have been made over this range, are, for the most part, bad. The geological formations are the granitic and the sandstone, overlaid by trap rock. |
| Bundelcund Ranges, three, viz.— I. Bindyachal. | Commence near Seuudah, lat. 26° 14′, lon. 78° 50′; proceeds S.W. to Narwar, 25° 39′, 77° 52′; S.E. to 24° 12′; N.E. to Ajegarh, 24° 53′, 80° 20′; and Kalleenjur, in the same vicinity, and E. to Barghar, 25° 10′, 81° 36′. | None more than 2,000 ft. Average between the Tara and Kuttra passes, about 520 ft. The Tous falls over the brow by a cascade of 200 ft.; Bilohi, 398 ft.; and Bouti, 400 ft. | The lower parts are primary, overlaid by sandstone, in many places trap, or other formations of volcanic origin. The plateau, which surmounts the range, is from 10 to 12 m. wide. |
| II. Panna . . . . . | Rises S. of the Bindyachal plateau. | Average elevation between Kuttra Pass and Lohargaon, 1,050 ft. Elevation between Lohargaon and the foot of the hills near Patteriya, about 1,200 ft. | Summit an undulating platform, about ten miles wide. Where deep ravines allow examination, an enormously thick bed of sandstone is found with primary rock superincumbent, itself overlaid by volcanic rocks. |
| III. Bandair . . . . | Separated from the Panna range by the valley of Lohargaon, rising from a platform from 10 to 20 m. wide. | Average elevation, 1,700; on some of its undulations, amounting to 2,000 ft. | Generally of sandstone, intermixed with ferruginous gravel. The basin of Lohargaon is of lias limestone. The outer limit of this hilly tract is marked by abrupt isolated hills. |
| Rajmahal Hills . . . . | Rise about 20 m. S. of the Ganges; stretch S. and S.W. to the Vindhya range and the highlands of the Deccan. They terminate at the pass of Sikrigali. | Of moderate elevation. Cluster on the W. of the Phalgu, one on the E. of that river, a third near Shukpoora; 700 ft. Hills towards the S. probably twice that elevation. Railway sweeps round the eastern extremity of the range. | In the E. the rock is of trap; in one place there is a conical hill, having at the top a cavity resembling the crater of an extinct volcano. A neighbouring hill sends forth smoke, luminous at night. In the W. and S.W. the rock is of quartz, or coarse jasper and flint, containing ore of iron and lead. |
| Sirgoojah Mountains . | Length, 90 m.; breadth, 85 m. Lie between 22° 34′, 23° 54′, 82° 40′, 84° 6′. | Rugged and mountainous, from 500 to 600 ft. above adjoining table-land of Chota Nagpore. | Drained by the rivers Kunher and Rhern, with its feeder the Mohan, flowing in a direction generally northerly. These rivers are mostly shallow, except during the rains, when they become rapid torrents. |

| | | | |
|---|---|---|---|
| PACHETE HILLS | Length, 105 m; breadth, 95 m. Lie between 22° 56′, 23° 54′, 85° 46′, 87° 10′. | Imperfectly known. N. part described as marked by hills from 400 to 600 ft. About 23° 35′, 85° 50′, a mountain conjectured at from 2,500 to 3,000 ft. Near the centre of dist. some hills about 900 ft. | Formation generally primitive, of either granite, gneiss, or sienite. Coal has been found near Jeria, 23° 44′, 86° 25′; and iron-ore exists at a short distance. The chain unites the N. extremities of the W. and E. Ghauts, and forms the base of the triangle on which rests the table-land of S. India. By the Moguls the country to the N. was called Hindoostan, and that to the S. the Deccan. |
| SAUTPOORA MOUNTAINS | Divides the Nerbudda from the Taptee valleys, extending from 21° and 22°, and 73° 40′, to 78°, when it becomes confounded with the Vindhya. | Avg. elevation, supposed, 2,500 ft. Asseerghur hill-fort, 1,200 ft. They form the northern base of the Deccanie table-land. | S. declivity towards Taptee abrupt; N. towards Nerbudda, gentle. They rise into peaks, or swell into forms denoting a primitive origin. They are volcanic. |
| WESTERN GHAUTS, called by the natives *Syadree* in its N. part; and *Sukheit* in its S. part.—MALABAR COAST. | Length, about 800 m. From about 21° 15′, to 73° 45′, 74° 40′, where they terminate almost precipitously, forming the N. side of the Gap of Palgatcheri. | Avg. height, 4,000 ft. About 21°; 2,000 ft. Mahabulishwur, 18°, 73° 40′; 4,700 ft. Poorundher, 4,472 ft. Singhur, 4,162 ft. Hurreechundurghur, 3,894 ft. About 15°; 1,000 ft. Towards Coorg: Bonasson Hill, 7,000 ft. Tandianmole, 5,781 ft. Papagiri, 5,682 ft. | Seaward face though abrupt, not precipitous, but consists of a series of terraces or steps. Chasms or breaks in the range, give access to the highlands, and are denominated *ghauts* or passes, a name which has become generally applied to the range itself. The core is primary, inclosed by alternating strata of more recent origin. Scenery delightful and grand, displaying stupendous scarps, fearful chasms, numerous waterfalls, dense forests, and perennial verdure. |
| NEILGHERRY GROUP | Length, about 50 m.; breadth, about 20 m.; area from 600 to 700 sq. m. Between 11° 10′ and 11° 35′, and 76° 30′ and 77° 10′. | Elevation from 5,000 to 8,000 ft. Dodabetta, 8,760 ft. Kudiakad, 8,502 ft. Kundah, 8,353 ft. Duvursolabeta, 8,380 ft. Beroyabeta, 8,488 ft. Murkurti, 8,402 ft. Ootacamund, lat. 10° 50′; 7,361 ft. General surface, an undulating table-land. | The foundation rocks are primary. Principal mineral,—iron-ore. Neither calcareous nor stratified rocks, nor organic remains are found. So steep are the precipices, that in many parts, a stone dropped from the edge, will fall several thousand feet without striking anything. Neilgherries, from "neil," blue, and "gherries," hills; blue hills. |
| PALGHAT GHAUTS | Length, about 200 m. From the Gap of Palgatcheri nearly to C. Comorin. | Elevation from 4,000 to 7,000 ft. A spacious table-land, 4,740 ft. A peaked summit, 6,000 ft. Another, 7,000 ft. Vurragherry ms., 5,000 to 6,000 ft. Near C. Comorin, in the extreme S., 2,000 ft. Several, not measured. | The W. brow is, with little exception, abrupt; on the E. side the declivity is gradual. Such a conformation would seem to indicate a volcanic disturbance along the W. precipitous face. |
| EASTERN GHAUTS, along COROMANDEL COAST | Length, about 1,000 m. From Balasore, S.W. to Ganjam; thence to Naggery, near Madras; where it joins the range which crosses the country in a north-easterly direction, from the W. Ghauts, N. of the Gap of Palgatcheri. | Average elevation, about 1,500 ft. Cauvery Chain, 4,000 ft. Condapilly, 1,700 ft. W. of Madras, estimated, 3,000 ft. Hills seen from the Moghalbundi, between Pt. Palmyras and Chilka Lake, appearing in irregular scattered groups, 300 to 1,200 ft. | Granite constitutes the basis of the range; and clay, hornblende, flinty and primitive slate, or crystalline limestone, forms the sides of the mountains; and the level country, as far N. as the Pennar, appears to consist of the debris, when the laterite formation covers a large surface. From the Kistnah, northward, the granite is often penetrated by trap and greenstone. To Vizagapatam and Ganjam sienite and gneiss predominate, occasionally covered by laterite. |
| ASSAM MOUNTAINS, VIZ.— I. NAGA HILLS. | Length, about 250 m. On the S.E. border of Assam, stretches to the mountain-range forming the N.W. boundary of Burmah. Centre, about 26° 30′, lon. 95°. | In the Khaibund range, supposed 4,000 ft. Some peaks are almost inaccessible. | The country is a wild unexplored tract. The measures adopted by the British government to restrain the outrages committed by the Nagas within British territory, have led to their submission. |
| II. DUPHALA, AND ABOR HILLS. | Mountains N. of Assam, inhabited by Bhooteans, Duphala, and Abor tribes. | From 5,000 to 6,000 ft. above the surrounding level. | The face of Assam presents an immense plain, studded with clumps of hills, rising abruptly from the general level. The mountains on the N. are composed generally of primitive rocks. Those to the S., of tertiary and metamorphic. |
| III GARROW HILLS | On the N.E. frontier of Bengal | A confused assemblage, from 1,000 to 6,000 ft. Estimated area, 4,347 sq. m. | Character of country, wild. The rock formation is supposed to be chiefly of gneiss, or stratified granite. |
| IV. COSSYAH HILLS | Estimated area, 7,290 sq. m. Between 25° & 26°, and 91° & 92°. | Chirra Poonjee, 4,100 ft. | |

| Name. | Extent and Position of Extremities. | Elevation above the Sea. | Remarks. |
|---|---|---|---|
| V. JYNTEAH HILLS . . | 80 m. in length from N. to S., and 40 in breadth. Extends from lat. 24° 55′, to 26° 7′, and from lon. 91° 35′, to 92° 48′. | About 16 m. on the Silhet side, and about the same on that of Assam, consists of low land interspersed with small hills. In the interior, about 50 m. in extent, is an undulating hilly table-land, from 1,500 to 2,500 feet high. | Coal is said to abound in the hills of Jynteah. |
| YOUMADOUNG, *or Arracan Mountains.* | Length, about 600 m. From Munneepoor, lat. 22° 20′, to C. Negrais. lat. 16°. | Average height, 3,000 to 5,000 ft. Blue Mountain, 22° 37′, 93° 11′, 8,000 ft. Pyramid Hill, 3,000 ft. Crest of Aeng Pass, 4,517 ft. Pass from Podangmew to Ramree, 4,000 ft. From Blue Mountain there is a gradual slope to C. Negrais, where it is only about 300 ft. | It is a continuation of the great mountain chain commencing at the S. of Assam, in 26° 30′; and extends S., running parallel with the river Irawaddy, and forms a natural barrier between Arracan and Ava. |
| BURMAH MOUNTAINS . . . | Little known. . . . | From Prome to Ava, characterised by unevenness and general elevation. Northerly, it is decidedly mountainous. Mountains 4 m. N. of Ava, 4,000 ft. Zyngait Mts., forming a kind of elevated dooab between the Saluen and Sittang rivers. | Gold, silver, iron, tin, lead, antimony, and other metals, are met with. Quarries of marble are worked near Ummerapoora. Coal has been discovered on the Irawaddy. |
| TENASSERIM MOUNTAINS . . | Length, about 500 m., breadth nowhere exceeds 80 m. Area, 30,000 sq. m. | Siamese Mts., running N. to S. along Tenasserim provinces, 3,000 to 5,000 ft. Mountains in Ye province, three parallel ridges, from 3,000 to 4,500 ft., gradually diminishing towards the coast, about 500 ft. Buffalo Mts., about 70 m. from Moulmein, 1,543 ft. | Coal of excellent quality has been discovered. Iron, tin, and gold are frequently met with. |

* The two sections of the Himalaya furnish points of resemblance, in presenting almost insurmountable obstacles to communication between the countries which they divide, thereby separating the Botis or people of Tibet from the Hindoo family of India. Major Cunningham considers the distinction of climate not less positively marked, both ranges forming the lines of demarcation between the cold and dry climate of Tibet, with its dearth of trees, and the warm and humid climate of India, with its luxuriance of vegetable productions. Some analogy, moreover, may be traced between the drainage systems of the two sections; the one separating the waters of the Sanpoo from those of the Ganges and its affluents; and the other intervening between the Indus, flowing at its northern base, and the subsequent tributaries of that river rising on its southern slope.

† Any view of the Himalaya, especially at a sufficient distance for the snowy peaks to be seen overtopping the outer ridges, is very rare, from the constant deposition of vapours over the forest-clad ranges during a greater part of the year, and the haziness of the dry atmosphere of the plains in the winter months. At the end of the rains, when the south-east monsoon has ceased to blow with constancy, views are obtained, sometimes from a distance of nearly 200 miles.

‡ It has often been observed, the Koh Kosh, or mountain of Kosh, offers a plausible etymology for the Caucasus of the classical writers. It is supposed by Ritter and Wilford to be that mentioned by Pliny, under the name of *Graucasas*, but slightly deviating from the Sanscrit *Gravakasus* (shining rock.)

§ Remarkable for its mass and elevation. Viewed from the Koushan Pass, distant ten miles south, its appearance is very sublime. The outline is serrated, it being crowned by a succession of lofty peaks, with sides often perpendicular, and it is wrapped in a perpetual covering of snow, in all parts not too steep to admit its lying.

‖ All the series appear to diverge from the apex of the plain, expanding "like the sticks of a fan."

¶ Humboldt regards it as the "most striking phenomenon amongst all the mountain-ranges of the old world." He considers that it may be traced from Taurus, in Asia Minor, across Persia, then, in the Huzareh mountains, to Hindoo-Koosh, and to the frontier of China; and that it is distinct from the Himalaya. The two ranges are physically discriminated by the depression down which the Indus flows, which, with its numerous irregularities, it is not easy to believe could have been hollowed out by the water's force even of that great river

** "The elevated expanse of Pameer," to the north of Hindoo-Koosh, observes Humboldt, "is not only a radiating point in the hydrographical system of Central Asia, but is the focus from which originate its principal mountain chains, being common to India, China, and Turkestan; and from it, as from a central point, their several streams diverge."

†† The country between Sufied-Koh and Hindoo-Koosh is hilly; breadth about twenty m. It is divided into a series of plains by cross ranges (Khyber, Kurkutcha, &c.), which pass between Sufied-Koh and the outer ranges of Hindoo-Koosh. These plains are generally barren and stony, and have a slope from E. to W. The Kabool, which flows through them, has to make its way by narrow passages.

‡‡ Valley of Catmandoo, nearly of oval shape: length, N. to S., 12 m.; E. to W. about 10 m. Bounded on the N. and S. by stupendous mountains. To the E. and W. by others less lofty, the western end defined principally by a low steep ridge, called Naga-Arjoon, which passes close behind Sumbhoo-Nath, and is backed by a more considerable one named Dhoahouk. To the eastward, the most remarkable hills are those of Ranichouk and Mahabut, but they do not reach the elevation of Phalchouk (the highest on the south), or of Sheopoori, which is by far the highest mountain. The bottom of the valley is uneven, intersected by deep ravines, and dotted throughout with little hills.

§§ The number of peaks which crown this mountain is variously stated. According to Tod, there are six, the most elevated of which is that of Gorucknath, having on its summit an area of only ten feet in diameter, and surrounded by a shrine dedicated to Gorucknath; each of the other peaks has its shrine. On a small table-land on the mountain, about 600 feet below its summit is the ancient palace of Khengar, and numerous Jain temples.

‖‖ Ascent from Indore (1,998 feet), gradual; descent, to the Nerbudda, steep and abrupt.

*Mountain Passes on the Indian Frontiers, from the Indus to the Irawaddy—so far as known.*

| Name and Position. | Lat. and Lon. of Extremities; Length and Breadth. | Heights, in Feet. | Remarks. |
|---|---|---|---|
| MOOLA or GUNDAVA—CUTCH GUNDAVA. | Lat. 28° 10′, lon. 66° 12′; lat. 28° 24′, lon. 67° 27′.—About 100 m. Open spaces, connected by defiles. | Bapow, 5,250 ft.; Peesee Bhent, 4,600; Nurd, 2,850; Bent-i-Jah, 1,850; Kullar, 750 ft. | Descent, 4,650 ft., average 46 ft. per m. Water abundant. Practicable for artillery.* |
| BOLAN—BELOOCHISTAN | Lat. 29° 30′, lon. 67° 40′; lat. 29° 52′, lon. 67° 4′.—55 m.; ½ m. wide at entrance. | Entrance, 800 ft.; Ab-i-goom, 2,540; crest, 5,793 ft. | Average ascent, 90 ft. per m.† Ditto. |
| GOMUL or GOOLAIREE—DE-RAJAT. | Lat. 32°, lon. 70° 30′.—About 100 m. | 20 m. from entrance road N.W., then 80 m. S.W., then N.W. to Ghuznee. | Winding course.‡ |
| KHYBER—PESHAWUR | Lat. 33° 58′, lon. 71° 30′.—About 33 m. | Crest, 3,373 ft. Ali Musjid, 2,433 ft. | Rises gradually from the E., but has a steep declivity westward.§ |
| BAMIAN—AFGHANISTAN | Lat. 34° 50′, lon. 67° 48′.—About 1 m. wide, bounded by nearly perpendicular steeps. | Bamian, 8,496 ft., over a succession of ridges from 8,000 to 15,000 ft. | Only known route over Hindoo-Koosh for artillery or wheeled carriages.‖ |
| KOUSHAN—HINDOO-KOOSH | Lat. 35° 37′, lon. 68° 55′: over principal shoulder of Hindoo-Koosh peak.—About 40 m.; narrow. | Crest, 15,000 ft. | Road rocky and uneven; descent, 200 ft. per m. Three entrances.¶ |
| KHAWAK—HINDOO-KOOSH | Lat. 35° 38′, lon. 70°.—About 15 m. | Crest, 13,200 ft. | Ascent on N. side, an uniformly inclined plane.** |
| BUL TUL or SHUR-JI-LA—CASHMERE. | Lat. 34° 10′, lon. 75° 15′ | Crest, 10,500 ft. | |
| BARAMULA—CASHMERE | Lat. 34° 10′, lon 74° 30′ | | Only pass into Cashmere practicable for an army. |
| BARA LACHA—TIBET | Lat. 32° 44′, lon. 77° 31′. | | |
| ROTANG—HIMALAYA | Lat. 32° 25′, lon. 77° 12′. | | |
| MANERUNG—HIMALAYA | Lat. 31° 56′, lon. 78° 24′ | Crest, 18,612; source of Darbung, 15,000 ft. | Very difficult. |
| CHARUNG—HIMALAYA | Lat. 31° 24′, lon. 78° 35′ | Crest, 17,348 ft. | Extremely difficult. |
| BURENDA—HIMALAYA | Lat. 31° 23′, lon. 78° 12′.—Length of crest, 50 paces | Crest, 15,095 ft. | Most elevated part a narrow glen, very steep.†† |
| BULCHA—KUMAON | Lat. 30° 28′, lon. 80° 14′ | | Over a high ridge extending E. and W. |
| NITI—KUMAON | Lat. 30° 57′, lon. 79° 54′ | Crest, 16,814; village of Niti, 11,464 ft. | Open from the end of June to October.‡‡ |
| KAMBACHEN—NEPAUL | Lat. 27° 38′ lon. 88° | Crest, 15,770 ft. | Broad shelf of snow, betⁿ. rocky eminences.§§ |
| CHOONJERMA—NEPAUL | Lat. 27° 33′, lon. 88° 1′ | Crest, 16,000 ft. | Temperature, 24° at 5 P. M. |
| WALLANCHOON—NEPAUL | Lat. 27° 52′, lon. 87° 14′ | Crest, 16,755 ft. | Path leading up the pass for eight miles, a narrow, stony, and steep gorge. Top, a low saddle, between two ridges of rock. |
| TUNKRA—SIKHIM | Lat. 27° 38′, lon. 88° 56′ | Crest, 16,100 ft. | Ascent, on N.W. side, gradual, over a snow-bed and glacier; descent, on S.E., steep, but grassy. |
| DONKIA—SIKHIM | Lat. 27° 56′, lon. 88° 48′ | Crest, 18,600 ft. | View of Tibet from summit. |
| AENG—ARRACAN | Lat. 19° 49′, lon. 94° 9′.—34 miles | Crest, 4,517; Khen-Kyomig, 3,777; Aeng, 147 ft. | Avrg. rise, 250 ft., avrg. descent, 472 ft. per m.‖‖ |
| MYHEE—ARRACAN | Lat. 19° 14′, lon. 94° 30′ | | Myhee village, a police-station. |

* In 1839, the Anglo-Indian detachment marched through it It is preferable to the Bolan Pass in a military point of view.
† A continuous succession of ravines and gorges. The air in the lower part of the pass is in summer oppressively hot and unhealthy.
‡ Of great commercial importance. Every spring, large caravans traverse it from Hindoostan to Afghanistan.
§ Called the Key of Afghanistan. At Ali-Musjid, merely the bed of a rivulet, with precipices rising on each side at an angle of 70°. Near Lamdee Khana, a gallery 12 ft. wide; on one side a perpendicular wall, and on the other a deep precipice. It was twice forced by the British.
‖ The great commercial route from Kabool to Turkestan; the several passes to the eastward are less frequented on account of their difficulty and their elevation.
¶ Most frequented east of Bamian; impassable for wheeled carriages.
** Scarcely frequented, yet may be considered the most practicable. Tamerlane crossed it on his march into Hindoostan.
†† Passes over the Outer Himalaya range:—Sugla, 31° 13′ lat., 78° 29′ lon.—elevation, 16,000 ft.; Kimlia, 31° 15′, 78° 25′, 17,000; Siaga, 31° 16′, 78° 20′, 16,000; Marga, 31° 16′, 78° 21′, 16,000; Lumbia, 31° 16′, 78° 20′, 16,000; Barga, 31° 16′, 78° 19′, 15,000; Nulgun, 31° 19′, 78° 13′, 14,891; Rupin, 31° 2′, 78° 10′, 15,480; Ghusul, 31° 21′, 78° 8′, 15,851; Nibrung, 31° 22′, 78° 10′, 16,035; Gunas, 31° 21′, 78° 8′, 16,026; Yusu, 31° 24′, 78° 4′, 15,877; Sundru, 31° 24′, 78° 2′, 16,000; Shatul, 31° 25′ lat., 77° 58′ lon., 15,555 ft. In Koonawur there are fifteen passes, at elevations varying from 15,000 to 17,000 ft.
‡‡ Considered the best pass between Kumaon and Tibet, and is one of the principal channels of trade between Chinese Tartary and Hindoostan.
§§ Ascended by Dr. Hooker, December, 1848. The distance to which the voice was carried was very remarkable: he could hear distinctly every word spoken at from 300 to 400 yards off.
‖‖ Considerable trade carried on over this pass between Ava and Arracan.

*Rivers of British India—their Source, Course, Discharge, and Length; Tributaries or Confluents; and estimated area, in sq. m., drained; Forty-nine Main Streams, having their outlet in the Sea; and large Tributaries, having their outlet in other Rivers.*

| Name. | Source, Course, Discharge, and Length. | Tributaries, and their Length in British Miles; and Area drained | Remarks. |
|---|---|---|---|
| 1 GANGES.—BHAGEERUTTEE at its source, and PODDA near the sea. | Gangoutri, Himalaya, 1,400 ft. above the level of the sea. N.W. to Johnioi; W. and S.W., 13 m.; S.W., 36 m.; S., 15 m.; S.E., 39 m.; S., 8 m.; W., 24 m.; S.W., 15 m.; S., 130 m.; S.E. to Allahabad, E., 270 m.; E. to Sikrigalee; S.E. remainder of course into Bay of Bengal, by numerous mouths. The Ganges gives off some of its waters to form the Hooghly, and also anastomoses with the Megna.—Length, 1,514 m. | Jumna, 860; Ghogra, 606; Gunduck, 450; Goomtee, 482; Sone, 465; Coosy, 325; Ramgunga, 373; Mahananda, 240; Karumnassa, 140; Koniae or Jamuna, 130; Aluknunda, 80; Bhillung, 50 m.—398,000 sq. m. drained, exclusive of Hooghly. | Navigable for river craft as far as Hurdwar, 1,100 m.; steamers ply as far as Gurmukteesur, 393 miles above Allahabad, distant from Calcutta *via* Delhi, 930 miles; at Cawnpoor, 140 m. above Allahabad, the navigation is plied with great activity. The breadth of the Ganges at Benares varies from 1,500 to 3,000 ft. Mean discharge of water there, throughout the year, 250,000 cub ft. per second. |
| 2. HOOGHLY . . . | Formed by junction of Bhageeruttee and Tellinghee, two branches of Ganges. S. to Calcutta; S.W. to Diamond Harbour; E. and S.W. into the sea at Saugor roadstead, by an estuary 15 m. wide.—Length, 160 m., by winding of stream. | Dammoodah, 350; Dalkissore, 170; Coossy, 240; Mor, 130.—About 49,000 sq. m. drained. | Formerly navigable for a line-of-battle ship to Chandernagore; now, vessels drawing more than 17 ft., not safe in passing from Calcutta to the sea, by reason of shoals. |
| 3. INDUS, or NILAB ("*blue-river.*") | Tibet, behind Kailas range, to the N. of Kailas peak, 22,000 ft. above the sea. N.W. to Dras R.; more northerly to Shy-yok; W.N.W., 115 m. to Makpon-i-Shagaron; S.S.W. and S. to Attock; a little W. of S. to confluence with Punjnud; S.W. to Khyrpoor; S. to Sehwan; S.E. to Hydrabad; W. of S. to Arabian Sea, Indian Ocean.—Length, 1,800 m. | Eekung-Choo, 110; Hanle, 70; Zanskar, 150; Dras, 75; Shy-yok, 300; Shy-ghur, 70; Ghilgit; Cabool, 320; Sutlej, 850; Chenab, 765; Jhelum, 490; Ravee, 450; Punjnud, 60 m.—About 390,000 sq. m. drained. | Navigable to Attock, 942 m. from sea, there from 500 to 800 ft. wide; depth, 60 ft. Breadth and depth varies much after junction with Punjnud; breadth, 1 to 30 m.; depth, 12 to 186 ft. |
| 4. BRAHMAPOOTRA—MEGNA, near the sea. | N.E. extremity of Himalaya range; lat. 28° 30′, lon. 97° 20′. S.W., 63 m.; W.—S.W.—S.E.—S.W., and E. to Bay of Bengal, through three mouths, Hattia, Ganges, and Shebazpoor.—Length, 933 m. | Sanpoo, 1,000; Dibong, 140; Noh-Dihong, 100; Boree Dehing, 150; Soobn-Sheeree, 180; Monas, 189; Bagnee, 150; Guddala, 160; Durlah, 148; Teesta, 313; Barak, 200; Goomtee, 140 m. In lat. 25° 10′, lon. 89° 43′, it gives off the Koniae.—305,000 sq. m. drained. | The branches of the Brahmapootra, together with those of the Ganges, intersect the territory of Bengal in such a variety of directions, as to form a complete system of inland navigation. |
| 5. IRAWADDY . . . . . . | E. extremity of Himalaya, lat. 28° 5′, lon. 97° 58′. Nearly N. to S. through Burmah, and the recently acquired British territory of Pegu; into the Bay of Bengal, by numerous mouths.—Length, 1,060 m. | Khyendwen, 470; Shwely, 180; Moo, 125 m.—164,000 sq. m. drained. | The Bassein branch affords a passage for the largest ships for 60 miles from its month. No river of similar magnitude, it is stated, presents so few obstructions. |
| 6. GODAVERY . . . . . . | E. declivity of W. Ghauts, near Nassik, 3,000 ft. above the sea. S.E., 200 m.; E., 100 m.; S.E., 85 m.; E., 170 m.; S.E., 200 m.; into Bay of Bengal, by three mouths.—Length, 898 m. | Wein-Gunga, 439; Manjera, 330; Poorna, 160; Paira, 105; Inderaotee, 140 m.—130,000 sq. m. drained. | In 1846, the sanction of the Court of Directors of E. I. C. was given to the construction, at an expense of £47,500, of a dam of sufficient height to command the delta, and to supply the rich alluvial soil of which that tract is composed, with the means of constant irrigation. The experiment of navigating the Godavery by steam, has been entertained by the Madras government, and means for carrying it into effect are under consideration. |

*N.B.—Where no tributaries or area drained are mentioned, it is because, as regards the former, there are none of note; and the other is small, and imperfectly defined.*

| | | | | |
|---|---|---|---|---|
| 7. Kistnah, or Krishna | | Mahabulishwar table-land, Deccan, lat. 18° 1′, lon. 73° 41′; 4,500 ft. above the sea. S.E., 145 m.; N.E., 60 m.; S.E., 105 m.; N.E., 180 m.; S.E. to Chentapilly; S.E. 70 m. further; then, parting into two arms, one flowing S.E. 30 m., the other S. 25 m., into Bay of Bengal. —Length, 800 m. | Beemah, 510; Toongabudra, 325; Gutpurba, 160; Mulpurba, 160; Warna, 80; Dindee, 110; Peedda Wag, 70 m.—110,000 sq. m. drained. | The Kistnah, in consequence of the rapid declivity of its waterway and rockiness of its channel, cannot be navigated by small craft, even for short distances. An extensive system of irrigation, in connection with this river, is now in progress, and has been estimated to cost £150,000. |
| 8. Nerbudda | Western side of India. | Amarkantak, a jungly table-land, lat. 22° 39′, lon. 81° 49′; from 3,500 to 5,000 ft. above the sea. Nearly due W., with occasional windings, to Gulf of Cambay, by a wide estuary.—Length, 801 m. | Herrun; Samarsee, 60; Suktha, 70 m.—About 60,000 sq. m. drained. | The river, notwithstanding the great width of its bed in some parts of its upper course, appears to be scarcely anywhere continuously navigable for any considerable distance, in consequence of the innumerable basaltic rocks scattered over its channel. |
| 9. Loonee | | Arravulli Mts., near Pokur, lat. 26° 37′, lon. 74° 46′. S.W., nearly parallel with Arravulli range, into Runn of Cutch, by two mouths, principal in lat. 24° 42′, lon. 71° 11′.—Length, 320 m. | Rairee, 88; Sokree, 130 m.—About 19,000 sq. m. drained. | Bed full of micaceous quartoze rock; banks low, and little above the surrounding level. |
| 10. Bunnas | | In a cluster of summits in the Arravulli range, lat. 24° 47′, lon. 73° 28′. S.W., into Runn of Cutch, by several small channels.—Length, 180 m. | About 17,000 sq. m drained. | |
| 11. Bhader | | Kattywar, lat. 22° 10′, lon. 71° 18′. S.W., into Indian Ocean, near Poorbunder, lat. 21° 38′, lon. 69° 46′.—Length, 135 m. | Area of peninsula, 18,950 m. | The surface of Kattywar peninsula is generally undulating, with low ridges of hills, running in irregular directions The land in the middlemost part is the highest, and here all the rivers take their rise, disembouging themselves respectively into the Runn and Gulf of Cutch, and Gulf of Cambay. |
| 12. Oojal | | Kattywar, lat. 21° 31′, lon. 70° 50′. Circuitous, but generally W., into backwater, behind Poorbunder.—Length, 75 m. | | |
| 13. Ajee | | Kattywar, lat 22° 10′, lon. 76° 31′. N.W., into Gulf of Cutch.—Length, 60 m. | | |
| 14. Setroonjee | | Kattywar, lat. 21° 15′, lon. 70° 25′. E., into Gulf of Cambay.—Length, 60 m. | | |
| 15. Geyla | | Kattywar, lat. 22°, lon. 71° 20′. E., into Gulf of Cambay.—Length, 60 m. | | |
| 16. Gooma | | Kattywar, lat. 22° 18′, lon. 71° 30′. E., into Gulf of Cambay.—Length, 88 m. | | |
| 17. Taptee | | Sautpoora Mts., near Mooltae, lat. 21° 46′, lon. 78° 21′. Generally W., to Gulf of Cambay.—Length, 441 m. | Poorna, 160; Girna, 160; Boree, 90; Panjar, 92 m.—About 25,000 sq. m. drained. | It can scarcely be deemed a navigable stream, as at Surat, 17 m. from its month, it is fordable when the tide is out. It is said to be navigable in the dry season for boats of light draught, through Candeish. The mouth is obstructed by numerous sands and a bar. |
| 18. Myhe, or Mahe | | Vindhya Mts., lat. 22° 32′, lon. 75° 5′; 1,850 ft. above the sea. N.W., 145 m.; W. 25 m.; S.W., 180 m., into Gulf of Cambay.—Length, 350 m. | Amass, 90; Manchun, 55 m. | Navigable for 15 m. from its month. At 50 m. up, 100 yds. wide; bed, 400 yds.; depth, 1 ft. |
| 19. Washishtee | | W. Ghauts, lat. 17° 50′, lon. 73° 36′. S.—W.—S.E.—W., into Indian Ocean.—Length 55 m. | No tributaries of note; area drained small, and imperfectly defined. | Though rugged, the Concans have many fertile valleys, each of which, for the most part, affords a passage for a small river or torrent, holding a westerly course from the Ghauts to Indian Ocean. The most fertile spots are on the banks of streams. The rivers abound with fish, but are also frequented by alligators. The Savitree is navigable as far as Mhar, 30 m. from its mouth. |
| 20. Savitree | | W. Ghauts, lat. 18° 17′, lon. 73° 27′. S.E.—W., into Indian Ocean.—Length, 70 m. | | |
| 21. Taunsa | | W. Ghauts, lat. 19° 41′, lon. 73° 29′. S.W.—W.—W.S.W.—W., into Indian Ocean.—Length, 58 m. | | |
| 22. Soorla | | W. Ghauts, lat. 19° 54′, lon. 73° 24′. W.—S., into Indian Ocean.—Length, 68 m. | | |
| 23. Damgunga | | W. Ghants, lat. 20° 11′, lon. 73° 42′. W.—N.—W.N.W., into Indian Ocean.—Length, 58 m. | | |
| 24. Par | | W. Ghauts, lat 20° 30′, lon. 73° 43′. W., into Indian Ocean.—Length, 50 m. | | |

| Name. | | Source, Course, Discharge, and Length. | Tributaries, and their Length in British Miles; and Area drained. | Remarks. |
|---|---|---|---|---|
| 25. Eed . . . . . . . | Western India. | W. Ghauts, lat 20° 50′, lon. 73° 42′. W., into Indian Ocean.—Length, 70 m. | No tributaries of any extent; and area drained imperfectly. | Nothing worthy note. |
| 26. Poorna . . . . | | W. Ghauts, lat. 20° 59′, lon. 73° 44′. W., into the Indian Ocean.—Length, 60 m. | | |
| 27. Gungavully . . | | Plain of Dharwar, lat. 15° 45′, lon. 75° 10′. S.—S.W., into Indian Ocean.—Length, 100 m. | | |
| 28. Cauly Nuddee . | | Plain of Dharwar, lat. 15° 33′, lon. 74° 47′. S., 61 m.; W., 30 m., into Indian Ocean.—Length, 91 m. | . . . . | Navigated by the largest patimars for 20 m. From Mullapoor to Shedashegur, rendered easy by uniformity of channel. |
| 29. Ponany . . . | | Coimbatoor, lat. 10° 19′, lon. 77° 6′. N.W.—W., into Indian Ocean.—Length, 128 m. | | Navigable for canoes as far as Palghat, 63 m. from the sea. |
| 30. Vygah . . . . . | Eastern side of India. | Madura, lat. 10° 17′, lon. 77° 37′. S.E., into Bay of Bengal.—Length, 130 m. | | The large anicuts upon it are Conoor, diverting a stream of same name, Parea Anai, & Chittanaik. |
| 31. Vellaur . . . . | | Base of E. Ghauts, lat. 10° 28′, lon. 78° 21′. E., into Gulf of Manaar.—Length, 80 m. | | |
| 32. Goondah . . . . | | Vellanuddhee hills, Madura. S.E., into Gulf of Manaar.—Length, 95 m. | | |
| 33. Cauvery . . . . | | Coorg, lat 12° 25′, lon. 75° 34′. E., 33 m.; N.E., 28 m.; S.E, 95 m.; N.E.—E.—S.E., 47 m.; S., 47 m.; S.E.—E.—N.E., into Bay of Bengal. Length, 472 m. | Magunmurchy, 40; Bhovani, 120; Noyel, 95 m.; Hennavutty; Leechman-Teert; Cubbany; Shimska; Arkavati; Ambrawutty.—About 36,000 sq. m. drained. | Navigable for craft through the low country during the inundation. Gungau Zooka fall, 370 ft. Burr Zooka, 460 ft. |
| 34. Vzllaur . . . . | | Base of E. Ghauts. E., into Bay of Bengal, near Porto Novo. | | The river is small at its mouth, and admits only coasting craft. |
| 35. Palar . . . . . | | Mysoor table-land, lat. 13° 20′, lon. 78° 2′. S.E., 55 m.; E., 87 m.; S.E., 48 m., into Bay of Bengal.—Length, about 220 m. | Pony, 40; Sheyaroo, 90 m. . . . . | The entrance of the Palar, near Sadras, is contracted by a bar or narrow ridge of sand, inside of which the river becomes of considerable width. |
| 36. Soornamooky . . | | Mysoor table-land, lat. 13° 26′, lon. 79° 11′. N.E., to Bay of Bengal.—Length, 99 m. | | |
| 37. Pennar.—(N.) . . | | Nundidroog table-land, lat. 13° 23′, lon. 77° 43′. N.W., 30 m.; N., 95 m.; E., 230 m., into Bay of Bengal.—Length, 355 m. | Chittravutti, 107; Paapugnee, 130; Chittair, 75 m. | |
| 38. Pennar.—(S.) . . | | N. of Nundidroog table-land, lat. 13° 32′, lon. 77° 45′. S. to Mootanhalli, 55 m.; S.E., 190 m., into Bay of Bengal, a mile N. of Ft. St. David.—Length, 245 m. | . . | Gold is found in its sands, in its passage through the Carnatic. |
| 39. Gundlacama . . | | Lat. 15° 40′, lon. 78° 49′. Very circuitous; E.—N.E.—S.S.E.—S.E., into Bay of Nizampatnam.—Length, 155 m. | | |
| 40. Bondsdora . . . | | Table-land of Orissa, lat. 19° 39′, lon. 83° 27′. S., into Bay of Bengal.—Length, 130 m. | | |
| 41. Lalolah . . . | | Table-land of Orissa, near source of Bondsdora. S., into Bay of Bengal.—Length, 133 m. | | |
| 42. Mahanuddy . . . | | Native state of Nowagudda, lat. 20° 20′, lon. 82°. W., 30 m.; N.E., 110 m.; S.E., 300 m., to Bay of Bengal by numerous mouths.—Length, 520 m. | Hutsoo, 130; Aurag, 117; Tell, 130; Bang Nuddee, 60 m.—About 46,000 sq. m. drained. | From July to February, navigable for boats for 460 m. |
| 43. Brahminy . . . | | Palamow table-land, lat. 23° 25′, lon. 84° 13′. S.—E.—S.E., into Bay of Bengal, near Pt. Palmyras.—Length, 410 m. | | |
| 44. Byturnee . . | | Near Lohardugga, lat. 23° 29′, lon. 84° 55′. N.—E.—S.—S.W.—S.E.—E., into Bay of Bengal, by Dhumrah river.—Length, 345 m. | Sunk, 95 m.—About 26,000 sq. m. are drained by Brahminy and Byturnee. | Sacred in the Hindoo mythology, more especially at its source. |

| | | | |
|---|---|---|---|
| 45. SOOBUNREEKA (En. India) | Chota Nagpoor table-land. N.E.—E.—S.E.—S.—S.E.—E.—S.E.—S., into Bay of Bengal.—Length, 280 m. | Karow, 80 m.—About 12,000 sq. m. drained. | |
| 46. ARRACAN, or COLADYNE. (East side Bengal Bay.) | Near Blue Mountain, Youmadoung range, lat. 22° 27′, lon. 92° 51′. S., into Combermere Bay.—Length, 160 m | Myoo; Lemyo. . . . . . . | Navigable within a few miles of Arracan town, for ships of 250 tons burden. 90 m. above Akyab, the stream is narrow, and navigable only for canoes. 10 m. broad at its mouth. |
| 47. SITTANG . . . . . (East side Bengal Bay.) | Burmah, lat. 21° 40′, lon. 96° 50′. S., into Gulf of Martaban.—Length, 420 m. | Yennan, 115; Saar, 120 m. . . . . | It is a navigable river. For about 190 m. forms the boundary between the Tenasserim provinces and Pegu. |
| 48. SALUEN, or SALWEEN (East side Bengal Bay.) | N. of Yunnan province, China; about lat. 27° 10′, lon. 98° 57′. S., into Gulf of Martaban, by two mouths, formed by Pelewgewen Island.—Length, 430 m. | Attaran or Weingo, 110; Thoung-yin Myit, 225; Meloun, 90 m. | It enters the British dominions about lat. 18° 40′. |
| 49. TENASSERIM . . . (East side Bengal Bay.) | Supposed to lie in the mountains to the N E. of Tavoy, between the 14th and 15th parallel of latitude. S to Metamio, lat. 14° 13′; S.E. and S. to Tenasserim town; N.W. into Bay of Bengal, by two mouths.—Length, 270 m. | Baing-Khiaung; Little Tenasserim; Kamaun Khiaung. | Upper part of course through a wild and uncultivated tract, sometimes between high and perpendicular banks. It afterwards opens on extensive plains. On many parts of its banks exist forests of fine teak, and the valuable sappan wood. |
| JUMNA, tributary to GANGES | Jumnoutri, Himalaya, lat. 31°, lon. 78° 32′; 10,849 ft. above the sea. S.W.—S.E., to Ganges, at Allababad. —Length, 860 m. | Tonse or Supin, about 100; Hindan, about 160; Hansoutee, 99; Bangunga, 220; Chumbul, 570; Sinde, 260; Betwa, 360; Cane, 230; Baghin Nuddee, 90; Seyngur, 210; Urrund Nuddee, 245 m.—About 105,000 sq. m. drained | In consequence of its bed being obstructed by shoals and rocks, navigation is not practicable for craft above Delhi, except by means of the canal. Its banks are lofty and precipitous, and ridges of rock in many places advance into the stream, combining with its general shallowness and strong current to render navigation extremely difficult and dangerous. |
| GHOGRA, tributary to GANGES | N. of Kumaon, lat. 30° 28′, lon. 80° 40′, probably between 17,000 and 18,000 ft. S.E., 33 m.; S.W., 70 m.; S.E., 12 m.; S., 30 m.; S., 23 m. further; S.E., to Ganges, near Chupra.—Length, 606 m. | Raptee, 134; Kurnalli, 225; Bhyrvee, 70; Dhauli, 45; Goringunga, 60 m.—About 49,000 sq. m. drained. | Butter describes it as navigable for the largest class of boats in all seasons. |
| GOOMTEE, tributary to GANGES | In a small lake or morass, 19 m. E. of the town of Pillebheet. Lat. 28° 35′, lon. 80° 10′; 520 ft. above the sea. S.—S.E., into Ganges, 30 m. below Benares.—Length, 482 m. | . . . | In the rainy season, boats of 1,000 or 1,200 maunds (40 tons) burthen, are sometimes seen proceeding to Lucknow. |
| SONE, tributary to GANGES . | Amarkantak table-land, lat. 22° 41′, lon. 82° 7′; from 3,500 to 5,000 ft. above the sea. N., 30 m.; N.W., 80 m.; N., 40 m.; N.E., 125 m.; E., 47 m.; N.E., into the Ganges, 10 m. above Dinapoor.—Length, 465 m. | Koel, 140; Kunher, 130; Johila, 100 m.—Including the Phalgu and other rivers falling into the Ganges above Rajmahal, about 42,000 sq. m. drained. | The navigation of the river is not considered available for purposes of important utility higher than Daudnagur, 60 m. from the confluence with the Ganges. |
| GUNDUCK, tributary to GANGES | Near Dhawalagiri peak, Himalaya. S.—S.E.—S.W. —S.E., into Ganges, near Patna.—Length, 407 m. | Trisula-gunga, 100; Marachangdi, 100; Naling, 110 m.—About 40,000 sq. m. drained. | Though navigable continuously through its whole course downwards from Bhelaunji, there are in the part of its channel nearer that place many rapids and passes, where, the course being obstructed by rocks, navigation becomes difficult and dangerous. |
| CHUMBUL, tributary to JUMNA | Malwa, lat. 22° 26′, lon. 75° 45′, 8 or 9 m. S.W. from Mhow, which is 2,019 ft. above the sea. It rises in the cluster called Janapava. N., 105 m.; N.W., 6 m.; S.E., 10 m.; N.E., 23 m.; N.W., 25 m.; N. to junction with Kalee Sind; N.E., 145 m.; S.E., 78 m., to Jumna.—Length, 570 m., described in a form nearly semicircular, the diameter being only 330 m. | Chumbela, 70; Seepra, 120; Parbutty, 220; Kallee Sind, 225; Banas, 320; Chota Kallee Sind, 104 m.—About 56,000 sq. m. drained. | It does not appear to be used for navigation, which is probably incompatible with the average declivity of its bed (2 ft. 5 in. per m.), and still more so with the general rugged and rocky character of its channel. Its average volume of water is so considerable, that on its junction it has been known to raise the united stream 7 or 8 ft. in 12 hours. |

| Name. | Source, Course, Discharge, and Length. | Tributaries, and their Length in British Miles; and Area drained. | Remarks. |
|---|---|---|---|
| RAMGUNGA, tributary to GANGES. | Kumaon, lat. 30° 6′, lon. 79° 20′; about 7,144 ft. above the sea. S.E., 20 m.; S.W., 70 m.; S. to Moradabad—S.E.—S., into Ganges.—Length, 373 m | Kosee, 150; Gurra, 240 m. . . . . . | Fordable at Moradabad, at 15 m. below confluence with Kosee; but not usually fordable below Jellalabad. |
| COOSY, tributary to GANGES. | Himalaya Mountains, lat. 28° 25′, lon. 86° 11′. S.W.—S.E.—S.—E.—S.E.—S., into Ganges.—Length, 325 m. | Aruo, 310; Tambur, 95; Gogaree, 235; Dud Coosy, 50; Tiljuga, 40 m.—46,000 sq. m. dr. | Where narrowest, and when lowest, stream 1,200 ft. wide and 15 ft. deep. It is larger than the Jumna or the Ghogra. |
| MAHANANDA, tributary to GANGES. | Near Darjeeling, in the Sikhim hills, lat. 26° 57′, lon. 88° 20′. S., 40 m.; S.W., 60 m.; S.E., 50 m.; S., 20 m.; S.E., 40 m.; S., 30 m.—Length, 240 m. | . . . . | Navigable during the dry season for craft of 8 tons as far as Kishengunge; for those of much larger burthen during the rains. |
| KARUMNASSA, tributary to GANGES. | In the Kymore range, lat. 24° 38′, lon. 83° 11′. N.—N.W., into the Ganges, near Ghazeepoor.—Length, 140 m. | | |
| TONS, tributary to GANGES. | Lat. 24°, lon. 80° 30′. N.W.—E.N.E.—N., into the Ganges, a few miles below Allahabad.—Length, 165 m. | Satni, Beher, Mahana, Belun, and Seoti.—Including small streams, 13,000 sq. m. drained. | |
| ALUKNUNDA, tributary to GANGES. | Lat. 30° 33′, lon. 79° 38′. N.W.—S.W.—W.—S.W., into the Bhageerutte, at Deoprayag.—Length, 80 m. | Doulee, 35; Vishnuganga, 25; Mundakni, 32; Pindur, 60 m. | At confluence with Bhageeruttee, 142 ft. broad; rises 46 ft. during the melting of the snow. |
| BHILLUNG, tributary to GANGES. | Lat. 30° 46′, lon. 78° 55′. S.W., into the Bhageeruttee.—Length, 50 m. | . . . | Between 60 and 70 ft. wide in the beginning of May, 5 m. from its mouth. |
| DAMMOODAH, tributary to HOOGHLY. | Ramghur district, lat. 23° 55′, lon. 84° 53′. E. and S.E., to Burdwan; S., to Diamond Harbour.—Length, 350 m. | Barrachur, 155 m. . . . . . | Crossed by a ferry, 50 m. above its mouth. At Raneegunj, 135 m. from mouth, 500 yds. wide, fordable, with a rapid current about 1 ft. deep in December. |
| COOSSY, tributary to HOOGHLY | Ramghur district, lat. 23° 35′, lon. 85° 58′. Circuitous, but generally S.E., into Hooghly.—Length, 240 m. | Comaree. . . . . . . . | It is crossed at Ameenugur, 80 m. from source, & at Koilaghat, 40 m. from mouth, by fords during the dry season, aod ferries during the rains. |
| DALKISSORE, tributary to HOOGHLY. | Pachete district, lat. 23° 30′, lon. 86° 34′. S.E.—S.—S.E., into Hooghly at Diamond Harbour.—Length, 170 m. | . . . . | Crossed at Bancoora, 50 m. from source, and at Jahanabad, by means of fords. |
| SHY-YOK, tributary to INDUS | Near Kara-korum Pass. S.E.—N.W., into Indus, near Iskardo.—Length, 300 m. | Chang-Chenmo, 58; Nubra, 66 m. | |
| CABOOL, tributary to INDUS. | Lat. 34° 15′, lon. 68° 10′, near Sir-i-Chusma, in Afghanistan; elevation, 8,400 ft. Generally E., through the valley of Cabool, and plains of Jellalabad and Peshawur, into the Indus.—Length, about 320 m. | Punchshir, 120; Tagao, 80; Alishang, 120; Soorkh-Rood, 70; Kooner, 230; Suwat, 150 m.—About 42,000 sq. m. drained. | Not navigable along the N. base of Khyber Mts. except on rafts and hides. Navigable for boats of 40 or 50 tons to Dobundee. |
| ZANSKAR, tributary to INDUS | N. declivity of Bara-Lacha Pass, lat. 32° 47′, lon. 77° 33′. N.W.—W.—N.W.—N.E.—N.W.—N.E., into the Indus, a few miles below Le.—Length, 150 m. | Trarap, 42; Zingeban-Tokpo, 22 m. | |
| SUTLEJ, tributary to INDUS. | Remote sources, Lakes Manasarowar and Rahwan Hrad, lat. 30° 8′, lon. 81° 53′; 15,200 ft. above the sea. N.W., 180 m.; S.W., through Bussahir; W. to junction with Beas; S.W. to Punjnud.—Length, 550 m., to junction with Beas; 300 m. farther to Punjnud: total, 850 m. | Spiti, 120; Buspa, 52; Beas, 290 m.—About 29,000 sq. m., or, including Ghara and Beas, about 65,000 sq. m. drained. | At Roopur, 30 ft. deep, and more than 500 yds. wide. Navigable as far as Filoor in all seasons, for vessels of 10 or 12 tons burthen. |
| BEAS, tributary to SUTLEJ. | On S. verge of Rotang Pass, lat. 32° 24′, lon. 77° 11′; 13,200 ft. above the sea. S., 80 m.; W., 50 m.; then a wide sweep to N.W. for 80 m.; S., 80 m., to Sutlej, at Endreesa.—Length, 290 m. | Parbati; Sainj, 38; Gomati, 55 m.; Ul; Gaj.—About 10,000 sq. m. drained. | |
| CHENAB, tributary to INDUS | Near Bara-Lacha Pass, lat. 32° 48′, lon. 77° 27′. N.W. to Murumurdwun; S.W. to confluence with Jhelum, thence S.W. to Ghara, or continuation of Sutlej.—Length, 605 m. to Jhelum, 765 m. to Ghara. | Suruj-Bhagur, 44; Murumurdwun, 86; Dharh, 56 m.—About 21,000; including Jhelum, 50,000; and with Ravee, 72,000 sq. m. drained. | Becomes navigable for timber-rafts at Aknur. Descends at the average rate of 40 ft. per m. for the first 200 m. Estimated elevation at Kishtewar, 5,000 ft. |

| | | | |
|---|---|---|---|
| JHELUM, tributary to CHENAB. | The Lidur, in N.E. mountains of Cashmere, near Shesha Nag. Through valley of Cashmere, and into Punjab by Baramula gorge; S. to Chenab confluence, in lat. 30° 10′, lon. 79° 9′.—Length, 409 m. | Lidur, 50; Vishnau, 44; Sindh, 72; Lolab, 44; Kishengunga, 140; Kunihar, 100; Pirpanjal, 115 m.—About 280,000 sq. m. drained. | Navigable for 70 m. through Cashmere. Navigable from the Indus to the town of Ohind. |
| RAVEE, tributary to CHENAUB | Lat. 32° 26′, lon. 77°, in the Pirpanjal or Mid-Himalaya range, to the W. of Rotang Pass. S.W., about 40 m.; W. to Lahore; S.W. to junction with Chenab.—Length, 450 m. | Nye, 20; Sana, 36; Chakki, 50 m.—About 22,000 sq. m. drained. | Tortuous course: fordable in most places for eight months of the year. |
| SANPOO, tributary to BRAHMAPOOTRA. | N. face of Himalayas, lat. 30° 25′, lon. 82° 5′. E., winding its way through Tibet, and washing the borders of the territory of Lassa. It then turns suddenly S., and falls into the Brahmapootra, under the name of Dihong.—Length, about 1,000 m. | Sanki-Sanpoo, Niamtsion, Zzangtsiou, Lalee Nuddee. | |
| TEESTA, tributary to BRAHMAPOOTRA. | About lat. 27° 59′, lon. 88° 50′. S.—S.E., into Brahmapootra.—Length, 333 m. | Laehoong, 23; Rungbo, 22; Rungeet, 23 m. | Navigable for craft of 6 or 7 tons as far up as Puharpoor, 15 m. beyond the divergence of the Attree. |
| BARAK, tributary to BRAHMAPOOTRA. | It is an offset from the Jeree, which leaves in lat. 24° 43′, lon. 93° 13′. W. through Cachar and Silhet; S.W., into Megna.—Length, 200 m. | . . . | Banks low and marshy along the valley of Cachar. |
| MONAS, tributary to BRAHMAPOOTRA. | Himalaya range, lat. 28° 20′, lon. 91° 18′. S., 40 m.; S.W., 110 m.; S.W., into Brahmapootra.—Length, 189 m. | Deemree, of greater length than itself. | |
| KHYENDWEN, tributary to IRAWADDY. | Burmah, lat. 26° 28′, lon. 96° 54′. Generally S., into Irawaddy, near the town of Amyenmyo.—Length, 470 m. | Myitia Khyoung, 170 m. | |
| WEIN-GUNGA, or PRENHETA, tributary to GODAVERY. | Mahadeo Mountains, lat. 22° 25′, lon. 79° 8′. E., 80 m.; S., 34 m.; S., 25 m.; S.W., 80 m.; S., 100 m.; into Godavery.—Length, 439 m. | Pench Nuddee, 150; Kanhan Nuddee, 130 m.—About 21,000 sq. m. drained, exclusive of Payne-Gunga and Wurda. | Elevation at Bundara, lat. 21° 12′; 872 ft. above the sea. |
| WURDA, tributary to WEIN-GUNGA. | Sautpoora Mountains, lat. 21° 44′, lon. 78° 25′. Generally N.W. to S.E.—Length, about 250 m. | Payne-Gunga, 320 m.—About 8,000 sq. m. drained. | Fordable, except at the height of the rains; then navigable for 100 m. above its mouth. |
| PAYNE-GUNGA, tributary to WEIN-GUNGA. | Lat 20° 32′, lon. 76° 4′, in Candeish. Very circuitous, but generally E., into Wurda.—Length, 320 m. | Araun, 105; Koony, 65 m.—About 8,000 sq. m. drained. | |
| MANJERA, tributary to GODAVERY | Lat. 18° 44′, lon. 75° 30′. S.E.—S.W., into Godavery.—Length, 330 m. | Thairnya, 95; Narinja, 75; Munnada, 100 m.—About 11,000 sq. m. drained. | |
| BEEMAH, tributary to KISTNAH. | Lat. 19° 5′, lon. 73° 33′, in the table-land of the district of Poona; 3,090 ft. above the sea. S.E., into Kistnah.—Length, 510 m. | Goor, 100; Neera, 120; Seena, 170; Tandoor, 85 m.—About 29,000 sq. m. drained. | |
| TOONGABUDRA, tributary to KISTNAH | Lat. 14°, lon. 75° 43′, junction of Toonga and Budra rivers. N.—N.E., into Kistnah.—Length, 325 m. | Chinna Hugry; Hundry, 225 m.; Wurda.—About 28,000 sq. m. drained. | Rocky obstacles to navigation in upper part of course. Fine teak forests on banks. |
| POORNAH, tributary to TAPTEE. | Lat. 21° 35′, lon. 77° 41′. S., 65 m.; W., 95 m.; into the Taptee.—Length, 160 m. | | |
| GIRNA, tributary to TAPTEE | E. slope of W. Ghauts, lat. 20° 37′, lon. 73° 25′. E., 120 m.; N., 50 m.; into the Taptee.—Length, 160 m. | | |
| BHOVANI, tributary to CAUVERY. | Among the Kundah group, lat. 11° 15′, lon. 76° 4′. E., into Cauvery.—Length, 120 m. | | |
| NOYEL, tributary to CAUVERY | E. slope of W. Ghauts, lat. 10° 59′, lon. 76° 44′. E., into Cauvery.—Length, 95 m. | | |
| HUTSOO, tributary to MAHANUDDY. | Lat. 23° 18′, lon. 82° 32′. S., into Mahanuddy.—Length, 130 m. | | |
| TELL, tributary to MAHANUDDY. | Lat. 19° 54′, lon. 82° 41′. N.W., into Mahanuddy.—Length, 130 m. | | |

NOTE—*Of the above-named rivers, forty-nine main streams flow to the sea: the chief tributaries to these number* 210, *of which thirty flow for* 200 *m. and upwards; sixty-three have a course of* 100 *to* 200 *m.; and the remainder under* 100 *m*

*Rivers in Afghanistan, and in the Countries adjacent to India on the North-west—so far as known.*

| Name and Length. | Source, Course, and Discharge. | Tributaries or Confluents; and their Length in English Miles. | Remarks. |
|---|---|---|---|
| HELMUND.—650 miles . . . | Pughman range, lat. 34° 40′, lon. 68° 2′; at an elevation of 10,076 ft. above the sea. Westerly; south-westerly to Pullaluk; north-westerly; in the Hamoon marshy lake, and that of Duk-i-Teer, by numerous channels. | At 25 m. below Girishk receives the Urgundab, 250 m.; Turnak. | At Girishk, 350 m. from source; banks, about 1,000 yards apart; in spring, spreads beyond these limits,—depth, 10 or 12 ft.,—with a rapid current. At Pullaluk it was crossed by Christie, who found it, at the end of March, 400 yards wide, and very deep. |
| LORAH.—About 80 miles . . | Shawl table-land, lat. 39° 49′, lon. 67° 20′. South-westerly, until lost in the sands of the desert of Khorasan. | . . . . . . . | In April the water (which is briny) is 7 or 8 yards wide, and 2 ft. deep. It is crossed on the route from Shawl to Kandahar. |
| KOONDOOZ.—About 300 miles | Valley of Bamian, about lat. 34° 52′, lon. 67° 40′. Easterly; northerly; north-easterly; northerly; and north-westerly; into the Amoo or Jinoon River. | Inderauh, 65; and Khanah-i-bad, 90 m. | |
| HERI ROOD, or HURY.—About 600 miles. | Huzareh Mountains, lat. 34° 50′, lon. 66° 20′; 9,500 ft. above the sea. Generally westerly to Herat, where it turns north-westerly, forming a junction with the Moorghaub; the united stream is ultimately lost in the desert of Khorasan. | Sir-i-Jungle, 90 m. . . . . . . | At Herat, it was formerly crossed by a brick bridge, but three out of thirty-three arches being swept away, communication is intercepted in time of inundation. It is remarkable for the purity of its water. |
| POORALLEE.—100 miles . . | Jhalawan province, about lat. 27° 23′, lon. 66° 21′. Southerly, through Lus province into the Indian Ocean, in lat. 25° 23′, lon. 66° 20′; near Sonmeanee. | | From the bund N. of Lyaree, the river has no bed; as it fills, during the rains, the bund is swept away, and the water inundates the plain, which is here about 5 m. broad. |
| GHUZNEE.—About 60 miles . | Huzareh Mountains, about lat. 33° 50′, lon. 68° 20′. Generally southerly, as far as lat. 33°; afterwards south-westerly; into Lake Abistada, in lat. 32° 42′, lon. 68° 3′. | N.B.—*The tributaries of these rivers, in the countries adjacent to India, are as yet very imperfectly known,—as indeed are also the origin and courses of the rivers themselves, or the countries through which they flow.* | |
| BOLAN.—About 70 miles . . | Sir-i-Bolan, Bolan Pass, lat. 29° 51′, lon. 67° 8′; 4,494 ft. above sea. Remarkably sinuous, but generally south-easterly; forms a junction with the Nari River. | | Liable to inundations; and as its bed, in some parts, occupies the whole breadth of the ravine, travellers are frequently overtaken by the torrent. Falls 3,751 ft. in 50 m., from source to Dadur. |
| MOOLA.—About 150 miles . | A few miles S. of Kelat, in Beloochistan. South-easterly, about 80 miles; north-easterly; and easterly; ultimately absorbed in the desert of Shikarpoor. | | The Moola or Gundava Pass winds along its course. |
| URGUNDAB.—250 miles . . | Huzareh Mountains, about lat. 33°, lon. 67°. South-westerly to 25 m. past Kandahar; westerly remainder of course,—falls into the Helmund River. | Turnak . . . . . . . | Where crossed 12 m. from Kandahar, it is, ordinarily, about 40 yards wide, from 2 to 3 ft. deep, and fordable; but in inundations, becomes much increased. Greater part of its water drawn off to fertilise the country. |
| GOMUL.—About 160 miles . | Afghanistan, about lat. 33°, lon. 69° 6′, at the foot of an offshoot from Sufied-Koh. S.; W.; and a little E. of S. to Goolkuts; thence E., N.E., and S.E., until absorbed by the sands of the Daman. | Zhobe, about 170 m. . . . . . . | Its bed for a great distance forms the Goolairee Pass, or great middle route from Hindoostan to Khorasan, by Dera Ismael Khan and Ghuznee; crosses the Suliman range lat. 32°. |

*Table-lands of British India—their Extent, Height, &c.*

| Name. | Locality. | Elevation, in Feet. | Remarks. |
|---|---|---|---|
| CENTRAL INDIA, including OODEYPOOR, MALWA, BHOPAL, BUNDELCUND, and SHAHABAD. | Extends by the Arravulli, Dongurpoor, Vindhya, Bindyachal, Panna, and Bandair ranges,—73° to 84°; about 700 m. long; breadth, very various,—greatest from Amjherra to Ajmeer, 250 m.; from Mhow to Mokundurra, 150 m.; at Saugor and Dumoh, 75 m.; afterwards very narrow. | Highest towards S. and W.; average of Oodeypoor, 2,000 ft. Malwa, 1,500 to 2,000. Bhopal, 2,000. Bundelcund, about 1,000. Shahabad, 700. Plain of Ajmere, 2,000 Oodeypoor town, 24° 37′, 73° 49′; 2,064 ft.—slope to N.E., Banas River flowing in that direction; gradual fall also to valley of Chumbul River, where it rises to Malwa; Mhow, 2,019. Dectaun, 1,881. Dhar, 1,908. Indore, 1,998. Crest of Jaum Ghaut, 2,328. Oojein, 1,698. Adjygurh, 1,340. Amjherra, 1,890. Saugor, 1,940. Rhotasgurh, 700. Sonar River, source, 1,900 ft. From the Vindhya range the surface has a generally gradual, but in some places abrupt, descent; as at Mokundurra, and the Bindyachal hills, where rivers occasionally fall over the brow in cascades. Shahabad district very rocky and uneven. | Tin and copper are found in Oodeypoor. In Bhopal the prevailing geological formation appears to be trap overlying sandstone. Minerals are few and unimportant. Water is very plentiful. The mineral resources of Bundelcund appear to be considerable. |
| SOUTHERN INDIA, including DECCAN, MYSOOR, &c. | Supported as it were by a triangle formed by the Sautpoora or sub-Vindhya on the N., W. Ghauts on the W., and E. Ghauts on the E.; the Sautpoora range constituting the base. Length, from Sautpoora River to Salem, about 700 m.; breadth from Mahabulishwar to Sirgoojah, about 700 m. If Chota-Nagpoor be considered as part of this great table-land, it may be said to extend nearly 250 m. farther in a north-easterly direction. | Highest parts, those nearest W. Ghauts, and in centre of Mysoor. Mahabulishwar 18°, 73° 45′; 4,700 ft. Source of Kistnah, 4,500. Source of Godavery, 3,000 Poona, 2,823. Source of Manjera, 3,019 ft. Rivers rising in ravines between spurs of W. Ghauts, wind their way through E. Ghauts across the Deccan, the slope being in that direction. Plains of Nagpoor, 1,000 ft.—slope to S E ; drained by Wein-Gunga, which falls into Godavery. Hydrabad, 1,800 ft. Secunderabad, 17° 26′, 78° 33′; 1,837 ft. Beder, 17° 53′, 77° 36′; 2,359 ft. From the Wein-Gunga the surface rises towards N.E., where Rypoor, 21° 12′, 81° 40′, is 1,747 ft. Source of Mahanuddy, 2,111; and Konkeir, 20° 16′, 81° 33′, 1,953 ft. Nundy-droog, highest in Mysoor, 4,856 ft.; slope from hence on all sides:—S. to Bangalore, 3,000; E. to plains of Carnatic—Chittoor, 1,100; N. to plains of Gooty, 1,182; and those of Bellary, 1,600 ft. Colar, 13° 8′, 78° 10′; 2,800 ft. Mysoor town, 12° 18′, 76° 42′; 2,450 ft. Seringapatam, 12° 25′, 76° 45′, 2,412;—from hence, there is a gradual rise to Coorg, where Verajenderpetta is 3,399, and Merkara, 4,506 ft. From Bangalore, descent to S. by rather abrupt steppes to plains of Salem, 1,400, and Coimbatoor, 1,483 ft. From Belgaum, 15° 50′, 74° 36′, 2,500 ft., there is a gradual fall to the E. Bellary plains, 1,600 ft. Gooty plains, 1,182; Cuddapah town, 507; and E. part of Cuddapah dist., 450 ft. | Hypogene schists, penetrated and broken up by prodigious outbursts of plutonic and trappean rocks, occupy by far the greater portion of the superficies of Southern India. The central part of the Deccan is composed of waving downs, which, at one time, present for miles a sheet of green harvests, but in the hot season, bear the appearance of a desert, without a tree or shrub to relieve its gloomy sameness The seaward face of the table-land towards the W., though abrupt, is not precipitous, but consists of a succession of terraces or steps. On the Coromandel side the slope to the sea is gentle, exhibiting the alluvial deposits borne down from the higher portions of the table-land. |
| SOUTH-WEST FRONTIER OF BENGAL, including CHOTA-NAGPOOR, SIRGOOJAH, PALAMOW, RAMGURH, HAZAREEBAGH, MYNPAT and AMARKANTAK. | Between 22° 30′ and 24° 30′; and easterly, from about 85° to 82′. | Chota-Nagpoor, 3,000 ft.; hills running E. and W., but of little elevation; Sirgoojah, mountainous, rising 600 to 700 ft. above level of Chota-Nagpoor. Mynpat table-land, about 30 m. S.E. from Sirgoojah town; area not ascertained—about 3,000 or 3,500 ft. Palamow dist., very mountainous—little known Hazareebagh town, 24°, 85° 24′; 1,750 ft. Slope of country to S., towards Sumbulpoor—N. and E. parts of dist. very mountainous, but level, and even depressed towards Mahanuddy. Sumbulpoor town, only 400 ft. Orissa table-land then rises on the other side of Mahanuddy, in some places to 1,700 ft., backed by the chain of E. Ghauts. Amarkantak, jungly table-land, 22° 40′, 81° 50′; 3,500 ft. | The soil in the plains is generally fertile, producing abundant crops of wheat, barley, rice, pulse, excellent vegetables, cotton and sugar-cane. The uncultivated parts are overrun with a coarse grass. A great part of the region is quite unknown to us. |
| NEPAUL . . . . . | At the foot of the Himalaya range, between Himalaya and the Tarai; 500 m. long; E. to W., 160 m. broad; area, 54,500 sq. m. | The surface generally consists of valleys varying from 4,000 to 6,000 ft. above Bengal plains. Khatmandoo (in an oval-shaped valley 12 m. long), 27° 42′, 85° 18′; 4,628. Bhynturee, 29° 34′, 80° 30′; 5,615 ft. Slope to S. drained by Ghogra, Gunduck, and Coosy. | The geological formation of the hilly tract—limestone, hornstone, and conglomerate. Vegetable productions of most remarkable stateliness, beauty, and variety. Climate resembles that of southern Europe. |

*Table-lands of Afghanistan and the Countries adjacent to India, on the North-west.*

| Name. | Locality. | Elevation, in Feet. | Remarks. |
|---|---|---|---|
| WESTERN AFGHANISTAN. | From about Ghuznee or Sufied-Koh, to Amran Mountains, N. to S.; and from near Kandahar to the Suliman range. | Crest of highland of Ghuznee, lat. 30° 43′, lon. 68° 20′; 9,000 ft. Ghuznee, 33° 34′, 68° 18′; 7,726. Yerghuttoo, 33° 20′, 68° 10′; 7,502. Mookur, principal source of Turnak River, 32° 50′, 67° 37′; 7,091. Abistada Lake, 32° 35′, 68°; 7,000. Punguk, 32° 36′, 67° 21′; 6,810. Shuftul, 32° 28′, 67° 12′; 6,514. Sir-i-Asp, 32° 15′, 66° 54′; 5,973. Kelat-i-Giljie, 32° 8′, 66° 45′; 5,773. Julduk, 32°, 66° 28′; 5,396. Hydurzie, 30° 23′, 66° 51′; 5,259. Hykulzie, 30° 32′, 66° 50′; 5,063. Teer-Andaz, 31° 55′, 66° 17′; 4,829. Kandahar, 32° 37′, 65° 28′; 3,484 ft. | Afghanistan, for four-fifths of its extent, is a region of rocks and mountains, interspersed with valleys of great fertility, and in many places containing table-lands, cold, bleak, and barren. It has a surface as rugged as that of Switzerland, with summits of much greater height. General slope of country, from N.E. to S.W. |
| NORTHERN AFGHANISTAN. | Between Hindoo-Koosh on the N., and Sufied-Koh on the S.; and Huzareh country on the W., and Khyber hills on the E. | Kurzar, near source of Helmund, 34° 30′, 67° 54′; 10,939 ft. Kalloo, 34° 30′, 67° 56′; 10,883. Youart or Oord, 34° 22′, 68° 11′; 10,618. Gooljatooe, 34° 31′, 68° 5′; 10,500. Shibbertoo, 34° 50′, 67° 20′; 10,500. Siah Sung, 34° 34′, 68° 8′; 10,488. Gurdan Dewar, 34° 25′, 68° 8′; 10,076. Soktah, 34° 40′, 67° 50′; 9,839. Khawak Fort, 35° 38′, 70° 5′; 9,300. Topchee, 34° 45′, 67° 44′; 9,085. Chasgo, 33° 43′, 68° 22′: 8,697. Bamian, 34° 50′, 67° 45′; 8,496. Huftasaya, 33° 49′, 68° 15′; 8,420. Sir-i-Chusma, 34° 21′, 68° 20′; 8,400. Zohak's Fort, 34° 50′, 67° 55′; 8,186. Killa Sher Mahomed, 34° 16′, 68° 45′; 8,051. Kot-i-Asruf, 34° 28′, 68° 35′; 7,749. Maidan, 34° 22′, 68° 43′; 7,747. Urghundee, 34° 30′, 68° 50′; 7,628. Khoord Kabool, 34° 21′, 69° 18′; 7,466. Kahool, 34° 28′, 69°; 6,396. Boothauk, 34° 30′, 69° 15′; 6,247. Jugdulluk, 34° 25′, 69° 46′; 5,375. Gundamuk, 34° 17′, 70° 5′; 4,616. Crest of Khyber Pass, 34° 8′, 71° 15′; 3,373. Ali-Musjid, 34° 3′, 71° 22′; 2,433. Jellalabad, 34° 25′, 70° 28′; 1,964 ft. | Slope from W. to E.; Kabool River flowing in that direction: lofty mountains enclosing valley of Jellalabad on N. and S. sides. Course of river obstructed, and bed contracted by ridges of rock connecting them. City of Kabool surrounded by hills on three sides. Jellalabad, on a small plain. |
| SHAWL AND PISHEEN | Between Hala and Amran ranges, on the N. frontier of Beloochistan. | Khojuck Pass, Amran Mts., 30° 45′, 66° 30′; 7,449 ft. Pisheen, from 5,000 to 6,000. Shawl exceeds 5,000. Town of Shawl, 5,563. Dasht-i-Bedowlat, 30° 57′; about 5,000. Siriab, 30° 3′, 66° 53′; 5,793 ft. | Wildest parts of enclosing mountains, —haunts of wild sheep and goats: more accessible tracts yield pasture to herds and flocks. Orchards numerous. Dasht-i-Bedowlat (*wretched plain*), destitute of water. |
| BELOOCHISTAN . . | S. of Afghanistan . . . . . . | Kelat, 28° 53′, 66° 27′; 6,000 ft. Sohrab, 28° 22′, 66° 9′; 5,800. Munzilgah, 29° 53′, 67°; 5,793. Angeera, 28° 10′, 66° 12′; 5,250. Bapow, 28° 16′ 66° 20′; 5,000. Peesee-Bhent, 28° 10′, 66° 35′; 4,600. Sir-i-Bolan, 29° 50′, 67° 14′; 4,494. Putkee, 28° 5′, 66° 40′; 4,250. Paeesht-Khana, 27° 59′, 66° 47′; 3,500. Nurd, 27° 52′, 66° 54′; 2,850. Ab-i-goom, 29° 46′, 67° 23′; 2,540. Jungikoosht, 27° 55′, 67° 2′; 2,150. Bent-i-Jah, 28° 4′, 67° 10′; 1,850. Beebee Nanee, 29° 39′, 67° 28′; 1,695. Kohow, 28° 20′, 67° 12′; 1,250 Gurmab, 29° 36′, 67° 32′; 1,081. Kullar, 28° 18′, 67° 15′; 750 ft. | Coast craggy, but not elevated; in some places a sandy shore; inland surface becomes higher. Most remarkable features of Beloochistan, rugged and elevated surface, barrenness, and deficiency of water. It may be described as a maze of mountains, except on the N.W., in which direction the surface descends to the Great Desert on the S., where a low tract stretches along the sea-shore. |
| CASHMERE and BULTISTAN, or LITTLE TIBET. | Western Himalaya . . . . | Average of Cashmere valley, between 5,000 and 6,000 ft. Huramuk Mt. 13,000. Pir-panjal, 15,000. Small elevations in valley, 250 to 500 ft. Average of valley of Indus (N. of Cashmere vale), 6,000 to 7,000 ft. Slope from S.E. to N.W. Mountains on each side rising from 6,000 to 8,000 ft. higher. | Mountains enclosing Cashmere vale, basaltic. Ranges on each side of Bultistan valley rugged, bare, and nearly inaccessible; formation generally of gneiss; that of the valley, shingle and sand. |

PRINCIPAL CITIES.*—A description of the cities and towns in India would occupy several volumes: all that can here be given is a brief note on some of the best known.†

*Calcutta,*—on the left bank of the Hooghly, about 100 m. from the sea; present seat of supreme government; a village when acquired by the English in 1700. Length, about 4½ m.; breadth, 1½ m.; area, nearly 8 sq. m. Beyond the Mahratta Ditch (an intrenchment intended as a defence against the incursions of the Mahrattas), are the suburbs of Chitpoor, Nundenbagh, Bahar-Simlah, Sealdah, Entally, Ballygunge, Bhowaneepoor, Allipoor, and Kidderpoor. On the opposite side of the river lie the villages of Seebpoor, Howrah, and Sulkea. The city is defended by Fort William, a large and strong fortress, built on a plain, of an octagonal form, somewhat resembling that of Antwerp: it mounts 619 guns.

In May, 1850, the population of Calcutta, exclusive of suburbs, was 413,182; number of residences, 62,565; of huts, 49,445. Among the public buildings are the Government-house, a magnificent structure; the Town-hall, a handsome edifice; the Supreme Court of Judicature, the Madrissa and Hindoo colleges, Metcalfe Hall, and the Ochterlony monument. About three miles below the city, on the Howrah side, there are extensive botanical gardens, laid out with good taste and effect.

The most elevated part of Calcutta (Clive-street) is only thirty feet above the sea-level at low-water. It appears to me very probable that the whole city will some day be submerged by the shifting beds of the Hooghly or Ganges.

*Madras,*—on the Coromandel coast, consists of three broad streets, running north and south, dividing the town into four nearly equal parts; they are well built, and contain the principal European shops. On the beach is a line of public offices, including the Supreme Court, the Custom-house, the Marine Board Office, and the offices and storehouses of the principal European merchants. The other buildings are, the Mint, the Roman Catholic Cathedral, the Church Mission Chapel, Armenian Church, Trinity Chapel, the General Hospital, and Medical School. Fort St. George is in form an irregular polygon, somewhat of a semicircle, of which the sea-face, which is well armed with heavy guns, is nearly a diameter.

No part is probably more than twenty feet above the sea-level. Population, 720,000, including the Black Town and suburbs.

*Bombay.*—The old town, built on the island, is about 2 m. in circuit, and strongly fortified; the recent increase of the calibre of the guns has completed the means of defence. Few remarkable buildings. There is a Government-house, an excellent dockyard and foundry for steam-vessels, a church within the fort, and one on the island of Colaba, where there are considerable cantonments: several banks, insurance companies, the Steam Navigation Company, Bombay branch of Asiatic Society, Bombay Geographical Society, &c.; and the leading merchants have their offices within the fort. Population, 566,119, including the widely-scattered suburbs.

*Agra,*—formerly a large city; the old walls remain, and mark out a space extending along the Jumna, about 4 m. in length, with a breadth of 3 m.; the area is about 11 sq. m; but not one-half is at present occupied. There is one wide street running from the fort in a north-westerly direction. The houses are built chiefly of red sandstone. Within the fort is the palace of Shah Jehan, and his hall of audience; the Motee Masjid or Pearl Mosque, and other structures. The celebrated Tajmahal, or mausoleum of Shah Jehan, is outside the city, and about a mile east of the fort. Adjacent to the city, on the west, is the Government-house, the official residence of the lieutenant-governor of the North Western Provinces. Population, 66,000.

*Ahmedabad,*—on the left bank of the Saburmuttee, 5¾ m. in circumference, surrounded by a high wall, with irregular towers every fifty yards. The noblest architectural relic is the Jumma Masjit or Great Mosque, built by Ahmed Shah of Guzerat, the founder of the city. Near the city wall is a tank a mile in circumference. Population said to amount to 30,000.

*Ajmere,*—a city of great antiquity and celebrity—situate in a picturesque valley, surrounded by hills, on the base and slope of one of which the town is built. A wall of stone, with five strong gateways (all on the north and west sides), surround it. The town contains several large mosques and temples. Some of the streets are wide and handsome. The houses of the wealthy are spacious, and generally well built: the habitations of the poorer classes are more commodious than ordinary. The strong fort of Taraghur, with a walled circumference of 2 m., surmounts the hill rising above the city: it contains two tanks, and commands another outside.

*Allahabad,*—at the confluence of the Ganges (here 1½ m. wide) and Jumna, (¾ of a m. in width.) The fort on the east and south rises directly from the water, and is in form a bastioned quinquangle, 2,500 yards in circuit, and of great strength. The town extends along the Jumna, to the west of the fort. Notwithstanding the advantageous position, it is an ill-built and poverty-stricken place. The Jumma Masjit is a stately building, but without much ornament. Population, 70,000. [This ought to be the seat of Supreme Government for India.]

*Almora.*—Principal place of the British district of Kumaon, situate on the crest of a ridge running from east to west, consists principally of one street, ¾ of a m. long, secured by a gate at each end, and forming two bazaars, divided from each other by Fort Almora, and by the site of the ancient palace of the rajahs of Kumaon, now occupied by a gaol. Detached houses, chiefly inhabited by Europeans and Brahmins, are scattered along each face of the mountain below the town. Fort Moira is at the western extremity, and adjoins the military lines.

*Amritsir.*—A walled city, about half-way between the Beas and Ravee rivers. It owes its importance to a *Tulao* or reservoir, which Ram Das caused to be made here in 1581, and named it Amrita Saras, or "fount of immortality." It is a square, of 150 paces, containing a great body of water, pure as crystal, though multitudes bathe in it: it is supplied, apparently, from natural springs. On a small island in the middle is a temple, to which are attached 500 or 600 priests. On this island Ram Das (the founder) is said to have spent his life in a sitting posture. City very populous and extensive; streets narrow; houses lofty. Manufactures—cloths, silks, and shawls. There is besides a very extensive transit trade, and considerable monetary transactions. Most striking ob-

* The several positions of these places, and their elevation, will be given in a Topographical Index.

† Full details will be found in Thornton's excellent *Gazetteer*.

ject, the fortress Govinghur; its great height and heavy batteries, rising one above the other, giving it a very imposing appearance. Population, 80,000 or 90,000.

*Bangalore.*—Town tolerably well built. has a good bazaar, and is inclosed by a wall, a ditch, and a broad fence of thorns and bamboos. Fort oval, constructed of strong masonry: within it is the palace of Tippoo Sultan, a large building of mud. Manufactures—cotton and silk; but the present importance of the place results from its being the great British military establishment for the territory of Mysoor. The cantonment is nearly $2\frac{1}{2}$ m. in length, and 1 m. in breadth. Population, 60,000.

*Bareilly,*—situate in a pleasant and well-wooded country in the N.W. provinces. It is a considerable town, the principal street or bazaar being nearly 2 m. long, has a brisk and lucrative commerce, and some manufactures, of which the principal is that of house furniture, cotton-weaving, muslins, silks, jewellery, gold, silver, and metal working, besides numerous others. Population, 92,208. Cantonment at south side of town, near the new fort, which is quadrangular, and surrounded by a ditch: it is the head-quarters for the Rohilcund division.

*Baroda,*—situate near the river Biswamintri, which is here crossed by a stone bridge. The town is surrounded by numerous groves containing many mosques, mausolea, and tombs of Mussulmen, which give an impressive solemnity to the scene. The fortifications, of no great strength, consist of slight walls, with towers, and several double gateways. Town intersected and divided into four equal quarters, by two spacious streets, meeting in the centre, at a market-place. Houses, in general, very high, and built of wood. Population, 140,000.

*Beejapoor.*—The walls, which are of hewn stone and very lofty, are entire, but inside all is desolation. The deep moat, the double rampart, and the ruins of the palaces in the citadel, attest its former magnificence. The Great Mosque is a grand edifice, and the tomb of Ibrahim Adil Shah, remarkable for elegant and graceful architecture. The chief feature of the scene is the mausoleum of Mohammed Adil Shah, the dome of which fills the eye from every point of view. The fort has a rampart flanked by 109 towers. The works surrounding it, and the citadel in the interior, are very strongly built; the parapets are 9 ft. high, and 3 ft. thick. The ditch is from 40 to 50 ft. in breadth, and about 18 deep: the curtains, which appear to rise from the bottom of it, vary from 30 to 40 ft. high, and 24 ft. thick. A revetted counterscarp is discernible, the circuit of which is $6\frac{1}{2}$ m., and its ground-plan deviates little from a circle. To the westward of the fort there is a vast mass of ruins, from the numerous edifices of every description scattered around. Beejapoor was evidently one of the greatest cities in India. It was formerly divided into several quarters, one of which is 6 m. in circumference. Among the various wonders of this ruined capital, is the gun called Malik-i-Maidan, or "the King of the Plain," one of the largest pieces of brass ordnance in the world.

*Beekaneer,*—capital of the Rajpoot state of the same name, viewed from without presents the appearance of a great and magnificent city. The wall, which is built of stone, is $3\frac{1}{2}$ m. in circuit, 15 to 30 ft. high (including parapet), 6 ft. thick, surrounded on three sides by a ditch 15 ft. deep and 20 ft. wide; there are five gates and three sally-ports. The interior exhibits a rather flourishing appearance; many good houses, neat and uniform, with red walls, and white doors and windows. Eighteen wells within the city; depth of each about 240 ft. Citadel situate $\frac{1}{2}$ a m. N.E. of the city, and quite detached from it; defences, about $\frac{3}{4}$ of a m. in circuit, constructed of good masonry. The rajah's residence occupies nearly the whole of the inside. Population, stated by Boileau and Tod, 60,000.

*Belgaum,*—Southern Mahratta country. Fort of an oval ground-plan, 1,000 yards long, 700 broad, and surrounded by a broad and deep wet ditch, cut in very hard ground. In 1848, the inhabitants formed a committee, and in four months reconstructed all the roads of the town, extending to a length of between 9 and 10 m. Belgaum was selected as the site of the educational institution for the instruction of the sons of natives of rank: in February, 1853, the number of pupils exceeded 50.

*Bellary.*—The fort, or fortified rock, round which the cantonment is situate, is a hill of granite: length, 1,150 yards; height, 450 ft.; circumference, 2 m.; eastern and southern sides precipitous; western face slopes gradually towards plain. Lower fort, $\frac{1}{2}$ a m. in diameter, contains barracks, arsenal, and commissariat stores, church, two tanks, and several on the top of the rock. Native population in 1836, exclusive of military, 30,426.

*Benares,*—on the Ganges, 3 m. long, 1 m. broad. Streets very narrow, and access gained to the river by noble ghauts, extending along the bank of the river, in the city. Numerous Hindoo temples, which render it a celebrated place of pilgrimage. Population, 300,000.

*Bhagulpoor,*—on the right bank of the Ganges here 7 m. wide during the rains. Though represented to be 2 m. long and 1 broad, it is a poor place, consisting of scattered market-places, meanly built; it is, however, ornamented by European residences and by mosques. Cavalry barracks, occasionally occupied; 4 m. from them are those of a native corps formed of the highlanders (Sonthals or Puharees) of the Rajmahal wilds. There is also a court of justice, a gaol, and an educational institution.

*Bhooj,*—the capital of Cutch, at the base of a fortified hill. When viewed from the north, has an imposing appearance. Rajah's palace, a castle of good masonry. A large tank has been excavated at the west end of the city. Population, about 20,000.

*Bhopal.*—Town surrounded by a wall of masonry about 2 m. in circuit, within which is also a fort of masonry. Outside, a large *gunje* or market, with wide straight streets. The fort of Futtyghur is on a rock S.W. from the town. S.W. of the fort is Bhopal Tal, or Lake, $4\frac{1}{2}$ m. long, $1\frac{1}{2}$m. broad: another tank, 2 m. long, is on the east. They are deep, and abound with alligators, but both appear to be artificial. The Bess river has its rise in the former. Bhopal is the seat of the British political residency.

*Bhurtpoor.*—Town 3 m. long, $1\frac{1}{4}$ broad, and about 8 in circumference. Its site is somewhat depressed; and this circumstance, in a military point of view, contributes to its strength; as the water of a neighbouring *jhil*, being higher than the ditch of the town, can be discharged into it in such a volume, as to render it unfordable. The defences are now shapeless piles of mud.* This measure of repair was permitted to the young rajah, after attaining majority, in 1844, and the walls allowed to be maintained in a condition (in the rajah's words) "to keep out thieves and wild beasts:" and the town itself is

* *See* Historical Section, 1805-'6, and 1824-'5.

merely a great collection of hovels; but it is a thriving place, having a trade in the Sambhur Lake salt. Population estimated at 100,000.

*Burdwan*,—on the left bank of the Dammoodah. The rajah's residence is a great collection of buildings of various sizes and colours, and without symmetry or regularity: the town an assemblage of crowded suburbs, wretched huts, a few handsome houses, but no temple of striking effect. Contiguous to the town is an artificial piece of water, having an estimated area of 30 acres, and much frequented by the natives for bathing. Burdwan contains the civil establishment of the district, and two English schools.

*Cawnpoor*,—on the right bank of the Ganges; area of the city, 690 acres; contains about 11,000 houses, and nearly 59,000 inhabitants. Population of cantonments, 49,975; making a total of 108,796, exclusive of the military. Commerce—busy and important; the Ganges (which is here 500 yards wide when lowest, and 1 m. wide when swollen by the periodical rains) being navigable to the sea, a distance of 1,000 m., and upwards to Sukertal, a distance of 300 m.

*Coimbatoor*,—situate near the left bank of the Noyel, a tributary of the Cauvery, in a dry and well-cultivated country, near the base of the Neilgherry group of mountains. Streets wide, airy, and neatly built; European quarter eastward of the town, and detached from it. In the time of Hyder Ali it is said to have contained 4,000 houses, but it suffered much in the wars between the British and Mysoor.

*Cuttack*,—situated on a tongue of land near the bifurcation of the Mahanuddy. Fortifications in a ruinous state, their materials fast disappearing, the stones being carried away, and used in various public works; among others, in the lighthouse at False Point, and in the macadamization of the cantonment roads. Within the fort is an old mosque. Town straggling, and exhibits evident signs of decay. The Jumma Masjit, and the "Kuddum Russool," Moslem buildings, are inelegant, and Brahminical temples small and ungraceful. Manufactures—brass cooking-vessels and shoes. Population estimated at 40,000.

*Dacca*,—on the Burha Gunga, an offset of the Koniae or Jabuna; 4 m. long, and $1\frac{1}{4}$ m. broad. It is at present a wide expanse of ruins. The castle of its founder, Shah Jehangir, the noble mosque he built, the palaces of the ancient newaubs, the factories and churches of the Dutch, French, and Portuguese, are all sunk into ruin, and overgrown with jungle. The city and suburbs are stated to possess ten bridges, thirteen ghauts, seven ferry-stations, twelve bazaars, three public wells, a variety of buildings for fiscal and judicial purposes, a gaol and gaol-hospital, a lunatic asylum, and a native hospital. Population, 200,000.

*Delhi*,—about 7 m. in circumference, is inclosed on three sides by a wall, and on the other, the river. Streets mostly narrow; the principal one is $\frac{3}{4}$ of a m. long, and 50 yds. wide, with good shops on each side. Population, 137,977.

*Dinapoor*.—Important military station on the right bank of the Ganges. Remarkable for the barracks, which are magnificent buildings, and of great extent. Church, spacious and handsome.

*Golconda*.—Fortress and ruined city, in the Nizam's dominions. Fortress on a rocky ridge of granite, is extensive, very strong, and in good repair, but is commanded within breaching distance. Being the depository of the treasures of the Nizam, and also used as a state prison, it is very strictly guarded, and entrance cannot be obtained by any but officials. The ancient mausolea form a group about 600 yards from the fort, the stern features of the surrounding rocky ground heightening the impressiveness and grandeur of those astonishing buildings. These tombs were erected at great expense, some of them being said to have cost £150,000. The diamonds of Golconda have obtained great celebrity throughout the world. (*See* Minerals.)

*Gwalior*,—the capital of the possessions of Sindia's family. The rock on which the celebrated Hill Fort is situate, is completely isolated: greatest height at the north end, 342 ft. The approach, by means of steps cut in the rock, is so large, and of such gentle acclivity, that elephants easily ascend. The passage, protected by guns pointing down it, has a succession of seven gates. Within the enclosure there are several tanks, capable of supplying an adequate garrison, though 15,000 men would be required to man the defences. The town lies along the eastern base of the rock; it is large, but irregularly built, and contains a cannon-foundry, and gunpowder and firework manufactory.

*Hurdwar*, or sometimes Gangadwara, the "Gate of the Ganges,"—a celebrated place of Hindoo pilgrimage. Town evidently of great antiquity, is situate close to the western bank; the foundations of many of the houses in the bed of the river.

*Hydrabad* (Deccan.)—The ground plan is a trapezoid, the longest or north-western side of which, extending along the river Mussi, is about $2\frac{3}{4}$ m. in length; the south-eastern, 2 m.; the southern, 1 m.; the south-western, $1\frac{3}{4}$ m. A suburb on the river side communicates with the city by a stone bridge. Streets, some paved; narrow; houses close together, and displaying little or no taste. The most remarkable structures are the principal mosque, and the British residency. Population, probably not exceeding 200,000.

*Hydrabad* (Sinde),—on the Gunjah hills, 4 m. from the Indus. Outline of fortress irregular, corresponding with the winding shape of the hills. Walls built of burnt bricks, thick at the base, but taper towards the top, and weakened by loopholes. There are about 5,000 houses; bazaar extensive, forming one street the entire length of the town. Manufactures—arms, and ornamental silks and cottons. Population (supposed), 24,000.

*Indore*,—capital of the possessions of Holcar's family. Outline of city, nearly a square of 1,000 yards; area, about 216 acres: ill-built, the houses disposed in irregular winding streets, constructed with sun-dried bricks, and covered with clumsy tiles laid on bamboos. It contains a few mosques, but has no architectural pretensions. The British residency, east of the town, has a pleasing scene.

*Jessulmere*,—built at the base of the south end of a rocky range of hills. Ramparts and bastions of uncemented stone; circuit, about $2\frac{1}{4}$ m.; height, 14 ft., including a parapet of 6 ft.; thickness of ramparts, 4 ft.: these defences are in many places so obliterated by sand-drifts, that they may be crossed on horseback. There are four gateways and three sally-ports. Outline of citadel an irregular triangle, about $\frac{3}{4}$ths of a mile in circumference; interior occupied by the palace, and several temples and dwellings. At the time of Boileau's visit, in 1835, there were 6 guns, a large howitzer, and 3 field-pieces.

*Jeypoor*,—in a small plain surrounded by hills on all sides, except the south. It is about 2 m. long, E. to W.; 1 m. broad, encompassed by a wall

of masonry, with lofty towers and well-protected gateways, and considered to be the most regularly built of the cities laid down by native Indians. A main street, 2 m. long and 40 yards wide, extends from E. to W.; this is intersected by several streets of the same width; and at each point of intersection is a *chauk* or market-place; and the whole is portioned out into rectangular blocks, the palace and royal premises being in the centre. Houses in the principal streets are generally built of stone, and, with the fine temples, add to the architectural splendour of the town. Population, 300,000.

*Joudpoor*,—on the north-eastern edge of a cultivated but woody plain. Site striking, being at the southern extremity of a ridge 25 m. long, between 2 and 3 m. broad, and from 300 to 400 feet above the average level of the plain. Built on an irregular surface, sloping upwards towards the base of the rock surmounted by the citadel, and inclosed by a rampart 5 m. in circumference. There are several tanks within the walls; but all fail in long-continued droughts, except the Rani Sagur, which is reserved exclusively for the garrison, being thrown open to the citizens only on extreme emergency. North-east of the city is the suburb Mahamandir. Population, 60,000.

*Khatmandoo.*—Capital of Nepaul, situate in a valley,* and on the east bank of the Bishnmutty river. Length, about 1 m.; average breadth, scarcely ¼ of a m. Streets narrow; houses brick, with tiled roofs, and though of several stories, are of mean appearance. Town adorned by several temples, the gilded pinnacles of which have a picturesque effect. The river is crossed by two bridges, one at each extremity of the town. Population estimated at 50,000; number of houses, 5,000.

*Lahore*,—surrounded by a brick wall, and defences 7 m. in circumference: fort at the north-west angle; there are several large and handsome mosques, besides Hindoo temples. Streets narrow; houses lofty; bazaars contracted and mean. Population, 100,000, or 120,000.

*Loodiana*,—four miles from left bank of the Sutlej: town ill-built, and without a wall, but having a fort of no great strength, which was constructed in 1808, on the north side, situate on a bluff, rising about 30 ft. above the *nullah* or watercourse. It is a thriving place, the residents including several capitalists, among whom are corresponding bankers; and as the mart lies on one of the principal routes between Hindoostan and Afghanistan, it has a considerable transit trade. Manufactures—cotton, cloth, and shawls. Population estimated at 20,000; chiefly Mohammedans.

*Lucknow*,—extends about 4 m. along the bank of the Goomtee. Streets, with few exceptions, crooked and narrow; number of brick-built houses small—palaces of showy architecture. The great ornament is the Imambarah, a Moslem cathedral, and the mosque attached to it. Population, 300,000.

*Masulipatam*,—on a plain stretching to the base of the E. Ghauts. Fort built on a swamp overflowed by the sea at spring-tides. Ground-plan, an oblong rectangle, 800 yards long and 600 broad, with high ramparts and a wide and deep ditch. The native town is situated south-west of the cantonment, and has some wide and airy streets, tolerably straight, and well built. Population, in 1837, 27,884.

*Meerut*,—situate in the Dooab, and nearly equidistant from the Ganges and the Jumna. Ruined wall of the town extensive, inclosing a considerable space. Streets narrow, and houses ill-built. Most important structure, the English church. Cantonments 2 m. north of the town. Population, 29,014.

*Mhow.*—In the territory of Indore. Its appearance is that of an European town, having a church with steeple on an eminence, a lecture-room and library, and a theatre. A considerable force is stationed at the cantonments, which are situate 1½ m. S.E. from the town.

*Mirzapoor*,—consists mainly of three long, wide, straight streets, along the side of which are rows of trees and wells. The houses, seldom more than two stories high, are for the most part built of mud or unburnt brick: those of the Europeans, which are the best, occur only at considerable intervals. It derives its present importance principally from its being the greatest cotton mart in India; military cantonment situated three miles north-east of the city. Population, 55,000.

*Mooltan.*—An ancient city, 3 m. east of the Chenab, whose inundations reach the fort. It is built on a mound of considerable height, formed of the ruins of more ancient cities. Bazaars extensive; about 4,600 shops. Manufactures—silks, cottons, shawls, loongees, brocades, tissues. Banking constitutes a large proportion of the business, and the merchants are considered rich. Population estimated at 80,000.

*Moorshedabad*,—extends about 8 m. along both banks of the Ganges, with an average breadth of 4 m. Though a place of considerable commerce it consists but of mud buildings, lying confusedly together. Unapproachable by craft of above a foot draught, during the dry months of spring. Population about 150,000.

*Muttra*,—extends along the Jumna in the form of a crescent, and, with its great ruined fort, has a very picturesque appearance; but its streets are steep, narrow, winding, and dirty. Population, in 1846, 49,672.

*Nagpoor.*—About 7 m. in circumference, but very irregular in shape. There is but one good street, the others being mean and narrow. Throughout the town no specimen of fine architecture; the rajah's palace, which is the most considerable building, is devoid of symmetry or beauty; it is merely a large pile of masonry, completely obscured by the encroachments of mean mud huts built against its walls. Population, 111,231.

*Oodeypoor*, Rajpoot city,—situate on a low ridge, in a valley, where extends an artificial lake 5 m. in circuit. Town ill-built; palace, a noble pile of granite, 100 ft. high, and overlooking the city.

*Oojein*,—in the territory of Gwalior, on the Seepra. It is of oblong outline, 6 m. in circumference, surrounded by a stone wall with round towers. Houses crowded together, and built either of brick or wood. Principal bazaar, a spacious street. There are four mosques, and many Hindoo temples. City well supplied with water. The head of the Sindia family has a spacious palace here, but of little exterior magnificence. At the southern extremity of the town is the observatory constructed by Jai Sing, the scientific rajah of Jeypoor. Principal trade in cotton fabrics, opium, and the wares of Europe and China. It is one of the seven sacred cities of the Hindoos, and the first meridian of their geographers.

*Patna.*—City extends about 1½ m. along the Ganges, inclosed by a rectangular wall, and has extensive suburbs; the principal one, on the east, called Marusganj, contains the chief market, and many store-

* *See* Note at end of "Mountains."

houses for grain. This is joined by another, denominated Giafir Khan. On the other side of the city is a long, narrow suburb, extending to Bankipoor, a distance of about 4 m.; this is the European quarter. The better class of houses in the city are built of brick, but the greater number of mud, and generally tiled. Population, 284,132.

*Peshawur*,—built by Akber, who fixed the name, signifying "advanced post," in reference to its being the frontier town of Hindoostan towards Afghanistan, is situate on a plain about 18 m. east of the eastern extremity of the Khyber Pass, and 44 m. from the Indus. In the early part of the present century, when visited by Elphinstone, it was a flourishing town, about 5 m. in circuit, and reported to contain 100,000 inhabitants. Twenty years later, Runjeet Sing demolished the Balla Hissar, the state residence, injured the city, and laid waste the surrounding country. The fortress, erected by the Seiks on the site of the Balla Hissar, is a square of about 220 yards, with round towers at each angle, and surrounded by a wall of mud 60 ft. high, fausse-braie 30 ft., and a wet ditch. The city is now improved under the British government. Population, 56,045; Hindoos, 7,706; remainder, Mussulmen.

*Poona*,—an ill-built city, without walls or fort; bazaars mean, streets irregular; recent improvements have somewhat changed its appearance. Between 1841 and 1846, 400 new houses were built, and several more were in the latter year in course of construction. A bridge over the Nagjurree Nullah was completed, and a stone one replaced for the old Mahratta bridge over the Moota Moola; there is another called the Wellesley bridge; the streets in the eastern part of the city have been macadamized, and a full supply of water secured to the population. The most remarkable building is the palace, formerly the residence of the Peishwa; situation picturesque. Population, 100,000.

*Rangoon*, or the "City of Victory,"—situated about a mile from the river of the same name. Ground-plan, a square of about ¾ths of a m., having at its northern side a pagoda as a citadel. It has been twice burnt (in 1850, when it was entirely destroyed, and in 1853); but conditions have been prescribed by government for ensuring its protection against future conflagrations.

*Sattara*,—situate amidst the highlands of the Deccan, and where the country, though rugged, inclines to the eastward. The fort, on the summit of a steep mountain, has an area extending about 1,000 by 500 yards. The town lies immediately under it, in a valley.

*Saugor*,—built along the west, north, and north-east sides of a lake nearly a mile in length, and three-quarters in breadth, which occupies the lowest part of a valley, or rather basin, surrounded by hills. There is a large fort, now used as an ordnance depôt. The mint stood about a mile from the lake, but the business of the establishment has been transferred to Calcutta. In 1830, an iron suspension-bridge was erected over the Bessi, a river running near the town. Population, 70,000.

*Seringapatam*,—a celebrated fortress (built 700 years ago) and town, once the capital of Mysoor, situate on an island in the Cauvery. Town ill-built, having narrow streets; houses ill-ventilated and inconvenient: water supplied abundantly from the river, which washes the walls on the northern and south-west sides. Ground-plan, an irregular pentagon, 1½ m. by ¾ of a m. Palace of Tippoo Sultan within the fort, and is surrounded by a strong wall of stone and mud. The Shehr Gangam, a suburb detached from the fortified town, was demolished by Tippoo on the eve of the investment of the place, but was afterwards built with considerable regularity. Population of the island, during his reign, estimated at 150,000; in 1800 it was only 31,895, exclusive of the garrison.

*Shikarpoor*.—The most important commercial town in Sinde. It is situate 20 m. west of the Indus. A branch of the Sinde canal passes within 1 m. of the city. Circuit of wall, which is now in ruins, 3,831 yards. The character of the place is thoroughly commercial, almost every house having a shop; mansions of the opulent Hindoo merchants large, inclosed and secluded by high brick walls; but the streets are narrow, and the houses generally small. The bazaar extends about 800 yards through the centre of the city, and contained, in 1837, 884, and in 1841, 923 shops. Transit trade important, as it is on the route to Afghanistan through the Bolan Pass. Population estimated at 30,000; viz., 20,000 Hindoos, and 10,000 Mohammedans, of whom 1,000 are Afghans. The town was founded in 1617.

*Surat*.—Outline of town an arc, nearly semicircular, the river forming the chord; circuit, about 6 m. Castle, though small, has bastions, covered way, and glacis; streets narrow and winding; houses high, upper stories projecting beyond the base. Population, in 1838, 133,544.

*Tanjore*.—Town consists of two forts; the greater, 4 m. in circumference, surrounded by a fortified wall and a ditch; streets within it irregularly built. Adjoining is the smaller fort, 1 m. in circuit, and very strong; within it is the great pagoda, considered to be the finest of the pyramidical temples of India.

*Trichinopoly*.—Rock very striking when viewed from a distance at any point, it being 600 ft. above the surrounding level. The fort is situate on part of the rugged declivity of the rock, and 2 furlongs from the Cauvery, which is embanked, but the works sometimes give way and inundate the country. The fort, with its strong and massive walls, bear the appearance of having been regularly and strongly built; they are from 20 to 30 ft. high, of considerable thickness, and upwards of 2 m. in circumference. Within is an extensive *petta* or town, arranged into tolerably straight, wide, and regular streets, many of which have bazaars. On the rock is a pagoda. The natives manufacture hardware, cutlery, jewellery, saddlery, and cheroots. The cantonment is from 2 to 3 m. south-west of the fort, and the troops generally there form a force of between 4,000 and 5,000 men.

*Umballa*.—On the route from Hindoostan to Afghanistan. It is a large walled town, situate in a level and highly cultivated country. Houses built of burnt brick, streets narrow. Fort at the N.E. of the town, and under its walls the encamping ground of the British troops.

*Vellore*.—A town in the Carnatic, with a strong extensive fort, on the south side of the Palar river; ramparts built of large stones, with bastions and round towers at short distances. A deep and wide ditch, cut in the rock, filled with water, surrounds the whole. Within are barracks, hospitals, magazines, and other buildings. Town situate between the fort and some rocky hills on the east, is clean and airy, and has an extensive and well-supplied bazaar. Most remarkable building, a pagoda dedicated to Crishna. Government, in 1846, sanctioned the erection of a church within the fort.

Climate.—A country extending through six-and-twenty degrees of latitude, and with elevations from the coast-level to the height of three or four miles above the sea, must necessarily possess great variety of temperature. About one-half of India is intertropical, comprising within its limits the three principal stations of Calcutta, Madras, and Bombay; in fact, all the country south of a line drawn from Burdwan on the east, through Bhopal, to the gulf of Cutch on the west—a distance from Cape Comorin of about 1,000 miles. All the region north of this line, and extending 800 miles from Cutch to Peshawur, is outside the tropic of Cancer: the area of the inter and extra-tropical territory is nearly alike. Mere distance from the equator will not convey an adequate idea of the climate of any district: other circumstances must be taken into account; such as elevation above the sea,—aspect in reference to the sun and the prevailing winds,—more or less vegetation,—radiation of terrestrial heat,—quantity of rain falling,* or siccidity of atmosphere,—proximity to snow-covered mountains or great lakes, — drainage, ventilation, &c.;† — all these, varying in collateral existence or in degree of operation, cause a variety of climate and thermometrical range, which latitude will not indicate. Regions contiguous to the equator, at or near the sea-level, possess a high but equable temperature: the mercury, on Fahrenheit's scale, exhibits in the shade at Singapore, a flat island in 1° 17′ N., a heat of 73° to 87° throughout the year. As we recede from the equator north or south, a wider caloric range is experienced, not only throughout the year, but within the limits of a single day. In the N. W. Provinces of India, and in the S.E. settlements of Australia, the mercury not unfrequently rises in the summer season to 90° and even 100° Fahr., and shows a fluctuation, in twenty-four hours, of 24°: but this extreme torridity —when the circumambient fluid seems to be aeriform fire—is but of brief duration. Animal and vegetable life are reinvigorated, for a large part of the year, by a considerably cooler atmosphere. Indeed, at New York and Montreal, I found the heat of June and July more intolerable than that of Jamaica or Ceylon; but then snow lies on the ground, at the former places, for several weeks in winter. Again, moisture with heat has a powerful and injurious effect on the human frame, though favourable to vegetation and to many species of animal life. Speaking from my own sensations, I have lain exhausted on a couch with the mercury at 80° Fahr., during the rainy season, in Calcutta, Bombay, and Hong Kong; and ridden through the burning forests of Australia, on the sandy Arabian plains, and over the sugar-cane plantations of Cuba, with the mercury at 100° Fahr. So, also, with reference to elevation: in the East and West Indies, at a height of several thousand feet above the sea, I have enjoyed a fire at night in June; and yet, in April and September, been scorched at mid-day in Egypt, Northern China, and Eastern Europe. These observations are made with a view of answering the oft-recurring inane question, without referring to any locality, "What sort of a climate has India?" In order, however, to

* The quantity of rain in the tropical or temperate zones is effected by the elevation of the land above the sea. In India the maximum fall is at 4,500 feet altitude; beyond this height it diminishes. This is shown by the present scientific chairman of the E. I. Cy., Colonel Sykes, in his valuable *Meteorological Observations:* thus, on the western coast of India the fall is at sea-level (mean of seven levels)—inches, 81; at 150 ft. altitude (Rutnagherry in the Concan), 114; at 900 ft., Dapoolee (S. Concan), 134; at 1,700 ft. (Kundala Pass, from Bombay to Poona), 141; at 4,500 ft. (Mahabulishwar—mean of 15 years, 254; at 6,200 ft. (Augusta Peak, Uttray Mullay range), 194; at 6,100 ft. (Kotagherry, in the Neilgherries, one year), 81; at 8,640 ft. (Dodabetta, highest point of Western India, one year), 101 inches. The same principle is observable in the arid lofty table-land of Thibet, and in the contiguous elevated regions where rain seldom falls. So also in Chili and other parts of the Andes. The distinguished meteorologist, Dr. John Fletcher Miller, of Whitehaven, adduces evidence, in his interesting account of the Cumberland Lake District, to demonstrate the existence of a similar law in England, where he considers the maximum fall of rain to be at the height of 2,000 feet.

† In 1829, I wrote and published in Calcutta a small *brochure*, entitled *The Effects of Climate, Food, and Drink on Man.* The essay was prepared in the hope of inducing the government to adopt sanitary measures for the drainage and ventilation of Calcutta, where cholera had become permanently located. I predicted that unless the *nidus* of this fearful malady were destroyed in the Indian cities by the purification of their respective atmospheres, the disease would be extensively generated and wafted with the periodical winds from Asia to Europe. The prognostication was ridiculed: sad experience may now perhaps induce corporations and citizens of large towns to adopt timely-effective sanitary measures. By so doing a healthy climate may everywhere be obtained; but no altitude or position will avail for the prevention of endemic diseases, or for lengthening the duration of life, wherever large masses of human beings are congregated, unless complete drainage, free circulation of air, and the removal of all putrescent animal and vegetable matter be made an urgent and daily duty.

convey some idea of the thermometrical range, and the quantity of rain falling at different stations, the following table has been collated from different sources:—

*Meteorological Monthly Observations for different parts of India; showing the Latitude, number of feet above the level of the sea, average Thermometer, and Rain in inches.*

The monsoons or prevailing winds within the tropics, as on the Coromandel and Malabar coasts, are denominated the *South-west* and the *North-east*; but owing to modifying circumstances, the direction is in several places changed: at Arracan, the S.W. blows more frequently from the S., and the N.E. more to the W. of N. Lower Bengal, including the country around Calcutta, has a climate more trying than that of any other part of India. November, December, and January are tolerably cool, and Europeans may walk out during the day. In February, March, April, and May, the heat daily increases, until, during the last month especially, it becomes almost intolerable; not a cloud appears in the heavens to mitigate the burning rays of the sun, which seem to penetrate into the very marrow of an European. I have known men and beasts to drop dead in the streets of Calcutta. When the monsoon is on the eve of changing, before the *chota bursaut* (little rain) set in, the nights as well as the days are oppressive; respiration becomes laborious, and all animated nature languishes: the horizon assumes a lurid glare, deepening to a fiery red; the death-like stillness of the

* Abstract of the mean annual summaries of a meteorological register kept at Calcutta, for ten years:—

| Years. | Sunrise. | 2·40 P.M. | Sunset. |
|---|---|---|---|
| 1841 . . . | 72°·7 | 89°·0 | 82°·4 |
| 1842 . . . | 73·3 | 88·0 | 82·1 |
| 1843 . . . | 73·3 | 87·6 | 82 5 |
| 1844 . . . | 72·7 | 87·6 | 82·3 |
| 1845 . . . | 73·7 | 86 9 | 82·3 |
| 1846 . . . | 74·3 | 86·3 | 81·9 |
| 1847 . . . | 73·2 | 86·1 | 81·1 |
| 1848 . . . | 74·1 | 87·4 | 82·5 |
| 1849 . . . | 73·6 | 86·7 | 81·8 |
| 1850 . . . | 73·1 | 86·1 | 81·4 |
| Mean . . | 73·4 | 87·2 | 82·0 |

The annual fall of rain at Calcutta, during six years, commencing with 1830, averaged 64 inches. In the wet season evaporation is very slight.

† Amount of rain at Bombay for six years:—

| | Inches. | | Inches. |
|---|---|---|---|
| 1845 . . . . | 54·73 | 1848 . . . | 73·42 |
| 1846 . . . . | 87·48 | 1849 . . . | 118·88 |
| 1847 . . . . | 67·31 | 1850 . . . | 47·78 |

Average annual fall during thirty years, 76·08 inches. At Madras, average for eight years, 66·59 inches.

‡ Between lat. 26° 54′, and lat. 29° 23′.—(Boileau's *Tour in Rajwara*, pp. 304—317.)

§ Situation, about 350 m. from nearest part of Bay of Bengal, and 420 m. from Indian Ocean. In 1826, and in 1831, the fall of rain slightly exceeded 65 inches; the greatest registered fall was 72 inches, and that was in 1809. Average fall of rain for eight years, 48·10 inches. Proceeding westward towards the Ghauts and Indian Ocean, the rains become heavier until reaching Mahabulishwar, where the fall is probably unexampled in amount; in 1849 it was 294 inches. The mean annual quantity is 239 inches, of which 227 fell in the four monsoon months. The greatest annual fall was in 1834, when it amounted to 297 inches. Another report gives the mean annual fall, as deduced from the observation of ten years, at 229 inches; and the number of days on which rain falls, at 127.

air is occasionally broken by a low murmuring, which is responded to by the moaning of cattle: dense, dark masses of clouds roll along the Bay of Bengal, accompanied with occasional gusts of wind; streaks of lightning, after sunset, glimmer through the magazines where the electric fluid is engendered and pent up; the sky becomes obscured with mist, and lowring; next, broad sheets of lambent flame illumine each pitchy mass, until the entire heavens seem to be in a blaze; while peal after peal of thunder reverberates from cloud to cloud, like discharges of heavy artillery booming through cavernous hills, or along an amphitheatre of mountains; thin spray is scattered over the coast by the violence of the increasing gale,—the rain commences in large drops, augments to sheeted masses, and sweeps like a torrent from the sky; the surf roars along the beach,—the wind howls furiously, screaming or groaning piteously; and every element seems convulsed with the furious conflict: at length the S.W. monsoon gains the victory, and the atmosphere becomes purified and tranquil. The monsoon is felt with varying degrees of intensity at different parts of the coast; but at Madras and at Bombay the scene is one of awful grandeur. During the rains the air is saturated with moisture; and the pressure on each square inch of the human frame causes extreme lassitude and mental depression: along the sea-shore the pernicious effects are mitigated by a sea-breeze, called the "Doctor," which sets in about ten, A.M., and lasts until sunset. As the country is ascended above the ocean-level, varieties of climate are experienced; but on the plains of the Ganges and of the Indus, and in some parts of Central India, hot winds blow nearly equal in intensity to those which are felt in Australia. In few words, some idea may be conveyed of the climate of several districts:—

*Bengal Proper*,—hot, moist, or muggy for eight months—April to November; remainder cool, clear, and bracing.

*Bahar*,—cool in winter months: hot in summer; rain variable.

*Oude*,—fluctuating temperature and moisture; therm. range 28 to 112°; rain, 30 to 80 inches.

*Benares*,—mean temperature, 77°; winter cool and frosty sometimes; therm. at night, 45°, but in the day, 100°; rain variable—30 to 80 inches.

*Agra*,—has a wide range of temperature; in midwinter night-frosts and hail-storms sometimes cut off the cotton crop and cover the tanks with ice; yet at noon in April, therm. reaches the height of 106° in the shade.

*Ghazeepoor*,—range in coldest months, 58 to 71°—April, 86 to 96°; May, 86 to 95°; June, 85 to 98°; July, 86 to 96°. In the *Dehra Doon*—range 37 to 101°. In the year 1841, December mean heat, 60°; June, 88°; whole year, 74°. In 1839, total fall of rain, 67 inches; of which in July, 15; August, 26.

*Cuttack* and opposite coast of Bay of Bengal,—refreshed by a sea-breeze blowing continuously from March to July.

*Berar*,—moderate climate, according to elevation.

*Madras*,—cold season of short duration in the Carnatic. Mercury in therm. higher than in Bengal, sometimes 100° Fahr. Heat tempered by the sea.

*Arcot*,—high temperature, 110° in the shade, sometimes 130° Fahr. Few sudden vicissitudes; storms infrequent.

*Salem*,—fluctuating climate—in January, 58 to 82°; March, 66 to 95°; May, 75 to 96°.

*Trichinopoly*,—has a steady high temperature, a cloudless sky, dry and close atmosphere, with much glare and intense radiation of heat.

*Vizagapatam*,—on the coast is hot, moist, and relaxing; inland equally sultry, but drier.

*Bellary* is characterised by great aridity; rain, 12 to 26 inches; therm. falls in January to 55 or 50°; thunder-storms frequent in summer months.

*Cuddapah*,—average max. temperature for several years (in the shade), 98°; minn., 65°; mean, 81°: mean temperature during monsoon, 77°; max., 89°.

*Madura*,—on the hills mild and genial in summer; therm. seldom below 50° or above 75°; in the plains, reaching 115° and even 130°.

*Travancore*,—owing to proximity of mountains, humid but not oppressive.

*Mysoor*,—table-land cool, dry, and healthy; at Bangalore (3,000 ft. high), therm. range from 56 to 82°. The monsoons which deluge the Malabar and Coromandel coasts, have their force broken by the Ghauts on either side, and genial showers preserve the Mysoorean verdure throughout the year.

*Neilgherries*,—the climate resembles that of the intertropical plateaux of America; at Ootacamund (height 7,300 ft.), mean temperature rather above that of London, but ann. range very small; not sufficient sunshine to bring the finer European fruits to perfection, but corn and vegetables thrive. Lower down the vales enjoy an Italian clime; at Coimbatoor (height 4,483 ft.), during the cold season, max., 59°; minn., 31°; in April, average 65°; May, 64° Fahr.; there are no sultry nights, a blanket being acceptable as bed-covering in all seasons. In the higher regions, the air beyond the zone of clouds and mists is clear and dry, as evidenced by the great distance within which sound is heard, and by the buoyancy of the human frame.

*Coorg* is a bracing mountain region. Daily range, 2 to 6°; ann., 50 to 80° Fahr.; annual rain, at Mercara (4,500 ft.), 119 inches; in June, about 40 inches.

*Malabar coast*,—warm but agreeable; therm. 68 to 88° Fahr.; ann. rain, 120 to 130 inches.

*Canara and the Concans*,—beneath the Ghauts are not, tropically speaking, unhealthy, except where marsh and jungle prevail, when malaria is produced.

*Bombay*,—tropical heat diminished by sea-breezes.

*Broach*,—December to March, cool; average rain, 33 inches.

In *Guzerat*, which is the hottest part of W. India, the westerly winds are burning in May, June, and July; temperature high for nine months; average fall of rain, 30 inches.

*Mahratta* country,—near the Ghauts the clouds are attracted from the Indian Ocean, and a profusion of rain falls for three or four weeks without intermission, but often not extending 30 m. to the E. or S. The *Deccan* table-land is salubrious; at Sattara, mean ann. temperature, 66°. Even in September I enjoyed the air of Poona, as a great relief from the sultry heat of Southern China. Ann. range of therm., 37 to 94°; fall of rain, light and uncertain—22 to 30 inches; among the Ghauts, 300 inches. Proceeding westward towards the Ganges, and northward through *Central India* plateau, there is a modified temperature (at Meerut, therm. falls to 32° Fahr.), with occasional hot winds, which prevail as far as Sinde and the Punjab. Sinde is dry and sultry; at Kurachee, 6 or 8 inches rain; at Hydrabad, 2 inches; at Larkhana, farther north, there was no rain for three years. Mean max. temperature of six hottest months, 98° in the shade.

*Punjab*,—more temperate than Upper Gangetic plain; from November to April, climate fine; summer heat, intense; hot winds blow with great violence, and frequent dust-storms in May and June render the air almost unbreathable. Rains commence in July; August and September, sickly months. The Great Desert to the S. of the Punjab has a comparatively low temperature; at Bickaneer, in winter, ponds are frozen over in February; but in summer the heat is very great; therm. 110 to 120° in the shade.

*Candeish* has a luxurious climate like that of Malwa.

*Upper Assam* has a delightful temperature; the heat bearable, and the cold never intolerable. Mean temperature of four hottest months, about 80°; of winter, 57°; mean ann., 67°; heavy rains, which commence in March and continue to October. The quantity which falls is unequal; at Gowhatty, it is about 80; at Chirra Poonjee, 200; and in the Cossya country, 500 to 600 inches = 50 ft. At this latter place there fell in 1850, no less than 502 inches = 42 ft.; in August, 1841, there were 264 inches = 22 ft., in five successive days—30 inches every 24 hours. [Let it be remembered that the *annual* fall in London is 27; in Edinburgh, 24; in Glasgow, 32 inches.] The eastern side of the Bay of Bengal, to the Straits of Malacca, is more genial and agreeable than that of the Coromandel coast: the greatest heat is in April; therm., at Mergui, 100°; the monsoon is mild, but violent to the northward.

*Lower Assam and Arracan* are similar to Bengal.

This rapid sketch will indicate the variety of climates in India; but it is in the loftier adjoining regions that the greatest extremes exist.

*The Himalaya and Hindoo-Koosh* slopes and valleys exhibit a very varied temperature, and corresponding diversity of products, from the loftiest forest trees to the stunted lichens and mosses, when the last trace of vegetable life disappears as effectually as it does at the Arctic or Antarctic Poles, snow being equally perpetual at an elevation of four to five miles (20,840 to 25,000 ft.) above the sea, as at the extreme northern and southern parts of our globe. On the southern, or Indo-Gangetic side of the Himalaya, which rises like a wall from the sub-Himalaya, the snow-line commences at 12,000 to 13,000 ft. on some of the spurs or buttresses; on the northern side of the same range,—table-land of Tibet 10,000 ft. above the sea; the snow-line commences at 16,000 ft., but in some places is not found at 20,000 ft. On the southern slope cultivation ceases at 10,000 ft.; but on the northern side, cultivation extends to 14,000 ft., where birch-trees flourish; the limit of furze-bushes is at 17,000 ft. Vegetation, to some extent, indicates the more or less severity of this mountain clime: the *Deodar* has its favourite abode at 7,000 to 12,000 ft.—attains a circumference of 30 ft., and of great stature, and the wood will last, exposed to the weather, for 400 years. Various species of magnificent pines have a range of 5,000 to 12,000 ft.; the arboraceous rhododendron, every branchlet terminated by a gorgeous bunch of crimson flowers, spreads at 5,000 to 8,000 ft.; the horse-chesnut and yew commence at 6,000 ft., and end at 10,000 ft.; the oak flourishes at 7,000 to 8,000 ft.; maple, at 10,000 to 11,000 ft.; ash, poplar, willow, rose, cytisus, at 12,000; elm, at 7,000 to 10,000; birch commences at 10,000, ceases on S. slope at 13,000 ft.; on N. side fine forests of this tree at 14,000 ft. Juniper met with occasionally at latter-named height; the grape attains great excellence at Koonawur, 8,000 ft., but does not ripen beyond 9,000 ft.; the currant thrives at 8,000 and 9,000 ft.; apricot, at 11,000 ft.; gooseberry and raspberry, at 10,000 to 12,000 ft.

The decrement of heat in proportion to latitude and elevation is, as yet, imperfectly ascertained. Dr. Hooker* allows one degree of Fahrenheit's thermometer for every degree of latitude and every 300 ft. of ascent above the sea; at Calcutta, in 22° 34′, the mean ann. temperature is about 79°; that of Darjeeling, in Sikhim, 27° 2′; 7,450 ft. above Calcutta, is 53°, about 26° *below* the heat of Calcutta. The decrease of temperature with elevation is much less in summer than in winter: in January, 1° = 250 ft., between 7,000 and 13,000 ft.; in July, 1° = 400 ft.; the decrement also less by day than by night. The decremental proportions of heat to height is roughly indicated by this skilful meteorologist—

| | | |
|---|---|---|
| 1° = 300 ft. | at elevation | 1,000 to 8,000 ft. |
| 1° = 320 ft. | „ | 8,000 to 10,000 ft. |
| 1° = 350 ft. | „ | 10,000 to 14,000 ft. |
| 1° = 400 ft. | „ | 14,000 to 18,000 ft. |

This must be effected by aspect and slope of elevation; by quantity of rain falling, and permeability of soil to moisture; by amount of cloud and sunshine, exposure of surface, absence of trees, undulation of the land, terrestrial radiation, and other local influences.

Within the tropics, in the northern hemisphere, the limits of perpetual congetation is 16,000 to 17,000 ft. above the sea; in lat. 30°, 14,000 ft.; in 40°, 10,000 ft.; in 50°, 6,000 ft.; in 60°, 5,000 ft.; in 70°, 1,000 ft.; and in 80° and further north, at the sea-level. In the southern hemisphere, Georgia, which is in lat. 56°, exhibits perpetual frost.

At Kumaon, winter rigour is moderated by great solar radiation, and somewhat tempered by contiguous snow-capped mountains, whence a diurnal current of air sets in as regularly as a sea-breeze on a tropical shore, and with a nearly equally invigorating effect. Snow commences to fall at the end of September, and continues until the beginning of April. During the absence of snow for five months, the mercury ranges at sunrise, 40 to 55°; at mid-day, 65 to 75° in the shade—90 to 110° Fahr. in the sun. The heat of course diminishes as height increases, except during the cold season. At Almora town, in 29° 30′, 5,400 ft. elevation, the therm. before

* In his valuable work, *Himalayan Journals*, ii., 404.

sunrise is always lowest in the valleys, and the frost more intense than on the hills of 7,000 ft. elevation, while at noon the sun is more powerful; extreme range in 24 hours, sometimes from 18 to 51° Fahr. Snow does not fall equally in every season; the natives say the greatest fall is every third year. On the Ghagor range, between Almora and the plains, snow remains so late as the month of May. At Mussoorie, 6,000 to 7,000 ft. high, the mean ann. heat is only 57° Fahr.; indeed, at 4,000 ft. hot winds cease, and vegetation assumes an European character. Annual fall of rain at Almora, 40 to 50 inches.

The northernmost part of Nepaul valley, between 27 and 28°, and elevation of 4,000 ft., has a climate somewhat similar to that of the southern parts of Europe. In winter a hoar-frost commonly covers the ground, occasionally for three or four months, freezing the standing pools and tanks, but not severe enough to arrest the flow of rivers. In summer noon, the mercury stands at 80 to 87° Fahr. The seasons are very nearly like those of Upper Hindoostan; the rains set in earlier, and from the S.E. are usually very copious, and break up about October, causing excessive inundations in some places from the mountain torrents. In a few hours, the inhabitants, by ascending the sides of the enclosing mountains, may exchange a Bengal heat for a Siberian winter.

At Darjeeling the atmosphere is relatively more humid than at Calcutta; the belt of sandy and grassy land, at the foot of the Himalaya, only 300 ft. higher than in Calcutta, and 3½° N. of that city, is, during the spring months, March and April, 6 or 7° colder; and though there is absolutely less moisture in the air, it is relatively more humid; this is reversed after the rains commence. The south wind, which brings all the moisture from the Bay of Bengal, discharges annually 60 to 80 inches of rain in traversing 200 m. of land; but the temperature is higher in advancing north-west from the Bay of Bengal: which may be caused from the absence of any great elevation in the Gangetic valley and plain, and its being walled in to the northward by the Himalaya mountains.

Elevation causes in Afghanistan a corresponding diversity of climate: at Cabool, which is considered to be very salubrious, and 6,396 ft. above the sea, the air is warmer in summer and colder in winter than that of England; and the diurnal therm. range is great, amounting to 40°. June, July, and August are the hottest; December, January, and February the coldest months,—the mercury falling several degrees below zero Fahr.; but the sun possesses sufficient power at mid-day to melt the surface of the snow, which, however, is again frozen at night. The seasons are very regular; the sky is unclouded, the air bright and clear, with scarcely any rain; in November a few showers are followed by snow; and from the middle of March till the 1st of May, there is incessant rain, which melts the snow rapidly, and causes a sudden transition from winter to summer (with but little spring), when thunder and hail-storms occur; earthquakes are not unfrequent during winter in the immediate vicinity of the lofty ranges, but are said to be unknown at Candahar. Prevailing winds, N.N.W. and W.; E. seldom; winter, calm; variable at breaking up of the season.*

*Cashmere* valley, by its elevation (5,000 ft.), has a cool climate; in winter the celebrated lake is slightly frozen over, and the ground covered with snow to the depth of 2 ft.; hottest months, July and August, therm. 80 to 85° at noon, when the air is sometimes oppressive from want of circulation.

But it is in the loftier regions that the peculiarities caused by altitude are most observable: at—

*Bussahir*,—the climate varies from that of the intertropical at Rampoor, 3,260 ft.† above the sea, to that of the region of perpetual congelation: in parts bordering on the table-land of Tartary the air is at one season characterised by aridity greater than that of the most scorching parts of the torrid zone. In October, and later in the year, when the winds blow with the greatest violence, woodwork shrinks and warps, and leather and paper curl up as if held to a fire; the human body exposed to those arid winds in a few minutes show the surface collapsed, and if long left in this condition life becomes extinct. Vegetation with difficulty struggles against their effects. Gerard found tracts exposed to them to have a most desolate and dreary aspect; not a single tree, or blade of green grass, was distinguishable for near 30 m., the ground being covered with a very prickly plant, which greatly resembled furze in its withered state. This shrub was almost black, seeming as if burnt; and the leaves were so much parched from the arid winds of Tartary, that they might be ground to powder by rubbing them between the hands. Those winds are generally as violent as hurricanes, rendering it difficult for the traveller to keep his feet. The uniform reports of the inhabitants represent the year as continual sunshine, except during March and April, when there are some showers, and a few clouds hang about the highest mountains; but a heavy fall of rain or snow is almost unknown. The excessive cold and aridity on the most elevated summits cause the snow to be there so light, loose, and powdery, that it is continually swept like smoke through the air by the tempestuous winds. The limit of perpetual congelation in Bussahir ascends to the northward.

The direct rays of the sun are extremely hot at great elevations: insomuch, that Jacquemont found the stones on the ground on the table-land of Tartary, at an elevation of 15,000 or 16,000 ft., become so hot in sunshine, as to be nearly unbearable by the hand; at an elevation of 18,000 ft., Gerard found the rays of the sun so oppressive that he was obliged to wrap his face in a blanket.

At *Bulti* or *Little Tibet* the atmosphere is very clear and dry. But though rain is almost unknown, snow falls, and lies from the depth of 1 to 2 ft. The cold in the elevated parts is intense in winter; on the high and unsheltered table-land of Deotsuh, it at that season totally precludes the existence of animal life. The heat in the lower parts in summer is considerable, the therm.‡ ranging from 70 to 90° in the shade at noon.

At *Ladakh* the climate is characterised by cold and excessive aridity. The snow-line is so usually high in Spiti and Ruphsu, at the south-eastern extremity of Ladakh, as to show the utter futility of attempting to theorise respecting the so-called isothermal lines, in the present scanty and imperfect state of our information as to the data from

* Notes of observations, 1st April, 1838, to 31st March, 1840, in Afghanistan.—(*Calcutta Jour. Nat. Hist.*

† The Choora district (valley of the Pabur, 4,800 feet) is a beautiful and fertile tract, with a delightful climate.

‡ Thornton's *Gazetteer: Afghanistan, &c.*, vol. i., p. 120.

which they should be determined. Gerard says, respecting Spiti, in lat. 32°, that the marginal limit of the snow, which, upon the sides of Chimborazo, occurs at 15,700 ft., is scarcely permanent in Thibet at 19,000, and upon the southward aspect has no well-defined boundary at 21,000 ft.; and one summit, 22,000 ft. high, was seen by him to be free of snow on the last day in August. This absence of snow probably results, in part, from the very small quantity of moisture kept suspended in the highly rarefied atmosphere, in part from the intense heat of the direct rays of the sun, the latter cause being in some degree dependent on the former. "Wherever we go," observes Gerard, "we find the sun's rays oppressive." In one instance, in the beginning of September, at an elevation of 15,500 ft., a thermometer, resting upon the rocks, marked 158°; in another, at 14,500 ft., the instrument, placed on sand, marked 130°; and in a small tent, at an elevation of 13,000 ft., it indicated 110°. These phenomena he attributed to the rarefaction and tenuity of the atmosphere, from elevation and the absence of moisture,—circumstances which allow of such immediate radiation of heat, that at the same moment there will be a difference of more than 100° between places only a few hundred yards asunder, occasioned by the one receiving, and the other being excluded, from the direct rays of the sun. At Ruphsu, at the elevation of 16,000 ft., it freezes every night, even at Midsummer; but the heat of the day so far countervails the cold of night, that the Lake Chamorereil is free from ice during the summer months. At Le, having an elevation of about 10,000 ft., frosts, with snow and sleet, commence early in September and continue until May; the therm. from the middle of December to February, ranges from 10 to 20°; even in June, the rivulets are often, at night, coated with ice. Moorcroft, during his Himalayan travels, found the therm., when exposed to the sun's rays at mid-day in July, to range from 134 to 144°. The atmosphere is in general dry in all parts of the country.

In the works of Gerard, Lloyd, Moorcroft, Vigue, Jacquemont, and Hooker, useful details are given on the meteorology of these lofty regions.

The climate of India is not inimical to the European constitution: that of Bengal and other low districts is very trying, especially to those who do not follow a strictly temperate course in all things; but there are many instances of Englishmen living for a quarter of a century at Calcutta, and on returning to England, enjoying another quarter of a century of existence, preserving, to old age, a vigorous mental and bodily frame.* In the hot and moist parts of India, abdominal diseases,—in the warm and dry, hepatic action or congestion prevail. Exposure at night, especially to malaria or the effluvia arising from intense heat and decomposing vegetable and animal matter, causes a bilious remittent (popularly called jungle fever), which operates as a poison on the human system, and becomes rapidly fatal if not counteracted by mercury or some other poison, or unless the morbific matter be expelled, and the patient have strength of frame to survive the fever.

The direct rays of a nearly vertical sun, and even those also of the moon, cause affections of the brain which are frequently fatal; and when not so, require removal to the temperate zone for their relief. The establishment of sanataria at elevated and healthy positions, has proved a great benefit to Anglo-Indians, who at Darjeeling, Simla, Landour, Mussoorie, Mount Aboo, the Neilgherries, and other places, are enabled to enjoy a European temperature and exercise,—to check the drain on the system from the cutaneous pores being always open,—to brace the fibres and tone the nerves, which become gradually relaxed by the long continuance of a high temperature. As India becomes more clear and cultivated, and facilities for locomotion by railroads and steam-boats are augmented, the health of Europeans will improve, and their progeny will derive a proportionate benefit: but it is doubtful whether there is any part of the country where a European colony would *permanently* thrive, so as to preserve for successive generations the stamina and energy of the northern races.

The diseases that prevail among the Indians vary with locality: low, continued fever is most prevalent in flat, and rheumatism in moist regions. Leprosy and other skin disorders are numerous among the poorest classes. *Elephantiasis*, or swelling of the legs; *berri-berri*, or enlargement of the spleen; torpidity of the liver, weakness of the lungs, and ophthalmia, are common to all ranks and places: goitre is found among the hill tribes; cholera and influenza sometimes decimate large masses of the people. Numerous maladies, engendered by early and excessive sensuality, exist among rich and poor, and medical or chirurgical skill are consequently everywhere in great request. The inhabitants of India, generally speaking, except in the more elevated districts, have not the robust frames or well-wearing constitutions which result from an improved social state, or from the barbarism which is as yet free from the vices and defects of an imperfect civilisation: the inhabitants of the torrid zone do not enjoy a longevity equal to those who dwell in the temperate climates of the earth.

* Mr. W. C. Blaquiere, for a long period police magistrate at Calcutta, died there in 1854, æt. 95: he arrived at Bengal in 1774.

Geology.—It will require many more years of scientific research before an accurate geological map can be laid down for India.* Immense tracts covered with impenetrable forests,—the few Europeans in the country occupied with military and civil governmental duties,—the lassitude of mind and body which, sooner or later, oppresses the most energetic,—and the malaria which inevitably destroys those who attempt to investigate the crust of the earth, overrun with jungle, or immersed in swamp;—these, and other obstacles render the prosecution of this science a matter of extreme difficulty. All that can be attempted in a work of this nature is to collate the best known data, and arrange them in outline, for reference and future systematic exposition.†

Rereprcsentatives of all the series found in Europe and other parts of the world, are traceable in India. Mr. Carter has industriously noted the observations of various investigators; and the following summary is partly abstracted from his compilation:—

Older Metamorphic Strata.—*Gneiss, Mica Schiste, Chlorite Schiste, Hornblende Schiste, Quartz Rock, Micaceous Slate, Talcose Slate, Clay Slate, Granular Limestone.*

*Gneiss.*—Most general and abundant,—occurring in different parts of the Himalaya; Oodeypoor; near Baroda; Zillah Bahar; Rajmahal hills; Phoonda Ghaut; Northern Circars; and more or less throughout "peninsula" (? Deccan) to the Palghaut, and probably to Cape Comorin: it is frequently veined by granite, contains in most places specular iron ore: beds of garnets common everywhere; corundum in southern India, and beryl in Mysoor. Composition varied in texture, compactness, and with more or less mica; colour—speckled, black, brown, reddish gray to white; sometimes tinted green where chlorite replaces mica: when very fine-grained and decomposing, gneiss bears a close resemblance to fine-grained sandstone.

*Mica Schiste.*—Southern Mahratta country, and western extremities of Vindhya range, passes into micaceous slate at the Phoonda Ghaut: veined with quartz, but no granite: being associated with gneiss and hornblende schistes, they pass into each other.

*Chlorite Schiste.*—Southern Mahratta country: it also contains garnets.

*Hornblende Schiste*, forms the sides of the Neilgherries, where it is from five to seven miles in breadth: garnets found in it. Southern Mahratta country, Salem; and often passes into mica schiste on the Malabar coast.

*Quartz Rock.*—Hills between Delhi and Alwur, and between Ajmere and Oodeypoor; mountains around Deybur Lake, Chittoor, and at the western part of the Vindhya range, with mica slate; southern Mahratta country; more or less in the granitic plains of Hydrabad, and in the *droogs* of Mysoor. The rock is compact and granular in the Ajmere mountains; and of a red, violet, gray, or brown colour; brilliantly white in the Mahratta country. Mica is frequently disseminated throughout the rock in large masses; talc and chlorite, occasionally.

*Micaceous Slate and Chlorite Slate.*—Both at the Phoonda Ghaut; and the latter in the Mahratta country. The micaceous occurs in the Indo-Gangetic chain, Koonawur; and in the Soolumbur range, Oodeypoor.

*Clay Slate*, appears to be of great thickness, and considerable extent, viz., from the Arravulli range, the lower part of which is composed of this formation; thence to Oodeypoor, *viâ* the Soolumbur range, across the Durgawud valley to Malwa, on the Kistnah; southern Mahratta country, Nellore; and in the Eastern Ghauts at Jungamanipenta, a ferruginous clay-slate overlies the trap at Mahabulishwar. In the Arravulli it is massive, compact, and of a dark blue colour. The Soolumbur range is almost entirely composed of this and chlorite slates. Micaceous passes into clay-slate at the Phoonda, and, farther south, the Saltoor passes (Western Ghauts.) This also occurs at the Carrackpoor hills (Bahar), where the clay-slate is about twenty miles wide, and extends in the direction of the strata.‡

Plutonic Rocks.—*Granite, Diorite or Greenstone.*

*Granite.*—Himalaya; Ajmere and around Jeypoor, traversing the mountains in veins and dykes; the Arravulli range consists chiefly of granite, resting on slate; Mount Aboo; from Balmeer across the sands to Nuggur Parkur; the Gir; Girnar; between Oodeypoor and Malwa, are all varieties: it extends more or less southward to the Nerbudda; on that river between Mundela and Amarkantak, Jubbulpoor, Kalleenjur, Zillah Bahar, Carrackpoor hills; in Bhagulpore and Monghyr districts; near Baitool; Nagpore territory; Cuttack; Orissa; Northern Circars; Hydrabad; between the Kistnah and Godavery; Gooty; Neilgherries; Malabar coast at Vingorla; Coromandel; between Madras and Pondicherry; ending at Cape Comorin. The granitic rocks vary in structure and composition, as they do in colour: thus there are *syenitic*, *pegmatitic*, and *protogenic.* It is gray at Ramteak in Nagpoor, red generally in

* The late eminent geologist, J. B. Greenough, has made an excellent beginning by his large map on this subject, and by the voluminous materials he collected.

† See a valuable *Summary of the Geology of India, between the Ganges, the Indus, and Cape Comorin;* by H. J. Carter, Asst. Surg. Bombay Establishment, Aug., 1853: reprinted from Journal of Bombay British Asiatic Society, p. 156.

‡ In the neighbourhood of Calcutta a series of boring experiments to find water, were carried on at intervals between 1804 and 1833; the results were—artificial soil at surface; next, as follows: a light blue or gray-coloured sandy clay, becoming gradually darker from decayed vegetable matter, until it passes at 30 ft. deep into a 2 ft. stratum of black peat, apparently formed by the *debris* of Sunderbund vegetation, which was once the delta of the Ganges; below the peat a black clay, and in this and the gray clay immediately above the peat, logs and branches of yellow and red wood, found in a more or less decayed state. In one instance only bones were discovered, at 28 ft. deep. Under blue clays, at 50 to 70 ft. deep, *kunkur* and *bagiri* (apparently small land shells, as seen in Upper India.) At 70 ft. a seam of loose reddish sand,—75 to 125 ft. beds of yellow clay predominate, frequently stiff and pure like potter's clay, but generally mixed with sand and mica: horizontal strata of kunkur pass through it, resembling exactly those found at Midnapoor. Below 128 ft. a more sandy yellow clay prevails, which gradually changes to a gray, loose sand, becoming coarser in quality to the lowest depth yet reached (176 ft.), where it contains angular fragments, as large as peas, of quartz and felspar.

the Deccan, but at Vencatigherry (Mysoor), and at Vingorla, gray: in the Neilgherries it is syenitic.

*Greenstone.*—Hazarecbagh, Mahratta country, Mysoor, Nellore, Chinglepnt, Madras, Trichinopoly, Salem, in the granitic plains of Hydrabad; and extensively throughout Southern India. In the Deccan the dykes may be traced continuously for twenty miles; about Hydrabad they are from 100 to 300 feet broad; about four miles from Dhonee, between Gooty and Kurnool, there is one 150 feet high, and 200 feet broad, passing through a range of sandstone and limestone mountains.

SILURIAN ROCKS.—*Greywacke.*—Ghiddore, Rajmahal hills; Kumaon. It is a quartzoze sandstone; yellow colour, resinous lustre, and compact splintery fracture.

*Transition or Cambrian Gneiss*, is of great extent in Bhagulpore district, composing two-thirds of the country between the Curruckpore and Rajmahal hills, and the greater portion of the southern ridges of the latter group. It consists of quartz, more or less, hornblende, felspar, mica, and garnet pebbles.

OOLITIC.—*Limestone.*—Cutch; near Neemuch, Malwa; Bundelcund; on the river Sone; Firozabad, on the Bheema; Kuladgee, in the southern Mahratta country; on the Kistnah; and as far south as Cuddapah. Though its principal characters are its uniform lithographic texture, solidity, conchoidal smooth fracture, and hardness,—dendritic surface, smoky gray colour, passing into dark smoky blue; and parallel thin stratification,—it differs when departing from its general composition, just as the shales differ which interlaminate it, the coal strata, and the sandstone, as being more or less argillaceous, bituminous, or quartziferous; of different degrees of hardness, coarseness, and friability of structure; and of all kinds of colours, streaked and variegated. It is occasionally veined, and interlined with jasper and light-coloured cherts, which, near Cuddapah, give it a rough appearance; also contains drusy cavities, calcedonies, and cornelian, north of Nagpoor: in the bed of the Nerbudda between Lamaita and Beragurh, near Jubbulpoor, of a snow-white colour, and traversed by chlorite schiste. It is frequently denuded of its overlying sandstone and shales in Southern India, and in this state is not uncommonly covered by trap, as near Ferozabad on the Bheema.

Thickness, 310 feet near Kurnool; 10 to 30 feet on the Bheema, with strata from 2 inches to 2 feet thick. In the part of the Himalaya examined by Captain Strachey, the secondary limestones and shales were several thousand feet in thickness, the upper portion being in some places almost made up of fragments of shells.

If the white crystalline marble generally of India is allowed to be metamorphic strata, this limestone exists in the Girnar rock of Kattywar; the lithographic form in Cutch, and between Neemuch and Chittore; the white marble about Oodeypoor, and northwards in the neighbourhood of Nusseerabad, Jeypoor, Bessona, and Alwar; a narrow strip about 150 m. long in Bundelcund; again about Bidjyghur and Rhotasghur on the Sone; white marble in the bed of the Nerbudda, near Jubbulpoor; in the hills north-east of Nagpoor; near the junction of the Godavery and Prenheta rivers; thence along the Godavery more or less to Rajahmundry; Sholapoor district; on the Bheema; of every variety of colour, and greatly disturbed and broken up about Kaludgee, in the southern Mahratta country; along the Kistnah, from Kurnool to Amarawattee; and more or less over the triangular area formed by the latter place, Gooty, and the Tripetty hills. Chunam, an argillaceous limestone, used for building in Bengal, Bahar, Benares, &c.;* occurs in nodules in the alluvium, which, at Calcutta, is 500 to 600 feet thick. Near Benares, it contains fragments of freshwater shells. South of Madras, a dark clay abounds in marine shells, used in preference for lime-burning to those on the beach, as beeing freer from salt.

*Sandstone,*—appears to be composed of very fine grains of quartz, and more or less mica, united together by an argillaceous material. It exists in Cutch; in the Panna range, Bundelcund; the Kymore hills; Ceded Districts; in lat 18°, 15 m. west of the Godavery; on the banks of the Kistnah; plains of the Carnatic, and the districts watered by the Pennar river. It is present in the sub-Himalaya range, and in the Rajmahal hills. All the towns on the Jumna, from Delhi to Allahabad, appear to be built of this sandstone. The plains of Beekaneer, Joudpore, and Jessulmere, are covered with the loose sand of this formation. It borders on the northern and western sides of the great trappean tract of Malwa, and forms the north-eastern boundary of the Western India volcanic district.

Its thickness varies, either from original inequality, or subsequent denudation. Its greatest depth, at present known, is in the eastern part of the Kymore range, where it is 700 feet at Bidjighur; and 1,300 feet at Rhotasghur; at the scarps of the waterfalls over the Panna range, it does not exceed 360 or 400 feet; from 300 to 400 feet is its thickness near Ryelcherroo and Sundrogam, in the Ceded Districts. Its greatest height above the sea is on the banks of the Kistnah, 3,000 feet. Organic remains are very abundant in this formation. It has been ascertained that the great trap deposit of the Western Ghauts, rests on a sandstone containing vegetable remains, chiefly ferns.

VOLCANIC ROCKS.†—*Trap.*—The largest tract is on the western side of India, and extends continuously from the basin of the Malpurba to Neemuch in Malwa; and from Balsar, about 20 m. south of the mouth of the Taptee, to Nagpoor. This is probably the most remarkable trap-formation existing on

* The British Residency at Hydrabad (Deccan) is a specimen; the Corinthian columns, &c., being executed in white chunam.

† Volcanic fires are said by the natives to exist among the loftier peaks of the Hindoo-Koosh and the Himalayan ranges, but earthquakes are of rare occurrence. A severe one was, however, experienced throughout a large extent of country on 26th August, 1833,—vibration from N.E. to S.W., with three principal shocks: first at 6·30 P.M.; second, 11·30 P.M.; and third, at five minutes to midnight. It was most severely felt at and near Katmandoo, where about 320 persons perished: the trembling of the earth commenced gradually, and then travelled with the rapidity of lightning towards the westward; it increased in violence until the houses seemed shaken from their foundations,—large-sized trees bent in all directions; the earth heaved fearfully; and while the air was perfectly calm, an awful noise burst forth as if from an hundred cannon. Probably in India, as in Australia, subterranean igneous action, which was formerly very violent, is now almost quiescent, or finds its vent through mighty chimneys at a height of four or five miles above the sea. The Lunar Lake, 40 m. from Saulna, is a vast crater 500 ft. deep, and nearly 5 m. round the margin; its waters are green and bitter, supersaturated with alkaline carbonate, and containing silex and some iron in solution: the mud is black, and abounds with sulphuretted hydrogen; the water is, nevertheless, pure and void of smell.

the surface of the globe; its breadth is about 335 m. N. to S.; length, about 350 m. E. to W.; and covers an area of from 200,000 to 250,000 sq. m.* Another portion extends from Jubbulpoor to Amarkantak, thence south-westerly towards Nagpoor. It constitutes the core of the Western Ghauts, and predominates in the Mahadeo and Sautpoora mountains.

Its two grand geological features along the Ghauts, where it has attained the highest elevation, are flat summits and regular stratification. Fourteen beds have been numbered in Malwa, the lowest and largest of which is 300 feet thick. These are equally numerous, if not more so, along the Ghauts, but the scarps are of much greater magnitude. Besides its stratification, it is in many places columnar; as in the beds of the Nerbudda and Chumbul; and the hill-fort of Singhur presents a surface of pentagonal divisions.

Wherever the effusions exist to any great extent, they appear to be composed of *laterite* above, then *basalt*, and afterwards *trappite* and *amygdaloid*.

*Basalt.*—There are two kinds of this rock; a dark blue-black, and a brown-black. Both are semi-crystalline. Their structure is massive, stratified, columnar, or prismoidal. Dark blue is the basalt of Bombay Island, brown-black that of the Deccan.

To this general description, I may add what I have been enabled to glean of the specific structure of some of the principal positions:—

*Himalayas.*—Formations primary: the first strata, which is towards the plain, consists of limestone, lying on clay-slate, and crowned by slate, greywacke, or sandstone. Beyond the limestone tract, gneiss, clay-slate, and other schistose rocks occur; granite arises in the mountains near the snowy ranges. The peaks are generally composed of schistose rocks, but veined by granite to a great elevation. Kamet, however, is an exception, appearing to consist of granite alone. Greenstone dykes rise through and intersect the regular rocks. Strata fractured in all directions; slate, as if crushed, and the limestone broken into masses. The soil is principally accumulated on the northern side.

The formation of the Indo-Gangetic chain, in Koonawur, is mostly gneiss and mica-slate; in some places, pure mica. On the left bank of the Sutlej, granite prevails, forming the Raldang peaks. Further north, it becomes largely intermixed with mica-slate; to the north-east changes into secondary limestone, and schistose rocks, abounding in marine exuviæ.† In Kumaon, the Himalayas are composed of crystalline gneiss, veined by granite; the range forming the north-eastern boundary, is believed to be of recent formation. The mountainous tract south of the principal chain in Nepaul consists of limestone, hornstone, and conglomerate. The Sewalik (the most southerly and lowest range of the Himalayan system) is of alluvial formation, consisting of beds of clay, sandstone with mica, conglomerate cemented by calcareous matter, gravel, and rolled stones of various rocks. The supposition is, that it is the *debris* of the Himalaya, subsequently upheaved by an earthquake. The geology of the Sewalik is characterised by the occurrence of quantities of fossil remains.

*Punjab.*—Near the north-east frontier, in the vicinity of the Himalaya, is an extensive tract of rocks and deposits of recent formation; limestone, sandstone, gypsum, argillaceous slate; occasionally veins of quartz.

*The Salt-range.*—Greywacke, limestone, sandstone, and red tenaceous clay, with deposits of chloride of sodium, or common salt.

*The Sufied-Koh* is *primary*, consisting of granite, quartz, mica, gneiss, slate, and primary limestone.

*The Suliman* mountains are of *recent* formations, principally sandstone and secondary limestone, abounding in marine exuviæ.

*Central India.*—Arravulli range, generally primitive, consisting of granite, quartz, and gneiss. Formation along banks of upper course of Nerbudda, trappean; lower down, at Jubbulpoor, granitic; at Bhera Ghur, channel contracted between *white* cliffs of magnesian limestone; at the junction of the Towah, there is a ledge of *black* limestone: at, and near Kal Bhyru, slate of various sorts; basaltic rocks scattered over channel. Ranges enclosing Nemaur, banks of rivers, and eminences in the valley, basaltic. Saugor and Nerbudda territory; eastern part, towards Amarkantak, generally sandstone; from here it extends westward, forming the table-land bounding Nerbudda valley on the north, and is intermixed with marl, slate, and limestone. The volcanic tract commences about lon. 79°, and extends to about the town of Saugor, which is situate on its highest part. This (trap), with that of sandstone, further east, may be considered to belong to the Vindhya; and the former to the Mahadeo and Sautpoora ranges. In some places, primitive rocks appear through the overlying bed. The Bindyachal hills are of horizontally-stratified sandstone; Panna hills, sandstone, intermixed with schiste and quartz; and, to the west, overlaid by limestone.

*Western Ghauts.*—The great core is of primary formation, inclosed by alternating strata of more recent origin. These have been broken up by prodigious outbursts of volcanic rocks; and from Mahabulishwar northward, the overlying rock is exclusively of the trap formation; behind Malabar they are of primitive trap, in many places overlaid by immense masses of laterite, or iron-clay. The Vurragherry or Pulnai hills (Madura) are gneiss, stratified with quartz; in some places precipices of granite.

*Nagpoor.*—North-western and western part, vol-

* The rock in which the Ellora caves are excavated is said to be a basaltic trap, which, from its green tinge and its different stages from hardness to disintegration, is supposed by the natives to be full of vegetable matter, in a greater or less advance to putrefaction: the crumbling rock affords a natural green colour, which is ground up and employed in painting on wet chunam (lime plaster.)

† Dr. Gerard found some extensive tracts of shell formation 15,000 ft. above the sea. The principal shells comprised cockles, mussels, and pearl-fish; nummulites and long cylindrical productions. These shells, of which many were converted into carb. of lime, some crystallised like marble, were lying upon the high land in a bed of granite, and pulverised state: the adjacent rocks composed of shell limestone, the large blocks composed of a multitude of shells of different sizes, imbedded in a mass of calcareous tufa. Four classes of shell formation were distinguished; one in particular, a freshwater bivalve, resembling the *unio*, which exists in great abundance at the foot of the lower hills and throughout the Dooab. In the Neermal hills, N. of the Godavery, on the road from Hydrabad to Nagpoor, many very perfect fossil shells, mostly bivalves, and evidently marine, have been discovered imbedded in a volcanic rock, together with the head and vertebræ of a fish: the formations around rest everywhere on granite; and there are several hot-springs holding lime in solution. Univalves and bivalves, particularly buccinum, ammonites, and mussels, abound in Malwa.

canic, principally basalt and trap. This terminates at the city of Nagpoor, and the primitive, mostly granite and gneiss, rises to the surface.

*Mysoor.*—The *droogs*, huge isolated rocks, scattered over the surface; vary in elevation from 1,000 to 1,500 feet; bases seldom exceeding 2 m. in circumference; generally composed of granite, gneiss, quartz, and hornblende; in many places overlaid by laterite.

SOIL,—mainly determined by the geological character of each district, except in the deltas, or on the banks of rivers, as in the Punjab, where an alluvium is accumulated. The land in Lower Bengal is of inexhaustible fertility, owing partly to the various salts and earthy limestone with which the deposits from the numerous rivers are continually impregnated: it is generally of a light sandy appearance. The alluvium of Scinde is a stiff clay; also that of Tanjore, Sumbulpore, and Cuttack, by the disintegration of granitic rocks. A nitrous (saltpetre) soil is general in Bahar; in the vicinity of Mirzapoor town, it is strongly impregnated with saline particles; and at many places in Vizagapatam. The *regur*, or cotton ground, which extends over a large part of Central India, and of the Deccan, is supposed to be formed by a disintegration of trap rocks; it slowly absorbs,* and long retains moisture; and it has produced, in yearly succession, for centuries, the most exhausting crops. It spreads over the table-lands of the Ceded Districts and Mysoor, flanks the Neilgherry and Salem hills, and pervades the Deccan, but has not been observed in the Concans. It is a fine, black, argillaceous mould, containing, in its lower parts, nodules, and pebbly alluvium. *Kunkur* (a calcareous conglomerate)† fills up the cavities and fissures of the beds beneath it; and angular fragments of the neighbouring rocks are scattered over its surface. It contains no fossils. In some parts it is from 20 to 40 feet thick. *Kunkur* is common in the north-western provinces, the rocks often advancing into the channel of the Jumna, and obstructing the navigation. In the western part of Muttra district, it is mixed with sand: in Oude, some patches of this rock, which undergo abrasion very slowly, stand 70 or 80 feet above the neighbouring country, which, consisting of softer materials, has been washed away by the agency of water. Its depth, in the eastern part of Meerut district, is from one to 20 feet. In the Dooab, between the Ganges and Jumna, and in many parts of the N.W. provinces, there is a light rich loam, which produces excellent wheat; at Ghazeepore, a light clay, with more or less sand, is favourable for sugar and for roses. As the Ganges is ascended before reaching Ghazeepore, the soil becomes more granitic, and is then succeeded by a gravel of burnt clay, argite, and cinders, resembling what is seen in basaltic countries. Assam, which has been found so well adapted for the culture of tea, has for the most part a black loam reposing on a gray, sandy clay; in some places the surface is of a light yellow clayey texture. The soil usually found in the vicinity of basaltic mountains is of a black colour, mixed with sand. Disintegrated granite, where felspar predominates, yields much clay.

A sandy soil exists in the centres of the *Dooabs*, of the Punjab; more or less in Paniput, Rhotuck, and Hurriana districts: Jeypoor, Machery, and Rajpootana; and in some parts of Scinde; in Mysoor, a brown and rather sandy earth prevails; Trichinopoly is arid and sandy; and near Tavoy town, on the E. side of the Bay of Bengal, there is a large plain, covered with sand.

The soil of Nagpoor, in some tracts, is a black, heavy loam, loaded with vegetable matter; red loam is found in Salem and in Mergui.

Tinnevelly has been found well suited for the cotton plant, and the substance in which it delights looks like a mixture of lime, rubbish, and yellowish brickdust, intermixed with nodules of *Kunkur*.‡ A chymical analysis of three of the best cotton soils in these districts, gives the following result:§—

| Cotton Soils. | Vegetable matter. | Saline and Extractive. | Iron. | | | Carb. lime. | Magnesia. | Alumina. | Silex. | Water and loss. | Remarks. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | Protox. | Deutox. | Tritox. | | | | | | |
| Bundelcund | 2·00 | 0·33 | — | 7·75 | — | 11·90 | trace | 3·10 | 74·0 | 1·00 | No peat or lignite; nothing soluble in cold water; silex in fine powder; kunkur in the gravel. |
| Coimbatore | 2·30 | traces | 4·00 | — | — | 7·50 | trace | 2·80 | 82·80 | 0·60 | Gravel, mostly silex, with some felspar, but no kunkur. |
| Tinnevelly . | 0·15 | 0·20. | — | — | 2·88 | 19·50 | 0·15 | 2·00 | 74·00 | 1·12 | Gravel, almost wholly kunkur; some carb. iron; half the soil of gravel. |

Guzerat is generally termed the Garden of Western India. With the exception of Kattywar, and to the eastward of Broach, it is one extensive plain, comprising many different soils; the chief varieties being the black or cotton soil, and the *gorat*, or light grain-producing soil.|| The former is chiefly confined to Broach and part of Surat N. of the Taptee; the latter prevails throughout Baroda, Kaira, and part

* All the soils of India have, in general, a powerful absorbing quality; hence their fertile properties.

† *Kunkur.*—A calcareous concretion, stratified and in mammillated masses of all sizes, which contains 50 to 80 per cent. of carbonate of lime, some magnesia, iron, and alumina: these nodules are interspersed in large quantities throughout extensive tracts of the alluvial and secondary formations, and are ascribed to the action of calcareous springs, which are of frequent occurrence.

‡ It is curious to note, in different countries, how plants seem to vary in their feeding: thus, at Singapore, the best cotton soil *apparently* consists of large coarse grains of white sand, mixed with something like rough charcoal-dust, and with fragments of vegetables and mosses of all sorts. A somewhat similar substance, mingled with shells and decayed vegetable matter, is the favourite *habitat* of the Sea Island cotton of Georgia, U. S.

§ See an interesting *Essay on the Agriculture of Hindoostan*, by G. W. Johnston.

|| *See* Mackay's valuable *Report on Western India*, p. 41.

of Ahmedabad, becoming more mixed with sand to the northward; black soil abounds to the westward of the Gulf, and in many of the Kattywar valleys. The numerous vegetable products of India attest the variety of soils which exist there.

MINERALS.—Various metals have been produced and wrought in India from the earliest ages: the geological character of the different districts indicates their presence. So far as we have yet ascertained, their distribution is as follows:—

*Iron.*—Ladakh.—Mines in the north-eastern part of the Punjab,* and in almost every part of Kumaon, where the requisite smelting processes are performed; though on a small scale, and in a rude and inefficient manner. Mairwarra; in veins, and of good quality, believed to be inexhaustible. Rajmahal; in gneiss. Lalgang, 16 miles south-west of Mirzapoor city. Kuppudgode hills; in schistes, quartz, and gneiss: on the north-east side, one stratum of iron, 60 feet thick. Ramghur—hills abounding in iron, though not of the best quality. Hazareebagh, in gneiss—flinty brown colour, pitchy lustre, and splintery fracture; 20 feet thick. Various parts of Palamow district; at Singra in inexhaustible quantities. Eastern part of Nagpoor territory. Mine of good quality at Tendukhera, near Jubbulpoor (were the navigation of the Nerbudda available, this would prove a most useful article of export for railways.) Western extremity of Vindhya; in gneiss. Southern Mahratta country; in quartz: micaceous and magnetic iron-ore occur in the same district; in clay-slate. In all the mountains of the Western Ghauts; in Malabar; in veins, beds, or masses, in the laterite (here extensively smelted.) Salem, southern part (yields 60 per cent. of the metal fit for castings.) Nellore district. In many places in Masulipatam. Rajahmundry; in sandstone hills. Vizagapatam. Abundant in many parts of Orissa. Tenasserim provinces; occurs in beds, veins, and in rocks. Between the Saluen and Gyne rivers, it is found in sandstone hills. Most abundant between Ye and Tavoy, approximating the sea-coast; the best is at a short distance north of Tavoy town: it is there in two forms—common magnetic iron-ore; and massive, in granular concretions, crystallized, splendent, metallic, highly magnetic, and with polarity. The ore would furnish from 74 to 80 per cent. raw iron. In various places the process of smelting is rudely performed by the natives, but they produce a metal which will bear comparison with the best Swedish or British iron.†

*Tin.*—Oodeypoor,—mines productive. On the banks of the Barakur, near Palamow; in gneiss. Tenasserim provinces. Tavoy, rich in tin-ore; generally found at the foot of mountains, or in hills: Pakshan river; soil in which the grains are buried, yields 8 or 10 feet of metal; at Tavoy, 7 feet: of superior quality in the vicinity of Mergui town.

*Lead.*—Ladakh. Koonawur. Ajmere; in quartz rocks. Mairwarra. Eastern part of Nagpoor. In the vicinity of Hazareebagh. Eastern Ghauts at Jungamanipenta; in clay-slate—mines here. Amherst province. Fine granular galena obtained in clay-slate, and clay limestone on the Touser, near the Dehra-Doon.

*Copper.*—Ladakh. Koonawur, in the valley of the Pabur. Kumaon, near Pokree; but these mines are almost inaccessible, and the vicinity affords no adequate supply of fuel for smelting: others at Dohnpur,‡ Dhobri, Gangoli, Sira, Khori, and Shor Gurang. Mairwarra. Oodeypoor; abundant,—it supplies the currency. Southern Mahratta country, in quartz; also in a talcose form. Vencatigherry, North Arcot. Nellore district.§ Sullivan's and Callagkiank Islands, in the Mergui Archipelago. This metal is most probably extensively distributed, and of a rich quality.

*Silver.*—In the tin mines of Oodeypoor. In the lead mine, near Hazareebagh, and other places.

*Gold.*—Sands of Shy-yok, Tibet. Ditto Chenab, Huroo, and Swan rivers, Punjab. Ditto Aluknunda, Kumaon. Throughout the tract of country W. of the Neilgherries, amid the rivers and watercourses, draining 2,000 sq. m., this coveted metal abounds; even the river stones, when pounded, yield a rich product: it is usually obtained in small nuggets. In the iron sand of the streams running from the Kuppudgode hills, and from the adjoining Saltoor range. Sumbulpoor; in the detrius of rocks. In moderate quantities in several places in the eastern part of Nagpoor. Many of the streams descending from the Ghauts into Malabar; and in Wynaad. Gold-dust in Mysoor.‖ In the Assam rivers it is plentiful: near Gowhatty 1,000 men used to be employed in collecting ore for the state. Various parts of Tenasserim provinces, but in small quantities. The geological structure of India indicates an abundance of the precious metals.

*Coal.*—The carboniferous deposits of the *oolitic series* in Bengal, west of the Ganges and Hooghly, consist of coal, shale, and sandstone, but no limestone, and they appear chiefly to occupy the depressions of the granitic and metamorphic rocks which form this part of India, becoming exposed in the banks or beds of watercourses or rivers which have passed through them, or in escarpments which have

* Colonel Steinbach says that the mineral wealth of the Punjab is considerable; that mines of gold, copper, iron, plumbago, and lead abound, and that "properly worked they would yield an enormous revenue."

† The natives of Cutch make steel chain-armour, sabres, and various sharp edge tools from their iron; the horse-shoes are excellent—the metal being more malleable, and not so likely to break as the English iron.

‡ The gray ore found in Dohnpur affords 30 to 50 per cent. of copper; it is associated with malachite, and contained in a compact red-coloured dolomite: hence mining operations can be carried on without timbering or masonry.

§ Mines discovered by Dr. Heyne, near Wangapadu. "A footpath, paved with stones, led up the hill to the place which was shown me as one of the mines. It is situated two-thirds up the hill, and might be about 400 ft. above the village (Wangapadu.) An open gallery cut into the rock, demonstrated that it had been formerly worked; and as the stones, which lay in abundance near it, were all tinged or overlaid with mountain green, there could be no doubt that the ore extracted had been copper."—(Heyne, *Tracts on India*, p. 112.)

‖ In excavating the disintegrating granite in the vicinity of Bangalore, to ascertain the extent to which the decomposing influence of the atmosphere will affect the solid rock (viz., 30 to 35 ft.), the contents of soil were frequently auriferous. In blasting sienite at Chinapatam, 40 m. from Bangalore, on the road to Seringapatam, Lieutenant Baird Smith, B.E., observed considerable quantities of gold disseminated in small particles over the fractured surfaces. At Wynaad this metal was obtained from rich yellow earth in sufficient quantity to employ a number of labourers and to yield some returo.

been produced by upheaval of the rocks on which they were deposited. The coal occurs in strata from an inch or less to 9 or 10 feet thickness, interstratified with shale and sandstone; the whole possessing a dark black or blue colour, of a greater or less intensity. At Burdwan its character is slaty: the genera of plants are partly English, some Australian, some peculiar. The depth at the Curhurbalee field, situated 60 miles south of the Ganges, near Surajgurrah, is from 50 to 100 feet. Proceeding westerly, towards Palamow district, which contains many valuable and extensive fields, and where several shafts have been sunk, it has been seen about 16 m. from Chergerh, in Singrowla; at the confluence of the Sone and Tipan, about 30 m. E. from Sohajpoor. Near Jeria, in Pachete district. Hills in Ramghur, abounding in coal. Jubbulpoor, 30 m. S. from Hoosungabad; in Shahpoor in the same neighbourhood; and abundantly along the valley of the Nerbudda. Traces of it are said to exist in the diamond sandstone north-west of Nagpoor, and it has been found in the Mahadeo mountains. In the Punjab, at Mukkud, on the left bank of the Indus, and in the localities of Joa, Meealee, and Nummul. The extremes of this coal formation, so far as have yet been discovered in India, are:—the confluence of the Godavery and Prenheta in the south, in lat. 19°, and the Salt range in about 33° N.; Cutch in the west, and Burdwan in the east; and detached in Silhet, Pegu (recently found of excellent quality), and the Tenasserim provinces (plentiful, and possessing good properties.) There are many other places, no doubt, in the country between Bengal and Berar, where this valuable mineral exists; traces of it have been observed in Orissa, but it has not yet been found available for use; it is not improbable that it extends across the delta of the Ganges to Silhet, distant 300 miles. It also occurs extensively in the grits bounding the southern slope of the Himalaya: it has been questioned whether this is the older coal, or only lignite associated with nagelflue,—where the Teesta issues from the plain, its strata is highly inclined, and it bears all the other characters of the older formation. Analysis of Indian coal found in different parts, and near the surface, gave the following results:—Chirra Poonjee, slaty kind: specific gravity, 1·497; containing volatile matter, 36; carbon, 41; and a copious white ash, 23 = 100. Nerbudda (near Fatehpoor), near the surface,—volatile matter, 10·5; water, 3·5; charcoal, 20; earthy residue (red), 64 = 100. Cossyah hills: specific gravity, 1·275; volatile matter or gas, 38·5; carbon or coke, 60·7; earthy impurities, 0·8 = 100 —(ash very small.) Hurdwar: specific gravity, 1·968; volatile matter, 35·4; carbon, 50; ferruginous ash, 14·6 = 100. Arracan: specific gravity, 1·308; volatile matter, 66·4; carbon, 33; ash, 0·6 = 100. Cutch: charcoal, 70; bitumen, 20; sulphur, 5; iron, 3; calcareous earths, 2.

*Sulphur.*—Mouths of Godavery, and at Condapilly, on the Kistnah. Sulphate of alumina obtained from the aluminous rocks of Nepaul; used by the natives to cure fresh wounds or bruises: yields on analysis—sulphate of alumina, 95; peroxyde of iron, 3; silex, 1: loss, 1. Sulphate of iron is procured in the Behar hills, and used by the Patna dyers: it yields sulphate of iron, 39; peroxyde of iron, 36; magnesia, 23: loss, 2 = 100.

*Diamonds.*—Sumbulpoor has been celebrated for the finest diamonds in the world; they are found in the bed of the Mahanuddy. Mines were formerly worked at Wyraghur, Nagpoor; Malavilly, in Masulipatam (near Ellore); and at Panna, in Bundlecund. Mr. H. W. Voysey described, in 1824, the diamond mines of the *Nulla Mulla* mountains, north of the Kistnah,* which were formerly extensively worked.†

*Rubies.*—Sumbulpoor; in the detrius of rocks.

*Pearls.*—Gulf of Manaar, near Cape Comorin, and on the coast of many of the islands in the Mergui Archipelago.

Muriat of soda (common salt) is found in rock and liquid form at various places. A salt lake, 20 m. long by $1\frac{1}{2}$ broad, is situated in lat. 26° 53′, long. 74° 57′; it supplies a great portion of the neighbouring country with salt after the drains are dried up. A salt lake in Berar contains in 100 parts,—muriat of soda, 20; muriat of lime, 10; muriat of magnesia, 6. Towards the sources of the Indus, salt lakes exist at 16,000 ft. above the sea. There are extensive salt mines in the *Salt range* of the Punjab. Natron and soda lakes are said to exist in the Himalaya.

Cornelian is found and worked in different places: the principal mines are situated at the foot of the western extremity of the Rajpeepla hills, close to the town of Ruttunpoor; the soil in which the cornelians are imbedded consists chiefly of quartz sand—reddened by iron, and a little clay. Agates abound in Western India: at one part of Cutch the sides of the hills (of amygdaloid)) are covered with heaps of rock crystal, as if cart loads had been purposely thrown there, and in many parts of the great trappean district the surface is strewed with a profusion of agatoid flints, onyx, hollow spheroids of quartz, crystals, and zoolitic minerals. There are evidences of several extinct volcanoes in Cutch.

This is but an imperfect sketch of the minerals of India: doubtless, there are many more places where metals exist; but during the anarchy and warfare which prevailed prior to British supremacy, the very knowledge of their locality has been lost. At no distant day this subterranean wealth will be developed; and probably, when the gold-fields of Australia are exhausted, those of India may be profitably worked.

* These mountains are bounded on all sides by granite, that everywhere appears to pass under it, and to form its basis: some detached portions have only the upper third of their summits of sandstone and quartz, the basis or remaining two-thirds being of granite. Deep ravines are not infrequent. The diamond is procured only in the sandstone breccia, which is found under a compact rock, composed of a beautiful mixture of red and yellow jasper, quartz, chalcedony, and hornstone, of various colours, cemented together by a quartz paste: it passes into a pudding-stone of rounded pebbles of quartz, hornstone, &c., cemented by an argillo-calcareous earth of a loose friable texture, in which the diamonds are most frequently found. The breccia is seen at depths varying from 5 to 50 feet, and is about 2 feet in thickness; immediately *above* it lies a stratum of pudding-stone, composed of quartz and hornstone pebbles, cemented by calcareous clay and grains of sand. The miners are of opinion that the diamond is always growing, and that the chips and small pieces rejected ultimately increase to large diamonds.—*Trans. A. S. Bengal*, vol. xiv., p. 120.

† The diamonds of Golconda have obtained great celebrity throughout the world, but they were merely cut and polished there, having been generally found at Parteall, in a detached portion of the Nizam's dominions, near the southern frontier, in lat. 16° 40′, long. 80° 28′.

## CHAPTER III.

POPULATION—NUMBERS—DISTRIBUTION—DENSITY TO AREA—PROPORTION OF HINDOOS TO MOHAMMEDANS—VARIETIES OF RACE—DIVERSE LANGUAGES—ABORIGINES—SLAVERY—PAST AND PRESENT CONDITION OF THE PEOPLE.

From remote antiquity India has been densely peopled; but, as previously observed (p. 13), we know nothing certain of its indigenous inhabitants,—of accessions derived from immigration, or from successful invasions by sea and land,—of the progressive natural increase,—or of the circumstances which influence, through many generations, the ebb and flow of the tide of population.* There is direct testimony, however, that before the Christian era the country was thickly inhabited by a civilised people, dwelling in a well-cultivated territory, divided into numerous flourishing states, with independent governments, united in federal alliance, and capable of bringing into the field armies of several hundred thousand men.

For more than a thousand years after the Greek invasion, we have no knowledge of what was taking place among the population of India, and but a scanty notice, in the eighth century, of the Arab incursions of the regions bordering on the Indus. Even the marauding forays of Mahmood the Ghaznevide, in the eleventh century, afford no internal evidence of the state of the people, save that derived from a record of their magnificent cities, stately edifices, immense temples, lucrative trade, and vast accumulations of wealth; the Hindoos were probably then in a more advanced state of social life, though less warlike than during the Alexandrine period: they had gradually occupied the whole of India with a greatly augmented population, and possessed a general knowledge of the arts, conveniences, and luxuries of life.

During the desolating period of Moslem forays, and of Mogul rule, there appears to have been a continued diminution of men and of wealth, which Akber in vain essayed to check by some equitable laws. We have sufficient indirect and collateral evidence to show that whole districts were depopulated, that famines frequently occurred, and that exaction, oppression, and misgovernment produced their wonted results in the deterioration of the country. No census, or any trustworthy attempt at ascertaining the numbers of their subjects, was made by the more enlightened Mogul sovereigns, even when all their energies were directed to the acquisition of new dominions.

The English, until the last few years, have been as remiss in this respect as their predecessors in power. An idea prevailed that a census would be viewed suspiciously as the prelude to a capitation tax, or some other exaction or interference with domestic affairs. In Bengal, Bahar, and Orissa, which we have had under control for nearly a century, no nearer approximation has yet been made to ascertain the number of our subjects, than the clumsy and inaccurate contrivance of roughly ascer-

* It is not improbable that some of the early immigrants were offshoots of the colonists who are said to have passed from Greece into Egypt, thence travelled eastward, forming settlements on the banks of the Euphrates and Tigris; and ultimately reached the Indus and Ganges. In craniological and facial characteristics, many Hindoos present a striking similitude to the ancient Greek, modified by climate, food, and habits; and in several architectural structures, of which ruins are still extant, there is considerable resemblance to the ancient buildings of Egypt, and those erected on the Babylonian plains. Bryant is of opinion that Chaldea was the parent country of the Hindoos; Vans Kennedey traces the Sanscrit language to Mesopotamia; H. H. Wilson deems that the Hindoos connected with the *Rig Veda* were from a northern site, as in that work the worshipper on more than one occasion, when soliciting long life, asks for an hundred winters, which the Professor thinks would not have been desired by the natives of a warm climate. This is not conclusive. In Britain man frequently dates his age from the number of summers he has seen. There can, however, be little doubt that many of the early invaders of India were of the type of Japhet,—some of them acquainted with maritime commerce, and all comparatively more civilised than the *indigènes* who were driven towards the southward and eastward, and to mountain and jungle fastnesses. When this occurred it is impossible to determine. General Briggs says that the *Vedas* were written in India at the period when Joshua led the Israelites over Jordan into Canaan. The date when Menu, the lawgiver, lived has not been ascertained. Whatever the period, the Hindoos had not then occupied the country farther south than the 23rd degree, as Menu describes the people beyond as "barbarians, living in forests, and speaking an unknown language." Remote annals are lost in legends and traditions; and the chronology of Hindooism is an absurdity, except on the principle of cutting off the ciphers attached to the apocryphal figures.

taining the houses and huts in a village or district, and then supposing a fixed number of mouths in each house (say five or six.) The fallacy of such estimates is now admitted, and rulers are beginning to see the value of a correct and full census, taken at stated intervals, in order to show the rates of increase or decrease, and to note the causes thereof. I believe that the Anglo-Indian government have no reason to apprehend unpleasing disclosures if a decennial census be adopted for all the territories under their sway: the natural fecundity of the Hindoos would lead to an augmentation where peace and the elements of animal sustenance exist; and a satisfactory proof would be afforded of the beneficence of our administration, by the multiplication of human life. With these prefatory remarks, I proceed to show briefly all that is at present known on the subject.

At pp. 3 to 11 of this volume will be found the returns collected by the indefatigable Edward Thornton, head of the statistical department of the East India House, with remarks thereon at p. 2. Evidently there must be erroneous estimates somewhere, otherwise there would not be so great a disproportion of mouths to each square mile, as appears between the British territories (157) and the other states (74)—say 105,000,000 on 666,000 sq. m., and 53,000,000 on 717,000 sq. m. Estimating the entire area, as above, at 1,380,000 sq. m., and the population thereon at 158,000,000, would give 114 to each sq. m. Viewing India as including the entire region, from the Suliman on the west, to the Youmadoung mountains on the east, and from Cape Comorin to Peshawur, and estimating the area at 1,500,000 sq. m., and the number of inhabitants to each sq. m. at 130, would show a population of 195,000,000; which is probably not far from the truth.

The Chinese census shows 367,632,907 mouths on an area of 1,297,999 sq. m., or 283 to each sq. m.* In England the density is 333; Wales, 134; Ireland, 200; Scotland, 100.† India, with its fertile soil, a climate adapted to its inhabitants, and with an industrious and comparatively civilised people, might well sustain 250 mouths to each sq. m., or 375,000,000 on 1,500,000 sq. m. of area.‡

The following table, framed from various public returns and estimates, is the nearest approximation to accuracy of the population of each district under complete British rule; it shows (excluding Pegu) a total of about 120,000,000 (119,630,098) persons on an area of 829,084 sq. m., or 146 to each sq. m.:—

* There have been several censuses of China, of which we have little reason to doubt the accuracy: that of 1753, showed 102,328,258; that of 1792, 307,467,200; that of 1812, 361,221,900. In some districts, along river banks, the density is very great; such as Kangsoo (Nankin)—774 to the sq. m.: in others the density varies from 515 down to 51. (*See* vol. i., p. 29, of my report on China to her Majesty's government, in 1847.)

† *See* Preface (p. xv.) to my Australian volume, new issue, in 1855, for density of population in different European states.

‡ In illustration of this remark, the following statement, derived from the Commissioners' Report on the Punjab,—of the population of Jullundhur Zillah, situated between the rivers Sutlej and Beas,—is subjoined, with the note appended by the census officer, Mr. R. Temple, 25th of October, 1851:—

| Pergunnahs. | Hindoo. | | Mussulmen. | | Total. | | Grand Total. | Total Area in Acres. | Area in sq. miles of 640 Acres each. | Number of inhabitants per sq. mile. | Number of Acres to each Person. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Agricultural. | Non-Agricultural. | Agricultural. | Non-Agricultural. | Agricultural. | Non-Agricultural. | | | | | |
| Philor . . . | 41,997 | 38,591 | 20,442 | 19,211 | 62,439 | 57,802 | 120,241 | 187,001 | 299 | 412 | 1·52 |
| Jullundhur . | 48,967 | 49,652 | 46,049 | 50,568 | 95,016 | 100,220 | 195,236 | 250,397 | 391 | 499 | 1·25 |
| Rahoon. . . | 42,739 | 47,201 | 25,145 | 19,027 | 67,884 | 66,228 | 134,112 | 199,472 | 312 | 430 | 1·48 |
| Nakodur . . | 28,787 | 19,349 | 44,085 | 26,181 | 72,872 | 45,530 | 118,402 | 225,031 | 351 | 337 | 1·80 |
| Total . . | 162,490 | 154,793 | 135,721 | 114,987 | 298,211 | 269,780 | 567,991 | 861,901 | 1,346 | 422 | 1·55 |

*Note.*—This return certainly shows a considerable density of population. It may of course be expected that a small and fertile tract like this, which contains no forest, waste, or hill, should be more thickly peopled than an extensive region like the North-Western Provinces, which embraces every variety of plain and mountain, of cultivation and jungle; we find therefore that in the provinces we have 322 inhabitants per square mile, while here we have one-fourth more, or 422; the population of this district proportionately exceeds that of twenty-two out of thirty-one districts of the North-Western Provinces, and is less than that of nine. It also exceeds the average population of any one out of the six divisions. It about equals that of the districts of Agra, Muttra, Furruckabad, and Cawnpoor, but is inferior in density to the populous vicinities of Delhi or Benares, and to the fertile districts of Juanpoor, Azeemgurh, and Ghazeepoor. The comparative excess of Indian over European population has become so notorious, that it is superfluous to comment on the fact, that the population averages of this district exceed those of the most highly peopled countries of Europe.

| Cossya Hills | 729 | 10,935 | Chirra Ponjee | 25 14 | 91 45 | 1826 |
| Cachar | 4,000 | 60,000 | Silchar | 24 49 | 92 50 | 1830 |
| Tenasserim, Mergui, Ye, &c. | 29,168 | 115,431 | Mergui | 12 27 | 98 42 | 1826 |
| Pegu Province | 25,000 | 550,000 | Prome | 17 40 | 96 17 | 1853 |

A more recent return (28th July, 1855) from the East India House, gives the population of India thus:—

*British States.*—Bengal, &c., 59,966,284; N. W. Provinces, 30,872,766; Madras, 22,301,697; Bombay, 11,109,067; Eastern settlements, 202,540: total, 124,452,354.

*Native States.*—Bengal, 38,259,862; Madras, 4,752,975; Bombay, 4,460,370: total, 47,473,207.

*Foreign States.* — French settlements, 171,217; Portuguese ditto, not known. Grand total, 172,096,778.*

The varying degree of density of population to area forbids reliance being placed on any mere "estimates," or "approximations to actual amount." Thus in Bengal, Behar, and Cuttack, the number of mouths to each square mile is stated to be—in Jessore, 359; Moorshedabad, 394; Bhagulpoor, 318; Patna, 506; Cuttack, 220; Dacca, 193; Chittagong, 324: average of all, 324.† These are high ratios; but the soil is fertile, and the inhabitants very numerous along the banks of rivers. In Assam, on the N.E. frontier of Bengal, and along the rich valley of the Brahmapootra, the density is placed at only 32 to the square mile; in Arracan, at 21; Tenasserim provinces, at 4; on the S.W. frontier (Chota Nagpoor, &c.), at 85; in the Saugor and Nerbudda territories, at 109; in the non-regulation provinces, Kumaon, Ajmeer, &c., at 44.

The census of the Madras Presidency (*see Appendix*) shows, on an area of 138,279 sq. m., a population of 22,281,527, or 161 persons to each sq. m. In some districts the inhabitants are much more thinly scattered: for instance, at Kurnool, 84; at Bellary, 94; at Masulipatam, 104; the highest is the rich district of Tanjore, with 430 to each sq. m. Madras has a much less density than the British N. W. Provinces, which, according to the return of 1852–'3, shows the following results:‡—

| Districts. | Square M. | Population. | Mouths to each sq. m. |
|---|---|---|---|
| Agra . . . . | 9,298 | 4,373,156 | 465 |
| Allahabad . . | 11,971 | 4,526,607 | 378 |
| Benares . . . | 19,737 | 9,437,270 | 478 |
| Delhi . . . . | 8,633 | 2,195,180 | 254 |
| Meerut . . . | 9,985 | 4,522,165 | 453 |
| Rohilcund . . | 12,428 | 5,217,507 | 419 |
| Total . . . | 72,052 | 30,271,885 | 420 |

By the two full censuses of Madras and the N. W. Provinces, we gain at last a fair estimate of the small number of Mohammedans, as compared with the Hindoos, in India: the Madras census of 1850–'1, shows, on a total of 21,581,572, that the *adult* Hindoos numbered 13,246,509; Mohammedan adults and others, 1,185,654: the *children*—Hindoos, 6,655,216; Mohammedans and others, 594,193: total census (exclusive of Madras city and suburbs, containing 700,000)—

| Class. | Males. | Females. | Total. |
|---|---|---|---|
| Hindoos . . . | 10,194,098 | 9,707,627 | 19,901,725 |
| Mohammedans and others. | 852,978 | 826,869 | 1,679,847 |
| Total . . . | 11,047,076 | 10,534,496 | 21,581,572 |

The proportion of Moslems to Hindoos in Southern India, is as one to ten.

The N. W. Provinces return, in 1852–'3, shows—

| Class. | Males. | Females. | Total. |
|---|---|---|---|
| Hindoos . . . | 13,803,645 | 11,920,464 | 25,724,109 |
| Mohammedans and others. | 2,376,891 | 2,170,880 | 4,547,771 |
| Total . . . | 16,180,536 | 14,091,344 | 30,271,880 |

* The sum of 124,452,354 is a higher figure than the Anglo-Indian subjects of the British crown have hitherto been rated, and is probably the result of a more accurate numbering of the people: thus, until a census now (July, 1855) in progress was made of the Punjab, the population was, as usual, under-estimated. According to the *Lahore Chronicle* of 30th of May, 1855, the returns then received show for Lahore, 3,458,322; Jhelum, 1,762,488; Cis-Sutlej, 2,313,969: which are higher figures than those given from the Parliamentary Papers, at previous page. The enumerations made up to May last, for the Punjab, gave 10,765,478; and it was supposed that the grand total, when completed, would be about eleven million and a-half, or nearly four million more than the official document previously given for the Punjab and Cis-Sutlej states. In my first work on India, twenty years ago, I assumed the population under British jurisdiction to be about one hundred million, which some considered an exaggeration; the above augmentation of twenty-four million is accounted for by the addition of new states, such as the Punjab. I have little doubt that an accurate census will show a larger aggregate than 124,000,000.

† I obtained in India, in 1830, "a census," or rather estimate of these districts, showing an aggregate of area in sq. m., 153,792; villages, 154,268; houses, 7,781,240; mouths, 39,957,561: or about one village to each sq. m. of 640 acres, five houses to each village, five and a-half persons to each house, and 259 mouths to each sq. m. (*See* my first *History of the British Colonies*, vol. i., Asia; 2nd edition, p. 166: published in 1835.)

‡ As regards the censuses of Madras and the N.W. Provinces, I have seen no details given of the means adopted to ensure an accurate enumeration in a single day; they must, I think, be considered as "near approximations" to truth: they appear to be the best yet obtained.

Delhi, Agra, and the adjacent provinces, have for several centuries been the strongholds of the Moslems; yet even here their numbers (including "other" denominations not Hindoos) is only four million to twenty-five million. In 1830, I estimated the total Mohammedan population of India at fifteen million, and recent investigations justify this estimate.

A census of Agra and its suburbs (excluding inmates of bungalows round about the city, and the domestics attached thereto, about 3,000 in number, and also the inhabitants of bazaars and villages in military cantonments) was made in 1844–'45, after seven months' careful examination: the result showed a population of 103,572, with an excess of 8,245 Hindoos over Mohammedans, in this a former seat of Moslem rule; the grand total of houses was 15,327.

A census, in 1829, of Moorshedabad city and district, the head-quarters of the former Mohammedan ruler of Bengal, showed—Hindoos, 555,310; Mussulmen, 412,816 = 968,126: proportion of sexes—*Hindoo*, males, 286,148; females, 269,162: Mussulmen, males, 216,878; females, 196,344: number of houses, Hindoo, 123,495; Mussulmen, 84,734. Allahabad city census in 1831-'2, gave—of Hindoos, 44,116; Mussulmen, 20,669. Allahabad district—Hindoos, 554,206; Mussulmen, 161,209; in the city, the Hindoos were in the proportion of two to one; in the district, of more than three to one.

The population of Calcutta has been a matter of wide estimate, and is in proof of the past neglect of statistical inquiries: in July, 1789, the inhabitants of the Anglo-Indian metropolis were *guessed* at 400,000; at the commencement of the present century, about one million; in 1815, at half a million; in 1837, an imperfect census gave a quarter of a million (229,714); and in 1850, a more complete census showed nearly half a million (413,182), comprising only those residing within the City Proper, bounded by the Mahratta ditch, or limits of the supreme court: the dense population of the suburbs, probably exceeding half a million, are not stated; nor, I believe, the floating mass of people who pass into and out of Calcutta daily; viz., 72,425, of whom 10,936 cross the river diurnally in ferries.

| Resume of Censuses. | 1850. | 1837. |
|---|---|---|
| | Males. | Females. |
| Europeans | 6,233 | 6,479 |
| Eurasians (mixed blood) | 4,615 | 4,746 |
| Armenians | 892 | 636 |
| Chinese | 847 | 362 |
| Asiatics and low castes | 15,342 | 21,096 |
| Hindoos | 274,335 | 137,651 |
| Mohammedans | 110,918 | 58,744 |
| Total | 413,182 | 229,714 |

It is usual to speak of India as if it were inhabited by a single race: such is not the case; the people are more varied in language, appearance, and manners, than those of Europe.* About twenty languages are extensively spoken; viz., (1.) *Hindoostanee*, in pretty general use, particularly in the N.W. Provinces, and usually by Mussulmen† throughout India; (2.) *Bengallee*, in the lower parts of the Gangetic and Brahmapootra plains; (3.) *Punjabee* or Seik, in the upper portion of the Indies; (4.) *Sindhee*, in Cis-Sutlej states and Sinde; (5.) *Tamul*, around Madras and down to the coast of Cape Comorin; (6.) *Canarese* or Karnata, in Mysoor and Coorg; (7.) *Malyalim*, in Travancore and Cochin; (8.) *Teloogoo* or Telinga, at Hydrabad (Deccan), and eastward to coast of Bengal Bay; (9.) *Oorya*, in Orissa; (10.) *Cole* and *Gond*, in Berar; (11.) *Mahratta*, in Maharashtra; (12.) *Hindee*, in Rajpootana and Malwa; (13.) *Guzerattee*, in Guzerat; (14.) *Cutchee*, in Cutch; (15.) *Cashmerian*, in Cashmere; (16.) *Nepaulese*, in Nepaul; (17.) *Bhote*, in Bootan; (18.) *Assamese*, Up. Assam; (19.) *Burmese*, in Arracan and Pegu; (20.) *Brahooi*, or Beloochee, in Beloochistan; Persian and Arabic sparingly, and numerous dialects in different localities.

In Bengal and Orissa the majority of the people do not eat meat, and the abstinence is ascribed to a religious precept forbidding the destruction of life: but almost every Hindoo eats fish; several consume kid flesh (especially when sacrificed and offered to idols),

* Principal languages: English, French, Portuguese, Spanish, Italian, German, Russ, Polish, Turkish, Greek, Dutch, Danish, Swede, Norwegian, Finn = 15.

† This tongue was formed as a medium of colloquial intercourse in 1555, by the Emperor Akber, out of *Hindee*, the primitive language of the Hindoos, and Arabic and Persian, which were used by the Mohammedan conquerors: the character adopted is sometimes the Deva Nagri (Sanscrit), but more generally the Arabic alphabet. Although the great majority of the people of India are usually termed Hindoos as regards creed, there is as slight a bond of union among them on that account as there is among the professing Christians in Europe, and as much diversity in reference to practices supposed to be connected with their religious faith

and also birds. Numerous Brahmins and Rajpoots of the highest castes, in N. and W. India, partake of goat, deer, and wild boar; while they abhor the domestic sheep and swine: others who use the jungle cock, (similar to our game-cock), would deem the touch of barn-door poultry pollution. Some classes feed on descriptions of provender which are rejected by others: at Bikaneer, all the Hindoos profess an abhorrence of fish; at Kumaon, they will masticate the short-tailed sheep of the hills, but not the long-tailed one of the plains; people will buy baked bread, but would lose caste if they touched boiled rice cooked by these very bakers: an earthen pot is polluted past redemption if touched by an inferior caste; a metal one suffers no such deterioration: some tribes allow a man to smoke through his hands from the bowl (*chillum*) which contains the tobacco, but would not suffer the same person to touch that part of the *hookah* which contains the water. Other instances of diversity might be multiplied. Even the religious holidays of Bengal are different from those observed in the N. W. Provinces. The barbarous ceremonies of Juggernaut, and the abominations of the Churruk Poojah (where men submit themselves to be swung in the air, with hooks fastened through their loins), are unknown in N. and W. India. In some parts, female infanticide is or was wont to be almost universal; in others it is held in just abhorrence: in some districts, polygamy prevails; in others polyandria—one woman being married to all the brothers of a family, in order to retain property among them;—*here* the marriage of a daughter is a great expense,—*there* a source of profit, as the husband buys his bride, and has the right to sell her, and even to mortgage her for a definite time as security for a debt.

Independent of the division of the Hindoos into castes—Brahmins, Cashtriya, Vaisyas, and Soodras,—and the subdivision of society into numerous hereditary classes, there are other diversities, arising probably from origin of race, and the peculiarities engendered during a long course of time by climate and food: thus the brave Rajpoot and the bold Mahratta are decided antagonists; but both view, with something of contempt, the peaceful, subtle, rice-feeding* Bengallee, whose cleanly, simple habits are outraged by the gross-feeding, dirty Mughs of Arracan, who object not to a dish of stewed rats or snakes, or even to a slice of a putrefying elephant. The Coromandel men have features and modes of thought distinct from those of the Malabar coast; while inhabitants of the Kattywar peninsula differ essentially from both. The dwellers on the cool and dry hills and plateaux, present a marked contrast to those who reside in the hot and humid plains and valleys; and the aborigines, such as the Gonds of Berar, present no similarity whatever to the fine mould and beautifully-chiselled head and face, arched nose, and olive hue, of the pure Hindoo, or to the large-boned, massive frame, and manly cast of the hard-featured, genuine Moslem.

The variety of races in India are so decided, that an experienced officer will at once say whether a soldier belongs to the respective departments of the army of Bengal, of Madras, or Bombay; and further, whether a Hindoo is from Rajpootana, from Oude, from the Deccan, from the coast, or elsewhere.†

With regard to the Mohammedans, irrespective of their local aversions, they are divided into two sects—Soonee and Shea,—who abhor each other as cordially as the members of the Latin and Greek church do, or as the Romanists and Orangemen of Ireland, and are equally ready to fight and slay on a theological point of dispute. Then, besides these two leading divisions of the population, there are several million persons under the denominations of Jains or Buddhists, who consume no animal food or fermented beverage; Seiks, who eat the flesh of the cow, and drink ardent spirits; Parsees or Guebers (erroneously termed "fire-worshippers"), Latin, Protestant, Nestorians, or Syriac and Armenian Christians, —Jews,‡ and a mixed race sprung from the

* A comparatively small portion of the Hindoo population live on rice; the majority eat wheat and other grain, as also various species of pulse.

† In Calcutta, where a variety of races, or, as they may more properly be termed *nations*, are collected, the peculiarities of each are readily ascertainable, and their antagonisms quickly manifested. Among twenty persons in my service at one time in Bengal, there were (excepting four Balasore palanquin-bearers, a tribe bearing a high repute for honesty), not two of the same race; consequently much mutual distrust, frequent quarrels, bickering, and fighting.

‡ Stavorinus adverts, in 1775—'78, to the colony of Jews at Cochin, who, he says, "although most of them are nearly as black as the native Malabars, they yet retain, both men and women, those characteristic features which distinguished this singular people from all other nations of the earth."—

marital union of all—some of one creed, some of another: added to these are the *Eurasians*, born of European fathers and Indian mothers; a rapidly increasing class, probably destined, at some future day, to exercise an important influence in the East.

Before passing from the subject of the numbers and variety of the people, I would wish to draw public attention to a large and most interesting section of them, to whom reference has been made previously, as the aborigines of India. They are scattered over every part of the country, generally in the hilly districts; and although speaking different dialects,* and of varying appearance, manners, and customs, they are considered by General Briggs and Mr. Hodgson (who have studied their peculiarities) as having their origin from a common stock. Of their number throughout India we know nothing; they must amount to several million human beings, whose character is thus summed up:—"The man of the ancient race scorns an untruth, and seldom denies the commission even of a crime that he may have perpetrated, though it lead to death: he is true to his promise; hospitable and faithful to his guest, devoted to his superiors, and always ready to sacrifice his own life in the service of his chief; he is reckless of danger, and knows no fear."† It may be added, that he considers himself justified in levying "black mail" on all from whom he can obtain it, on the ground that he has been deprived of his possession of the soil by the more civilised race who have usurped the territory. The aborigines are distinguished from the Hindoos by several marked customs: they have no castes; eat beef and all sorts of animal food; drink, on every possible occasion, intoxicating beverages (no ceremony, civil or religious, is deemed complete without such drink); have no aversion to the shedding of blood; atone for the sins of the dead by the sacrifice of a victim; widows marry and do not burn; they are ignorant of reading or writing, and usually live by the chase and by pastoral pursuits. Some tribes take their designation from the country they inhabit: Gonds, in Gondwana; Koles or Kolis, in Kolywara; Mirs or Mairs, in Mairmara; Bheels or Bhils, in Bhilwara and Bhilwan; Benjees, in Bengal, &c. Other tribes, such as the Todawurs of the Neilgherries, have designations of which the origin is unknown.

The men are nearly naked; the women wear a cloth wrapper round the waist, carried over the left shoulder and under the right arm; they live mostly in conical thatched hovels, apart from the dwellings of the Hindoos, by whom they are treated as outcasts, and have no valuables but asses and dogs. As watchmen and thief-takers they are of great use, from their fidelity, sacred regard for truth, and the skill evinced in following a foot-track: they are entrusted with the care of private property to a large amount, and convey the public revenue to the chief towns of districts—a duty which they perform with scrupulous care and punctuality.

An unseen deity is worshipped; prayers are offered to avert famine and disease, and for preservation from wild beasts and venomous reptiles: to propitiate the favour

(*Voyages to East Indies*, vol. iii., p. 226.) They had then "a very beautiful and authentic copy of the Pentateuch," but know not when or where they derived it. Their own statement is, that they are of the posterity of the ten tribes carried away into captivity by Shalmaneser, and who, after being liberated from their Assyrian bonds, came hither, where they have from time immemorial constituted a small but isolated community, and enjoyed for a series of ages valuable privileges, including the exercise of their religion without restraint. Their houses, in a separate town, are built of stone, plastered white on the outside, and they have three synagogues; most of them are employed in trade, and some are very wealthy. How these Jews became black is not known; but according to Stavorinus, when they purchase a slave he is immediately circumcised, manumitted, and received into the community as a fellow Israelite. By intermarriages with such converts, the colour, in process of time, may have become perfectly dark, while the peculiar physiognomy was perpetuated in the race of mixed blood, as I have noticed is generally the case with the descendants, by male fathers, of the English, French, Spanish, and Portuguese. There is a colony of white Jews at Mattacherry, or *the Jews' town*, a suburb of Cochin; they regard the black Jews as an inferior caste: the former say that they came to Cranganore after the destruction of the second temple, and that they have a plate of brass in their possession since the year A.D. 490, which records the grant of land and privileges conceded to them by the king of that part of India: a copy of it is now in the public library at Cambridge. By discord and meddling in the disputes of the natives, the Cranganore Jews brought destruction on themselves at the hands of an Indian king, who destroyed their strongholds, palaces, and houses, slew many, and carried others into captivity. The Jews have a never-ceasing communication with their brethren throughout the East. For fuller details of these white and black Israelites, *see* Hough's *History of Christianity in India*, vol. i., 464.

* They seem to be connected with the Tamul and other languages of Southern India, and have no affinity with the Sanscrit.

† *Lectures on the Aboriginal Race of India*; by Lt.-General Briggs: 1852, p. 13.

or appease the anger of the object of adoration, living sacrifices (in some cases human beings) are deemed essential; and the blood of the victim is retained in small vessels by the votaries. All social and religious ceremonies are accompanied by feasting, drinking, and dancing; the latter performed, sometimes, by several hundred women (their hair highly ornamented with flowers) grouped in concentric circles, each laying hold with one hand on her neighbour's cincture or waist, and beating time with the heels on the ground. In figure they are well made and sinewy; rather low in stature; face large or flat, and wide; eyes black and piercing; nose-bridge depressed, nostrils expanded, mouth protruding, lips large, little or no beard: altogether presenting a marked contrast to the Apollo-like form of the genuine Hindoo.*

Several benevolent governmental servants have undertaken the civilisation of different tribes, and by kindness and tact effected considerable improvement in their habits and condition. When disciplined, they make brave and obedient soldiers, are proud of the consideration of their European officers, to whom they become ardently attached, and are ready to follow them abroad, on board ship, or wherever they go. The aborigines of the Carnatic formed the leading sepoys of Clive and Coote; and at the great battle of Plassy they helped to lay the foundation of the Anglo-Indian empire.† The *Bengies*, who are found in all parts of the Gangetic plain, when serving in the Mohammedan armies, claimed as *indigenes* the honour of leading storming parties. In the defence of Jellalabad, under the gallant Sir R. Sale, the *Pariahs* (out castes, or low castes, as the aborigines are termed) evinced the most indomitable courage and perseverance, as they have done at Ava, or wherever employed in the pioneer and engineer corps. These hitherto neglected races may be turned to beneficial uses. The tribe termed *Ramoosees*, or foresters, became the active and indefatigable infantry, who enabled Sevajee to conquer from the Moguls the numerous hill forts which formed the basis of the Mahratta dominion. The *Bheels* have long been celebrated in Western India annals, and their deeds recorded by Malcolm, Tod, &c.: as a local militia, they rendered good service in Candeish. The *Southals* of Bhagulpoor, reclaimed by the noble-minded civilian Cleveland, have now one of the finest regiments of the British army, recruited from their once despised class. The *Mairs* of Mewar are selected to guard the palace and treasury of the Rajpoot rajah, and form the only escort attendant on the princesses when they go abroad. Hyder Ali had such confidence in the *Bedars* of Canara, that a body of 200 spearmen ran beside him, whether on horseback or in his palanquin, and guarded his tent at night.

Slavery in India.—During the early Hindoo sway, the aborigines were, as far as practicable, reduced to servitude; those who could not find refuge in the hills and jungles, were made *adscripti glebæ*, and transferred as predial slaves with the land. Under Moslem rule, this unhappy class was augmented by another set of victims of man's rapacity. Persons unable to pay the government taxes were sold into servitude; others who were reduced to extreme poverty voluntarily surrendered themselves as bondsmen, either for life or for a term of years, to obtain the means of existence: in many cases the children of the poor were bought by the wealthy for servants or for sensual purposes. Eunuchs and others employed in the harems and as attendants, were imported from Africa and other places. Hence slavery, domestic and predial, now exists in almost every part of India. Our government, even during the administration of Warren Hastings, were aware of the fact; but it was deemed politic not to interfere, for the same reasons that induced the long toleration of widow-burning and infanticide.

In 1830, I applied to Mr. Wilberforce on the subject, and urged the anti-slavery society to investigate the matter; but he considered it then most advisable to give all his attention to the West Indies. Evidence adduced before the East India parliamentary committee, in 1832, disclosed a dreadful state of human suffering among East Indian slaves, which was confirmed by subsequent investigations, when it was ascertained that the Anglo-Indian government were large

* Some of the gipsy tribe of the aborigines whom I saw in the Deccan, were like their European brethren of the same class, and the women equally handsome: in the form of their encampment—asses, carts, and dogs—the tribe might have been considered a recent migration from Devonshire. Some gipsies, whose location I visited in China, presented similar characteristics.

† My authority for these statements is Lt.-general Briggs.

slaveholders in right of lands held in actual possession. Parliament, in 1834-'35, began to discuss the matter, and several eminent civil servants of the E. I. Cy. exerted themselves to elucidate the evils of this nefarious system. In December, 1838, I laid before the Marquis Wellesley a plan for the gradual but effectual abolition of slavery in India: it was highly approved by his lordship, who urged the adoption thereof on the Indian authorities. Some part of the plan* was adopted: the government relinquished their right to slaves on escheated lands; reports were called for from the collectors and other public officers; and, on the 7th of April, 1843, an act (No. 5) was passed by the President of India in council, which declared as follows:—

"I. That no public officer shall, in execution of any decree or order of court, or for the enforcement of any demand of rent or revenue, sell or cause to be sold any person, or the right to the compulsory labour or services of any person, on the ground that such person is in a state of slavery.

"II. That no rights arising out of an alleged property in the person and services of another as a slave shall be enforced by any civil or criminal court or magistrate within the territories of the E. I. Cy.

"III. That no person who may have acquired property by his own industry, or by the exercise of any art, calling, or profession, or by inheritance, assignment, gift, or bequest, shall be dispossessed of such property, or prevented from taking possession thereof, on the ground that such person, or that the person from whom the property may have been derived, was a slave.

"IV. That any act which would be a penal offence if done to a free man, shall be equally an offence if done to any person on the pretext of his being in a condition of slavery."

Much, however, still remains to be done, until slavery be as effectually extinguished in the *East* as it has happily and beneficially been in the *West* India possessions of the British crown. There is no difficulty among the Hindoo population, as slavery is not a question of *caste;* and with regard to Mohammedan laws, a Christian government cannot be expected to recognise that which is repugnant to the first principles of humanity. We know nothing certain of the number of slaves in Hindoostan; the estimates made are but guess-work: in Malabar,† Canara, Coorg, Tinnevelly, and other parts of Southern India, the estimates are from a half to one million; for Bengal, or the N. W. Provinces, we have no estimates. In fact, we know not whether there be *one* or *ten* million slaves under the British government in Asia.

---

The foregoing illustrations sufficiently indicate that there is no homogenity of population in India, no bond of union,—no feeling of patriotism, arising from similarity of origin, language, creed, or caste,—no common sentiment, founded on historic or traditional associations: there is therefore more security for the preservation of British authority; but there is greater difficulty in ameliorating the social condition of the mass of the people, which was deteriorated under Moslem tyranny, and is still, as compared to some past period, at a low ebb.

The discussion of this theme is beyond my appointed limits, and I can only offer a few passing observations. The Hindoos speak of having experienced three ages,—1. Gold and silver; 2. Copper and brass; 3. Earth and wood,—which form the component parts of their domestic utensils; but when these ages commenced and ended, there are no means of ascertaining.‡ Ere Tyre became a place for fishermen to dry their nets, the Hindoo-Phœnician commerce had an Asiatic renown: the spices of India were sought in the time of Solomon; the gossamer muslins of Dacca, the

* My chief recommendations were—(1.) A committee of inquiry. (2.) A registry in each collectorate of male and female slaves, agrestic and domestic. (3.) District magistrates to report on the laws and customs in force. (4.) All children born after a certain date to be declared free. (5.) Slaves to have the same protection of the law as freemen; their evidence equally receivable in a court of justice. (6.) Ill-treatment to be followed by manumission. (7.) Masters no power to punish. (8.) Wife and children not to be separated. (9.) Slaves on government lands to be at once freed. (10.) No voluntary sale of individuals or of their children to be lawful. (11.) Transfers of slaves only in their respective districts. (12.) Slaves to be entitled to acquire and possess property, and to purchase manumission: magistrate to arbitrate in cases of disputed price. (13.) Magistrate to attend to the condition and complaints of slaves, to pass summary judgment, and to report his proceedings annually to government, who were to send out queries, and call for reports on the nature and extent of slavery in each district, from the officers entrusted with supervisionment.

† Mr. Peggs and others estimate the number of slaves, in Malabar alone, at 147,000; in Canara, Coorg, Wynaad, Cochin, and Travancore, at 254,000; in Tinnevelly, 324,000; Trichinopoly, 10,000; Arcot, 20,000; Assam, 11,300; Surat, 3,000. According to Buchanan, the number must be very large in Behar and in Bengal: and all authorities describe their condition as truly miserable;—stunted, squalid, and treated with far less care than the beasts of the field.

‡ The third age is still extant, as illustrated by the earthen water and cooking pots—*chatty*.

beautiful shawls of Cashmere, and the brocaded silks of Delhi, adorned the proudest beauties at the courts of the Cæsars, when the barbarians of Britain were painted savages. Embossed and filigree metals,—elaborate carvings in ivory, ebony, and sandalwood; brilliant dyed chintzes; diamonds, uniquely set pearls, and precious stones; embroidered velvets and carpets; highly wrought steel; excellent porcelain, and perfect naval architecture,—were for ages the admiration of civilised mankind: and before London was known in history, India was the richest trading mart of the earth. Ruined cities, such as *Gour,* the ancient capital of Bengal, which covered an area of seventeen miles,—*Beejapoor,* with its million of inhabited houses; *Mandoo,* with a wall twenty-eight miles in circuit; *Rajmahal,* the dwelling-place of an hundred kings; Palebothra and Canouj,—indicated a large urban class, who required to be fed by a proportionately numerous agrestic population. Hundreds of cave temples,* equal in interior-size and architectural beauty to the noblest cathedrals of Europe, attest the depth of religious feeling among the worshippers; while gorgeous ceremonials and sensuous luxuries indicate the highest stage of Pagan refinement: but all afford a melancholy contrast to the poverty which now pervades the mass of the people, and to the dull intellectuality and idolatrous routine that at present extends over social life.†

An extensive study of Indian records leads to the conclusion that the decay of Hindoostan dates from the period of Mohammedan incursions and conquests. Afghan, Tartar, Patan, Mogul, Persian, Arab, and other Moslem adventurers, here found the richest spoil and the most fertile field: swarming like locusts, and equally ravenous, successive hordes crossed the frontiers, slew all who opposed, and, by their tyranny and sensuality, pauperised and demoralised all whom they subjected to their sway. Hence entire regions became desolate, and famines frequent in the inhabited parts. One of these afflictions, prolonged from 1640 to 1655, was felt throughout India, but principally in Bengal and in the Deccan; another occurred in 1661, when Aurungzebe was endeavouring to collect fifty per cent. of the produce of the land: other famines, resulting from poverty and exactions (not, as is alleged, from unpropitious seasons), occurred at different times, followed as usual by sicknesses, and swept off millions of the inhabitants.

Then the fierce and long-continued struggles of the Rajpoot, Mahratta, and other Hindoo races in refusing to bow their necks to Islamite yoke; the frequent rebellions in distant provinces necessitating the maintenance of large armies for the support of imperial power at Delhi; the internecine contests between several Mogul viceroys for the extension of dominion; and the desolations of the Carnatic and of Southern India by those Moslem scourges Hyder Ali and his son Tippoo, must each and all, together with other collateral circumstances which cannot here be examined, have contributed to the rapid decay and impoverishment of the people of India, in a manner not dissimilar to the destruction and demoralisation of the Greeks, and the desolation of the fair regions of Asia Minor by the Turks.‡ That the Moguls have left traces behind

* Such as those of Karli, Ellora, Elephanta, &c. Dr. Buist, of Bombay, in his eloquent advocacy of the claims of India, says—"These have been hewn out in the absence of gunpowder, and, fashioned without natural adjunct or addition of masonry into their present form, covered with rich and elaborate structures by the hand of man. The caves are grouped together so as to furnish places of worship, halls of instruction, and domiciles for the professors and their pupils, exactly on the plan of the universities which came into existence in Europe *two thousand years after* those of India were forgotten; indicating an amount of civilisation and demand for knowledge in the East twenty-four centuries ago."—(*Notes on India:* London, 1853, p. 10.) The number of temples in India is as yet imperfectly ascertained. Mount Aboo, 5,000 feet high, is covered and surmounted by these singular structures.

† *See* Dr. Buist's *Notes on India.*

‡ The desolating effect of Moslem sway over the fairest portion of Eastern Europe for nearly 400 years, notwithstanding the influences of surrounding civilisation, and with an active, intelligent, impressive character in the millions of Greeks subject to its sway, proves the incapability of Mohammedanism for that progressive improvement in society which pre-eminently marks Christianity as the true religion adapted for man. The Turks for three centuries lived among, yet apart, from the Greeks; during their intolerant rule, there was no social intercourse between the dominant and subject races; and, in matters of dispute, all law or justice was set aside, as the word or oath of a Christian was not recognised in their legal tribunals. The taxes levied were enormous; in the local country, where resistance to fiscal oppression was impossible, four-fifths of his produce was exacted from the agriculturist, independent of minor plunderings, of "presents," forced tribute to each new pasha or provincial governor, and of endless extortions by his satellites, which was required from all who had accumulated any wealth. As in India during the Mogul sway, so in Greece: there was no security for life, honour, and property; the virtue of woman, the labour of the peasant, the skill

them of some great works is undoubtedly true, but they were the work of Hindoo artificers, and such as conquerors exact from slaves;—palaces and fortresses, mosques and mausoleums, canals and tanks—the latter indispensable for the production of territorial revenue, which would fail without irrigation of the land: but the Mohammedans took as little root in India as the Romans did in Britain; and their power crumbled to pieces of its own accord, leaving the sceptre which Baber, Akber, and Aurungzebe had wielded by military force, to be scrambled for by the strongest arm. We found the people of Bengal and of the Carnatic impoverished and oppressed; the oppression has been removed, but the poverty is as yet only slightly mitigated. On this topic I hope to offer, at the concluding section (if space permit), some points for consideration.

of the artisan, were all at the mercy of sensual, barbarous, and cruel tyrants, from the sultan at Constantinople to the janissary in the smallest village; the whip and the bastinado, the sword and the rope, were the prime instruments of Turkish rule. As financiers and penmen, the Greeks, like the Hindoos, were entrusted sometimes with high offices, which the Mohammedans were incapable of executing. The Hindoos, especially the Mahrattas, made several attempts to destroy Moslem sway, but there was no effectual combination. The Greeks were successful by their union in 1821. After seven years of secret organisation, they commenced their efforts for independence. Instead of being met by any concessions, Gregory, the patriarch of their church,—although he had, at the bidding of the sultan, excommunicated and anathematised the strugglers for liberty, and released the *Philikoi* (members of the Secret Society) from their oath,—was seized on Easter eve, dragged ignominiously through the streets of Constantinople, and then strangled at the door of the church in which he recently officiated; the body was left hanging three days to be pelted at and made the jest of the populace, then cast into the Bosphorus. Three suffragan archbishops were hanged by a black executioner at different parts of the city, and many hundreds of the clergy were massacred by the populace. Then began a series of atrocities which ought to have caused the entire expulsion of the barbarians from Europe. Throughout every part of the wide-spread Turkish dominions there was an indiscriminate slaughter of the Christians; savage brigands from Anatolia and Kurdistan were brought across the Bosphorus, under a firman calling on all true Mohammedans for defence: a few wealthy Greek merchants, fearing what was coming, fled to Odessa, but for the mass of their countrymen there was no refuge or hope of escape; houses were broken open, and the inmates torn from their hiding-places and carried to slaughter; every Christian seen in the streets was instantly slain as if he were a mad dog; "the European ships in the harbour, and the houses of the foreign consuls were thronged by the unhappy Christians, but their asylum was disregarded; and the decks of British and French *merchant vessels* were deluged with the blood of those whom their captains had vainly endeavoured to protect. In a few days 10,000 Christians perished in that one city; the remnant of the Greek population there was scattered to the four winds of heaven; they wandered as beggars through the streets of Odessa, or starved in the ditches of the Byzantine suburbs."—(*See* London *Times*, 5th October, 1853.) In Adrianople and Smyrna the streets were smeared with blood; and from the Danube to the Nile, wherever the Moslem held sway, the life of a Christian was not worth one hour's purchase. Within the short space of a few weeks, in the year 1821, it is estimated that 40,000 Christians were slain; and during six years' struggle for life and liberty, at least 100,000 perished. Perhaps of all the massacres, the fiendish character of the followers of the false prophet is best exemplified by that which took place in the beautiful and fertile island of Scio, of which an account is given in the columns of the *Annual Register*, 1822–'3. Suffice it to say, that a population which at the beginning of the year numbered 120,000, was in the month of July reduced to 900, and even these were in danger of perishing from the pestilence which ensued on the fearful slaughter of their countrymen. How many such scenes may have been acted in Hindoostan there were none to record. During the debates in parliament, pending the war between Russia and England, fearful illustrations were produced of the cruelty, oppression, exaction, and remorseless spirit which characterise the Mohammedans even at the present day. The consequences of Turkish rule, and the condition of a Christian village after an Osmanli invasion, are thus stated by Mr. Layard:—"Their church was in ruins; around were the charred remains of the burnt cottages, and the neglected orchards overgrown with weeds. A body of Turkish troops had lately visited the village, and had destroyed the little that had been restored since the Turkish invasion. The same taxes had been collected three times—and even four times over. The relations of those who had run away to escape from these exactions had been compelled to pay for the fugitives. The chief had been thrown, with his arms tied behind his back, on a heap of burning straw, and compelled to disclose where a little money that had been saved by the villagers had been buried."—(*Times*, 14th March, 1851.) On the 4th July, 1853, Lord Stratford de Redcliffe wrote to his government that he was necessitated of late, and indeed for some years back, to bring to the knowledge of the Porte atrocious acts of cruelty, rapine, and murder, for which no effectual redress was provided. Doubtless there are many high-minded, trustworthy, and amiable men among the disciples of the Crescent. Asiatic travellers can record numerous instances of good offices received from Moslems—whether designated as Turks, Arabs, Persians, or Hindoos. Under the Anglo-Indian government, there are thousands of Mohammedans as "true to their salt," as brave and kindly in their nature, as those of any other form of religion: but for civil government, the creed of the Koran is utterly unfit; indeed, Mohammed never designed it for aught but military power and despotic sway, which naturally corrupts the minds of those who long use these means to preserve their dominion,—to keep men morally and politically in bondage,—instead of fitting them in this world, by freedom and the exercise of their faculties, for an eternity of happiness.

# CHAPTER IV.

## RELIGION—CHRISTIAN MISSIONS—EDUCATION—THE PRESS—AND CRIME.

INDIA exemplifies the truth of the assertion,* that religion is inseparable from the nature of man: the savage and the sage alike frame some system of theological belief,—some mode of communicating with the Deity,—some link of spiritual connexion between the created and the Creator;† but every attempt to invest humanity with the attributes of Divinity has ended in the deification of stocks and stones,‡—in the concoction of monstrous frauds, and in the practice of the grossest sensuality, which corrupt alike the souls and the bodies of the worshippers.

In Hindoostan the principle of a universal religion is illustrated in every conceivable form, from abstract Monotheism to complex Pantheism,—from the worship of the sun, as the representative of celestial power, to the rudely-carved image which a Brahmin is supposed to endue with sentient existence,—from the sacrificial offering of fruit and flowers, to the immolation of human victims: here, also, we see this natural feeling taken advantage of by artful men to construct Brahminical and Buddhistical rituals, which, embracing every stage of life, and involving monotonous routine, completely subjugate the mass to a dominant priesthood, who claim peculiar sanctity, and use their assumed prerogatives for the retention of the mass of their fellow-beings in a state of moral degradation and of intellectual darkness.

Yet, amidst this corruption and blindness, some rays of truth are still acknowledged—such as a supreme First Cause,§ with his triune attributes of omnipotence, omniscience, omnipresence;|| creation, preservation, destruction; the immortality of the soul, individual responsibility, atonement for sin, resurrection to judgment, heaven and hell; and a belief in unseen beings pervading space, and seeking to obtain a directing influence over probationary creatures for good or for evil.¶ But these cardinal points are mingled with pernicious doctrines, supersti-

* *See* Preface to second edition of my *Analysis of the Bible with reference to the Social Duty of Man.*

† From the highest to the lowest link in the chain which connects in one genus every variety of the human race, all believe in a spiritual power that is superior to man,—in an invisible world, and in a resurrection after death: this is manifested by dread of an unseen good or evil deity,—by a persuasion of the existence of fairies or ghosts,—by the sepulture of the body,—and by placing in the grave things deemed necessary in another stage of existence.

‡ The Rev. William Arthur, in his admirable work, *A Mission to Mysoor*, refers to the arguments he was in the habit of having with Brahmins, and says—"They frequently took strong ground in favour of idolatry, urging that the human mind is so unstable, that it cannot be fixed on any spiritual object without some appeal to the senses; that, therefore, to worship by mere mental effort, without external aid, is impossible; but that, by placing an image before the eye, they can fix the mind on it, and say, '*Thou art God;*' and by this means form a conception, and then worship." It was probably this idea that unhappily induced the early Christian church to admit images, pictures, and representations of holy men, into places of public worship; though it is not so easy to account for the introduction of Maryolatry. The necessity of engaging the usually wandering mind by some visual object is, I believe, the plea used by Romanists and Greeks for the frequent elevation of the crucifix; and it is quite possible that many pious persons deem its presence essential: the danger is not in the crucifix, or the figure of the Redeemer thereon, but in the representation degenerating into formalism. On the other hand, it is to be feared that many professing protestants have few ideas of vital Christianity, and consider its solemn duties fulfilled by an hebdomadal public worship.

§ Thus acknowledged in one of the Hindoo prayers:—"We bow to Him whose glory is the perpetual theme of every speech;—Him first, Him last,—the Supreme Lord of the boundless world;—who is primeval Light, who is without His like,—indivisible and infinite,—the origin of all existing things, movable or stationary."

|| The Hindoo expression means *all-pervasive.*

¶ The Hindoos believe the Deity to be in everything, and they typify Him in accordance with their imaginations. *Brahm* or *Brihm* is supposed to have had three incarnations, viz., Brahma, the *Creator;* Vishnu, the *Preserver;* Siva, the *Destroyer*:—who have become incarnate at different times and in various forms, for many objects. To these are added innumerable inferior gods, presiding over earth, air, and water, and whatever may be therein. Temples and shrines are erected to a multitude of deities, to whom homage or worship is tendered, and tribute or offerings made. The Pagan deities, in every country and in all ages, have more or less an affinity to each other; they refer, generally, to the powers of nature, and to the wants or civilising appliances of man; but they all merge into, or centre in, one Supreme Being: thus there was an intimate relation between the Greek and Indian mythology. The Brahminical and the Magian faith had many points of union: the sun was the ostensible representation of Divine power; the fire-altar of both may be traced to that of the Hebrews; and the idolatry of the calf, cow, or bull, have all a common origin. Ferishta states that, during the era of Roostum, when Soorya, a Hindoo, reigned over Hindoostan, a Brahmin persuaded the king "to set up idols; and from that period the Hindoos became idolaters, before which they, like the Persians, worshipped the sun and stars."—(Vol. i., p. 68.) The Mythrae religion at one time existed in all the countries between the Bosphorus and the Indus; vestiges are still seen at Persepolis, at Bamian, and in various parts of India. In all Pagan systems there is a vagueness with reference to the Deity; for it is only through the Saviour that God can be known. With regard to the soul, it is thus negatively described by the author of the great Hindoo work, entitled *Mahabarat*:—"Some regard the soul as a wonder; others hear of it with astonishment; but no one knoweth it: the weapon divideth it not, the fire burneth it not, the water corrupteth it not, the wind dryeth it not away; for it is indivisible, inconsumable, incorruptible: it is eternal, universal, permanent, immovable; it is invisible, inconceivable, and unalterable." The shastras, or "sacred" books, contain also many remarkable and even sublime passages; but their character

FROM THE ORIGINAL OF SIR JOSHUA REYNOLDS, IN THE COLLECTION OF

THE RIGHT HON<sup>BLE</sup> THE EARL SPENCER.

tious observances, cruel rites, and carnal indulgences; hence the pure, merciful, and loving* character of God is unknown, the innately sinful nature of man imperfectly understood, the positive necessity of a Redeemer unappreciated, and the urgent want of a Sanctifier unfelt.

It is not therefore surprising, that in the yearnings of the spirit for a higher, holier enjoyment than this world can afford, that sincere devotees in India, as in other countries and in every age, devoid of the light of Christianity, deem suicide a virtue;† torture of the body a substitute for penance of the soul;‡ ablution sufficient for purification; solitude the only mode of avoiding temptation; offerings to idols an atonement for sin; pilgrimages to saintly shrines a means of obtaining peace or rest; the maintenance of perpetual fire the highest privilege; contemplation of God the nearest approximation to communion; and human sacrifice a propitiation of Divine wrath.§

With such creeds and such worship, perpetuated for centuries, the votaries, both priests and laymen, must necessarily be sunk to a depth of degradation from whence no mere human efforts can elevate them, and which the untiring perseverance of Christianism, with the guidance of the Spirit, can only hope to meliorate in the existing generation.

Among the numerous creeds which pervade India, the most prominent are Hindooism, or worshippers of Brahm;‖ Buddhists, devoted to Buddh;¶ Parsees, disciples of Zoroaster;** Moslems,†† followers of

is well summed up by the Rev. William Arthur, who has attentively studied the subject. This Christian writer says —"Taking those books as a whole, no works of our most shameless authors are so unblushing or so deleterious: the *Sama Veda* treats drunkenness as a celestial pastime; all the gods are represented as playing at will with truth, honour, chastity, natural affection, and every virtue, running for sport into the vilest excesses, and consecrating by their example all hateful deeds. Falsehood, if with a pious motive, has a direct sanction. Menu declares that 'a giver of false evidence from a pious motive, even though he know the truth, shall not lose a seat in heaven: such evidence men call divine speech.' Vishnu has often preserved the gods by the most wicked impostures. Lies flow familiarly from divine lips, and thus lose all dis-repute in mortal eyes. The amours of the gods are so detailed as to corrupt all who read and admire them; while they argue, on the part of the writers, a horrible familiarity with every variety of debauch. In the lofty poetry of the sacred books are musically sung expressions of a coarseness that would be spurned from the vilest ballad. Part of the retinue of every temple consists of priestesses, who are the only educated women in the country, and whose profession it is to corrupt the public morals. In some of the temples, excesses are at certain times openly committed which would be concealed even in our lowest dens of vice."—(Arthur's *Mission to Mysoor*, p. 489. London: Hamilton, Paternoster-row.) Such is the system; and this is but a faint shadowing of its fearful wickedness, against which Christianity has to contend. Simple aboriginal tribes have an indefinite notion of an Almighty superintending providence. Thus the Todawar of the Neilgherries, on first seeing the sun daily, or a lamp, uses the following prayer, with his face turned to the sky:— "Oh! thou the Creator of this and of all worlds—the greatest of the great, who art with us as well in these mountains as in the wilderness,—who keepest the wreaths that adorn our heads from fading, and who guardest the foot from the thorn—God among a hundred—may we be prosperous." They believe that the soul, after death, goes to the *Om-nor* (large country), about which they have scarcely an idea; they sacrifice living animals, and burn them on a rude altar: the dead are buried in a dark, secluded valley. A blood sacrifice is deemed essential by all these tribes, to procure remission from sin. The relative antiquity of Brahminism and Buddhism,—their common origin and separation,—their points of unity or dissonance,—and the various other forms of religion in India, are subjects beyond my limits in this work.

* The only love that I can find recognised in reference to the Deity, is similar to that acknowledged by the Greeks: hence Sir William Jones thus apostrophises the Hindoo Cameo or Kama Deva (Cupid):—

"Where'er thy seat, whate'er thy name,
Earth, sea, and sky, thy reign proclaim:
Wreathy smiles and rosy treasures,
Are thy purest, sweetest pleasures;
All animals to thee their tribute bring,
And hail thee universal king!"

I quote from memory this beautiful version of Indian stanzas.

† *See* section on crime for the number of suicides committed annually at Madras.

‡ The self-inflicted torture which Hindoo fanatics undergo, with a view to the remission of sin, and to obtain the favour of their deity, is revolting; but it indicates strong feelings on the subject. Among them may be mentioned:—standing for years on the legs, which become swollen and putrefying masses of corruption; keeping an arm erect until the muscles of the *humerus* are attenuated and the joint anchylosed (fixed in the socket); lying on a bed of spikes until the smooth skin is converted into a series of indurated nodules; turning the head over the shoulders, and gazing at the sky, so that, when fixed in that posture, the twist of the gullet prevents aught but liquids passing into the stomach; crawling like reptiles, or rolling as a hedgehog along the earth for years; swinging before a slow fire, or hanging with the head downwards, suspended over fierce flames; piercing the tongue with spits; inserting an iron rod in the eye-socket, from which a lamp is hung; burying up to the neck in the ground; clenching the fist until the nails grow through the back of the hand; fasting for forty or the greatest practicable number of days; gazing at the sun with four fires around, until blindness ensues. These are some of the practices of the Yogis or Sanyases, and other devotees.

§ The Ganges is considered sacred by the orthodox Hindoos, and its waters everywhere, from their source in the Himalaya to their exit in the Bay of Bengal, are regarded with peculiar sanctity. It is supposed that, at the moment of dissolution, a person placed therein will have all his transgressions obliterated. Should a Hindoo be far distant, the Brahmins enjoin that he should think intensely of the Ganges at the hour of death, and he will not fail of his reward. To die within sight of the stream is pronounced to be holy; to die besmeared with its mud, and partly immersed in the river, holier still; even to be drowned in it by accident, is supposed to secure eternal happiness. Until the close of the 18th century, the Brahmins, taking advantage of this superstitious idea, persuaded tens of thousands of Hindoos to assemble in January annually on the island of Gunga Saugor, at the sea mouth of the Ganges, to perform obsequies for the good of their deceased ancestors, and to induce many hundred children to be cast living into the torrent by their parents, as a means of atonement for the sin of their souls. Lord Wellesley abolished this wickedness.—(*Baptist Mission*, vol. i., p. 111.) Among some aboriginal tribes, a child is not unfrequently slain when the agricultural season is commencing, and the fields sprinkled with the blood of the innocent, to propitiate the earth god, in the expectation of procuring thereby an abundant harvest.

‖ For a description of Hindooism, *see* Maurice's *Indian Antiquities*, in 7 vols. 8vo; Ward's *Mythology of the Hindoos*, 4 vols. 4to; Moor's *Hindoo Pantheon;* Coleman's *Mythology of the Hindoos;* Vans Kennedy's *Researches;* various volumes of the Asiatic Society; the *Asiatic Journal* of London; and the *Journal Asiatique* of Paris.

Mohammed; Seiks, attached to Nanik;* Gonds, Koles, Bheels, Sonthals, Puharees, and other aboriginal tribes, distinct from all the preceding; Jews (white and black), Syriac, Armenian, and Latin Christians; representatives of the churches of England, Denmark, and Germany; Scotch Presbyterian, Baptist, Wesleyan, Congregational, and North American missions.† Each persuasion or sect would require one or more volumes for elucidation: all that is practicable, is a very brief description of the rise and progress of protestant missions in Hindoostan.

Christianity prevailed to some extent in India from an early date; but we have no certain knowledge of its introduction under the denomination of Syriac, or any other church.‡

The Portuguese, soon after their arrival, attempted the conversion of the Hindoos, with whom they were brought in contact, to the Romish form of Christianity, by jesuitism and the inquisition; and necessarily failed, as they did in China and in Japan. The Dutch, engrossed with commerce, made little or no attempt to extend the Calvinistic creed; the French were equally indifferent; but the King of Denmark, in the spirit of Lutheranism, encouraged, in 1706, the Tranquebar missionaries in their meritorious efforts to preach the gospel of Christ to the natives in the vernacular tongue; and for more than a century many devoted men, including Ziegenbalg, Schwartz, Gericke, Schultze, and others, laboured patiently in the south of India for the extension of the Divine mission of truth and peace; but failed, by permitting the intermingling of heathen customs with the purity of life which admits of no such toleration. The British church§ and government for many years made no response to appeals on behalf of Christianity. The latter was not merely negative or apathetic; it became positive and active, in resistance to the landing of missionaries in the territories under its control; and when, at the close of the 18th century, the Danish and other continental churches had almost retired in despair from the field, and the Baptists (under the leadership of Carey and Thomas) sought to occupy some of the abandoned ground, they and their able coadjutors, Marshman and Ward, were compelled to seek an asylum at the Danish settlement of Serampore, on the banks of the Hooghly, 15 m. above Calcutta.‖

* This reformer, at the beginning of the 16th century, attempted to construct in the Punjab a pure and peaceful system of religion out of the best elements of Hindooism and Mohammedanism: his followers (the Seiks) became devastating conquerors; and infanticide and other abominable crimes still fearfully prevail among this warlike race.

† *See* Hough's valuable *History of Christianity in India*, 4 vols. 8vo, 1839; Cox's *History of Baptist Missions*, 2 vols.; Pearson's *Lives of Dr. Claudius Buchanan* (2 vols.) and of *Schwartz*, 2 vols. 8vo; Arthur's graphic *Mission to the Mysoor*, 1 vol.; Duff on *India Missions*; Hoole's *Missions to South of India*; Pegg's *Orissa*, 1 vol.; *Memoir of W. Carey*; *Life of Judson*; and other interesting missionary works.

‡ Thomas Herbert, author of *Some Yeares Travels into divers parts of Asia and Afrique* (published in London in 1638, and who began his voyaging in 1626), speaks of there being Christians in many places; and refers especially to several maritime towns in Malabar. He says—"The Christians in these parts differ in some things from us, and from the Papacie yet retaine many principles of the orthodox and catholic doctrine: their churches are low, and but poorly furnished; their vassalage will reach no further, whether from their subjection, or that (so the temples of their bodies bee replenisht with vertue) the excellency of buildings conferre not holinesse I know not: neat they are, sweetly kept; matted, without seats, and instead of images have some select and usefull texts of holy writ obviously writ or painted. They assemble and haste to church each Lord's day with great alacrity: at their entering they shut their eyes, and contemplate the holiness of the place, the exercise they; come about, and their own unworthinesse: as they kneele they look towards the altar or table near which the bishop or priest is seated, whom they salute with a low and humble reverence, who returns his blessing by the uplifting of his hands and eyes: at a set houre they begin prayers, above two houres seldom continuing: first they have a short generall confession, which they follow the priest in, and assent in an unanim amen: then follows an exposition of some part or text of holy Scripture, during which their attention, dejected lookes, and silence, is admirable; they sing an hymne," &c. Herbert then proceeds to observe that they have the Old and New Testaments; they baptize commonly at the fortieth day, if the parents do not sooner desire it; they observe two days' strict preparation for the holy communion, eating no flesh, and having no revelry; in the church they confess their sins and demerits with great reluctance: after the arrival of the Portuguese they shaved their heads. The clergy marry but once, the laity twice; no divorce, save for adultery. Lent begins in spring, is strictly observed for forty days; they "affect justice, peace, truth, humility, obedience," &c. When dead, the bodies are placed in the grave looking west towards Jerusalem, and they "believe no purgatory." St. Thomas is their acknowledged tutelar saint and patron.—(Lib. iii., on East Indian Christians, p. 304-'5.)

§ The E. I. Cy's. charter of 1698 directed ministers of religion to be placed in each "garrison and superior factory," and a "decent and convenient place to be set apart for divine service only:" the ministers were to learn the Portuguese and the native languages, "the better to enable them to instruct the Gentoos that shall be the servants or slaves of the said company, or of their agents, in the protestant religion." By the charter of 1698, the company were required to employ a chaplain on board of every ship of 500 tons' burthen. This regulation was evaded by hiring vessels, nominally rated at 499 tons, but which were in reality, by building measurement, 600 to 650 tons.—(Milburn, i., p. lvi.) Some clergymen of the Church of England were sent out to India from time to time; but with a few exceptions (whose honoured deeds are recorded by Hough in his *History of Christianity in India*), such men as Dr. Claudius Buchanan, Dr. Kerr, David Brown, Corrie, and Henry Martyn, had not many imitators: they "performed duty" on the sabbath; looked after money and other matters during the week; and, at the termination of their routine official life, returned to Europe with fortunes ranging from £20,000 to £50,000 each. Kiernander, the Danish missionary, mentions, in 1793, three of these misnamed ministers of the gospel (Blanshard, Owen, and Johnston), then about to return to England with fortunes of 500,000, 350,000, and 200,000 rupees each; which (Mr. Kaye observes) shows, according to their period of service, "an annual average saving of £2,500."—(*Hist. of Admn. of E. I. Cy.*, p. 630.)

‖ During its early career the E. I. Cy. paid some attention to religion, and a church was built at Madras; but as commerce and politics soon absorbed all attention, the ministrations of religion were forgotten, and not inaptly typified by the fate of the church erected at Calcutta by pious merchants and seamen, who were freemasons, about the year 1716, when the E. I. Cy. allowed the young merchants £50 a-year "for their pains in reading prayers and a sermon on a Sunday." In October, 1737, a destructive hurricane, accompanied by a violent earthquake, swept over Bengal, and among damages, it is recorded that "the high and magnificent steeple of the English church sunk into the ground without breaking."—(*Gentleman's Magazine*, 1738.) Christianity certainly about this time sank out of sight in India, without being broken or destroyed, and it is now rising into pre-

The Marquis Wellesley gave encouragement to devout missionaries of every Christian persuasion;* but during the administrations of Lord Minto and of the Marquis of Hastings, there was direct opposition to the ministers of the Cross, who were obliged to proceed from England to the United States, and sail in an American vessel to their destination. Some were prohibited landing on British ground, others were obliged to re-embark; ships were refused a port entrance if they had a missionary on board, as they were deemed more dangerous than the plague or the invasion of a French army: and the governor of Serampore, when desired by the Calcutta authorities to expel Drs. Carey, Marshman, and others, nobly replied,—they might compel him to pull down the flag of the Danish king, but he would not refuse a refuge and a home to those whose sole object was the temporal and spiritual welfare of their fellow-beings. Despite the most powerful official discountenance, the missionary cause ultimately triumphed. The Church of England became an effective auxiliary. Calcutta, in 1814, was made the see of a bishop, under Dr. Middleton; and his amiable successor (Heber) removed many prejudices, and paved the way for a general recognition of the necessity and duty of affording to the people of India the means of becoming acquainted with the precepts of Christianity. The thin edge of the wedge being thus fairly inserted in the stronghold of idolatry, the force of truth drove it home; point by point, step by step, the government were fairly beaten from positions which became untenable. It was tardily admitted that some missionaries were good men, and did not intend or desire to overthrow the dominion of England in the East; next it was soon acknowledged that they had a direct and immediate interest in upholding the authorities, as the most effectual security for the prosecution of their pious labours. Soon after the government ceased to dismiss civil and military servants because they had become Christians; then came the public avowal, that all the Europeans in India had not left their religion at the Cape of Good Hope, on their passage from England, to be resumed on their return; but that they still retained a spark of the living faith, and ought no longer to be ashamed to celebrate its rites.† When

eminence by the aid of that very E. I. Cy. who, a century ago, were so indifferent, and half a century since, so hostile to its introduction or discussion in Hindoostan. In 1805, the Rev. Dr. Claudius Buchanan, government chaplain at Calcutta, issued a *Memoir on the Expediency of an Ecclesiastical Establishment for British India, both as a means of perpetuating the Christian Religion among our own Countrymen, and as a foundation for the ultimate Civilisation of the Natives.* The memoir was dedicated to the Archbishop of Canterbury; and the appendix comprised a variety of instructive matter on the superstitions of the Hindoos. The work was in fact a forcible appeal to the Christians of Britain for the evangelisation of India, and was exceedingly well received by the bishops of London (Porteous), Llandaff (Watson), Durham, Exeter, St. David's, and other eminent divines. In India the memoir caused great excitement among that portion of the government who "viewed with sensitive alarm, for the security of our empire in the East, the circulation of the Word of God."—(Hough, iv., 179.) Contrasts were drawn between Hindooism and Christianity, to the prejudice of the latter, by Europeans who still professed that faith; and in November, 1807, Dr. Buchanan memorialised the governor-general (Lord Minto), on the change of policy from that which the Marquis Wellesley had pursued. Among the points complained of were—*First*, withdrawing the patronage of government from the translation of the Scriptures into the Oriental languages; *secondly*, attempting to suppress the translations; *thirdly*, suppressing the encomium of the Court of Directors of the E. I. Cy. on the character and proceedings of the venerable missionary Schwartz; and *fourthly*, restraining the Protestant missionaries in Bengal from the exercise of their functions, and establishing an *imprimatur* for theological works. Sermons which Dr. Buchanan had delivered on the Christian prophecies, he was desired by the chief secretary to transmit to government for its inspection, which he properly declined to do. In 1813 several missionaries from different societies were ordered to quit India without delay; one in particular (Mr. Johns), was told if he did not take his passage *immediately*, he would be forcibly carried on board ship. Two members of the American board of missions, on arriving at Bombay, were ordered away by Sir E. Nepean, and directed to proceed to England; they left in a coasting vessel, landed at Cochin on their way to Ceylon, and were sent back to Bombay as prisoners. Sir E. Nepean was a religious man, and ultimately obtained permission for the missionaries to remain.

* The opposition of the home authorities to the college of Fort William, which was founded by the Marquis Wellesley, had reference chiefly to the religious design of the noble founder. Dr. Claudius Buchanan pointed out that it was a mistake to consider the sole object was merely to "instruct the company's writers." Lord Wellesley's idea, as Dr. Buchanan correctly states, was "to enlighten the Oriental world, to give science, religion, and pure morals to Asia, and to confirm in it the British power and dominion." The Doctor adds—"Had the college of Fort William been cherished at home with the same ardour with which it was opposed, it might, in the period of ten years, have produced translations of the Scriptures into all the languages from the borders of the Caspian to the Sea of Japan."—(Pearson's *Life of Dr. C. Buchanan*, i., 374.)

† The Rev. M. Thomason, father of the late excellent lieutenant-governor of the N. W. Provinces, was dismissed from the governor-general's (Earl Moira) camp, in June, 1814, because he remonstrated against "the desecration of the sabbath, and other improprieties of conduct."—(Hough, iv., 383.) At Madras, a collector (civil servant of high standing) was removed from the service for distributing tracts on Christianity among the natives. In Bombay, the state of Christianity at the commencement of the present century was indeed very low; immorality was general. Governor Duncan, a kind and benevolent man, rarely attended divine service; and the late lamented Sir Charles Forbes told me, that though educated in the sabbatical strictness of the Scotch kirk, the effect of evil example on youth carried him with the stream, and that Sunday was the weekly meeting of the "Bobbery hunt" (a chase on horseback of jackals or pariah dogs), and its concomitant, drinking and other excesses. Henry Martyn, when visiting Bombay in 1811, on his way to Shiraz, speaking of the Europeans, says—"I am here amongst men who are indeed aliens to the commonwealth of Israel, and without God in the world. I hear many of those amongst whom I live bring idle objections against religion such as I have answered a hundred times." At the cantonments and revenue stations, marriages and baptisms were usually performed by military and civil servants. Many English officers never saw a church or minister of the gospel for years. Earnest representations for the erection of even small chapels were disregarded by the government, and the young cadets soon sank into drinking, debauchery, and vice. In 1807 not a Bible was to be found in the shops at Madras—it was not a saleable article; religious books were at a similar discount: the first purchasable Bible arrived in 1809. The observation of thoughtful old natives, for many years, on the English was—"Christian Man—*Devil* Man." If Charles Grant, who laboured so earnestly and effectively half a century for the introduction of Christian principles into India, were now alive, he would perceive that the above reproach

this vantage-ground was gained, other triumphs necessarily followed.* The Scriptures, which the British and Foreign Bible Society, and also the Baptists, had been engaged in translating and printing, were now openly distributed. "Toleration" was no longer conceded only to Hindooism and other idolatries; it was extended to Christianity: and the principle was urged boldly, that the state should renounce all interference in the shameful orgies of Juggurnaut and other Pagan abominations;—that the car of this idol and its obscene priests should cease to be annually decorated with scarlet cloth and tinsel, specially provided by the E. I. Cy.; and that the troops, English and Mohammedan, should no longer have their feelings outraged by being compelled to do honour to disgusting rites which were a mockery to the true and living God.†

The demoniac practice of *suttee* (widow-burning), was formidably assaulted by the missionaries and other good men. To sanction the crime of suicide was admitted to be repugnant to the character of a professing Christian government, which had already forcibly suppressed infanticide; and notwithstanding many forebodings of danger, and considerable opposition by the enemies of missionaries,‡ self-murder was, on Dec. 4, 1829, during the administration of Lord William Bentinck, suppressed throughout British India, by a prohibitory edict of the supreme government; under which all persons aiding and abetting *suttee* were liable to the penalty inflicted for culpable homicide. There was not the slightest opposition to this ordinance throughout India.§ Widow-burning, however, still continues in several provinces which are not under our immediate government.

Many other advantages accrued from the course of Christian polity now fairly begun;—the government ceased to hold slaves, and passed a decree mitigating some of the evils of the system; churches were erected at the principal civil and military stations; and chaplains were appointed for the celebration of public worship at European stations.|| In 1834, bishoprics were founded at Madras and Bombay.

to his countrymen was removed, and there would be found many co-operators in the evangelising work.

* Up to 1851 the operations of the society, as regards India, were:—Sanscrit gospels and acts, 8,200; Hindoostanee Testament (*Roman*), 31,000; Urdu Persian portions of Old Testament, Urdu Persian gospels and acts, 82,000. *Northern and Central India.*—Bengallee portions of Old Testament, Bengallee and English St. Matthew and St. John, Bengallee Testament (*Roman*), Bengallee, with English Testament (*Roman*), 130,842; Uriya Bible, 16,000; Hinduwee Old Testament, 4,000; Harrottee Testament, 1,000; Bikaneera Testament, 1,000; Moultan Testament, 1,000; Punjabee Testament, 7,000; Cashmerian Testament, 1,000; Nepaulese Testament, 1,000; Sindhee St. Matthew, 500. *Southern India*—Telinga Testament, 33,000; Canarese Bible, 10,000; Tamul Bible, 105,000; Malayalim New Testament, Malayalim Old Testament, 32,065; Tulu Testament, 400; Kunkuna Testament, 2,000; Mahratta Testament, 30,000; Guzerattee Testament, 20,100; Cutchee St. Matthew, 500.

† In August, 1836, the Bishop of Madras, the clergy of every denomination, several civil and military servants, merchants, &c., addressed a memorial to the governor of Madras, the summary of which prayed, that in accordance with the instructions laid down by the Court of Directors, 28th February, 1833, guaranteeing toleration, but affording no encouragement to Mohammedan or heathen rites—"That it be not hereafter required of any Christian servant of the state, civil or military, of any grade, to make an offering, or to be present at, or to take part in, any idolatrous or Mohammedan act of worship or religious festival. That the firing of salutes, the employment of military bands, and of the government troops in honour of idolatrous or Mohammedan processions or ceremonies, and all similar observances which infringe upon liberty of conscience, and directly 'promote the growth and popularity of the debasing superstitions of the country,' be discontinued. That such parts of Regulation VII. of 1817, as identify the government with Mohammedanism and heathenism, be rescinded, and every class of persons left, as the honourable Court of Directors have enjoined, entirely to themselves, to follow their religious duties according to the dictates of their consciences." The governor (Sir Frederick Adam) administered to the bishop and to the memorialists a sharp rebuke, saying, he did not concur in their sentiments, which he viewed with "the deepest pain and concern," as they manifested the "zeal of over-heated minds," and that the "communication" (worded in a guarded and Christian spirit) "was fraught with danger to the peace of the country, and destructive of the harmony which should prevail amongst all classes of the community."—(Parl. Papers—Commons, No. 357; 1st June, 1837; p. 5.) The E. I. Cy. and her Majesty's government thought differently: the prayer of the memorialists was ultimately granted; and the peace of India and the harmony of its people was never for a moment disturbed. But previous to the final concession. Lieutenant-general Sir T. Maitland resigned the command of the Madras army rather than be a participator in offering honours to idols by sending the troops to assist at the Hindoo celebrations. Colonel Jacob, an old artillery officer, stated before the House of Commons' committee, 4th August, 1853, when referring to the attendance of British troops at idolatrous ceremonies—"I was myself in that position at Baroda, on the occasion of the Dusserah festival, when we were waiting for six hours in the sun at the beck and bidding of the Brahmins, who announced the fortunate hour, as they apprehended, for the Guicowar to go and sacrifice a fowl to the Dusserah. The whole of the force was under arms, and the British resident attended on the same elephant with the prince. Upon the Brahmins cutting off the head of the fowl, the signal was given, and I had to fire a salute." This Christian officer adds—"Within our own presidency, under the British flag, there can be no sort of excuse whatever for forcing British officers to take part in an heathen or idolatrous procession or worship, such as the cocoa-nut offerings, annually at Surat, by the governor's agent. At Madras, when I was there some years ago, the government sanction was directly given to idolatrous practices by presenting offerings of broadcloth to the Brahmins, for them to pray to the idol deity to save the Carnatic from invasion."—(Parl. Papers—Commons; 6th August, 1853; p. 151.)

‡ The Brahmins, who had originated *suttee* to prevent their widows remarrying, declared it was a religious rite, and on this ground several English functionaries objected to its forcible suppression; but the doctrine laid down by Menu, the great Hindoo lawgiver, does not sustain the assertion. The texts referring to the subject run thus:—"A faithful wife, who wishes to attain in heaven the mansion of her husband, must do nothing unkind to him be he living or dead. Let her emaciate her body by living voluntarily on pure flowers, roots, and fruits; but let her not, when her husband is deceased, even pronounce the name of another man. Let her continue until death forgiving all injuries, performing harsh duties, avoiding every sensual pleasure, and cheerfully practising the incomparable rules of virtue which have been followed by such women as have been devoted to one only husband."

§ I was happily enabled to be of some use in preparing the public mind for this great event by writing articles on the subject, and addressing them, when translated into different languages, to the Hindoo population.

|| Until recently the spirit under which the Anglo-Indian government was administered, was the protection and encouragement of Brahminism and Mohammedanism, and the disavowal of any connection with Christianity. Thus, as

Gradually the state, so far as is alleged to be compatible with pledged faith, ceased to interfere in the temporal concerns of idolatrous shrines; the forfeiture of property by Hindoos who had become converts to Christianity, was no longer recognised as the law; native Christians became equally eligible with their fellow-citizens to public offices. Finally, several of the highest functionaries have openly avowed, that the best means for effecting an improvement in even the physical condition of the people, is by the diffusion of Christianity; and that the mainstay for the security of British dominion in India, is the inculcation and practice of its divine precepts. Such are the glorious results of nearly half a century* spent in peaceful but unceasing efforts on behalf of truth; and I now proceed to show the means in operation for continuing the great work which has been so signally blessed in its course. The following data show the state of the Church of England establishment,† and that of the principal protestant missions in India, at the present period:—

stated by the Rev. J. Lechman, in his evidence before parliament (8th August, 1853), "the government have maintained for thirty years an institution for the instruction of its Mohammedan subjects in their creed, but has not maintained any college or school for the exclusive instruction of its Christian subjects."

* The Rev. W. Mullens thus sums up the progress of missions during the present century:—"Within a few years stations were established in Calcutta, Madras, and Bombay, and began to push outward into all the presidencies of Hindoostan. The beginnings were slow but sure. One society, then another—one missionary and then another, landed on the coast, and took up their posts on the great battle-field of idolatry. The London Missionary Society sent missionaries to Chinsurah, to Travancore, to Madras, Vizagapatam, Bellary, and to Surat. The American board, after some opposition from the government, occupied Bombay. The Church Missionary Society entered first on the old missions at Madras, Tranquebar, and Palamcottah; but soon began an altogether new field among the Syrian Christians in West Travancore. They planted a station at Agra, far in the north-west, and maintained the agency which Corrie had employed at Chunar. A native preacher began the work at Meerut, while two missionaries were stationed in Calcutta. The Baptist Missionary Society soon occupied Jessore, Chittagong, Dinagepore, and other places. The Wesleyans speedily obtained a footing in Mysoor; and to them succeeded the missionaries of the American board. North, south, east, and west, the Church of Christ was pushing forth its men and means into the land with vigour and earnestness of purpose." There is much wanting for India a *Medical Missionary Society*, similar in its working to the institution (composed of Americans and British) under this title which is now accomplishing so much good in China.

† There is a large Roman catholic establishment consisting of bishops, vicars-general, and inferior clergy, not only at Goa and Pondicherry, but also at the British stations: their number is alleged to have been, in 1853, about 303, of whom 200 were Europeans; and of these forty are British. The Roman catholic community throughout India is estimated at 690,000, exclusive of about 16,000 soldiers.

* The numbers in this column represent the nominal converts; but do not include the heathen, whose numbers, by reason of the irregularity of their attendance on the public services, cannot be reported.

In the beginning of 1852, the number of native Christian churches in India (including Ceylon), was 331; of recorded members (communicants), 18,401; and of worshipping Christians, 112,191: number of missionaries (including forty-eight ordained natives), was 443, together with 698 native catechists belonging to twenty-two missionary societies, who have established 1,347 vernacular day-schools, 93 boarding, 347 day-schools for girls, 120 girls' boarding-schools, 126 superior English schools, throughout the country (*see* Mission returns.) There are eight Bible societies in India, which published, in 1850, no less than 130,000 copies of the Bible, or selections from it, in thirteen languages, and distributed 185,400 copies. There are also fifteen tract societies engaged in supplying works for native Christians—short tracts, or expositions of Bible truth, and school-books for missionary schools. The entire Bible has been translated into ten languages, the New Testament into five others, and separate gospels into four other languages; besides numerous works of Christians;—thirty, forty, and even seventy tracts, suitable for Hindoos and Mussulmen, have been prepared in the vernacular. The missionaries maintain twenty-five printing establishments. The cost of all these operations, for 1851, was £190,000, of which £33,540 was contributed by European Christians in India itself.†

This is but a very small beginning of the great work to be accomplished by philanthropists of all classes; the *Urgent Claims of India for more Christian Missions*‡ has been forcibly set forth by Mr. Muir, of the Bengal civil service: he shows that some of the fairest portions of India have no missionary; that others are supplied in the proportion of one to one million people;—a "long range of fertile, populous countries as much neglected as if they were districts of Japan."—(p. 12.) Formerly the Hindoos would not listen to the missionaries; now they attend to hear, discuss, and dispute: and, what is still better, they *buy* the books issued from the mission presses, in large quantities.§ Undoubtedly there is a great change coming over the Indian population, especially of the educated class: the little leaven is fomenting the vast mass. Idolatry cannot long stand before truth, when presented in the manner in which its Divine Founder explained it to His disciples; but the unbeliever must be born again before he can *see* God,—he must be born of water and of the Spirit before he can dwell with Him. The Hindoo is as yet only born of the earth—earthy, with every corruption of our nature in its pristine strength; he is also surrounded and entangled by the meshes of a Satanic system, from which he cannot extricate himself. It seems to be a part of the Divine scheme for man's redemption, to make his fellow-man an instrument in the work of regeneration; for thus both the giver and receiver of good are blessed. Hence, to human eyes, the operation appears slow. But we cannot penetrate the designs of Omnipotence. We cannot tell why millions of Hindoos have been left steeped in the mire of idolatry for ages, and that they should now be raised from darkness into light by a handful of men from the remote isles of the western world; all this, and much more, is a mystery: but may not this singular communion between England and India be as much for the benefit of the former as for that of the latter? May not Britain need, nearly as much as Hindoostan, not only the quickening influence which is able to save and make wise, but also the renovation of the flickering flame of celestial

† *Results of Missionary Labour in India*, by Rev. W. Mullens; reprinted from *Calcutta Review*, October, 1851. London: Dalton, Cockspur-street

§ These are not solely religious tracts. For instance, at the Wesleyan press in Bangalore, *Robinson Crusoe* has been printed in the vernacular language, with woodcuts: it has an extensive sale.

life, which, until the last few years, burnt dim and fitful here, and needed kindling into a bright and cheering light,—a light whose expanding, vivifying rays may, ere long, spread to the darkest and remotest corners of our globe? Be this as it may, the Anglo-Indian Christian mission is now fairly commenced; a wide and encouraging prospect is open for its meritorious labours. In a mere worldly point of view, an extension of operations is of the utmost importance. Every Hindoo or Moslem converted to the gospel of peace, is an additional security for the permanence of British power. Mere secular men ought therefore to aid this great cause. The day is past in England for attempting to rule a nation by brute force, as if men were beasts of burthen or irreclaimable maniacs. Kindness, consideration, and reasoning, are the instruments of conversion which the missionaries employ, and they are happily in accordance with the dictates and policy of government. There is therefore, in a new sense, a union between church and state in India, devoid of patronage or pecuniary relations, but based on the principle that what is good for the spiritual, must be equally good for the temporal interests of the people.

EDUCATION.—Under both the Hindoo and Moslem governments, the education of the people was, at various times, deemed a matter of public importance; many of the temples now devoted to idolatry and paphian rites, were originally schools and colleges for instruction, endowed with lands for this purpose, and conducted somewhat after the manner of the monastic institutions of Europe: but in both regions the teaching of the young fell into desuetude. The setting apart of a body of men as more sacred than their fellow-mortals,—investing them with peculiar privileges,—furnishing them in abundance with not only the necessaries, but also the luxuries of life, for which they were not required to labour,—enjoining celibacy,—and placing them under an ecclesiastical, instead of a civil law applicable to all,—was as pernicious to the scholastic system of Hindoos and Mohammedans as it was to that of the Latins: the funds allocated for the temples and mosques became appropriated solely to the use of a lazy, sensual priesthood; the minds as well as the morals of the people were neglected; and but for the village schools, sustained by each little agricultural community, and the town seminaries, supported by paying pupils, the people of Hindoostan would not even have had the primary elements of reading, writing, and arithmetic, which we found to prevail pretty general among the better classes of the community.

For a considerable period, the Anglo-Indian authorities gave no thought to the subject. In 1781, a Mohammedan madrissa (college) was established at Calcutta, under the patronage of Warren Hastings; and in 1792 a Sanscrit college was founded at Benares by Jonathan Duncan; but the main idea in connexion with these institutions—with the Hindoo college at Calcutta, founded in 1816; colleges at Agra and Delhi, in 1827; and a few seminaries in various provincial towns—was the propagation of *Oriental* literature, and the inculcation of the Hindoo and the Mohammedan religion. The extension of the English language, and of the arts and sciences, of which it might become the medium, was an innovation; and as such, dreaded by those whose opinions then ruled. A watchmaker at Calcutta, David Hare, about 1823-'4, established a British school there: he saw that the efficacy of Lord Wellesley's policy in founding the college at Fort William, as a means of incorporating the English on the Asiatic stock, was sound, and that no material improvement could take place in the mass of the people by endeavouring to communicate knowledge through twenty different tongues instead of by one, which would form a common medium of intercourse for all. The thought began to be "ventilated"—some advocating the English, some the vernacular, some both. The latter was partially adopted, as a compromise between the two former systems: but it ultimately gave way;* and now sound-thinking Indian statesmen are convinced that the foundation of education ought to be the English, whatever may be the vernacular; so that in due time it may become the ordinary dialect of about 200,000,000 in Hindoostan.

In 1813, attention was directed to the necessity of something being done towards the education of the people; and under the then charter act it was decreed that a lac of rupees (£10,000) should be annually appropriated out of the revenue of India for the "revival and improvement of literature."† It was a small sum for such an object: yet it remained unemployed for ten years; and then the accumulated funds were appropriated to the Hindoo college‡ at Calcutta, which was placed under the superintendence of government, and to such other Oriental seminaries as a Committee of Public Instruction (appointed in 1823) might recommend.

The Court of Directors early foresaw the inefficiency of mere Oriental literature as a means of improving the people. In a despatch to India, written in 1821, the Court warned the local governments thus:—"In teaching mere Hindoo or Mohammedan learning, you bind yourselves to teach a great deal of what is frivolous, not a little of what is purely mischievous, and a small remainder indeed in which utility is in any way concerned." Bishop Heber also justly remarked—"The Mussulman literature very nearly resembles what the literature of Europe was before the time of Copernicus, Galileo, and Bacon. The Mussulmans take their logic from Aristotle, filtered through many successive translations and commentaries; and their metaphysical system is professedly derived from Plato. Both Mohammedans and Hindoos have the same natural philosophy, which is also that of Aristotle in zoology and botany, and Ptolemy in astronomy, for which the Hindoos have forsaken their more ancient notions of the seven seas and the six earths." The Court of Directors had to contend against the prejudices of distinguished Englishmen, who clung pertinaciously to the idea of educating the people in the Oriental tongues. Thus, in a despatch of September 29th, 1830, the Court says—"We think it highly advisable to enable and encourage a large number of natives to acquire a thorough knowledge of English, being convinced that the high tone and better spirit of European literature can produce their full effect only on those who become familiar with them in the original lan-

* The Right Honourable T. B. Macaulay deserves credit for the efforts he made in favour of the extension of the English language in India.

† Parl. Papers on India, submitted by E. I. Cy. in 1853.

‡ Of the course of education in this institution, that accurate observer the late Rammohun Ray, said—"It can only load the minds of youth with grammatical niceties and metaphysical distinctions of no practical use; the pupils will acquire what was known 2,000 years ago, with the addition of vain and empty subtleties." In fact, its pupils became deists and atheists.

guage. While, too, we agree that the higher branches of science may be more advantageously studied in the languages of Europe, than in translations into the Oriental tongues, it is also to be considered, that the fittest persons for translating English scientific books, or for putting their substance into a shape adapted to Asiatic students, are natives who have studied profoundly in the original works."—(Despatch, September 29th, 1830.)

These sound views were not immediately adopted by the Indian government, who absurdly persevered for several years attempting to instruct the people who attended the public seminaries by translating English literature into Sanscrit and Arabic—the one not spoken, and the other a foreign language in India. Before a Hindoo could study the best masters in English, he must waste precious time in becoming an Oriental scholar: in effect, it would be paralleled if boys in the national schools of Britain were required to learn Latin and Greek, and then study English literature from translations into these languages. The pedantry and inutility of such a system was at length exposed; and, with broader views of statesmanship, there came a recognition of the necessity of making English the classical and predominant language.

On the 7th of March, 1835, the government abandoned the Oriental scheme of education, and the comprehensive and adaptative tongue of the ruling power was gradually substituted by attaching English classes to the Hindoo and Mohammedan colleges which had been established in different cities; to these were added scholarships, with stipends attainable after a satisfactory examination, and terminable at a central college to which the school was subordinate. In October, 1844, government passed a resolution, promising preference of selection for public employment to students of distinguished ability. Model schools have been adopted in several districts; suitable books prepared; an organised system of inspection maintained;* and Christian instruction thus extended:—

In the parliamentary discussions relative to India, in 1852-'3, the subject of educating the people by a general system, was fully recognised as one of the most important duties of government; and accordingly, in July, 1854, an admirable despatch was forwarded to Bengal by the home authorities.† In this document the Court of Directors declare that "no subject has a stronger claim to attention than education;" and that it is "one of our most sacred duties, to be the means, as far as in us lies, of conferring upon the natives of India those vast moral and material blessings which flow from the general diffusion of useful knowledge, and which India may, under Providence, derive from her connexion with England. For although British influence has already, in many remarkable instances, been applied with great energy and success to uproot demoralising practices, and even crimes of a deeper dye, which for ages had prevailed among the natives of India, the good results of those efforts must, in order to be permanent, possess the further sanction of a general sympathy in the native mind, which the advance of education alone can secure. We have, moreover, always looked upon the encouragement of education as peculiarly important, because calculated 'not only to produce a higher degree of intellectual fitness, but to raise the moral character of those who partake of its advantages, and so to supply you with servants to whose probity you may with increased confidence commit offices of trust' in India, where the well-being of the people is so intimately connected with the truthfulness and ability of officers of every grade in all departments of the state. Nor, while the character of England is deeply concerned in the success of our efforts for the promotion of education, are her material interests altogether unaffected by the advance of European knowledge in India: this knowledge will teach the natives of India the marvellous results of the employment of labour and capital, rouse them to emulate us in the development of the vast resources of their country, guide them in their efforts, and gradually, but certainly, confer upon them all the advantages which accompany the healthy increase of wealth and commerce; and, at the same time, secure to us a larger and more certain supply of many articles necessary for our manufactures and extensively consumed by all classes of our population, as well as an almost inexhaustible demand for the produce of British labour."

These are noble sentiments, worthy of England, and of incalculable benefit to India. With this preamble, the Court of Directors proceed to state the main object thus:—"We emphatically declare that the education which we desire to see extended in India is that which has for its object the diffusion of the improved arts, science, philosophy, and literature of Europe; in short, of European knowledge."

Pecuniary aid is to be given to vernacular and Anglo-vernacular schools. The study of law, medi-

* In September, 1845, I attended an annual examination of the Poona schools, and was agreeably surprised by the intelligence and proficiency of the pupils.

† It is understood that the preliminary draft of this valuable State Paper was drawn up by Sir Charles Wood, then president of the India Board.

cine,* and civil engineering to be encouraged; and all the higher branches of sound education. The expenditure for these great designs will be large, and can only gradually be employed: at present it amounts to about £150,000 a-year, which, it is to be hoped, will ere long be largely augmented.†

*Note.*—The above return is founded on the information received for the year 1852-'53; but as the state of education in India is at present one of transition, it is probable that considerable alteration has taken place. By the despatch to the government of India, dated the 19th July (No. 49 of 1854), a plan for the general extension of education was laid down, and when the instructions therein contained shall begin to be carried out, the changes made will be of a wide and sweeping character. For the reasons already assigned it is impossible to afford any precise information on the subject of Vernacular Schools. It is known, however, that these schools are increasing in number and improving in character. In October, 1849, sanction was given by the home authorities for the establishment of one government vernacular school in each of eight tehsildarries, or revenue divisions of the North-West Provinces, to afford a model to the native village schoolmasters. The experiment proved highly successful; the number of village indigenous schools, within the eight tehsildarries, having increased in three years, from 2,014 to 3,469; and that of the scholars therein, from 17,169 to 36,884. The plan has now been extended to the whole of the North-Western Provinces, and also to portions of Bengal and the Punjab. The expense of the measure is estimated at £60,000 per annum.

Under the present system there is an educational department at each presidency, with an official of talent, largely remunerated, at its head; qualified district inspectors report periodically on the colleges and schools supported and managed by government, and statistical returns are to be annually sent, with the reports, to England. Universities are to be established, under charter, in different parts of India, and to be managed by senates, consisting of the chancellor, vice-chancellor, and fellows of each; periodical examinations to be held in the different branches of art and science, and degrees conferred, unconnected with religious belief, on qualified persons who may be educated at the university college, or at affiliated institutions conducted by all denominations, whether Christians, Hindoos, Mohammedans, Parsees, Seiks, Buddhists, Jains, or any other religious persuasion, if found to afford the requisite

* In 1829, I laid before Lord Wm. Bentinck, then governor-general, a plan for establishing a medical and surgical college at Calcutta, and pointed out the great benefits which would accrue from such an institution. I also offered to deliver gratuitously a course of lectures on anatomy, for which there was an abundance of "subjects," the Ganges being the place of sepulture for many million Hindoos whose bodies daily floated in thousands past Calcutta. Lord Wm. Bentinck warmly commended my proposition; but subsequently informed me that he found such a decided opposition to it in the council that it would be hopeless to get the sanction of those who feared every innovation, and deemed that the Hindoos would never attend a dissecting-room. In a few years after my plan was effectively carried out by others, and it has produced the most beneficial results. Hindoos even come to England to study and qualify themselves for the position of surgeon in the service of government. I know of no branch of science so urgently needed for the people of India as that of medicine and chirurgery; and it is to be hoped that public hospitals and lecturers will be established in the large cities for the benefit of the native population. The *Friend of India* thus alludes to the good done by the establishment of medical institutions in Malwa:—"In 1847, throughout the great provinces over which the authority of the resident at Indore extends, there was not, we believe, one single dispensary. There are now nine, all supported by funds derived from sources independent of the British government, and all frequented by the people with an eagerness not always manifested in our older provinces. The nine are stationed at Indore, Oojein, Rutlan, Manpoor, Dhar, Dewas, Sillanah, and Bhopawur, the central station having two. From these establishments no less than 20,223 new patients have received medical relief, of whom about a third, or 6,465, were women and children. The number of females, in itself a sixth of the whole, deserves especial remark. No less than 2,468 surgical operations were performed; a number which appears enormous, unless very slight cases are included. When it is remembered that a few years since this vast amount of human suffering must have been unrelieved, or relieved only by the superstitious quackery of the Vedic doctors, the good which has been accomplished by Mr. Hamilton, and the energetic residency surgeon, will be readily appreciated. The whole expenses of these establishments amount to 16,032 rupees; and the receipts, chiefly from native chiefs and princes, have been a little above that sum. There appears to be no probability of any falling off; and in spite of their hereditary apathy, the neighbouring chiefs appear to be desirous of imitating a system which, under their own eyes, produces so excellent an effect."

† The reorganisation of village schools would bring instruction home to the mass of the people: they might be made industrial institutions, and combine agriculture with rustic mechanics.

course of study, and subject to the inspection, periodically, of government inspectors.

A people who have been subject, for several centuries, to a rigid political despotism, and sunk for ages in a gross system of idolatry, which, while it involved a slavish subjection to a dominant caste, encouraged the development and exercise of every sensual passion, must necessarily have both intellectual and moral faculties darkened to a degree almost surpassing belief. If it be a hopeless task to regenerate a human being, of whose originally small glimmering of soul scarcely a scintilla is left, and whose frame, diseased by debauchery, is returning to its original mire, how much more difficult must it be to raise a hundred million from the inert state in which the mass now vegetate through existence! Far easier is the task of elevating the New-Zealander or Kaffir; nay, the efforts making for the civilising of Bheels, Gonds, Mairs, Sonthals, and other aborigines in India, may be attended with earlier success than can be expected from the Hindoo, whose mind is still under the dominion of a Gooroo, or Brahmin. It is only, therefore, by great and long-sustained exertions on the part of government, aided by *all* its servants, that the literary, moral, and industrial education of the people of India can be accomplished.*

The Press.—The rise and progress in India of this potent engine of civilisation requires to be briefly noted. During the administration of Warren Hastings, the first English newspaper was established at Calcutta: it was styled *Hickey's Gazette*, and is described as a low, scurrilous, immoral publication; it soon died a natural death. In 1814, the *Government Gazette* was the only publication extant. With the increase of Anglo-Indian residents the number of newspapers augmented, and their character improved. In 1820 there were three weekly journals and one monthly periodical in Calcutta. In 1830, the number of daily, weekly, monthly, and annual periodicals issuing from the Bengal press was thirty-three. In 1834 the numbers stood thus:—*Daily*, political newspapers, four; commercial advertisers, four. *Tri-weekly*, political, two; commercial, one. *Weekly*, political, four; commercial, four. *Monthly*, general, six. *Quarterly*, reviews and Army List, four. *Annuals* and almanacs, five. In the N. W. Provinces, Agra, Delhi, Cawnpoor, and Meerut, had each an English newspaper.

At Madras there were *nine*, and at Bombay *ten* English newspapers and other periodicals; there was no stamp or advertisement duty, but postage was levied on the transmission of journals through the post-office. A registration of the name and residence of proprietors, and a lodgment of a copy with government of each issue of a publication, were required. Until Sir Charles Metcalfe, when acting governor-general in August, 1835, declared the press of India free, and its conductors subject only to the civil law, and trial by jury for libel, the government exercised a vigilant censorship, and could at any moment destroy an obnoxious journal by the deportation of its conductors to Europe (as was done in the case of the late Mr. Silk Buckingham); but since 1835, the newspaper press of India has been as free as that of England.

The native periodical press is of recent formation. During Hindoo and Moslem sway, no such thing as a newspaper with freedom of discussion existed.† Even in 1820 there were no journals in the vernacular: a few subsequently arose.‡ In 1834 there were fifteen newspapers published weekly in Bengal, some in Bengallee, others in Persian, and some with translations into English. At the same period there was in Madras one native newspaper published in Hindoostanee and in English; and in Bombay, four—in the Guzerattee, Mahratta, and Persian languages.

With the establishment of these journals, English and native, there came into operation several printing-presses for the publication of books, pamphlets, &c., which were of essential service to the spread of education and literature.

The latest data before me (1853) of the newspapers and periodicals in the English language at each presidency, show:—*Calcutta*—Daily, seven;§ bi-weekly, three; weekly, eleven; bi-monthly, five; monthly, eight; quarterly, nine; yearly, eight. This is a larger issue of periodical literature than Edinburgh, Dublin, or any city in the United Kingdom

* Government do not seem to have as yet given any attention to the highly important subject of female education. The character of the men of any country may be readily inferred by the intellectual progress and moral teaching of the women. The barbarous system of the Mohammedans is to keep the fair sex as mere sensual toys or household drudges: this cruel policy has, in some places, been adopted by the Hindoos from their Moslem conquerors; but it belongs not to their social ethics, as Menu enjoins reverence and respect; and there have been several distinguished female sovereigns and personages in Hindoostan. A London institution for promoting the education of the women of India is now in full operation, under the direction of a ladies' committee, who send out carefully-trained schoolmistresses, and superintend the working of the society at home and abroad. If the day have not arrived when girls' schools can be formed by government in India as well as in England, then to such a body as "the Society for promoting Female Education in the East," the work of educating the women of India might be temporarily entrusted by the state.

† There were *Ukhbars*, or Court Circulars, containing such scraps of official news, or *gup*, as the ruling power permitted to be made known.

‡ In 1829, in conjunction with Rammohun Roy, Dwarkanaut Tagore, Prussuna Comar Tagore, and other Hindoo gentlemen, I established in Calcutta a weekly journal, and printed it, under my own roof, in English, Bengallee, and Hindoostanee (Persian) characters, in parallel columns, with a hope of improving the tone of the native mind, and preparing it for a temperate discussion of public affairs. This journal was acknowledged to have been eminently instrumental in aiding Lord Wm. Bentinck in the abolition of *suttee*, by appeals to the humane feelings of Hindoo husbands, fathers, and brothers. When widow-burning was suppressed, attention was directed to other prevailing pernicious practices, such as duelling among Europeans, and flagellation in the army. Some very mild comments on a court-martial sentence, dated 20th July, 1829, of "*one thousand lashes on the bare back* of gunner Wm. Comerford, of the 1st company 5th battalion of Bengal artillery" (whose wife had been seduced by the captain of his company, and the seducer's life threatened by the aggrieved husband), led to the condemnation by the government of India of the journal, and its ultimate destruction, with the large property embarked therein. It is now unnecessary to advert to the injury sustained; the circumstance is mentioned as a fragment of history. The sacrifice was made for great objects, and it is seldom one is privileged to witness the beneficial results by the attainment of the end in view.

§ *Englishman, Hurkaru (Messenger), Citizen, Morning Chronicle, Evening Mail, Commercial and Shipping Gazette, Exchange Gazette.* The *Englishman* and *Hurkaru*, for instance, are of the size of the London *Times* without its supplement.

but London can exhibit. *Bombay*—Daily, three;* bi-weekly, two; weekly, five; bi-monthly, four; monthly, three; quarterly, one; half-yearly, one; annually, two; and occasionally (transactions of scientific societies), four. *Madras*—Daily and weekly, nine; bi-monthly, two; monthly, eight; quarterly, three; annual, six. Throughout different parts of India there are also English newspapers, journals, &c., viz., at Agra, four; Delhi, four; Simla, one; Lahore, one; Serampoor (*Friend of India*), one; Rangoon, one; Bangalore (bi-weekly *Herald*), one; Poona, one; Kurachee (Sinde), two. Of the native press I can find no complete returns: in Bengal it has largely increased;† as also at Bombay, where there are two daily newspapers in Guzerattee; five bi-weekly, four weekly (Marathi, Guzerattee and Persian), one bi-monthly (Marathi and English), one monthly (in Portuguese.)

The activity of printing may be judged by the number of establishments in full operation at Bombay, viz., English, seven; Guzerattee, eleven; Marathi, four; Persian, four; lithographic presses, five. In the N. W. Provinces, the number of native presses in operation during the year 1853, was forty; and the number of native newspapers issued therefrom, thirty-seven: some of these, though containing current news, supply information useful for schools, on subjects connected with geography, zoology, history (chiefly modern), education, popular errors, translations from Shakspeare, influence of the moon on animal and vegetable creation, and various scientific matters. The official report to government (19th No. of Selections) on the subject of these native presses, states—"Of the forty presses at work, five were established within the year, and four discontinued during the same period; in the same manner, five new newspapers were issued, and five old ones discontinued. The books published at the presses were 195, and the approximate number of copies of the same struck off for general use, 103,615. Two of the principal presses, viz., Gobind Pughonath's at Benares, and the Moostufaee press at Delhi, have not furnished us with the number of copies they have published of each work issued by them: for these, therefore, the lowest average, viz., 200 to each work, has been taken; but it may confidently be assumed that a far greater number of copies were struck off, more especially as the last-named press is noted for its success in the publication and sale of books." The report adverts commendingly to several of the newspapers, viz., the *Koh-i-Noor*, at Lahore; the *Noor-ool-Absar*, at Agra; the *Quiran-oos-Sadyn*, at Delhi; the *Soodhakeer*, at Benares, "which ranks very high among the native journals of these provinces." One newspaper deserves special note, owing to its patronage and source:—"Another well-conducted periodical is the *Malwa Ukhbar*, under the patronage of the Maharajah Holkar and Sir R. N. C. Hamilton, and published at Indore. The paper is edited by one of the teachers of the Indore school, and contains intelligence relative to the native neighbouring states, which have been personally visited by the editor, and with the condition and general affairs of which he would appear to be thoroughly conversant." It is to be regretted that there are no government reports on the state of the native press in Bengal, Madras, and Bombay. Very little foresight is needed to perceive the vast importance, political, social, and moral, which this rapid extension of printing is calculated to produce on the native mind throughout the length and breadth of Hindoostan: for weal or for woe our government is now committed to the principle of free discussion on every topic which the discursive faculties of the Asiatic may choose to examine. Some publications of a decidedly deistical and even atheistical character

* *Times*, *Gazette*, and *Courier*, each nearly equal in size to the Calcutta newspapers.

† The *Baptist Mission Press* is distinguished in Bengal above all others for the accuracy and excellency of its work; it does a large amount of business, the profits of which are all devoted to the mission. By the aid of this active society, the Scriptures have in whole or in part been translated into, and printed in, forty-four Asiatic languages, which may be thus enumerated:—

*Statistics of Translations (in the Languages of India) of the Holy Scriptures.*

| Languages or Dialects. | No. of Copies. | |

‡ New Testament. § Old Testament.

(Parl. Papers—Commons; 6th August, 1853; p. 165.) The *London Missionary Society* have translated the whole Bible into two languages—the Canarese and Teloogoo; aided that of the Oordoo, Guzerattee, Bengallee, Tamul, and Maliyalim. Of £63,963 annual income, £26,136 is expended in India. The *Church Missionary Society* spends in India £45,000 per annum, and has eighty-eight ordained clergymen engaged in its glorious work. The excellent Moravians are "breaking ground" in the Himalaya, and the Scotch church are effectively occupying Western India.

have already appeared.* Paine's *Age of Reason* and Volney's *Ruins of Empires*, not long since found a more ready sale than any other imported books; for, in the transition state from Paganism to Christianism, the gulf of infidelity must, it is to be feared, be passed with ruin to many souls.†

The pure Hindoo mind, generally speaking, resembles very much that of the ancient Greek: it is logical, yet fond of romance—acute in perception, but wanting in profundity; delighting in subtleties, and eager for disputation; more vain than proud,—prone to exaggeration,—given to fine sentiments rather than to noble actions,‡—with a keener relish for the beautiful than the true,—physically brave, but morally pusillanimous,—superstitious, impulsive, ardent in love, bitter in hatred,—of vivid thoughts, bright imaginings, and lofty aspirations. With such a people, whose natural character has been subdued by centuries of despotism, great results may be produced by example and precept. If left unguided, the bias of fallen man must lead to evil; but with the powerful engine of the printing-press, government may exercise a permanent influence for good. There is no time to be lost: the school inspectors, European and native, now being appointed over every district, may become efficient instruments for the guidance of the native press in the inculcation of truth, the discussion of political economy, and the diffusion of virtuous principles.

Crime.—For want of regular returns and a uniform system, it is not possible at present to show the extent of crime among the population generally; the nature of offences peculiar to the Hindoos or to the Mohammedans; the increase or decrease for several years; or the ratio that it bears to the number of inhabitants: such statistics would be very valuable, and might be obtained. Some returns prepared for the judicial department of the Madras government, furnishes useful details for the year 1850. It appears, that among a population of 22,281,527, there were in one year 167,063 alleged cases of assault,§ 2,308 of cattle-stealing, 9,135 of theft, and 5,424 of various other offences: total, 183,930 cases of crime, for which summonses were granted by the district magistrates. The *village* police cases included 11,087 charged with petty assault, and 1,585 of petty theft.

The offences against the person in the Madras Presidency, show that the Hindoo is not the peaceable person that he is generally represented.‖ The murders in 1850 were 275; homicide, 87; wounding with intent to kill, 25; assault with wounding, 412; rape, 75: total, 864. The offences against property in the same year, were:—Robbery, with aggravating circumstances, 486; robbery, without ditto, 828; housebreaking, 5,959; theft, 2,350; cattle-stealing, killing, or wounding, 922; arson, 377; embezzlement and fraud, 205: total, 11,127. Forgery, 86;¶ perjury or subornation, 11; various, 1,742: total, 1,839. This is a heavy catalogue of *known* crime, which, it is to be feared, forms but a small proportion of the amount actually perpetrated.

The crime of murder varies in different districts:—Malabar, 32 cases; Canara, 30; Cuddapah, 24; Salem, 23; Bellary, 20; in Gangam, Rajahmundry, N. Arcot, Coimbatoor, Madura, and Tinnevelly, the number of cases ranged from 12 to 16. The number of persons charged, in 1850, with abuse of authority as police-officers (principally peons, or constables and village police servants), was 1,410, which indicates grievous maladministration among the lowest officials.** In proportion to the population of the whole presidency, the number of persons summoned for petty offences was one in eighty-three inhabitants, and the crimes and misdemeanours one in 1,000.

* I obtained in 1845, at Bombay, one atheistical book, written by a Parsee, in reply to the Scotch missionaries, which was of such a blasphemous character that I burnt the work to prevent its falling into the hands of any young person in England.

† One of the ablest newspapers published in India, termed the *Calcutta Inquirer*, was edited by a Hindoo named Khrishna Mohun Bannajee, a man of brilliant abilities, perfectly well acquainted with the English language, which he wielded with great power against the government as a thorough "radical:" his infidelity was for a time complete. About the year 1834 he became acquainted with the missionaries; his scepticism was shaken, and he soon embraced Christianity—ceased to oppose government, "sounded the alarm to his countrymen and the authorities on the danger of imparting a merely intellectual education, as inevitably leading a large mass of the population into hostility to the British rule; and declared his entire conviction, both politically and morally, that the government would do well not to exclude Christianity from their schools."—(*See* valuable evidence of Colonel Jacob, of the artillery, before parliament, 4th August, 1853.) While in India, I invited the presence of many young Hindoo gentlemen to my chambers in the evening, and usually had large *soirees:* they quoted Shakspeare, Byron, and other popular works with remarkable memory, but almost invariably scoffed at the Bible and all religion; they had kicked away the crutches of Hindooism, and received no substitute; hence they stumbled through dark and fearful regions of atheism.

‡ There are many exceptions to this, especially in Rajpoot annals; and the devotion of the Hindoo sepoy to his European officer, has often been exhibited by the sacrifice of life to save that of his commander; but heroism is not, in the present age, the characteristic of the mass of the people.

§ Of this number but 46,381 were punished. The disproportion of persons punished to those summoned is a great evil. In Rajahmundry, for instance, 1,422 out of 14,571, or nine per cent. Thus ninety-one out of every hundred persons brought before the magistrates are acknowledged to be innocent: this indicates a very bad state of society.

‖ Murder and attempts to kill are awfully prevalent in every part of India: the nature of the assault varies with the character of the people, and is more manifest among the hot-blooded Mussulmen than the cooler Hindoos; the former slaying, the latter poisoning. Disputes regarding women are often the cause, and a blood feud is transmitted from father to son. Abstinence from animal food does not seem to indispose the vegetarian from taking the life of his fellow-man.

¶ Forgery, perjury, and coining, were deemed trivial offences under Pagan and Moslem rule. Coining base money was turned to advantage by local functionaries, who levied a tax from the coiners.

** The native police throughout India (excepting the Punjab) is notoriously inefficient and corrupt. There can now be no doubt that tortures of the most atrocious and indecent character have been, and are still inflicted, for the purpose of extorting confession from alleged criminals, and still more with a view to obtain money from the suspected or the accused. This, in a great degree, accounts for the large number of persons summoned or apprehended. In Bengal, *dacoity*, or gang-robbery, is nearly as bad as in the days of Warren Hastings. No branch of our Indian administration demands reform more than the police; and perhaps in no department is it more difficult, owing to the unprincipled and profligate class of the community from whom the police are selected. The remedy elsewhere suggested—of erecting municipalities, and leaving the matter in the hands of corporations dependent on the ratepayers, appears to afford the best means of obtaining an honest and vigilant police.

The number of suicides and accidental deaths reported to the magistracy in 1850, within the limits of the Madras Presidency, is very remarkable:—

| Cause of Death. | Men. | Women. | Children | Total. |
|---|---|---|---|---|
| Suicides:— | | | | |
| Drowning . . . . | 195* | 536 | 13 | 744 |
| Hanging . . . . | 171 | 72 | — | 243 |
| Poison . . . . . | 4 | 25 | 1 | 30 |
| Various . . . . . | 28 | 10 | — | 38 |
| Total . . . . | 398 | 643 | 14 | 1,055 |
| Accidental deaths:— | | | | |
| Drowning in wells . | 573† | 913 | 662 | 2,148 |
| Do. in tanks or rivers | 468† | 270 | 521 | 1,259 |
| By burning . . . | 48 | 29 | 47 | 124 |
| „ lightning . . . | 99 | 27 | 16 | 142 |
| „ sunstroke . . . | 15 | 9 | 1 | 25 |
| „ wild beasts . . | 85 | 21 | 13 | 119 |
| „ landslips, &c. . | 67 | 26 | 35 | 128 |
| Various . . . . . | 497 | 87 | 64 | 648 |
| Total . . . . | 1,852 | 1,382 | 1,359 | 4,593 |
| General Total . | 2,250 | 2,025 | 1,373 | 5,648 |

The recklessness of life which this table exhibits is awful; upwards of a thousand suicides‡ and 4,500 *alleged* accidental deaths, constitute only those known to or reported by the police; and probably many of those are murders.

BOMBAY, 1850.—The returns of crime for this presidency vary in form, and are not so full as those of Madras, neither do they appear to be so accurately prepared. Number of persons apprehended for crime by the *district* police, 60,673; by the *village* ditto, 2,398 = 63,071. But here, as at Madras, and owing most probably to the same sause—a corrupt police—the number apprehended or summoned is no actual test of crime. For instance, of 60,673 persons apprehended, 17,765 were discharged without trial, and 16,564 acquitted after investigation.§ The following official specification of crime for two years, throughout the Bombay Presidency, will confirm the remark made under Madras, as to the immoral state of the population:—

*Crime throughout the Bombay Presidency in* 1850, *contrasted with* 1849.

| Offences. | 1849. | 1850. |
|---|---|---|
| Adultery‖ . . . . . . . | 213 | 201 |
| Assault with homicide . . . . . | 15 | 26 |
| Ditto, with wounding or other violence . | 503 | 499 |

* In the year 1849—men, 328; women, 527.

† In 1849.

‡ In India, as in China, suicide very frequently results from the use of opium and other intoxicating drugs, the constant use of which (as an aphrodisiac in the first instance) tends to the prostration of all vigour of mind or body, and ultimately to self-murder, as a relief from the torment experienced. Unhappily, our Indian government, for the sake of obtaining a revenue, have encouraged not only the growth of opium for exportation, but also for private use. The late Henry St. George Tucker, a respected and able chairman of the E. I. Cy., recorded in 1829 his sentiments on this point. "The supreme government of India have condescended to supply the retail shops with opium for domestic consumption. I believe that no one act of our government has appeared in the eyes of respectable natives, both Mohammedan and Hindoo, more questionable; nothing, I suspect, has tended so much to lower us in their regard. Was it becoming in a great government to establish shops for the retail sale of the drug? Is it desirable that we should bring it to the very door of the lower orders, who might never otherwise have found the article within their reach, and who are now tempted to adopt a habit alike injurious to health and to good morals."—(*Memorials of Indian Government; Selections from the Papers of Henry St. George Tucker*, p. 154. Edited by J. W. Kaye: London, 1853.)

§ In Madras, out of 183,930 persons summoned or apprehended for alleged criminal offences, only 54,067 were punished.

‖ This is a prevalent crime in India. The Punjab commissioners report that "the men of the Punjab regard adultery with a vindictiveness only to be appeased by the death or mutilation of the parties; yet in no country are instances of female depravity and conjugal infidelity more frequent." The natives hate any system of law which will not give such redress as their vengeance may demand, and murder the aggressor when in their power to do so.

¶ Child-stealing was extensively practised under the native rule; and, despite our vigilance, is still practised in every part of India. While slavery existed and was encouraged, there was of course a premium offered for the abduction of infants from their parents. In the Punjab, for instance, "children of both sexes, especially females, were openly bought and sold."—(Report, p. 44.) There the crime is now punished with ten or fifteen years' imprisonment.

The supposed number of offenders for the year is 96,591, of whom 78,366 only were apprehended. Of the prisoners tried, no more than 8,123 could read and write; the number tried for second offences was 2,503. The punishments are thus shown of 4.222 prisoners who were in the gaols on 31st December, 1850:—Imprisonment for life, with labour in irons, 131; ditto, without irons, 65; imprisonment, ten to fourteen years, 270; ditto, seven to ten years, 495; ditto, less than seven years, 2,762; ditto, without labour, 499. The number of deaths in prison throughout the year was 318: the average mortality being about six per cent. The sentences of death by the Sudder Foujdaree Adawlut, or highest criminal court, was only 13, which marks a very limited extent of capital punishment. Fines seem to be the most usual mode of dealing with offenders: of 26,352 sentenced by district police, 22,679 were mulct in money, or imprisoned in default of payment, 2,482 confined without labour, and 1,191 placed in the stocks; of 4,792 sentenced by magistrates, 2,535 were fined, 46 flogged and discharged, and the remainder imprisoned for various terms under a year. The session judges' sentences on 1,258 tried before them, comprised 151 fined, and the others imprisoned for various terms of one to five years.

The returns for Bombay,* as well as Madras, note that petty crime prevails most in those districts where there is heavy taxation, failure of crops, general distress, and want of remunerative employment; also assaults with wounding† where the men still go abroad on all occasions armed. Where the inhabitants are employed in constructing tanks, wells, and other public works, crime has diminished. The sums reported lost by robbery throughout the presidency, in 1850, is not large, viz., rupees, 558,345 = £55,854; and recovered by the police—rupees, 150,560; lost by arson—rupees, 24,034.

North-West Provinces.—The details of crime for 1849,‡ in this large section of India, are very meagre. The number of persons apprehended during the year was 82,957; and, with the addition of 1,435 prisoners under examination 1st January, 1849, and 1,071 received by transfer, total disposed of, 85,463: of these only 45,863 (barely more than one-half) were convicted, and 32,842 were acquitted; the remainder died (51), escaped (65), were transferred, &c. No statement of crimes or of suicides, and no trustworthy returns from Bengal appear among the papers laid before parliament; but the following significant expression by the governor-general (Dalhousie), when examining the "Report of the Punjab," will, to some extent, show the state of the country. His lordship says—"I will boldly affirm, that life and property are now, and have for some time been, more secure within the bounds of the Punjab, which we have only held for four years, than they are in the province of Bengal, which has been ours for very nearly a century."§ According to a police report, it is stated that in 1854, out of a population estimated at 35,000,000, spread over 31 districts, 84,536 persons were arrested for 82,925 separate charges: one person accused in every 414 inhabitants—less than a fourth per cent. The convictions are quoted at 48,127, or one-seventh per cent. on the population. Value of property stolen during the year—rupees, 600,000; amount recovered—rupees, 74,111, or nine per cent. A military police, like that of Ireland, would be useful.

‖ Returns not yet received.

Punjab.—It is refreshing to turn from the crime and inefficient police of Southern India to the condition of the Punjab Proper, where, previous to the assumption of British sovereignty (29th March, 1849), crime and deeds of violence were rife. Under the sway of Runjeet Sing, the penal code was unwritten. There were but two penalties—mutilation and fine: capital punishment was rare; imprisonment almost unknown; mutilation reserved for seduction and adultery—sometimes inflicted for violent theft and robbery; but for every offence from petty larceny to murder, impunity was purchased by money. From one to ten thousand rupees was the price of human life; occasionally a noted murderer or

* Within the last two years, military officers have been made assistant magistrates, and placed in charge of the police. The result has been satisfactory: the policemen have been brought under discipline, and rendered effective.

† In the Punjab Proper, a complete disarming of the population recently took place with the happiest results; 119,796 weapons of various kinds were seized or surrendered to the police.

‡ Dated Agra, 13th September, 1850.

§ Minute by Governor-general, 9th May, 1853.

robber was enlisted, on high pay, as a cavalier or a foot soldier; if he were a notorious villain, he was made an officer. When a district became disturbed, Runjeet Sing left the matter to his lieutenants, and did not object to the Draconian code of General Avitabile,* in which hanging was the penalty for every crime, small or great.

Considering that 60,000 men were let loose over the Punjab after the surrender of the Seik power, and that the neighbourhood contained hosts of lawless mountaineers, on a frontier line of 500 miles, apt at all times to make forays, and prey on the more civilised and wealthy communities of the plains, the organisation of an efficient police became a matter of the first consideration. A territory extending over an area of 10,000 miles, between the Beas and Indus, peopled by several million warlike Seiks and fanatic Mussulmen,—by Rajpoots, Patans, Jats, and Goojurs,—by devotees and renegades of every faith in India,—required a preventive police with military organisation, and a detective force under civil control: the former consists of six regiments of foot (5,400 men), and twenty-seven troops of horse (2,700), regularly armed and equipped, and commanded by four British officers as police captains. The infantry guard the gaols, treasuries, frontier posts, and city gates, furnish escorts for the transit of treasure, and other civil duties; the cavalry are posted in small or larger numbers as a mounted patrol along the grand lines of road. Both horse and foot are ready at a moment's notice to aid the civil police, the infantry to crush resistance, the cavalry to expedite pursuit.

The civil police supported by the state (and independent of the city watchmen and rural constabulary paid by the people), consists of 6,900 men of all grades, divided over 228 jurisdictions, in each of which a police-officer is stationed, with one or two deputies and policemen. Each *tehsildar* (native collector of land revenue) is invested with defined police powers within his circle, with authority to overawe the police when corrupt, to animate them when negligent, and to aid the police-officers by infusing honour and vigour into the men. Unknown and suspicious characters are prevented prowling about; curfew penalties are imposed on those found wandering outside the villages between sunset and sunrise; parties not registered as public workmen or camp followers, and found within cantonments, are punished; armed travellers must deposit their arms at the police-station nearest to the pass, and receive them back on their return; all large bodies of men are watched; wayfaring men who put up at the village inns, must report themselves to the village chief; and any inn or hotel proved to have sheltered enemies to the public peace, is destroyed. The city watch and village police form an important link between the executive and the people.

The rural detectives here, as in other parts of India, form admirable trackers; among the middle and lower parts of the Dooabs, amid the wild tract of forest and brushwood, there is a scattered population, who hitherto subsisted chiefly by stealing thousands of cattle, which once carried thither, never emerged thence with life. Roads have been cut through these haunts, and the professional trackers will follow a thief with stolen cattle for fifty to one hundred miles, although the ground may be overgrown with grass, or too hard to be susceptible of footmarks. *Dacoity*, during the first year of our administration, attained an alarming height; gangs of armed and mounted robbers scoured the roads at night, and attacked the houses of native grandees by day, after the fashion of the bush-rangers, as described in my volume on Van Diemen's Land. These gangs have been dispersed, hunted down by men braver than themselves, and the leaders have suffered death or been outlawed: those who escaped have been chased into perpetual exile among the fastnesses of Bikaneer and Raj'hasthan, or the wilds of the Great Desert. Now the Punjab is as free from *dacoity* as any part of Upper India. *Thuggee*, which was practised by a low class of Seiks, who, however, had not "the supple sagacity, insidious perseverance, religious faith, dark superstition, sacred ceremonies, peculiar dialect, and mysterious bond of union which distinguished their Hindoo brethren," has been suppressed, and an organised body of ferocious and desperate murderers destroyed. Finally, in no part of India is there more perfect peace than in the Punjab.† The returns show a moderate amount of crime,‡ especially when the recent habits of the population be considered. The ratio, in proportion to the population of the Lahore district, as compared with other parts of Western India, is thus stated :—

| Districts. | | Persons apprehended. | Persons convicted. | Detected criminals, one to | Convicted criminals, one to |
|---|---|---|---|---|---|
| Lahore division . | 1849–'50 | 9,009 | 5,144 | 274·41 | 480·32 |
| Do. do . . | 1850–'51 | 9,998 | 5,423 | 247·13 | 455·61 |
| Delhi district . . . | 1849 | 2,179 | 1,653 | 140 68 | 186·66 |
| Agra do. . . . . | „ | 4,070 | 2,313 | 203·3 | 358·6 |
| Allahabad district . . | „ | 3,476 | 1,424 | 204·33 | 498·78 |
| Benares do. . . | „ | 3,620 | 1,776 | 204·81 | 423·10 |

Under the native laws, punishments for crime were exceedingly cruel; but except in extraordinary cases of treason or sacrilege, the poor were alone the sufferers, as the administration of justice was corrupt to the core. Torture was applied to both principals and witnesses, and by the gaolers also, to extort money from the prisoners. Flogging, mutilation, decapitation, drowning, burying alive, casting to wild beasts, and disembowelling, constituted the successive grades of sentences for those who were unable to buy off the infliction.

Under our rule capital punishments are restricted to murder; all other heinous offences are visited with transportation to Sincapoor or other places across the sea, with imprisonment and hard labour, on the roads or at public works, either for life or for a term of years.

* At Peshawur, where Avitabile (a Neapolitan) was supreme, the code was blood for blood, especially if the murdered man was a Seik; but "his object was the sacrifice of a victim rather than the punishment of guilt."—(Report of Commission, 1851; p. 11.)

† General Report on Administration of Punjab, p. 39.

‡ Infanticide unhappily prevails extensively in the Punjab. In Rajpootana it has existed for years; but here the Rajpoots are free from that crime which is committed chiefly by the Bedees or priestly class among the Seiks, who consider their order sacred, and that if their daughters lived and married, the fathers would be degraded: the children are consequently doomed to an early death. Other tribes also commit this unnatural and foul crime, viz., "some of the Mussulmen sects, and some subdivisions of the Khastree caste." The British officials, at the suggestion of some excellent missionaries, have had a public meeting of the chiefs, who have agreed to co-operate in the abolition of this unnatural crime. The purchase of slave girls is also decreasing.

# CHAPTER V.

## CIVIL GOVERNMENT—JUDICIAL ADMINISTRATION—MILITARY POWER—AND PROTECTED STATES AND PENSIONARIES.

THE earliest knowledge we possess of India, inclines me to think that the country was divided into several forms of government, some as military monarchies, others as aristocratic oligarchies,* and many with republican† or democratic institutions; but all, more or less, combined the hereditary element in their constitutions, and were required, on great occasions, to unite for mutual defence against a foreign foe. Individual freedom was prized by the people; and when overcome by an enemy, many fled into the deserts and jungles, preferring solitude to subjugation.

The village or municipal system of India, which has outlived all dynasties and changes, combines the hereditary with the democratic: the potail or mayor, in virtue of his birth, would succeed his father; but if unfit for his position, the commonalty might elect their chief. Among the Hindoos there is a strong tendency to office-succession in the same family—not so much in reference to feudality or clanship, as to the transmission of property from one generation to another, in an unbroken line, for a long series of years; a feeling tenaciously held by some races of mankind, and especially by several of Asiatic origin. This idea would doubtless tend to mould the form of government.‡

As a general rule, it may be stated that the *Hindoo* polity was monarchical, with some republican principles, a territorial feudal aristocracy, and hereditary rights and privileges; the Mohammedan rule (acquired by the sword) was styled imperial, and upheld by despotic sway; no aristocracy but that of office or service was tolerated; no local institutions were encouraged; everything became, as far as possible, centralised; and all persons and property were at the mercy of the emperor, whose position, though to some extent hereditary, was only so after the manner of the Cæsars; for the large standing army at Delhi (as at Rome) could make or unmake the chief ruler.§ After the marauding Moslem hordes from Tartary and Afghanistan had consolidated their conquests, the empire was divided into soubahs‖ or provinces, such as Bengal, Bahar, Oude, Malwa, Lahore, &c., over each of which there was a creature of the court, with the style and position of viceroy; most of whom, on the break-up of the Mogul dynasty, declared themselves sovereigns in their respective localities, although they preserved the formality of obtaining the investiture of office from the nominal emperor at Delhi.

When the English appeared in India, they followed the example set by the Arabs and Portuguese,—erected factories at places convenient for trade, and gradually turned them into forts for the protection of their goods and the security of their lives, during the lawless state which ensued consequent on the breaking up of the imperial government at Delhi.

Until 1707, the affairs of the factory of Calcutta were under the superintendence of Fort St. George or Madras: in that year a presidency was formed for Bengal, consisting of a president or governor, aided by a council of varying number—of

* At the city of Nysa, during the Alexandrine period, the chief authority resided in a senate of 300 members. When the Portuguese first saw the Rajpoots, they described them as living under aristocratic republics.—(Barros—*Asia*, iv., p. 545.) The reader desirous of investigating the fragmentary information and legendary lore derived from the Puranas, Maharabat, Cashmerian annals, and other documents relative to the Hindoos, up to the period of the marauding invasions of the Mohammedans in the 11th century of the Christian era, will find abundant scope for inquiry in the works of Sir W. Jones, Colebrook, Wilkins, Wilson, Deguignes, Tod, Bentley, Heeren, Bird, Wilford, Moore, Elphinstone, Dow, Stewart, Masson, and other writers, who have praiseworthily devoted themselves to antiquarian researches connected with the history of the East. A summary of the scanty facts thus obtained would lead to no useful result, as scarcely two authors agree in their general conclusions, excepting in so far that about the period above-named India was divided into many separate states, with numerous tributary or independent rajahs or feudal chiefs.

† This word is used in reference to the prevailing idea of its signification. I do not myself think that any form of republic, whether carried on by an oligarchy or by a democracy, can long exist except under *Christian* polity, when each member of the commonwealth not only governs himself, but subjugates or directs his passions and desires for the promotion of the public weal. In proportion to the fulfilment of this duty, and so far as it accords with the Divine law, in such proportion will be the duration, prosperity, and happiness of a state, whatever may be the designation given to its form of government.

‡ Mr. George Campbell, B.C.S., in the first chapter of his useful work (*Modern India*, 1852), shows the difficulty of arriving at any definite conclusion as to the early form of government among the Hindoos. He thinks the Rajpoots conquered the greater part of India, and although democratic or feudal at home, they were absolute sovereigns abroad, and that under their sway, previous to the arrival of the Mohammedans, India "enjoyed prosperity and wealth."—(p. 12.)

§ At the beginning of the 18th century, the emperor had 30,000 cavalry and 400,000 infantry in constant pay. Merit, not birth, gave precedence, and largesses were frequently distributed.—(*Gemelli.*)

‖ *See* p. 117 for the soubahs of the empire, and their administration at the period of Akber's death in 1605. Peter Heylin, in his *Cosmographie*, 2nd edition, London, 1657, p. 883, says that India was then, according to the latest observations, divided into forty-seven kingdoms, "whereof some few have still their own national kings, the rest all subject to the power of the Great Mogul." By joining many lesser territories, he arranged the whole of India within the Ganges into twelve divisions, viz.—1. *Dulsinda* (W. of the Indus); 2. *Pengab* (E. of the Indus, more inclining towards the S.); 3. *Mandao*, lying between the Pengab on the N., Agra on the S., Delhi on the E., and the Indus on the W.; chief city, Mandao; well fortified, and said to be 30 m. in circumference: also Mooltan and other cities; 4. *Delhi* or Delin; 5. *Agra*, including Gwalior; 6. *Sanga*, on the E. of Agra, and S.W. of Cambaia; 7. *Cambaia*, S. of Dulsinda and part of Mandao, lying on both sides of the Indus, and containing Guzerat, &c.; 8. *Deccan*; 9. *Canara*; 10. *Malabar*; 11. *Narsinga* (N. of Travancore and S. of Orixa); 9. *Orixa* or *Oristan*; 10. *Bolanter*, the petty kingdoms N.E. of the Ganges river; 11. *Patanaw* (Patna); 12. *Bengala*. The *extra Gangetic* territories were divided into Brama or Barma (Burmah), Chav. Chin China, Cambaia, Jangoma or Laos, Siam, and Pegu.

nine to twelve members of the civil class,—chosen according to seniority, and generally head factors, who held their lucrative situations at the will of the governor. In 1758 the government was remodelled by order of the directors of the E. I. Cy.: instead of one governor, *four* were nominated, each to hold office three months, and follow in rotation; these quarterly governors to be aided by a council of ten members. This extraordinary scheme was set aside by the four newly-appointed governors themselves: they saw it was not possible to work out such an absurdity, and they invited Clive to accept the undivided office of president; which was done.

In 1765, another form was devised by the home authorities, to remove existing disturbances in the executive, viz., a governor and four councillors, called a select committee. Before this body arrived, the disturbances had ceased to exist; but the governor and committee assumed the whole civil and military authority. In 1769, a new plan was devised, with a view to check the corruption, and procure the funds which the E. I. Cy. expected from India; a Board of Commissioners was to supervise the proceedings of the governor and council, and to exercise abroad almost the entire power which the Court of Directors were authorised to employ at home. The ship in which the supervisors embarked was never heard of after leaving port, and the plan was abandoned.

The Crown began, in 1772, to take an interest in the administration of India, which up to this period had been exclusively vested in the E. I. Cy. In 1773, parliament passed a "Regulating Act," under which, as previously stated (p. 313), a supreme government was established at Calcutta, Warren Hastings was appointed governor-general, and several changes were made defining the constitution of the company, as regarded both Courts of Directors and proprietors, and the powers to be vested in the subordinate governments at Madras and Bombay.* In 1781, another act (21 Geo. III., c. 95) was passed, referring to the exclusive privileges of the company, which had hitherto been considered perpetual, but which were now fixed for a period of ten years, at the end of which the company was entitled to a three years' notice of the intention to resume the conceded privileges; and another step was taken to abridge the power of the company, or, at least, to associate it with that of the Crown. By a clause in the Charter Act of 1781, copies of all letters and orders relating to the civil or military government of India, were to be delivered to one of her Majesty's secretaries of state; and all documents relating to the revenues, to be forwarded to the lords of the treasury; and "the court should be bound by such instructions as they might receive from her Majesty, through one of the secretaries of state, as far as related to the conduct and transactions of the company and their servants with the country powers of India, as well as to the levying war and the making peace." Henceforth the company ceased to be solely responsible for the good government of the territories entrusted to its care. Censure for omission or commission ought to be applied to the double government.

In 1783, a committee of the House of Commons was appointed to inquire and to consider how the British possessions in the East could be best governed. In the succeeding year, Mr. Fox introduced his celebrated "India Bill," which was very adverse to the company,† "on the assumption that they had betrayed their trust, mismanaged their affairs, oppressed the natives of the country, and brought themselves to the verge of bankruptcy."‡ By the bill, it was proposed to place the territorial government, for four years, in the hands of seven directors, to be nominated by parliament; the commercial affairs (then of great magnitude) to be confided to nine "assistant directors," elected by proprietors of E. I. stock, but to act under the instructions of the seven nominated directors, who could remove the nine assistants. The company strongly protested against the bill; the measure became one of violent party feeling; the king wanted to be rid of Fox as his Majesty's prime minister, and called the youthful Pitt to his aid, who denounced the measure, which, however, was carried through the Commons on the 8th of December, 1783, by a majority of two to one; but was rejected, after several debates, by the House of Lords on the 17th of December, by a majority of nineteen.§ The ministry, also, was thrown out; Pitt succeeded Fox, and early in 1784, moved for leave to introduce a bill for the better government and management of the affairs of the E. I. Cy.: leave was refused by the Commons; parliament was dissolved; a new house, on the 6th of July, adopted the views of the minister; an act (24 Geo. III., c. 25) was passed constituting the Board of Control, or India Board of Commissioners, consisting of certain members of the privy council, including two of the secretaries of state and the chancellor of the exchequer for the time being; the first-named person, in the letters patent, to be styled the President. A secret committee (chairman, deputy chairman, and senior director) was formed out of the Court of Directors, through whom the Board of Control could communicate on all state matters of importance which it might not be deemed advisable to divulge to the Court, and who were to be compelled, if necessary, by *mandamus* from the Court of Queen's Bench, to transmit the orders of the Board to India. A secretariat and staff were organised for the Board, before whom were to be laid drafts of all despatches for inspection and revision; and if the Court failed, within fourteen days, to prepare despatches on any subject required by the Board, it was empowered to transmit the orders to India, without the concurrence of the Court. On this basis, subject to some alterations of detail in the renewed Charter Act of 1813, the government of India was administered, with slight modifications, until 1833, when the commercial character of the company ceased, the functions of the Court became entirely territorial and political, and subject still more to the supervision of

* The president and council, at each of these stations, were also henceforth prohibited commencing hostilities, or declaring or making war against any Indian princes or powers, or negotiating or concluding any treaty of peace, or other treaty, without the consent or approbation of the governor-general in council being first obtained, except in such cases of imminent necessity as would render it dangerous to postpone hostilities or treaties until the orders from the governor-general in council might arrive, or unless special orders be sent from the E. I. Cy. in England.

† In the caricatures of the day, Fox was represented as a carrier, with the India House on his back, with which he was proceeding along Leadenhall-street towards Westminster.

‡ Kaye's *History of the Administration of the E. I. Cy.*, p. 126.

§ Government, under the leadership of the Duke of Portland, had fifty-seven peers present, and nineteen proxies; the opponents, seventy-five present, and twenty proxies.

the Crown by the nomination of a fourth member of the council of India (Mr. T. B. Macaulay), who was also to be a law commissioner for the revision and codification of the Indian laws. Agra and the N. W. Provinces were formed into a lieutenant-governorship, under the immediate supervision of the governor-general. In every matter, the authorities in the East were subordinate to the Court of twenty-four Directors, elected by the shareholders of the E. I. Cy., and to the India Board or Board of Control, whose authority was made more absolute at each parliamentary interference.

In 1853 (20th of August), on the termination of the twenty years' tenure of power* granted in 1833 to the E. I. Cy., a new act of parliament was passed, "to provide for the government of India." Under this enactment, the usual lease of India for several years to the E. I. Cy. was abolished, and the company became tenants at will, in trust for her Majesty, her heirs and successors, as a supervising authority in England; subject in all things to the Board of Control as representative of the Crown, whenever that Board might choose to exercise paramount power in the government of Indian affairs. By this act, the number of directors chosen by the proprietary† was reduced from twenty-four to fifteen; and the Crown was empowered to appoint six directors—the first three immediately, the second three as casual vacancies occurred,—all to have previously served officially in India for at least ten years. The Court of Directors, "under the direction and control of the Board of Commissioners for the affairs of India," were empowered to appoint a separate governor, or lieutenant-governor, for Bengal, and thus release the governor-general from much detail (which has since been done.) Every appointment by the Court of Directors of ordinary members of council at each presidency, now requires the sign-manual and counter-signature of the president of the India Board.‡ A *Legislative Council* has been constituted, for making laws and regulations; the council to consist of one member from each presidency or lieutenant-governorship for the time being, of not less than ten years' official service in India. The chief justice of the Supreme Court of Judicature, one other judge of the Queen's courts, and two other persons of ten years' standing in the service of the company, to be selected by the governor-general, whose assent is requisite to the validity of all laws. The discussions of this council are carried on in public, with reporters of the press in attendance, as in the English House of Commons. Under this act, the patronage of appointment to the civil and medical service of India, which had heretofore been vested in the Court of Directors, ceased, and the nominations henceforth were thrown open to public competition under certain regulations, and examiners ordered by the Crown. The patronage of military and naval officers and chaplains still remains with the Directory, who, in lieu of the advantages derivable from civil appointments, receive—chairman and deputy, £1,000 each; directors, £500 each, yearly.§ Such, in substance, are the leading features of the act of 1853: it makes no mention of the trading charter of the company, which is in abeyance; and it leaves parliament at liberty to decree, from time to time, whatever changes may be deemed advisable in the administration of Indian affairs at home or abroad. The nomination of the governor-general, governors, commander-in-chief of the army, and other high functionaries, remains, as before, a matter of arrangement between the Board and the Directory; the former with a controlling power. The Court claims the right of recalling a governor-general, as it did in the case of Lord Ellenborough: but there can be no doubt that the ministers of the Crown tacitly consented, for certain reasons, to that stretch of prerogative, which is unnoticed in the act of 1853.

* *See* p. 1, for changes in 1833.

† The number of proprietors of E. I. stock in April, 1852, entitled to vote in the election of directors by the possession of £1,000 stock, was 1,765; number having two votes, 311; three votes, 60; four votes, 42: total number of votes, 2,322. Number of voters in service of the company—civil service, 93; military, 160 = 253. Of twelve chairmen of the Court of Directors, between 1834 and 1852, all but three had served ten years in India; one had never been in the East; and two had commanded company's ships. Viewed as a whole, the Court of Directors, since the commencement of the present century, has contained many able men perfectly conversant with the affairs of India, and deeply interested in its welfare. At the present period, the Court possesses a high range of talent among fifteen members, all acquainted locally with India,—whose public character is identified with its good government and prosperity.

‡ The India Board consists of a president, who ranks as a secretary of state—salary, £5,000; parliamentary secretary, £1,500; permanent ditto, £1,500; assistant ditto, £1,200; five senior clerks, £900 to £1,150; six assistant ditto, £500 to £800; twelve junior ditto, £150 to £550; librarian, £400; and other officials. The secretariat establishment of the E. I. Cy. is large and well paid; but a government like that of India, where every transaction of the most trivial character is recorded in writing, and all correspondence and despatches, which are very voluminous, are transmitted in duplicate or triplicate, necessitates a large executive. The heads of departments are gentlemen of known talent and great experience; especially the secretary, Sir James Cosmo Melvill, who, by his administrative ability, information, and tact, is entitled to rank among the most eminent men of his age. Edward Thornton, the historian of India; Professor Horace Hayman Wilson, the celebrated Orientalist; Mr. John Mill, son of the great historian (celebrated himself as an *economist* writer); Professor Forbes Royle, and Mr. Peacock, are among the *employés* at Leadenhall-street.

§ The patronage of the Court of Directors, previous to the act of 1852-'3, was undoubtedly large. I am also bound to add, that with a few exceptions, it was equitably distributed. From 1790 to 1835, the number of writerships (in civil service appointments) ranged from 20 to 25 a year; and from 1835 to 1851, the number at the disposal of the directors (exclusive of 40 at the nomination of the president of the India Board) was 546, or, per cent., 30. The cadetships for the army, and assistant surgeonries and chaplains, were also very numerous between 1796 and 1837: the total was 9,446; averaging 224 per ann. From 1835 to 1851, the number of cadets appointed (including 347 by the India Board president), was 4,916, or 289 per ann. Into the distribution of this patronage we have some insight, which is creditable to the distributors. Between 1813 and 1833, the number of cadets appointed was 5,092; of these, 409 were given to sons of military officers in the royal military, and 124 to those in the naval service; 224 to sons of company's civil servants; 491 to ditto in company's military servants; 40 to ditto of company's maritime service; 390 to sons of clergymen; and 1,119 to orphans and sons of widows. In the parliamentary returns of 1852-'3, the information is not so precise: of 546 writerships at the disposal of the directors, 164 were given to the sons of civil officers, and 96 to those of military = 260. Of 4,569 cadetships within the same date—342 to civil, and 1,100 to military officers of the company = 1,442.—(*See* Thornton's *Statistics* Kaye's *Administration of E. I. Cy.—Indian Progress.*)

It is not within my province or limits to criticise the changes that have been made, to say whether too much or too little has been done; time alone can now determine the wisdom of the policy adopted. The government of India is termed an "enlightened despotism." At Madras and Bombay, the governors are each aided by a council of three members, holding high office; the lieutenant-governors of Bengal and of Agra stand alone. The Supreme Council of India, with whom all power resides, consists of three or four members, of whom the commander-in-chief of the Anglo-Indian army is generally one: the other members are civil servants of the highest standing.

Each governmental department—such as foreign, home, financial, military—has a secretary of state, who is in fact its head, and responsible only to the governor-general, or, in the subordinate governments, to their respective administrators. There is, however, no uniformity: in some places there are departmental boards; in others, a single civil or military officer is entrusted with all power. The patronage of the governor-general is immense; for although seniority is the general rule, the exceptions are very numerous.

The administration of Indian affairs may be considered as in a transition state; the natives must, sooner or later, be admitted to a share in the executive and legislature of their country.* In Jamaica and the West India colonies, I recently saw negroes, of pure African blood, sitting as "honourable members of her Majesty's council," and as representatives of white and black men in the legislative assemblies. Shall we deny to educated and trustworthy Hindoo, Mohammedan, Parsee, and other native gentlemen, those rights which are conceded in other parts of the empire to Africans who, a few years since, were slaves in the lowest stage of servitude?†

I do think the time is arriving (if it have not already come), when intelligent men, of every creed and colour, pecuniarily independent, of good moral character, and whose loyalty to the British government is unquestioned, should sit in a general Legislative Assembly for all India. They might be selected —as in other transmarine dependencies—by the Crown, nominated for life (*quam diu se bene gesserint*), and enjoy some honorary rank or privilege: this would prepare the way for a representative assembly and freer form of government.‡ In addition to this general council, municipal bodies might be formed in all the large cities, for cleansing, lighting, and police, erecting and supporting hospitals, and other useful institutions, and superintending generally the peace and welfare of the several communities. A general act might be passed, empowering the formation of these corporations in all cities having at least 10,000 inhabitants: the people would thus become familiarised to self-government, by managing their own local affairs; and the Hindoos would recognise, in an improved form, one of their most ancient and cherished institutions, and look to the re-establishment of the *punchayet*, or trial by jury, as an indispensable adjunct for the administration of justice. In a sanitary point of view,—in the suppression of crime,—in providing for the poor, infirm, and diseased,—and in organising the elements of civil life and social concord, the formation of municipalities throughout India would be attended with the most beneficial results.

For executive purposes, British India is divided into districts, each of which, on an average,§ contains the annexed area and population, and yields a land revenue as estimated:—

| Presidency. | Area sq. m. | Population. | Land Rev. |
|---|---|---|---|
| | | | £ |
| Bengal . . . . | 3,200 | 1,000,000 | 103,000 |
| N. W. Provinces | 2,300 | 730,000 | 130,000 |
| Madras . . . . | 6,500 | 800,000 | 165,000 |
| Bombay . . . | 4,200 | 600,000 | 160,000 |

Each of these districts in N.W. Provinces, Madras, and Bombay, is under the charge of *one* European official, styled "Magistrate and Collector." In Bengal Proper, the magistracy and collectorship are held by separate persons. These *covenanted* officers are of the highest class, and consist of those who go out as "writers" (the old designation.) The prize of these high appointments is now obtained by undergoing a public examination in languages and elementary branches of knowledge. The range of emoluments varies from £600 to £3,000 a-year and upwards; if the lieutenant-governorship or governor-

* Of late years, the number of natives of India employed in the civil administration of the country, has been largely increased. The following official return shows the augmentation in twenty years:—

*Positions held.—Revenue and Judicial*—Principal Sudder Aumeens (native judges of three grades, who dispense civil justice)—1828, 64. Sudder Aumeens—1828, 157; 1849, 81. Moonsiffs—1828, 86; 1849, 494. Deputy magistrates—1849, 11. Deputy and assistant collectors—1849, 86. Sub-collectors' assistants—1849, 27. Abkaree superintendents—1849, 75. Tehseeldars—1828, 356; 1849, 276. Sherishtedars—1828, 367; 1849, 155. Mamlutdars—1828, 9; 1849, 110. Dufterdars—1828, 2; 1849, 19. Camavisdars—1828, 57. Adawluttees—1849, 5. Meer Moonshees—1849, 1. *Educational*—1828, 14; 1849, 479. *Various*—1828, 149; 1849, 990. Total, 1828, 1,197; 1849, 2,813. (Indo-Britons or Eurasians—as persons of mixed colour are designated—not included in these numbers.) Before 1828 there were only two grades of native judges, viz., the Sudder Aumeens and Moonsiffs. The office of Principal Sudder Aumeen was instituted in 1837, that of deputy collector in 1833, and that of deputy magistrate in 1843. In 1827, no native of India employed in the judicial or revenue department in Bengal received more than 250 rupees per mensem, or £300 per annum. The allowances now received are as follow, at 2s. the company's rupee. One receives £1,560; 8 receive £840 to £960; 12—£720 to £840; 68—£600 to £720; 69—£480 to £600; 58—£360 to £480; 277—£240 to £360; 1,173—£120 to £240; 1,147—£24 to £120 per annum. Since 1849, the number employed has been largely increased.

† Europeans and natives employed in India. BENGAL (in May, 1830, and 1850.)—*Judicial branch*—Europeans, 114 and 218; native, 11,161 and 22,800. Salaries, &c., 2,100,052 and 3,225,625 rupees per annum. *Revenue ditto*—Europeans, 112 and 204; natives, 3,447 and 6,806. Salaries, 651,962 and 1,601,810 rupees. *Customs*—Europeans, 82 and 146; natives, 1,652 and 271. Salaries, 290,490 and 340,835 rupees. *Salt*—Europeans, 41 and 32; natives, 8,569 and 4,786. *Opium*—Europeans, 15 and 42; natives, 1,638 and 2,066. Salaries, 157,433 and 378,620 rupees. Various other departments—Political, educational, &c.—Europeans, 375 and 573; natives, 16,247 and 32,076. Salaries, 2,642,437 and 4,932,356 rupees. *Commercial*—Europeans, 33 and 9; natives, 2,026 and 39. Salaries, 261,666 and 22,438 rupees. PUNJAB, (1850.)—Europeans, 185; natives, 10,986. Salaries, 1,619,546 rupees per annum.

‡ Natives of Ceylon sit in the Legislative Council there.

§ *Modern India;* by George Campbell, B.C.S.: London, 1852, p. 239.

ship of a presidency be obtained.* The *uncovenanted* consist of Europeans, or Eurasians (gentlemen of colour born in India), who hold subordinate positions, and cannot rise into the covenanted class: their emoluments are good, but scarcely equal to their deserts. The number and position of this class are being augmented and improved; and many soldier-officers now find active employment in magisterial and other civil duties.

The number of covenanted or of uncovenanted civil servants at each presidency in 1834 and 1851, the number on the retired and on the active list, and on furlough respectively, is thus officially stated in June, 1852:—

| Civil Servants. | Bengal.† | Madras | Bombay.‡ |
|---|---|---|---|
| 1834. | | | |
| *Covenanted:—* | | | |
| Active list (including those on furlough) . . . . . . . | 506 | 225 | 152 |

The duties of the European civil servants in India, are thus described by the E. I. Cy. in their statements laid before parliament in 1852-'53:—

"Civil servants are prepared for the higher offices in Bengal by previous instruction in this country. At Haileybury the basis of education is European literature and science (classics and mathematics), to which is added, the study of the general principles of law, together with political economy, history, and the rudiments of the Oriental languages.

"At the college of Calcutta the studies of the civilian are resumed, and directed to the mastery of the vernacular languages, the acquisition of the principles of Mohammedan and Hindoo law, and a familiarity with the regulations and the legislative acts of the Indian government; the object of the two institutions being to combine the education of an English gentleman with the qualifications of the native law officer.

"Upon passing his college examination, the civilian commences his career in the public service as assistant to a collector and magistrate. He is thus engaged alternately in the judicial and the revenue line. In his magisterial capacity, he takes the deposition of witnesses, and prepares cases for the decision of his superior; or he hears and determines, subject to revision, cases specially made over to him by the magistrate. His power of punishment extends to two months' imprisonment, a period which, when he is entrusted with special powers by the government, is enlarged to twelve months. As assistant in the revenue department, he decides petty claims relating to arrears or exactions of rent.

"After this apprenticeship of several years, the assistant is regarded as a candidate for promotion. He is then subjected to a further examination, with the view of testing his knowledge of the languages and the laws of the country; and his promotion is made dependent on the success with which he passes the test. That the examination is severe and searching, may be gathered from the fact, that of twenty civilians who came up in 1852, seven only were passed. A successful candidate is then deemed qualified for the office of collector or magistrate.

"As magistrate, he directs the police operations of his district, and takes cognizance of all criminal matters. The law provides for his dealing with certain classes of offences, but limits his power of punishment to three years' imprisonment. Parties charged with graver crimes are committed by him to take their trial before the sessions court.¶ In certain cases the magistrate may inflict corporal punishment, not exceeding a few stripes, and no other punishment is then superadded. Appeals from his sentences, or from those of his assistant, when vested with special powers, lie to the sessions judge.

"As collector, he has charge of the district treasury. He superintends the collection of the government rental; puts in execution coercive measures against defaulters; sells estates for arrears of revenue; and manages those escheated or bought by government. He superintends the partition of estates, and regulates the distribution of the government assessment among the several subdivisions. He also exercises judicial powers in settling, by summary

* Governors of Madras and Bombay, and Lieutenant-governor of Bengal, £10,000 a-year each, and an official residence, &c.; members of council, £8,000 per annum; secretary of government of Bengal, £3,600 per annnm. Such are a few of the prizes now thrown open to public competition throughout the British empire.

† Including Agra, the newly-acquired Cis and Trans Sutlej territory, and the Punjab.

‡ Including Sinde.

§ Exclusive of the pensioners on "Warden's Official Fund," which cannot be shown, as the accounts received from India do not distinguish Europeans from natives.

‖ Exclusive of pensioners on "Warden's Official Fund."

¶ "British subjects guilty of felony or other grave offences, are committed for trial before the Queen's Court. In cases of assault and trespass, they are subject to the jurisdiction of the magistrate (European or native), which extends to the imposition of a fine of 509 rupees, and to imprisonment for two months if not paid. An appeal from the decision of the magistrate lies to the sessions judge, and the case, if so appealed, is not liable to be removed to the Queen's Court by a writ of *certiorari*. Further, Europeans, by being rendered subject to penal recognizances for the maintenance of the peace, are virtually amenable to the jurisdiction of the mofussil police."

process, disputes among the agricultural community regarding rents.

"After further experience, the civilian is promoted to the judicial chair.

"The civil judge presides over the civil courts in his district, and supervises the dispensation of justice by his native functionaries. It is competent to him to withdraw suits from the courts below, and to try them himself.* He hears appeals from the decisions of his principal native judge, when the matter in dispute does not exceed the value of £500; but he may transfer appeals from the decisions of the other subordinate courts to the file of the principal native judge.

"In the sessions court the judge is required to try all persons committed for heinous offences by the magistrates. He has not the power of life and death, but his jurisdiction extends to sixteen years' imprisonment.† All capital cases, after trial, must be referred for the disposal of the Nizamut Adawlut; as also those cases in which the sessions judge dissents from the opinion of his Mohammedan law officer. Persons not professing the Mohammedan faith are not to be tried under the provisions of the Mohammedan law, but under the regulations, the judge being assisted by a *punchayet* or assessors, or a jury, but having power to overrule their opinion. The sessions judge holds a monthly gaol delivery, though in fact he may be said to be constantly sitting. He sits in appeal from sentences passed by the magistrates and their assistants.

"The Sudder Dewanny Adawlut, the highest of the company's courts, is composed of the judges selected from the civil and sessions judges. It has ceased to exercise any original jurisdiction. It is the court of final appeal in the presidency, and controls all the subordinate civil tribunals. Besides regular appeals from the original decisions of the European zillah judge, and in certain cases from those of the Principal Sudder Aumeen, the court is competent to admit second or special appeals from decisions of the courts below on regular appeals. The grounds for special appeal are when the judgments shall appear inconsistent with law or the practice or usage of the courts. The power thus given to the Sudder Court of hearing special appeals extends their means of supervision, and brings judicially before them the proceedings and decisions of all classes of judicial officers, and affords opportunity for correcting errors and insuring consistency, it being one of their duties to regulate the practice and proceedings of the lower courts. Moreover, each judicial officer is required by law to record his decisions and the reasons for them in his own vernacular tongue; and this affords the Sudder Court extended means of judging correctly of the individual qualifications of their subordinates. The Sudder Court sits daily except during the Dusserah and the Mohurrum,‡ when all civil proceedings are suspended. In the trial of appeals, the proceedings of the lower tribunals are read before one or more judges. A single judge is competent to confirm a decree. Two of three sitting together must concur for its reversal, whether the appeal be regular or special. Decisions of the court in suits exceeding in value £1,000, may be carried by appeal before the Queen in council. Monthly reports are received of the state of business from every district, and an annual report is made to government of the administration of civil justice, both in the Sudder Court and in its subordinate courts.

"*The Nizamut Adawlut.*—The judges of the Sudder Dewanny are the judges also of this court. The Nizamut has cognizance in all matters relating to criminal justice and the police of the country; but it exercises no original jurisdiction. Appeals from the sessions judges lie to this court, but it cannot enhance the amount of punishment, nor reverse an acquittal. The sentences of this court are final. In cases of murder and other crimes requiring greater punishment than sixteen years' imprisonment (which is the limit of the sessions judges' power), all the proceedings of the trial are referred for the orders of the Nizamut. The Mohammedan law officer of this court (unless the *futwa* be dispensed with) first records his judgment, and all the documents are then submitted to the judges of the Nizamut. If the case be not capital, it is decided by the sentence of a single judge. Sentences of death require the concurrence of two judges.§ Trials before the sessions judge for crimes punishable by a limited period of imprisonment, are also referred, as already intimated, for the disposal of the Nizamut, in cases where the sessions judge differs from the opinion of the Mohammedan law officer. As in civil matters, monthly abstracts of all trials are laid before the judges of the court sitting together, when the proceedings of the sessions judges are reviewed. In sentences of acquittal which may be disapproved, though the Nizamut cannot interfere so as to affect the sentence, the judge is admonished.

"*Revenue Commissioners and Board of Revenue.*

* "In the trial of civil suits, original or appeal, it is competent to the European judge to avail himself of the assistance of natives in one of the three following modes:—1st. By a *punchayet*, who conduct their inquiries on points submitted to them apart from the court, and make their report to the judge. 2nd. By assessors, who sit with the judge, make observations, examine witnesses, and offer opinions and suggestions. 3rd. By a jury, who attend during the trial, and after consultation deliver in their verdict. But under all the modes of procedure described in the three clauses, the decision is vested solely and exclusively in the judge."

† "The great length of the terms of imprisonment in India is one of the vestiges of a barbarous law, or rather a consequence of its abolition. In 1793, the punishment of mutilation was abolished, and it was then ordained that if a prisoner be sentenced by the *futwa* of the Mohammedan law officer to lose two limbs, he should in lieu thereof be imprisoned for fourteen years, and if sentenced to lose one limb, to seven years. Under a later law, it is competent to the judge to impose two years' additional imprisonment in lieu of corporal punishment. A reduction in the terms of imprisonment has been repeatedly urged upon the government of India by the home authorities."

‡ "The Dusserah is a Hindoo festival continuing for ten days, which are appropriated to religious ceremonies. The Mohurrum is a fast kept by Mohammedans in commemoration of the death of Hossein and Hassein, the two sons of Ali by his cousin Fatima, the daughter of Mohammed."

§ "If the judges of the Nizamut concur in the verdict of the lower court, and the prisoner be considered deserving of a higher degree of punishment than could be awarded by the sessions judge, he may be sentenced to suffer death, or to undergo imprisonment for twenty-one years; but if sentenced to imprisonment for life, then transportation for life, either to the penal settlements of Singapore, Penang, or Malacca, the Tenasserim provinces, Arracan, or Aden, would be substituted; but no native of India can be transported to New South Wales or the adjacent islands."

—In Bengal and the North-Western Provinces there are revenue commissioners, a class of officers superior to collectors, each of whom has authority extending over a division comprising several collectorates; his duty being that of watching the proceedings of the collectors therein, and ascertaining that in every respect they are regular and consistent with just principles of administration.

"All matters relating to the settlement, collection, and administration of the revenue, ultimately fall under the superintendence and control of a Board of Revenue, which exercises a general supervision over the proceedings of commissioners and collectors. Some arrangements, not dissimilar, exist for the like purposes under the other presidencies. Appointments to the Revenue Board, and also to the office of revenue commissioner, are made by selection from civil servants employed in the revenue department."

The average period of service of the Bengal civil servants is stated to be—Judges, Sudder Court, Calcutta, 34; members of Board of Revenue, 30; secretaries to supreme government, 25; magistrates and collectors, 18 to 26; magistrates, 7 to 19 years; other grades varying in proportion.

ADMINISTRATION OF JUSTICE.—Within the limits of the cities of Calcutta, Madras, and Bombay, there are supreme courts of judicature, vested with all the powers of the courts at Westminster, and presided over by chief and puisne judges nominated from the British bar. In these courts, trial by jury takes place; in civil and criminal cases, the law administered is in conformity with that of England, and there is a regular "bar" and solicitors. Beyond the limits of the three principal cities there are "company's courts," viz., at each presidency a supreme civil and a supreme criminal court; the former being one of appeal from numerous zillah or district courts, of which there are in Bengal, 32; in the N. W. Provinces, 21; in Madras, 20; in Bombay, 8. The European judges who preside in the company's courts are not educated for the "bar." There is no jury to assist in deciding on the facts of a case; the law is a compound of Hindoo, Mohammedan, and English principles, and a decision rests with the varying feelings and prejudices of the judge. This great defect will, it is expected, be corrected.

Civil justice is now almost wholly dispensed by native judges, styled Principal Sudder Aumeens, Sudder Aumeens, and Moonsiffs. The first-named are divided, in Bengal, into two classes, who receive each £720 and £480 per annum. Sudder Aumeens receive £300, and Moonsiffs £100 to £200 per annum.* Their functions are thus officially described:—"The jurisdiction of the two lower grades is limited to suits in which the matter in dispute does not exceed a certain value, the limit being of course higher in regard to the upper of these two grades than to the inferior. To the jurisdiction of the highest native judge there is no such limit. To these different classes of native judges is entrusted the original cognizance of all civil suits; and no person, whether British or native, is exempt from their jurisdiction.

"The first grade of native judges (Principal Sudder Aumeens) may sit in appeal from the decrees of the two inferior courts; and as the law, except in special cases, allows but one trial and one appeal, the power of final decision in by far the larger number of suits rests with native judges.†

"Further, suits wherein the amount in dispute exceeds £500 may be tried either by the Principal Sudder Aumeen or by the European zillah judge, if he so please. But in either case an appeal lies only to the highest company's court, the Sudder Adawlut.‡ Here then the native judge exercises the same extent of jurisdiction as the European functionary. Native and British qualification and integrity are placed on the same level. The suits now entrusted to a head native judge were confided, before the passing of Act No. 25 of 1837, to no officer below a European provincial judge.

"The number of appeals affords evidence of the feeling of the people in respect to the administration of the law. The number affirmed and reversed is evidence of the qualifications, intellectual and moral, of the native functionaries as estimated by their superiors. The proportion of appeals to original decisions in the suits disposed of in the N. W. Provinces, for seven years, is about fifteen per cent.; the proportion of decisions reversed in the original suits is little more than four per cent., as shown in the following table:—

| Years. | Original Suits decided on Merits. | | Appeal Suits. | | Reversals. | Proportion of Reverses to Original Suits. |
|---|---|---|---|---|---|---|
| | By Zillah Judges. | By Native Judges | By Europ. Judges | By Native Judges | | |
| 1843 | 31 | 39,181 | 4,505 | 3,083 | 2,301 | 5⅞ per cent. |
| 1844 | 17 | 40,213 | 4,397 | 2,902 | 2,020 | 5 ,, |
| 1845 | 10 | 40,579 | 3,980 | 2,809 | 1,895 | 4½ ,, |
| 1846 | 3 | 41,775 | 3,900 | 2,392 | 1,676 | 4 ,, |
| 1847 | 8 | 43,169 | 3,608 | 2,559 | 1,673 | 3¾ ,, |
| 1848 | 11 | 41,340 | 3,977 | 2,916 | 1,736 | 4 ,, |
| 1849 | 20 | 44,933 | 3,802 | 3,674 | 2,042 | 4½ ,, |

* Mr. Edward Thornton, in reference to these salaries, says—"If the value of money be estimated by the wages of labour in the two countries, it would appear that its worth is about seven times greater in India than in England. The rate of wages issued to 2,000 men employed on the Calcutta and Bombay mail-road is three rupees, or 6*s.* per month each; and assuming the rate of wages in England at 10*s.* per week, £24 in India is equal to £168 in England."

† "A. sues B. for a debt of £10. The suit is instituted in the Moonsiff's court, and conducted by a vakeel or pleader. The pleadings and motions may be submitted in writing, the pleader merely examining the witnesses, or he may have recourse also to oral pleading. The judge is required by law to record his decision, and the reasons for it, upon the face of his decree. The dissatisfied party may appeal from the decision to the European judge of the district, who either hears the appeal himself, or refers it to his Principal Sudder Aumeen. The decision in either case is final, except upon a point of law, when a special appeal lies to the Court of Sudder Adawlut; thus the subordinate courts' proceedings are brought under supervision."

‡ "The course of proceeding in such cases is as follows:—C. sues D. for £1,000. The suit must be instituted in the court of the head native judge; and if not withdrawn by the European judge of the district, it is tried by the native judge. The appeal in either case lies to the Sudder Adawlut, from whose decision, however, there is an appeal to the Queen in council, in all cases where the value in dispute amounts to £1,000."

"By a more recent enactment, natives of India are eligible to the office of deputy magistrate. They are competent in that capacity to exercise the powers of the European covenanted assistant, and even under orders of the local government, the full powers of magistrate. When entrusted with the latter, their power of punishment extends to three years' imprisonment, and they are also competent, in cases of assault and trespass committed by Europeans on natives, to inflict a fine to the extent of 500 rupees, and to imprison for the period of two months, if the fine be not paid. Natives are frequently invested with full powers of magistrates.

"Native deputy collectors are subordinate to the European collectors, but they are competent to transact any of the duties of the collector. Their proceedings are recorded in their own names, and on their own responsibility.

"The selection and promotion of native judicial functionaries are regulated as follows:—Vakeels or pleaders, before obtaining diplomas, must have passed an examination before a committee, consisting of the European revenue commissioner, the European judge of the district, the Principal Sudder Aumeen, the principal of the college or other educational establishment at the station, and such other officers as may be appointed by the government.

"The examination may be presumed to be of stringent character, from the following results:— In 1852, at Agra, twenty-seven candidates presented themselves for examination,—*none* passed. At Bareilly, forty-eight candidates, of whom *two* passed. At Benares, seventy-two, of whom *four* passed. The Moonsiffs (the lowest grade of native judges) are selected from the vakeels, and appointed by the Court of Sudder Adawlut. The Sudder Aumeens are selected from the Moonsiff class by the Sudder Adawlut, and appointed by the government. The Principal Sudder Aumeens are selected from the class of Sudder Aumeens, and appointed by the government. The service is one of gradation, but not of seniority, the superior ranks being filled up by the most efficient men of the inferior."*

A reform is needed in this important section of our civil government of India. By the Charter Act of 1833–'4, it was intended to remedy the defect; and it was mainly with this object that a distinguished person (T. B. Macaulay) was then nominated fourth member of the council of India. Indian law commissioners (T. B. Macaulay, Macleod, Anderson, and Millett) were subsequently appointed, and in June, 1835, laid before the governor-general a draft penal code to be applied to all India; and in October, 1847, it was finally printed for distribution, examination, and discussion at home and abroad. The code contains twenty-six chapters, with notes on each, occupies 124 folio pages, and is undoubtedly a philosophical production. The principal sections refer to *offences against*, or in relation to, the state, army and navy, public tranquillity, government servants, justice, revenue, coin, weights and measures, public health, safety and convenience, religion and caste, the press, offences against the human body, property and property marks, documents, illegal pursuit of legal rights, criminal breach of service contracts, marriage, defamation, criminal intimidation, insult and annoyance, abetment and punishment.† This code has been much criticised; but nothing has been done towards carrying it into effect, or amending its provisions.

ANGLO-INDIAN ARMY.—It is usually said, that the tenure of British power in India is held by the "sword:" this tenure is, however, changing into one of "opinion," *i.e.*, a conviction of the justice, honesty, and advantage of our rule; it will, however, require many years before the latter be fully acknowledged, and before the motley, unsettled, and in many parts turbulent people subjected to our sway, can be left to the simple administration of a purely civil government. The army of India (as was recently that of Ireland) must be considered a police force for the preservation of internal tranquillity, and, by means of its well-educated 6,000 European officers, as an efficient means of promoting the civilisation of the people.

The formation of a body of armed men had its origin in the necessity of protecting factories in which valuable goods were stored, after the manner previously adopted by the Portuguese, and their predecessors (the Arabs) on the coasts of Asia and of Africa. When once a selected class are set apart, with weapons in their hands, to protect the lives and property of others, discipline becomes imperative, and for this purpose a few Europeans were sent from England. In 1747, an act of parliament provided for the regulation of the E. I. soldiers; and in 1754, articles of war, comprised in fifteen sections, were founded on the above act, and promulgated "for the better government of the officers and soldiers in the service of the company of merchants trading in the East Indies." Dupleix organised a brigade, with French officers; the English, in self-defence, did the same. Hindoo and Mohammedan rulers sought the aid of foreign mercenaries, and assigned territorial revenues for their support; interference with the disputes of native states created the necessity for more troops; Hindoos and Moslems were ready to enlist under French or English banners, and made good soldiers; they fought against each other, irrespective of caste or creed,—were faithful and attached to their European leaders; and, in due process of time, an Anglo-Indian standing army was formed and brigaded (*see* p. 304), which grew from year to year, until it has now attained the following proportions:—Aggregate strength of the Indian army in 1851,‡ 289,525: component parts—Queen's regiments—five of dragoons, twenty-four of infantry = 29,480 men; E. I. Cy's. European infantry, six regiments = 6,266 men; company's artillery, 16,440, divided into European horse and foot, and native foot or Golundanze; engineers, or sappers and miners, 2,569. *Natives*—cavalry, regular, twenty-one

* Statistical Papers relating to India, laid before parliament by E. I. Cy., 1853.

† Parl. Papers, No. 673—Commons; 3rd August, 1838.

‡ In 1764, there were eighteen battalions of native infantry, perhaps about 15,000 men. In 1765, Clive found the army of Bengal (the principal forces) consisted of four companies of artillery, a troop of hussars, about 1,200 irregular cavalry, twenty-four companies of European infantry, and nineteen battalions of sepoys, with a due proportion of European officers. The aggregate strength of the Anglo-Indian army, in 1799, was—Bengal, 53,140, including 7,280 Europeans; Madras, 48,839, including 10,157 Europeans; Bombay, 22,761, including 4,713 Europeans: total, 124,740; of these, 22,150 were Europeans. The above comprised—of her Majesty's troops, dragoons, four; infantry, eighteen—regiments. In May, 1804, the number of her Majesty's troops serving in India, was—cavalry, 2,072; infantry, 9,911 = 11,983. The number of troops has varied from time to time, according to the exigencies of war.

regiments = 10,186; irregulars, thirty-four corps = 21,134; infantry regular regiments, 155 = 157,711; ditto irregular regiments, 53 = 39,613; veterans, or native invalid corps for garrison duties, 4,124 men. Among the natives, proportion of Mohammedans to natives, one to four. European commissioned officers, 5,142; warrant ditto, 243. Medical establishment—E. doctors, 824; native ditto, 652; apothecaries, &c., 287. Aggregate cost per annum, about £10,000,000. The army of each presidency is kept distinct under the governors and councils, but all under the control of the governor-general and council.

| Police, militarily organised . . . . | 35 | — | 24,015 | 24,050 |
| Grand total . . . . | 5,249† | 43,149 | 288,596 | 336,994 |

The company's European and native troops are under the discipline of articles of war granted by parliament; the officers hold commissions under the sign-manual of the Queen, and have been recently authorised to rank in England on the same footing as H.M. troops of the line. The company is empowered to employ in India 20,000 European soldiers, irrespective of the Queen's troops, but not to have at one time in Britain more than 4,000 men.

The sepoys of the Indian army consist of men of all castes and creeds: the Bengal troops, which are considered the highest caste, are recruited principally from Oude, Rajpootana, and the N. W. Provinces (a mixture of Hindoos and Mussulmen); the men are hardy, bold, powerful—good materials for soldiers: the Bombay force has its recruits from Oude, Deccan, Concan, &c. Hindoo, Moslem, Jew, and Portuguese, all contribute to make hardy, efficient troops, who will dig trenches (to which the Bengal soldiers object), and fight in them with as much courage as the Rajpoots. The Madras, like the Bombay troops, are termed "low caste," but quite equal to their compeers in any other part of India. It is said that the Bengal troops do not stand being "knocked about," or, in other words, "rough" it so well as the other divisions. In the Punjab force there are now many Seik soldiers. The pay and advantages of the three presidencies have been equalised: the sepoys get a higher and more certain remuneration than is known in any other oriental service; and a scale of pensions is fixed adequate to native wants. The period of enlistment is fifteen years: no bounty is paid; the service being popular, there is always abundant offers of recruits.

*The artillery*, horse and foot, is unrivalled by that of any European power, save in its draught cattle; bullocks and elephants being still partially employed for the siege or field artillery, which number about 400 guns. There are five brigades of horse artillery; twelve battalions of European foot artillery; and six battalions of native foot artillery. The horse artillery is considered the "crack" corps of the Anglo-Indian army. Its cadets at Addiscomb rank next to the *engineers*, the prize for which is obtained by those who attain the highest position after three years' hard study and competition;‡ the young engineers are subsequently instructed for a year at Chatham, along with the royal engineers, and are also required to possess a knowledge of the civil branch of their profession. Their pay and advantages are higher than those of the artillery, and their services much in request for the development of the resources of the country.

The cavalry is divided into two departments—the regular and irregular; the latter term being given to those corps where the trooper provides and feeds his own horse, and supplies his arms and equipments, for which he receives an allowance from the government of twenty rupees = 40*s*. a-month;§ in the regulars, the state provides the horse, arms, and clothing, and gives the soldier pay and batta for his subsistence—about nine rupees = 18*s*. a-month.

There are also regular and irregular infantry regiments, the difference consisting chiefly in the former

* House of Commons' Return, 17th April, 1855.

† In 1760, the number of European officers in the Bengal army was sixty; viz., nineteen captains, twenty-six lieutenants, and fifteen ensigns.

‡ As an illustration of the fairness with which the appointments are made, the following case may be cited. Sir Henry Willock, with commendable public spirit, placed a nomination to Addiscomb at the disposal of the Kensington Free Grammar School. Several youths started for the prize; it was given, after a hard contest, to a friendless youth whose competitors were all seniors to himself, and several of them possessed of family connections. The lad went to Addiscomb, and determined to stand for an engineer appointment: he worked hard night as well as day, knew no vacation, and soon outstripped cadets of older standing than himself; the second year he obtained the honour of the corporal's sword, and the third year, after a neck-and-neck struggle, reached the goal, and became Lieutenant Julius George Medley, of the Bengal engineers. He is now in a high and responsible position in the Punjab, a credit to the service, and a honour to his respected parent, the late William Medley, the eminent banker and financier, to whose generous and patriotic spirit several of the best of our monetary institutions (such as the *Provincial Bank of Ireland*, and the *Bank of British North America*) owe their origin.

§ The irregulars, whose numbers have recently been increased by the addition of twenty-eight regiments, making altogether 21,000 men, are very useful. Cavalry thus formed are not half the expense of a regular corps; the service is liked, the discipline is not strict—(it may be termed "free and easy")—there are more native and fewer European officers, and the men can march without baggage at a moment's warning.

always receiving half a batta (3s. a-month), which is only allowed to the latter when on service or escort duty. This, however, is very often, as the transmission of treasure from one part of India to another gives employment annually to about 30,000 soldiers.

In the Punjab several Seik and other local corps have been organised since the disbandment of our former antagonists: among them is one called the *Guide corps;* it consists of both cavalry and infantry, officered by Europeans. Most of the wild or warlike tribes in Upper India are represented in its ranks; the men unite all the requisites of regular troops with the best qualities of guides and spies,—thus combining intelligence and sagacity with courage, endurance, soldierly bearing, and a presence of mind which rarely fails in solitary danger and in trying situations. Men habituated from childhood to war and the chase, and inured to all the dangers of a wild and mountainous border, are freely admitted into its ranks. To whatever part of Upper India the corps may be marched, it can furnish guides conversant with the features of the country and the dialect of the people: it is thus calculated to be of the most essential service in the quartermaster-general's department, as intelligencers and in the escort of reconnoitring officers.* This excellent force was raised in 1846, at the suggestion of Colonel H. M. Lawrence, and was of great use in the second Seik war, and on other occasions. The corps has been recently augmented to 800 men, who receive rather higher pay than the ordinary soldiers.

Promotion is slow in the Indian army. In January, 1844, the Bengal artillery had ten colonels, whose period of service ranged from forty to fifty-three years; ten lieutenant-colonels, thirty-five to thirty-nine years; ten majors, thirty-one to thirty-five years; captains, eighteen to thirty years: engineers—four colonels, thirty-three to forty-eight years; four lieutenant-colonels, twenty-six to thirty-one years; four majors, twenty to twenty-six years; captains, fourteen to twenty years. Cavalry—ten colonels, twenty-four to forty-eight years; ten lieutenant-colonels, thirty-five to forty-two years; ten majors, twenty-five to thirty-five; captains, eighteen to twenty-four years: other ranks in proportion. Retirements are effected by the juniors purchasing out the seniors; that is, paying them a certain sum of money to induce them to retire on the pension due to their rank:† the money for this purpose is procured by loans from the Indian banks, for the security of which all officers below the party retiring are expected to become bound, or be "sent to Coventry." This is said to be one of the causes of the pecuniary embarrassments which prevail among the juniors of the Indian army: the buying out of old officers is, however, deemed essential to efficiency; and it is proposed to legalise the procedure by act of parliament. A liberal spirit pervades all ranks; and a handsome provision is made for the children of brother-officers who die in India.‡

The Indian commissariat is well managed; the troops are continually on the move, well fed, attended and provided with hospital stores. The executive of this branch consists of a commissary-general, deputy, and joint-deputy ditto, first and second-class assistants, &c.—all Europeans, chosen from the company's European regiments. When an army takes the field, there are about three registered camp followers to each fighting man. The peace establishment of carriage cattle is large: of elephants, about 500; of camels, 5,000. Knapsacks, of forty pounds each, are carried for the men. A subaltern, on the march, is allowed one camel (which costs about three rupees a-month) to carry his baggage; other officers, of higher rank, in proportion. During war, a doolie or litter, with six bearers, is appointed to every twenty Europeans; among the native corps there are two doolies to each company. Supplies are procured by tenders and contract. The feeding of the troops is excellent; the sepoys get two pounds of flour daily. Porter and ale are sent out from England for the canteens. Punkahs, to keep the air cool, are supplied to the barracks and hospitals; regimental libraries are established in European corps; and of late years (particularly during the command-in-chief of Sir William Gomm)§ large barracks, better bedding, improved ventilation, and plunging baths for daily ablution, have been adopted throughout India. By these and other judicious measures the mortality has been greatly diminished: recently, among European troops, it amounts to—for Madras, two; Bombay, three and a-half; Bengal, five and a-half—per cent. The invalidings are heavy: to keep up 100 soldiers, it requires ten annually to supply the decrement by death, invaliding, discharges, and staff appointments. Each European soldier costs, when landed in India, not less than £100. The entire expense of her Majesty's troops serving in Hindoostan is defrayed from the Indian revenues. The discipline of the Anglo-Indian army is excellent,|| the *morale* good, and its efficiency as an armed force has been repeatedly proved.¶ It is said by some, that the cordial feeling between the European officer and

* Report of Punjab Commissioners, 1851, p. 27.

† The buying-out amount varies: a senior captain or junior major of the Bombay artillery would receive £3,500 to £4,000 for retiring on his pension.

‡ In August, 1782, the Bengal army had reached a position to entertain, and subsequently to carry into effect, a project for the maintenance of the orphans of European officers; which is still in operation. A fund was provided by a monthly contribution, deducted from the pay of the several ranks under colonel, viz., subalterns and assistant-surgeons, three; captains and surgeons, six; and majors, nine—rupees each. Governors and managers were appointed by the subscribers, and the foundation laid of one of the most useful institutions in the East, which promptly and liberally at once received the support of the Indian government.—(*Original Papers, &c.*: London, 1784; 8vo. p. 56.)

§ This experienced officer, whose sanitary measures for the health of the troops in the West Indies I noticed in the volume containing that section, thus refers to the same subject in a recent letter to me from Simla:—"With regard to improved barrack accommodation for the European troops, I may report to you at once very satisfactorily, the government has promptly attended to all my representations made to it with this view, and acceded invariably to all my requisitions made upon it in furtherance of this most desirable object. Thus the quarters at Peshawur, Rawul-Pindee, and Meean Meer, have been prepared with all practicable expedition; those of Umballa have been essentially improved; while at Ferozepoor and Cawnpoor (in healthy sites), an entirely new set of barracks have been recently sanctioned."

|| The number of officers dismissed from the service by sentence of court-martial, between 1835 and 1857 (inclusive), was—for Bengal, 47; Madras, 45; Bombay, 16 = 108: which is certainly not a large number among four or five thousand men during seventeen years.

¶ The Anglo-Indian officers are, as a class, superior in military knowledge to the junior officers of similar rank in the Queen's service.

his men does not now exist in the same degree as it did in the times of Clive and Coote, or even at a later period; but be this as it may in the regular regiments, there must be a considerable degree of attachment still prevailing in the "irregulars," where the few officers are so intimately dependent on the feelings of the men for their military success.

The nature of the climate, which renders the luxuries of the temperate zone absolute necessaries,—the habits and caste of the people, which require several men to do the work that one would perform in Europe, and the wear and tear of life, make the Anglo-Indian army a heavy expense on the revenue. The following shows the comparative cost of a regiment of each arm of the service in India, Queen's and Company's:*—Her Majesty's dragoons, eight troops—701 non-commissioned and rank and file, £79,680; native cavalry, six troops—500 native commissioned, non-commissioned, and rank and file, £34,840; brigade of horse artillery, consisting of three European troops and one native—341 European non-commissioned and rank and file, and 218 native commissioned, non-commissioned, and rank and file, including gun Lascars, £59,310; battalion of European foot artillery, consisting of four companies—336 European non-commissioned and rank and file, and 140 native commissioned and rank and file, gun Lascars, £31,020; battalion of native foot artillery, six companies—630 native commissioned, non-commissioned, and rank and file, £22,330; regiment of her Majesty's infantry, nine companies—1,068 non-commissioned and rank and file, £61,120; regiment of company's European infantry, ten companies—970 non-commissioned and rank and file, £52,380; regiment of native infantry, ten companies—1,160 native commissioned, non-commissioned, and rank and file, £25,670; regiment of irregular cavalry, of six ressalahs—584 native commissioned, non-commissioned, and rank and file, £18,770; regiment of local infantry, of ten companies—940 native commissioned, non-commissioned, and rank and file, £13,700.

In 1851, the total charges (including military buildings) of 289,529 soldiers, Europeans and natives, was £10,180,615, or £35 per head. The distribution of cost for the year 1849-'50, which differs but slightly from that of the year 1851, is thus shown:—Her Majesty's cavalry, £188,651; her Majesty's infantry, £771,148; engineers, £76,104; artillery, European and native, H. E. I. C., £576,318; regular native cavalry, £479,075; irregular, £728,247; company's Europeans, £175,954; regular native infantry, £2,880,054; irregular, £431,857; veterans, £128,257; medical department, £142,038; ordnance, £154,813; staff, £415,862; commissariat, £1,248,986; buildings and miscellaneous, £1,701,562. Grand total, £10,098,926.

Taking the number of the Anglo-Indian army, regulars and irregulars, at 330,000, of whom about 50,000 are Europeans, or one Englishman to about six natives, it cannot be considered a large force for the maintenance of peace, and the protection of a country which extends 18,000 miles from north to south and from east to west, and comprises a population of about 200,000,000, of whom, not long since, ten men at least in every hundred were armed, and most engaged in some internecine strife, but now all subjected to the dominant sway of one power. Add to these considerations a land frontier of 4,500 miles, and the necessity of being at all times ready to repel invasion, and to preserve the mass of the people from plunder, and we may not be surprised at the extent, but at the smallness of the force employed on an area of about 1,500,000 sq. m.: the result shows one soldier to about 600† inhabitants; whereas, in France, there is one soldier to seventy inhabitants; Austria, one to seventy-two; Russia, one to sixty; Prussia, one to fifty-six. In most of the old civilised countries of Europe, the standing armies, in proportion to the population, are ten times larger than those of India. The garrison in and around Paris exceeds in number that of the European troops in all India.

The number of officers removed from regimental, and employed in civil and on detached duties, is large. In 1851, it consisted of—colonels, 37; lieutenant-colonels, 47; majors, 48; captains, 479; lieutenants, 400; cornets and ensigns, 29 = 1,040.‡ The complement of regimental officers in 1851, consisted—European infantry, one colonel, two lieutenant-colonels, two majors, twelve captains, twenty lieutenants, and ten ensigns; native infantry, one colonel, one lieutenant-colonel, one major, six captains, ten lieutenants, and five ensigns; cavalry, one colonel, one lieutenant-colonel, one major, six captains, eight lieutenants, and four ensigns.

It would seem advisable to organise an Indian staff corps—a civil department of the army—of a strength in accordance, from time to time, with the necessities of government. A good discipline, education, and moral training, under military surveillance, where the Christian principles predominate, is an effective school for preparing young and intelligent men for the exercise of their powers on a large scale. At present, owing to the want of civilians, the government is allowed to drain off one-third of the officers of the line; military men are extensively employed in political duties, and the regiments are denuded of their officers to an extent which often seriously damages the efficiency of the corps. Double the number of officers might be appointed to each regiment, and after they had passed examination in the native languages, and had served three years in regimental duties (as now prescribed), the option should be given of retiring from the military to the civil branch of the army, or for employment as magistrates, superintendents, electric telegraph, geological surveys, and in other functions, for which peculiar talents might qualify.

INDIAN NAVY.—There is a small maritime force under this designation, consisting of about thirty-three sailing and steam-vessels, which have rendered good service in the Persian Gulf during the China war, and in surveys of the Indian coasts and havens. The steamers are now chiefly employed as post-office

* Parliamentary Evidence, 14th December, 1852, p. 9, of P. Melvill, the experienced chief of military dept.

† I do not take into account the irregular troops in the service of native states; they are very ineffective, unless when disciplined by English officers.

‡ *Officers on furlough 30th April*, 1851.—Military, private affairs, 146; sick certificate, 542 = 688. Medical, private affairs, 18; sick certificate, 93 = 111: total, 799. These figures do not include colonels of regiments, of whom the number on furlough, in 1851, was—Bengal, 70; Madras, 50; Bombay, 29: total, 149. *Number of officers of each army employed, in 1851, on detached service, civil and political and military respectively.*—Bengal, civil and political, 151; military, 430. Madras, civil and political, 44; military, 208. Bombay, civil and political, 42; military, 165. Officers of engineers not included. A corps of civil engineers, trained for Indian service, would be useful.

packets between Bombay, Aden, and Suez. A few of these are of large burthen; the vessels are well armed, manned with Europeans and Lascars, and altogether thus officered:—One commodore, eight captains, sixteen commanders, sixty-eight lieutenants, 110 mates and midshipmen, fourteen pursers, and twelve captains' clerks: a surgeon, detached from the army, is placed on board the larger-sized vessels. The pay is good. Commodore, £250 a-month, with an official residence; post-captains, £80 to £90; commanders, £50 to £70; lieutenants, £12 to £15 (and £2 5*s.* a-month table money while afloat); pursers, £25 to £30; clerks, £5—*a-month.* Retiring pensions, after twenty-two years' service—captains, £360; commanders, £290; lieutenants and pursers, £190—*per annum.* The above ranks retiring from ill-health, after ten years' service, £200, £170, and £125 per annum. In 1852, there were fifty-three officers on retired list and nine on furlough. There is an excellent pilot establishment, maintained by government, at the Sand Heads, off the entrance of the Hooghly river, where it is much needed.

SUBSIDIARY AND PROTECTED STATES AND PENSIONARIES.—At pp. 5—12 will be found a tabular view of the states of India not under our immediate government, with their area, population, soldiery, and revenue. The British relations with protected states are entrusted to officers selected from either the civil or military services, according to their abilities, and denominated Residents, Governor-general's Agents, or Commissioners, as the case may be: at the larger political agencies there are European assistants to the Residents, who have, in some cases, charge of deposed princes. Practically speaking, the "Resident" is, or ought to be, a check on the native ruler when he does ill; a guide and supporter when he does well. Civil independence, with military superiority, is in reality a nullity; and although the Resident does not interfere, except in extreme cases, with the general administration of affairs, he expects to be consulted in the selection of a minister of state; and a system, founded on precedent, has grown to have almost the force of law, though a wide discretion is necessarily left to the British functionaries, who have, by remonstrance and persuasion, rather than by direct interference, put down, in several states, *suttee*, infanticide, and other inhumanities. This system, which answered well at an earlier stage of our dominion, has now nearly outgrown the purposes for which it was designed. Power in the chief, without responsibility, has worked ill for the subject: relieved from external danger in war, and from internal rebellion caused by misgovernment,—indolence, sensuality, and crime found full scope; and we have been obliged to assume the duties of lord paramount where princes have died without heirs, or where it became a positive obligation to prevent the misery and ruin of the people of an entire kingdom.

The stipendiaries who receive annually political payments from the British government, are thus stated:*—The King of Delhi (a lineal descendant of the Mogul emperors, but now totally divested of power), £150,000; Nabob of Bengal (a descendant of Meer Jaffier—*see* p. 291), £160,000; families of former Nabobs, £90,000; Nabob of the Carnatic (a descendant of a former Mohammedan viceroy), £116,540; families of former Nabobs of Carnatic, £90,000; Rajah of Tanjore (descendant of a petty military chief), £118,350; Rajah of Benares (a deposed Zemindar), £14,300; families of Hyder and Tippoo (both usurpers—*see* pp. 316–'17—and bitter enemies of the English), £63,954; Rajahs of Malabar, £25,000; Bajee Rao (deposed Peishwa), £80,000; others of Peishwa's family, £135,000; various allowances, including political pensions, compensations, &c., £443,140: total, £1,486,284. It would certainly seem advisable to exercise some surveillance over the recipients of these large sums: most of them are usurpers and upstarts of yesterday, and really have no claim to these extravagant pensions; the more so, as in several cases these large annuitants avail themselves of the means thus provided to bad lives of debauchery and idleness, pernicious to themselves and to all around. The main plea for the continuance of the pensions is the large families and harems of the stipendiaries.

---

# CHAPTER VI.

## FINANCE—INCOME AND EXPENDITURE—INDIAN DEBT—MONETARY SYSTEM.

DURING the early periods of our intercourse with India, the profits derived from commerce mainly furnished the means for maintaining the necessary establishments. After the acquisition of Bengal (1765), an income was derived from land, customs, and such other sources as contributed to fill the exchequer of our Mohammedan predecessors.† Subsequent additions of territory furnished revenue to defray the charges attendant thereon: and thus, from time to time, the finances were enlarged.

* *Modern India;* by G. Campbell, B.C.S.: p. 150.

† The oppressive taxes levied by the Mohammedans have been abolished, including the inland transit dues. Among the exactions during the Mogul rule, which are not now collected, the following may be enumerated:—*Jesych*, or capitation tax, paid by Hindoos or other "infidels;" *meer behry*, port duties (probably similar to our custom duties); *kerrea*, exaction from each person of a multitude assembled to perform a religious ceremony; *gawshemary*, on oxen; *sirderukhty*, on every tree; *peishcush*, presents; *feruk-aksam-peesheh*, poll-tax collected from every workman; *daroghaneh* (police); *teeseeldary* (subordinate collector); *fotedary* (money-trier), taxes made for those officers of government; *wejeh keryeh*, lodging charges for the above officers; *kheryteh*, for money-bags; *serafy*, for trying and exchanging money; *hassil baazar*, market dues; *nekass*, tax on the sale of cattle, and on hemp, blankets, oil, and raw hides; also on measuring and weighing, and for killing cattle, dressing hides, sawing timber, and playing at dice; *rahdary*, or passport; *pug*, a kind of poll-tax on salt, spirituous liquors, storax, and lime—on fishermen, brokerage, hearths, buyer and seller of a house, and other items comprised under the term of *serjerjehat.*—(See *Ayeen Akbery*, for details.)

*Revenues and Indian Charges* (independent of home expenses)† of each Presidency.*—At 2s. the Sicca Rupee.

* In the above statement, from the year 1828, the allowances and assignments payable to native princes and others under treaties (amounting to upwards of a million and a-half per annum), and the charges of collecting the revenue, including the cost of the opium and salt (amounting to upwards of two millions and a-half more), have been excluded in order to arrive at the real produce of the revenue.

In the tabular statement, down to the year 1827, the gross revenues are shown; and the rate of converting the Indian money into sterling is 16 per cent. higher than the rate at present used.

† *The Territorial Payments in England, in* 1849–'50 (latest return made up), were :—Dividends to proprietors of East India stock, £629,435; interest on the home bond debt, £173,723; purchase and equipment of steam-vessels, and various expenses connected with steam communication with India, £50,543; her Majesty's government, on account of the proportion agreed to be borne by the company of the amount payable under contract between her Majesty's government and Peninsular and Oriental Steam Navigation Company for an extended communication with India and China, £70,000; transport of troops and stores, deducting freight charged in invoices, £36,418; furlough and retired pay to military and marine officers, including off-reckonings, £614,393; payments on account of her Majesty's troops serving in India, £200,000; retiring pay to her Majesty's troops (Act 4 Geo. IV., c. 71.) including an arrear, £75,000.

*Charges, general,* comprising :—Board of Commissioners for the Affairs of India; salaries of the president and officers of the board, including superannuation allowances granted by warrant of the Crown under Act 53 Geo. III., cap. 155, sec. 91, £30,523; salaries of the Court of Directors, £7,600; contingent expenses of the Courts of Directors and Proprietors, consisting of repairs to the East India House, taxes, rates, and tithes, coals, candles, printing, stationery, bookbinding, stamps, postage, and various petty charges, £28,829; salaries and allowances of the secretaries and officers of the Court of Directors, deducting amount applied from the fee fund in part payment thereof, £93,794; annuitants and pensioners, including compensation annuities under Act 3 & 4 Will. IV., cap. 85, and payments in commutation thereof, £198,199; Haileybury College, net charge, £9,074; military seminary at Addiscombe, net charge, £4,057. Recruiting charges: pay of officers, non-commissioned officers of recruiting establishments, and of recruits previous to embarkation, bounty, clothing, arms, and accoutrements, £43,438; passage and outfit of recorder, Prince of Wales' Island, Bishop of Madras, aides-de-camps, chaplains, company's officers in charge of recruits, officers in her Majesty's service proceeding to join their regiments, and volunteers for the pilot service, &c., £22,655; charges of the store department, articles for use in inspection of stores, labour, &c., £3,201; Lord Clive's fund, net payment for pensions, &c., £36,519; law charges, £12,215; cultivation and manufacture of cotton, &c. in India (expenses incurred in view to the improvement of), £547; commission to agents at the outports on realisation of remittances, £260; maintenance of lunatics, £6,466; miscellaneous—consisting of expenses of overland and ships' packets, maintenance of natives of India, donation to the Bengal Civil Fund and to widows' funds for the home service, donations for services and relief, &c., £7,667. Interest paid upon sums deposited by Great Indian Peninsula Railway Company, £1,722; East Indian Railway Company, £2,983; absentee allowances to civil servants of the Indian establishments, £32,383; annuities of the Madras Civil Fund of 1818, £15,388; retired pay and pensions of persons of the late St. Helana establishment, not chargeable to the Crown, £5,795. The total territorial payments, including invoice value of political stores (£378,100), and some small items not above enumerated, was £2,750,937.

‡ Deficit of £852,217. § In this and following years, the receipts and charges of Sinde are included in Bombay.
‖ In this and following years, the revenues and charges of the Punjab are included in Bengal. ¶ Surplus.

The *receipts* for the year 1852-'53, were—Land-tax, £15,365,000. *Sayer* (stamps, &c., on land) and *abkarree* (excise on spirituous liquors), £1,185,000; *moturpha* (tax on houses, shops, trades, and professions),* £118,000; salt, £2,421,000; opium, £5,088,000; custom or import duties, £1,430,000; stamp-duties, £491,000; post-office receipts, £200,000; mint ditto, £150,000; tobacco, £63,000; tributes and subsidies, £571,000; miscellaneous (comprising arrears of revenue, marine and pilotage dues), £1,522,000: total gross receipts, £28,610,000.

The *disbursements* for the same year were—Interest on India and home bond debt, £2,503,000; charges defrayable in England, viz., dividends to proprietors of E. I. stock, £650,000; E. I. House and India Board establishments, half-pay and pensions, stores, &c., £2,697,000; army and military charges, £9,803,000; judicial establishments, £2,223,000; land revenue collection and charges, £2,010,000; general charges and civil establishments, £1,928,000; opium charges and cost of production, £1,370,000; salt, ditto, £350,000; marine (including Indian navy, pilot service, lighthouses, &c.), £376,000; post-office, £213,000: customs—collecting import duties, £189,000; mints, £60,000; stamps, £32,000; miscellaneous (including *sayer*, excise, *moturpha*, public works, &c.), £4,223,000: total charges, £27,977,000.

THE INDIAN DEBT requires a brief elucidation: it was originally created to meet the temporary wants of commerce, and subsequently those of territory; money was borrowed in India, in such emergencies, at high rates of interest. In April, 1798, the debt amounted to £8,500,000;† of this, £1,300,000 was at twelve, £4,000,000 at eight, £1,700,000 at six—per cent.; the remainder at various lesser rates, or not bearing interest.

In April, 1803, the debt stood at £17,700,000; of which £10,200,000 was at eight, £3,000,000 at ten, £600,000 at twelve—per cent; remainder as above.

In April, 1804—debt, £21,000,000; of which £3,000,000 at ten, £1,200,000 at nine, £12,000,000 at eight—per cent.; remainder as above.

In April, 1834—debt (exclusive of home bond), £35,000.000; in April, 1850, £47,000,000; in 1855, about £50,000,000. Annual interest of debt, at five and four per cent., about £2,000,000.

There is a home India debt, which has been created from time to time to meet deficiencies in remittances required for home charges: it now amounts to about £2,500,000.

Proportion of debt due to Europeans and to natives, in 1834—Europeans, £20,439,870; natives, £7,225,360 = £27,665,230. In 1847, Europeans, £21,981,447; natives,‡ £12,271,140 = £34,252,587.

The India debt has been mainly caused by war:§ that with the Burmese cost, from 1824 to 1826, at least £13,000,000. The debt was augmented by it from £26,468,475 to £39,948,488, or £13,500,000. During the ten years from 1839–'40 to 1848–'49 (which was almost uninterruptedly a period of warfare in Afghanistan, Sinde, the Punjab, and Gwalior), the aggregate charges exceeded the revenues of India by £15,048,702, showing an annual deficiency of £1,500,000.

There was a *nominal* reduction of the debt between 1830 and 1834, by an alteration of the high rates of exchange, previously used, to the rate of two shillings the sicca rupee, adopted after the passing of the act 3 and 4 William IV., ch. 85: by this the debt appeared reduced from £39,948,488 in 1830, to £35,463,483 in 1834. There was a *real* reduction to £29,832,299, between 1834 and 1836, by the application to that purpose of a portion of tea sales and other commercial assets, derived from a winding up of the mercantile business of the E. I. Cy. The progress of the debt bearing interest in India is thus shown:—

| Years. | Value. | Years. | Value. | Years. | Value. |
|---|---|---|---|---|---|
| | £ | | £ | | £ |
| 1834 | 35,463,483 | 1841 | 32,051,088 | 1848 | 43,085,263 |
| 1835 | 33,984,654 | 1842 | 34,378,288 | 1849 | 44,204,080 |
| 1836 | 29,832,299 | 1843 | 36,322,819 | 1850 | 46,908,064 |
| 1837 | 30,406,246 | 1844 | 37,639,829 | 1851 | 47,999,827 |
| 1838 | 30,249,893 | 1845 | 38,627,954 | 1852 | 48,014,244 |
| 1839 | 30,231,162 | 1846 | 38,992,734 | 1853 | 49,043,526 |
| 1840 | 30,703,778 | 1847 | 41,798,087 | 1854 | — |

There is in India, as well as in England, a constant tendency to increased expenditure. In fifteen years the augmentation stood thus:—

| Years. | Total Revenue. | Charges. | | Debt. | |
|---|---|---|---|---|---|
| | | India. | England. | India. | Home. |
| | £ | £ | £ | £ | £ |
| 1834–'35 | 18,650,000 | 16,680,000 | 2,160,000 | 35,460,000 | 3,523,237 |
| 1849–'50 | 25,540,000 | 23,500,000 | 2,700,000 | 47,000,000 | 3,899,500 |

This increase has taken place in addition to £8,122,530‖ appropriated from commercial assets, in 1834, towards liquidation of India debt, and £1,788,522 applied to reduction of home bond debt: total £9,911,055; and notwithstanding a reduction in the interest of the India debt from six and five to five and four per cent. An annual deficit of upwards of a million sterling, for about a quarter of a century, does not appear satisfactory, and requires not merely vigilance to keep down expenditure, but still more, the utmost efforts to raise revenue by increasing the paying capacities of the people. Assuming the British India population at 130,000,000, and the annual revenue at £28,000,000, the contribution per head is about fifty-two pence each per annum. A people in prosperous circumstances would yield much more than four shillings and fourpence each yearly.

* This tax, a relic of the Moslem system, still exists at Madras: its abolition is under consideration.

† Instead of giving rupees, which perplex an English reader, I give the sum, converted into sterling, at 2*s.* the rupee.

‡ Between 1834 and 1846, the sums invested by Indian princes in the India debt, has been—King of Oude, £1,200,000; rajah of Mysoor, £84,000; Bajee Rao, £50,000; rajah of Gurhwal, £10,000; Chimna, Indore, £25,000; Pretaup Sing, Tanjore, £6,000.

§ During the present year (1855), a five per cent. loan has been created, to be applied solely to the extension of public works. In November, 1840, a similar proposition was submitted by the author to the E. I. Cy.

‖ Of this sum, £2,677,053 constituted the principal of the Carnatic debts.

The debt due to the E. I. Cy. is provided for. In 1834 the sum of £2,000,000 was set apart from the commercial assets of the company to be invested in the English funds (three per cents.), and to accumulate at compound interest, at forty years (until 1722). in order to pay off the E. I. Cy's. stock of £6,000,000,* at the rate of £200 for every £100 stock: making the total amount to be liquidated in 1874, £12,000,000. In May, 1852, the £2,000,000 had increased, by the annual reinvestment of three per cent. int., to £3,997,648.

The tangible commercial property sold under the act of 1834, realised £15,223,480, which was thus disposed of:—£8,191,366 towards discharge of India debt; £2,218,831 was applied in payment of territorial charges in England; £1,788,525 was applied in liquidation of part of home bond debt; £2,000,000 was paid into the Bank of England, for investment in the funds, to provide a "security fund," at compound interest, for the ultimate redemption of the capital stock of the company (£6,000,000) in 1874; £561,600 was applied in compensations to ship-owners and other persons; and the remainder, of £463,135, was retained in London, as an available cash balance for the purposes of government in India. The unavailable assets claimed as commercial by the company—viz., the India House in Leadenhall-street, one warehouse retained for a military store department, and house property in India,—the whole, valued at £635,445,—remains in the hands of the company, but applicable to the uses of the Indian government.†

MONETARY SYSTEM.—Silver is the standard of value: the coins in circulation are—the rupee of silver, value two shillings; the anna of copper, three-halfpence; and the pice, a base metal, whereof twelve represent one anna.

The rupee contains 165 grains of fine silver, and fifteen grains of alloy: when silver is worth five shillings per ounce, its value is one shilling and tenpence farthing; the average rate of remittance, by hypothecation, from India, has been at the rate of one shilling and elevenpence three farthings; bullion remittances have averaged one shilling and tenpence, four per cent. over the metallic value of the rupee. It is usually converted into sterling, approximatively, for nominal purposes at two shillings.

Gold coins, termed pagodas and mohurs, are now seldom seen. There are no means of ascertaining the amount of the circulating medium, in metal or in paper: government possess no returns on the subject. The quantity of specie (value in rupees) issued from the mints, in several years, has been:—

| Mints. | Gold. | Silver. | Copper. |
|---|---|---|---|
| | Rupees. | Rupees. | Rupees. |
| Calcutta, 1847–'48 . . | 10,286 | 12,158,939 | 35,116,331 |
| ,, 1848–'49 . . | 46,980 | 15,211,580 | 47,724,328 |
| ,, 1849—'53, 4yrs. | 151,299 | 84,534,529 | 116,571,391 |

| Bombay, avg. of same period . . . . . | — | 17,264,598 | none coined. |
| Total . . . . | 208,565 | 132,440,835 | 205,571,721 |

PUBLIC BANKS IN INDIA.—Until within the last few years, there was only one public joint-stock bank (*Bengal*) in India. This institution owed its formation, at the commencement of the present century, to the financial ability of the late Henry St. George Tucker,‡ and was eminently successful. In 1829-'30 I proposed and assisted at the organisation of the *Union Bank of Calcutta*. It was soon taken out of my hands by the leading merchant bankers, who used its capital and credit to prop up their insolvent firms: it did not, however, prevent their failure for £20,000,000 sterling, leaving a dividend of not many pence in the pound. The *Union Bank* held its ground for a few years, but it ultimately fell with another great crash of Bengal traders, and was then ascertained to have been, for the last few years of its existence, a gigantic swindle.

In conjunction with Sir Gore Ouseley and other friends, I tried to establish in London an East India Bank, which should act as a medium of remittance between Britain and India. The government and several members of the E. I. Cy. were favourable, but private interests, connected with individual banking and agency, were too powerful at the E. I. House. A charter offered was clogged with restrictions which would defeat the object in view; and after an expenditure of several thousand pounds, and five years of untiring perseverance, the project was abandoned, when I went to China, in her Majesty's service. in March, 1844. Since then a local bank, formed at Bombay, established a branch in London—has now its head-quarters (*Oriental Bank*) there, with branches in India and China, and appears to be doing a large and profitable business. Acting on my suggestions, banks were established at Bombay and Madras, on the same governmental basis as that of Bengal; their notes being received as cash by government, and remittance operations prohibited. There are now about a dozen public banks in India, whose aggregate capital is only about £5,000,000: but no returns of their position are made to the E. I. House. There are numerous governmental treasuries in different parts of India. To meet current expenses, and to provide against contingencies, large cash balances are kept there. In 1852, the coin ready for emergencies was £12,000,000.§

The Hindoos have no joint-stock banks among themselves; the *shroffs*, or money-changers, issue *hoondees*, or bills of exchange, which are negotiable according to the credit of the issuer; the leading *shroffs* in the principal towns correspond not only with their brethren in all parts of India, but also in the large cities of Asia, and even at Constantinople: by this means important European intelligence was wont, before the establishment of communication by steam, to be known among the natives in the bazaar at Calcutta, long before the government received official tidings.

* This capital consisted originally, on the union of the two companies in 1708, of £3,200,000 (*see* p. 230); between 1787 and 1789, this sum was increased to £4,000,000; from 1789 to 1793, to £5,000,000; and from 1793 to 1810, to £6,000,000.

† Evid. of Sir J. C. Melvill.—(Parl. Papers; May, 1852.)

‡ An admirable memoir of this distinguished Indian statesman, and selections from his valuable papers. have been recently prepared by Mr. J. W. Kaye, who has attained a high reputation as a biographer.

§ In June, 1855, the assets of the general treasuries was —Bengal, 15,200,000 rupees; Madras, 2,000,000; Bombay, 9,200,000 = 26,400,000 rupees, of which 22,300,000 was in specie. The assets of each of the three governmental banks was, in April, 1855—B. Bengal, 27,682,636 rupees; B. Madras, 6,062,163 rupees; B. Bombay, 12,077,566 rupees. Excess of assets over liabilities of each, 10,863,264 rupees; 2,996,958 rupees; 5,340,480 rupees. Coin in these three banks, 10,660,000 rupees. Bank notes outstanding, 17,500,000 rupees. Government bills and debentures, 6,400,000 rupees.

# CHAPTER VII.

## COMMERCE—IMPORTS—EXPORTS—SHIPPING—VALUABLE PRODUCTS—CAPABILITY OF GREATLY INCREASED TRAFFIC.

The commerce of India has, for many ages,* been deemed of great value; but considering the extent and resources of the country, it was not until recently carried on with England to any large extent. In 1811–'12, our dominion was firmly established in Hindoostan, and there was general peace: a contrast between that year and 1851–'2, will show its progress in forty years:—

| Total Commerce. | 1811–'12. | 1851–'52. |
|---|---|---|
| | £ | £ |
| Value of merchandise imported from the United Kingdom | 1,300,000 | 9,300,000 |
| Ditto from other countries | 160,000 | 3,100,000 |
| Total Imports | 1,460,000 | 12,400,000 |
| Merchandise exported to the United Kingdom | 1,500,000 | 7,100,000 |
| Ditto to other countries | 600,000 | 12,700,000 |
| Total Exports | 2,100,000 | 19,800,000 |

Thus, exclusive of bullion, coin, or treasure, there has been, in merchandise alone, an increase of imports from £1,460,000 to £12,400,000, and of exports, from £2,100,000 to £19,800,000. The treasure transit, at the two periods, has been:—1811–'12—imported, £230,000; exported, £45,000: 1851–'52—imported, £5,000,000; exported, £910,000. The shipping of all nations entering at the two periods, was—1811–'12, 600,000 tons; 1851–'2, 1,700,000 tons.

In 1811, it was gravely asserted before parliament, by several witnesses, that the trade of India could not be extended; that it was not possible to augment the consumption of British manufactures; and that the people of Hindoostan had few wants, and little to furnish in exchange. The answer to this is an extension from one to nine million worth. Yet the trade of India is still only in its infancy; and but for the unjust prohibitions† to which for many years it was subjected in England, it would now probably be double its present value. Assuming the population of all India at 200,000,000, including about 60,000 Europeans, and the exports of our merchandise at £10,000,000,‡ there is a consumption of only one shilling's worth per head. Our exports to the United States of America, in 1854, amounted to £21,400,000, or, for 25,000,000 inhabitants,§ about seventeen shillings per head of the population; to Australia, for 700,000 persons, to £12,000,000, or about £17 per head during a year of diminished trade. Even the negro population in the West Indies, under one million in number, take off nearly £2 sterling per head of British produce; and the colonists of British America, £5 each yearly. The exports from the United Kingdom to India, in the year 1854, already, however, equal in amount those sent in the same year to France (£3,175,290), Spain

* Three hundred years before the Christian era the India trade was a tempting prize to Alexander, and it continued to be an object of solicitude to Europe and to Asia. In 1204, the Venetians, assisted by the soldiers of the fourth crusade, obtained possession of Constantinople, and retained the occupation for fifty-seven years, mainly by the advantages of Indian commerce: these were, in the 13th and 15th centuries, transferred to their rivals the Genoese (whose colonies extended along the Euxine and towards the Caspian), in return for assistance given to the Greeks. The Venetians then entered into a treaty with the Mohammedans, and conducted their commerce with the East *via* Egypt and the Red Sea. The discovery of a maritime route by the Cape of Good Hope, destroyed the overland trade by Egypt and Asia Minor. The construction of a ship canal through the isthmus of Darien, would give a fresh stimulus to the commerce of the East.

† For many years, great commercial injustice was done by England to British India. High, indeed prohibitory, duties were laid on its sugar, rum, coffee, &c., to favour similar products grown in the West Indies: still worse, we compelled the Hindoos to receive cotton and other manufactures from England at nearly nominal duties (two and a-half per cent.), while, at the very same time, fifty per cent. were demanded here on any attempt to introduce the cotton goods of India.—(*See* Commons Parl. Papers; No. 227, April, 1846; called for, and printed on the motion of one of the oldest and most independent members, Edward Stillingfleet Cayley, M.P. for N.R. Yorkshire.) The same principle was adopted in silk and other articles: the result was the destruction of the finer class of cotton, silk, and other manufactures, without adopting the plan of Strafford, in Ireland, during the reign of Charles I.—namely, the founding of the linen trade as a substitute for that of woollen, which was extinguished in order to appease the English hand-loom weavers. To remedy the evil of treating India as a foreign state, I appealed to the common sense of the nation, through the public press, to a select committee of parliament, by voluminous evidence, and, aided by Sir Charles Forbes and other eminent merchants, on 11th May, 1842, carried the principle of the following motion in the General Court of Proprietors of the E. I. Cy., as the sequel of a resolution laid before the Court on the previous 22nd December, "praying that parliament, in the exercise of justice and sound policy, will authorise the admission of the produce and manufactures of British India into the ports of the United Kingdom, on reciprocal terms with the produce and manufactures of the United Kingdom when imported into British India—that East India vessels be entitled to the privileges of British shipping, and that the produce of subsidiary states, whose maritime frontiers we have occupied, be treated as that of British India."—(See *Asiatic Journal* for January, 1842.) "That in the opinion of this Court, the territories under the government of the E. I. Cy. ought to be treated as integral portions of the British empire; and that as a revision of the English tariff is now taking place, this Court, in fulfilment of its duty to their fellow-subjects in British India, do again petition both houses of parliament, praying for a complete reciprocity of trade between India and England, which, if fully and fairly established, will confer mutual and extensive benefits on both countries, and materially contribute to the security and permanence of the British power and influence in the eastern hemisphere."—(*See* debate thereon in *Asiatic Journal*, May, 1842.) The late Sir R. Peel admitted the injustice, and adopted measures for its redress, which merged into the low import system, by a misnomer designated *free trade*, which does not exist with any country.

‡ In 1854, £10,025,969.

§ Census of 1850, 23,351,207, including 3,178,000 slaves.

(£1,270,064), Portugal (£1,370,603), Sardinia (£1,054,513), Lombardy (£635,931), Naples (£563,033), Tuscany (£505,852), Papal States (£149,865), Denmark (£759,718), Sweden and Norway (£736,808.)

The export of British manufactures and produce to India ought to amount to at least twenty shillings per head, which would be equal to £200,000,000 sterling, or twice the value of our present exports to every part of the world.* Let not this be deemed an extravagant assertion: the capacity of Hindoostan to receive our goods is only limited by that which it can furnish in return; and, happily, the country yields, in almost inexhaustible profusion, wherever capital has been applied, all the great staples which England requires, such as wheat, rice, sugar, coffee, tea, cotton, silk, wool, indigo, flax and hemp, teak, and timber of every variety,† tallow,

* Export of British and Irish produce and manufactures to every part of the world, in 1854—£97,298,900.

† India could supply cotton for all Europe. For some years experiments have been made, and considerable expense incurred, by sending out seed from America, and American agents to superintend the culture and cleaning: no corresponding result has ensued; the main elements of skill, energy, and capital are still wanting. Western and Central India, especially the provinces of Guzerat and Berar, afford the best soils and climate for the plant; but roads, railways, and river navigation are needed; and it is a delusion to think that India can rival the United States until they are supplied. With every effort that government and individuals have made since 1788, when the distribution of cotton-seed commenced, the import of cotton wool from India was, in 1851, no more than 120,000,000 lbs.—not one-seventh of the United States' supply. Improvement of the navigation of the Godavery and other rivers, will probably cause an extension of production. *Silk* has long formed an article of Indian commerce: it was probably introduced from China, but was not largely produced until the middle of the 18th century, when the E. I. Cy. sent (in 1757) a Mr. Wilder to Bengal,—urged the planting of the mulberry; and granted, in 1765, reductions of the rents of lands where attention was paid to the culture of the tree, and in 1770—'75, introduced the mode of winding practised in Italy and other places. When Napoleon, in 1808, stopped the exportation of silk from Italy to England, the Court made successful exertions to furnish large supplies of filature wound in Bengal, and to augment the supply of silk goods, which is an increasing trade. An unlimited quantity of the raw and manufactured material can be produced in India. *Wool* of every variety, from fine down adapted to the most beautiful fabrics, to the coarse, wiry, and long shaggy hair which makes excellent carpets, is procurable, and now exported to the extent of several million lbs. annually. The plateau and mountain slopes of India sustain vast herds of sheep in a favourable climate, with abundant pasture. It is a trade susceptible of great development. *Indigo* is a natural product of many parts of India. Until the close of last century, Europe derived its chief supplies from South America and the West Indies. About 1779, the Court of Directors made efforts to increase the production by contracting for its manufacture. In 1786, out of several parcels consigned to London, one only yielded a profit: the aggregate loss of the company was considerable. Improvements took place in the preparation of the dye: and, in 1792, the produce of Bengal was found superior to that of other countries; in 1795, the consignments amounted to 3,000,000 lbs. Several civil servants of government established indigo factories; private Europeans came into the trade; capital was advanced by the merchant bankers of Calcutta, who sometimes lost heavily, and sometimes acquired immense gains. Happily, low duties were levied in England, and the cultivation and manufacture largely augmented, and now it is spread over about 1,200,000 acres of land in Bengal and Bahar, employing 50,000 families, and requiring an annual outlay of more than a million and a-half sterling. Sinde is now becoming a competitor with Bengal, and is said to have the advantage of immunity from heavy rains, which wash the colour from the leaves when ready to be cut. *Sugar* is an indigenous product of India; it was carried from thence into Sicily, the south of Europe, the Canaries, and subsequently to America; the cane is grown in every part of India, and its juice used by all classes. For many years the export to England was discouraged by the imposition of high duties to favour the West India interest; and in 1840, I was under examination for several days before a select committee of the House of Commons, adducing evidence of the necessity of admitting East India on the same terms as West India sugar into the United Kingdom. The quantity exported has increased of late years, but again fallen off. In the year ending June 30th, 1855, the sugar imported from the East Indies amounted to 739,144 cwt.; Mauritius, 1,237,678 cwt.; West Indies, 3,139,209; foreign produce, 3,117,665 = 8,233,696 cwt. Duty received, £5,330,967. Average price of Muscovado, for the year, per cwt.—East Indies, 23*s.* 4*d.*; Havannah, 22*s.* 9*d.*; British West Indies, 20*s.* 11*d.*; Mauritius, 20*s.* 2*d.* Thus it will be perceived, that the imports from all India are little more than one-half of the small island of Mauritius, and that the price is higher (despite labour wages at 1½*d.* a-day) than in any other country. The consumption of sugar in the United Kingdom, in the year ending 30th June, 1855, was—8,145,180 cwt.=912,260,160 lbs., which, for 27,000,000 people, shows 34 lbs. per head annually, or about 10 oz. a-week for each individual. In the *Taxation of the British Empire*, published in 1832, when the consumption was only about 5 oz. a-head weekly, I endeavoured to demonstrate that by reducing the duty, and extending the market of supply, the consumption would be doubled; which has taken place: now, by affording encouragement to sugar cultivation in India, the consumption in the United Kingdom would probably increase to at least 1 lb. a-week per head. The *tea* shrub has been found growing wild in Assam, and contiguous to several of the lower slopes of the Himalayas: it delights in sheltered valleys, the declivities of hills, or river banks with a southern exposure, as in Gurhwal, Kumaon, and at Katmandoo (Nepaul), where a plant ten feet high has been seen. In 1788, it was announced officially that this remarkable herb was indigenous to India; but no attempts were made to encourage the cultivation, lest the China trade should be disturbed. In 1835, Lord Wm. Bentinck brought the subject under the notice of the E. I. Cy. and of the public; a committee of investigation was appointed, who decided in favour of an experimental culture. In 1839, an Assam tea company was incorporated in London, with a capital of £500,000; the directors went to work energetically, and have spent £200,000, a large part of which, however, was wasted. Experience has been dearly bought; but under the able supervision of Mr. Walter Prideaux, a large crop is at present secured, and annually increasing. The tea crop for three years, in Assam, amounted to—in 1852, 271,427 lbs.; in 1853, 366,687 lbs.; in 1854, 478,258 lbs. The yield of 1855 is expected to realise £50,000, and the expenditure half that sum. The Assam tea is of excellent quality, so also is that of Kumaon. By perseverance and judgment, we may hope to be less dependent on China for this now indispensable and cheering beverage. *Coffee*, a native of Yemen (Arabia), has long been naturalised in India: it is grown, of excellent quality, in Malabar, Tellicherry, Mysoor, and other contiguous places. *Tobacco* was introduced in 1605, during the reign of Akber,—is now cultivated in every part, and in general use; but as a commercial article, is inferior to the American weed. Care only is required to produce the finest qualities. This is the case at Chunar on the Ganges, Bhilsa near Nagpoor,

hides and horns, vegetable oils, tobacco, peppers, cardamoms, ginger, cassia, and other spices, linseed, saltpetre, gum and shell-lac, rum, arrack, caoutchouc and gutta-percha, canes or rattans, ivory, wax, various dyes and drugs, &c.

These constitute the great items of commerce; and the demand for them in Europe is immense—in fact, not calculable: 200,000,000 Europeans could consume twenty times the amount of the above-mentioned products that are now supplied; 200,000,000 Hindoos would consume, in exchange, an equal proportion of the clothing, manufactures, and luxuries from the western hemisphere. The tariff of India offers no impediment to the development of such barter: internal peace prevails, there are no transit duties, land and labour abounds; but capital and skill are wanting. How these are to be supplied,—how Britain is to be rendered independent of Russia or of the United States for commercial staples,—how such great advantages are to be secured,—how India is to be restored to a splendour and prosperity greater than ever before experienced,—I am not called on to detail. Let it suffice for me to indicate the good to be sought, and desire earnestly its successful attainment.

Woodanum in the Northern Circars, in the low islands at the mouth of the Kistna (from which the famed Masulipatam snuff is made), in the delta of the Godavery, in Guzerat, near Chinsurah, Bengal, at Sandoway in Arracan, and at other places. The Court of Directors procured from America the best seed from Maryland and Virginia, which has thriven well. Tobacco requires a fertile and well-manured soil. The best fields at Sandoway, Arracan, show on analysis—iron (peroxyde), 15·65; saline matter, 1·10; vegetable fibre, 3·75; silex, 76·90; alumina, 2; water and loss, 60 = 100. *Flax and Hemp* are furnished by India in larger varieties than from any other country in the world. The *sun*, properly cured and dressed, is equal to Russian hemp; other varieties are superior, as they bear a strain of 200 to 400 lbs.; while that of St. Petersburg breaks at 160 to 200 lbs.; the *kote-kangra* of the Punjab is equal to 400 lbs.; *jute* is also excellent; the *khiar*,* made from cocoa-nut husk fibres, is used principally for maritime purposes, as the specific gravity is lighter than sea-water, in which it does not decay like hemp. Any amount of plants adapted for cordage, coarse cloths, and the manufacture of paper (for which latter there is a greatly increasing demand throughout the civilised world), are procurable in India. *Linseed* was only recently known to abound in India, and is now shipped annually to the extent of many thousand tons. The greater part of the oil-cake used for fattening cattle in Britain is derived from the fields of Hindoostan. *Salt* is supplied in Bengal by evaporating the water of the Ganges, near its mouth, and by boiling the sea-water at different parts of the Bay of Bengal; at Bombay and Madras, solar evaporation is used. This indispensable condiment is found pure in different parts of the interior; the Sambhur Lake, in Rajpootana, supplies it in crystals of a clear and fine flavour, when the water dries up during the hot season. The Punjab contributes a quantity of rock-salt, from a range of hills which crosses due west the Sinde-Saugor Dooab; it is found cropping out in all directions, or else in strata commencing near the surface, and extending downwards in deep and apparently inexhaustible fecundity. The mineral, which requires no preparatory process but pounding, can be excavated and brought to the mouth of the mine for two annas (threepence) the maund (80 lbs.); it is of excellent flavour and purity,—of transparent brilliancy and solid consistency; when, as is sometimes the case, veins of iron lie adjacent to the saline strata, it assumes a reddish hue. In this latter respect the salt of the cis-Indus portion of the range differs from that obtained in the trans-Indus section. Common bay-salt is made in many adjacent localities, and in all parts of the country the ground is occasionally impregnated with a saline efflorescence resembling saltpetre. In the Alpine principality of Mundee an impure salt is produced, but it is strongly mixed with earthy ingredients. In Sinde, a coarse kind of salt is everywhere procurable in large quantities; some ship-loads have been sent to Bengal, and sold well. *Saltpetre* (nitre) is derived from the soil of Bengal, Oude, and other places; the average quantity annually exported is about 20,000 tons. Sulphate of soda (glauber-salts), is found near Cawnpoor; carbonate of soda, at Sultanpoor, Ghazeepoor, and Tirhoot; and other salines are procurable, in various places, to any required extent. *Rice*,—widely grown in Bengal, Bahar, Arracan, Assam, Sinde, and other low districts, and also at elevations of 3,000 to 5,000 feet along the Himalayas and other places, without irrigation, where the dampness of the summer months compensates for artificial moisture. Bengal and Patna rice are now, by care and skill, equal to that of Carolina, though the grain is not so large; that from Arracan and Moulmein is coming extensively into use. Pegu will also probably furnish considerable supplies. *Wheat*, from time immemorial, has been a staple crop on the plains of Northern India, in the Punjab, Nepaul, and other places. The soil is well fitted for this cereal, but owing to defective cultivation, the crops are not good: it is, however, the main food of many millions in Hindoostan; and yet, a few years since, when I placed a small sack of excellent Indian wheat on the table of the Court of Proprietors of the E. I. House, while urging its admission into England at a low rate of duty, it was viewed with astonishment, it being generally supposed that rice was the only grain in the East. *Oils*,—that expressed from the cocoa-nut is the most valuable, especially since it has been converted into candles. This graceful palm thrives best on the sea-coast, the more so if its roots reach the saline mud, when it bears abundantly at the fourth year, and continues to do so for nearly 100 years, when it attains a height of about 80 feet. The planting of the cocoa-nut is considered a meritorious duty. *Castor-oil* is extensively prepared for burning in lamps, as well as for medicinal purposes. *Rose oil* (*attar of roses*) is produced chiefly at Ghazeepoor on the Ganges, where hundreds of acres are occupied with this fragrant shrub, whose scent, when in blossom, is wafted along the river a distance of seven miles. Forty pounds of rose-leaves in 60 lbs. of water, distilled over a slow fire, gives 30 lbs. of rose-water, which, when exposed to the cold night air, is found in the morning to have a thin oleaginous film on the surface. About 20,000 roses = 80 lbs. weight, yields, at the utmost, an ounce and a-half of attar, which costs at Ghazeepoor 40 rupees (£4.) Purity tested by the quick evaporation of a drop on a piece of paper, which should not be stained by the oil. *Opium*,—this pernicious drug is extensively prepared in Bahar (Patna) and Malwa. The cultivation of the poppy (from whose capsule the poisonous narcotic is obtained) began to attract attention in 1786; the trade was fostered as a means of obtaining a public revenue, there being a great demand in China, where its use has rapidly increased within the last forty years, and hastened the decay of the Tartar government of that vast country. The Patna drug is procured by the Anglo-Indian government making advances of money to the cultivators, and stipulating for a certain amount at a fixed price; that of Malwa yields a revenue by transit-permits on its passage to Bombay. The revenue to the state, from both these sources, is upwards of five million sterling. Among the timber woods may be mentioned—teak, sandal-wood, mango, banian, dhak, babool, different kinds of oak, pine, holly, maple, plane, ash, horse-chesnut, juniper, deodar or Himalayan cedar, fir, sâl, sissoo, peon, michelia, syzygium, arbutus, bay, acacia, beech, chesnut, alnus, sappan-wood, cassia, toon, cedar, laurel (four to six feet in diameter), mulberry, willow, tulip-tree, indigo-tree, bamboo, and a variety of other timber adapted for ship and house-building. In the Madras Presidency alone there are upwards of a hundred different kinds of timber, and about 500 specimens have been collected from Nepaul and the Ultra-Gangetic country,

# SUMMARY.

In the preceding pages an endeavour has been made to trace the history of India during a period of above 2,000 years—that is, from the time of Alexander's invasion of the frontier to the middle of the nineteenth century;—to show the rise and progress of Mussulman and Mogul power since the eleventh century, and the strife, sensuality, and misgovernment which caused and attended its downfall;—to narrate the successive struggles for dominion of Portugal, Spain, Holland, France, and England;—and lastly, to describe the singular train of events which marked the gradual transition of a trading association into a warlike state, holding imperial sway over nearly a fifth of the human race. So far as space would permit, the author has also striven to depict the leading physical as well as political features of India;—its mountain chains and plateaux, rivers, coasts, and cities; its diversified geological characteristics and variety of climate;—the number, distribution, and peculiarities of its population;—the state of religion, and statistics of crime;—the existing forms of civil government and of the military establishments;—the amount and disbursement of the public revenue;—the value of trade, the extent of shipping, and the varied commercial products;—the position of the remaining protected, tributary, and feudatory native principalities;—the general advancement of secular education and the newspaper press; together with the sounder and more elevating instruction imparted by Christian missions.

The important and difficult question of the social condition of the people of India cannot here be discussed; indeed, it is doubtful whether sufficient materials have been collected for its elucidation. The formidable barriers of language, customs, and creed, still exclude the masters of India from the intimate knowledge of the inner life of the Hindoos, which it is alike their duty and their interest to acquire. It is difficult for English functionaries in India, much more at home, to realise this fact; so many brilliant reputations have been deservedly acquired, that we are apt to forget how much *terra incognita* still remains to be explored in British India. The pioneering work is only partially accomplished; yet enough has been done to prove that the labours of the scholar, the practical statesman, and the Christian philanthropist, are all—especially the latter—required to promote the welfare of the vast population of Hindoostan, as manifestly as the parched soil of a drought-stricken land needs fertilising rain. It must be remembered, however, that we are as yet little more than encamped in India in the proportion of one Briton to 3,800 Hindoos;* and that a century of struggle for position, of strife for mastery, has left few intervals of breathing-time, and but scanty funds, for the accomplishment of any other object than the establishment and consolidation of political supremacy.

It has pleased Providence that our dominion should be established through the instrumentality of the natives, continuously exerted since the time when the little band of sepoys stood beside Clive at Arcot, declaring themselves content to receive the water that the rice was boiled in, and give up the grain for the sustenance of their European fellow-soldiers, until our latest battles, when Rajpoots and Mahrattas, Patans, Seiks, and Goorkas fought in strange association beneath our banners, bound by the common tie of fidelity to their "salt." The superstitious Hindoo has thrown aside the shackles of caste, and crossed the dreaded "black water;" on the arid sands of Egypt, and the sickly coasts of China,—amid the snows of Afghanistan, and the swamps of Burmah,—in the Red Sea, the Persian Gulf, and the Indian Ocean;—wherever the interests of Britain called, the sepoy has freely risked, and often sacrificed, life itself, in fulfilling the behests of his chiefs. The growth and organisation of the Anglo-In-

* The European military force in India, of all ranks, is about 50,000: the covenanted and uncovenanted European civilians, about 1,000: the British residents, not in the service of the Queen or the E. I. Cy., engaged as merchants, bankers, traders, shopkeepers, indigo, cotton, and sugar-planters, agents, &c., are estimated at—males, 5,729; females, 4,271 = 10,000, exclusive of the wives and families of civil and military servants, who number probably 4,000: showing a total of 65,000 of the governing class to about 200,000,000 natives, directly or indirectly beneath our sway or influence.

dian army are no less marvellous than the results which it has achieved: and if the civil government be less perfect in its construction, less homogeneous in its details, allowance must be made for our imperfect acquaintance with the wants of the people, and the necessity of introducing great changes slowly, and, if possible, with the free consent of those affected by them. The authority now exercised by England over India has been obtained by various means, among which the sword no doubt has played a leading part; yet, with few exceptions, the contest has been not with the Indian population, but with foreign usurpers, who now, pensioned by their conquerors, constitute the leading nobility of Hindoostan. The mass of the population have benefited by the change. Various charges of omission and of commission may be adduced against the Anglo-Indian government; but every decade of the last fifty years has carried with it labours calculated to obliterate the reproach of Burke, in his day, that if our power were on the instant annihilated, it would be difficult to tell whether the English or tigers had dwelt in the land. The sarcasm would be pointless now: even then its exaggeration weakened its force. A hundred years ago, when Dupleix espoused the cause of Chunda Sahib, and the English supported the claims of the rival candidate (Mohammed Ali), the strife and anarchy which desolated the Carnatic was not peculiar to that country, but prevailed over the length and breadth of India. It was no single struggle of race or creed; for Mussulman fought against Mussulman, Hindoo against Hindoo, and each against the other; Afghan warred with Mogul, Mogul with Rajpoot; Mahratta with all. The hand of every man was raised against his neighbour: the peasant went armed to the plough, the shepherd stood ready to defend his flock with his life; for the Pindarry, Dacoity, and Thug—the trained marauder, the thief and assassin, pursued their murderous avocations in the light of noonday and in the depth of midnight.

The supremacy of the Great Mogul had become a mere fiction. The decay of the empire originated from within, and scarcely needed the hastening influence of unfaithful servants and external foes. Yet these were not wanting. Aurungzebe, the ablest and most powerful of his race, not content with dominion far exceeding that swayed by the greatest of his predecessors, thirsted so impatiently for conquest, that he suffered his power in Northern India to crumble into ruins, while engaged in the destruction of the independent Mohammedan kingdoms in the Southern Peninsula, which formed his safest barrier against the inroads of the predatory hordes of Sevajee. The bigoted Mogul demolished Beejapoor and Golconda; and the hated and despised Mahrattas grew strong upon the spoil, and hunted the conqueror to the death. Usurping viceroys, and adventurers of all creeds and complexions, disputed over the wreck of the empire; while Nadir Shah and Ahmed (the robber kings of Persia and Afghanistan) swooped down like vultures, to secure their share of the carcass, and pillage a country they did not attempt to govern.

Under such circumstances, the representatives of the E. I. Cy. could not view without anxiety the precarious position in which they stood, exposed to the caprice of every new ruler; much less could they be expected to witness without opposing, the rapid aggrandisement of a hostile European power. There was no native state of undoubted strength and integrity under whose banner they could confidently seek protection; from England, and from England only, could come the support necessary to hold their ground against European rivalry. The struggle with France involved the assumption of a position in which neutrality became impossible: the choice lay between complete retirement or the maintenance of that commanding attitude which has proved the keystone of our power in India, and, it may be, in Europe also. The importance of the earliest offensive operations of the Bengal Presidency was seen and dreaded by the E. I. Cy., who, except during the sway of the brothers Child, sincerely deprecated warlike proceedings as calculated to impede their commercial dealings. This feeling was natural; for the absolutely disorganised state of the country was then only very imperfectly understood. Warren Hastings, perhaps, first fully appreciated the important position occupied by the English; but he dared not act up to his convictions, and persistently sought the immediate gains of his employers to the neglect of their permanent interests. The Marquis Wellesley suffered no personal considerations to bias his judgment or warp his integrity; but, deeply impressed with the duties and responsibilities of the Anglo-Indian government as a paramount power, he directed all the

energies of his mind to its establishment and consolidation. His views were for a time repudiated; and the efforts of some selfish, and other good but prejudiced men, prevailed for the temporary adoption of a system of neutrality which placed our weaker neighbours and sworn allies at the mercy of their incensed foes. This delusion passed away: and at the present epoch few persons will care to dispute Lord Wellesley's dictum concerning the maintenance of supremacy in India. The subsidiary system, with other measures adapted to the exigencies of the critical period during which he bore sway, must be viewed simply as means to an end. That end has been carried out by the labours of successive governors; and the close of Lord Dalhousie's administration is marked by the grateful intelligence, brought by the last mail, that "India is tranquil throughout."* Even the anarchy which more or less pervades the states still partially subject to native rulers—such as the territories of the King of Oude, the Nizam of Hyderabad, and the Guicowar of Baroda —is temporarily abated, and a degree of peace heretofore unknown prevails throughout the fairest and richest part of Asia, over an area of 1,500,000 square miles, inhabited by about 200,000,000 human beings, who enjoy an immunity from the horrors of war which Christian Europe may well envy.

The cessation of internal strife has been accompanied by many internal reforms; such as the abolition of infanticide, and *suttee*, or widow-burning; the extirpation of the horrible Thuggee or Phansigar system, and the material diminution of the ancient and too common practice of *dacoity*, or gang-robbery; the sensible mitigation of domestic slavery; and the amelioration of the criminal code, by the abolition of mutilation and torture. The security for life and property which now prevails, from Peshawur to Cape Comorin, from Afghanistan to Burmah, is doubtless to some extent attributable to the admirable organisation of the army, the efficiency of which consists in its discipline far more than in its magnitude. The Anglo-Indian empire is no military despotism, imposed at the point of the bayonet, and upheld by the same means; its permanent force is not a tenth part so large, in proportion to its population, as that maintained by France, Russia, Austria, Prussia, and other European states. There are about 3,000,000 men in arms in Europe out of 250,000,000 people, or one soldier to every eighty-three civilians; while in India the proportion is as one in 600, the total number of troops being only 330,000 (including 50,000 Europeans), and the population reaching 200,000,000. Could an estimate be framed of the troops formerly maintained by the various native states now included in British India, there can be little question that the list of fighting men would be found to have largely diminished, and the numbers of mechanics and cultivators to have increased in a similar degree.

The progress of public works attests the favourable change effected when the resources of a country are freed from the heavy drain and depressing influence of war, and directed, even partially, to national undertakings and local improvements.

Perfect freedom of internal commercial intercourse has been bestowed by the abolition of long-established fiscal transit duties. Roads and bridges,† railways and canals,

* By the *Indian Mail*, Oct., 1855.

† It is difficult, during periods of war, to find money and time for public improvements; and those which have been accomplished are spread over such an immense extent of country as not to be very conspicuous. In fifteen years—from 1837-'8 to 1851-'2—the direct expenditure on roads, bridges, and works of irrigation, has been £4,500,000, irrespective of £30,000 per ann. supplied by convict labour; altogether, about £5,000,000. This is independent of works under the control of local committees, the cost of which is defrayed from ferry receipts, tolls, and other sources. Three great trunk roads are in progress:—1st. From Calcutta to Peshawur, 1,423 miles, *viâ* Benares, Agra, Delhi, and Lahore; the outlay from Calcutta to Delhi, 887 miles, has already been £820,000 (exclusive of convict labour), or nearly £1,000 per m., including bridges: the road is metalled throughout: charge of keeping it in repair, £35 per m. = £50,000 per ann. 2nd. Mail-road from Calcutta to Bombay, *viâ* Sumbulpoor, Nagpoor, Ahmednugger, and Poona, 1,170 m.: this road was planned in 1840, and the cost estimated at £500,000, or £500 per m. 3rd. Road from Bombay to Agra, *viâ* Sindwa, Akberpoor, and Indore, 734 m.: commenced in 1840; expenditure, £330 per m. The length of these three main roads is 3,159 m.; first cost, £2,166,673; and the annual repairs, £90,000. In the Punjab several roads have been ordered, and an expenditure of £50,000 a-year for this purpose sanctioned by the home authorities. The system of railway communication in progress throughout India, will probably effect a wonderful moral as well as physical improvement in the country. It is proposed to connect Calcutta with Peshawur by Delhi; Madras with Bombay; and Bombay with Agra. Portions of the respective lines have been opened at each presidency, and the natives have thronged the carriages. The Anglo-Indian government has acted in a munificent spirit by granting the land required, and guaranteeing five per cent. interest per ann. for the capital employed, under certain favourable conditions.

river and coast steam navigation,* afford facilities for locomotion hitherto unknown. Various structures, such as tanks, aqueducts, and embankments for irrigation,† with improved governmental buildings, are being erected in different provinces; and the three presidencies of Bengal, Madras, and Bombay are connected by an electric telegraph,‡ which flashes intelligence along its wires in a single day, from Cape Comorin to the Himalaya. A trigonometrical survey of India, which has been in progress above half a century, has already cost more than £500,000 sterling, and is completed to a greater extent than any similar scientific measurement throughout the globe.§

Low custom duties (recently reduced), both on imports and exports, enable the people of India to buy and sell in the best markets. Bi-monthly communication is carried on with England *via* the Red Sea and Egypt, each voyage averaging thirty days. Small and uniform postage rates, with the total absence of any passport system, accelerate social as well as mercantile intercourse. The right of residence in any part of India, devoid of license or restraint, has been granted to every Englishman. Perfect freedom has been conceded to an unstamped newspaper press; and the privilege of public meeting and discussion accorded, to an extent unknown in continental Europe. Every form of religion is tolerated; the ban which existed on Christianity has been removed; and no disqualifications for office exist, to men of any creed, colour, or caste, but those of ignorance, incompetence, or crime.

To advance the moral improvement of

* Various public works have been constructed in Sinde; the Kurachee mole and road have cost £30,961. The government has stationed steam-vessels on the Indus for the conveyance of goods and passengers from Kurachee to Mooltan, and propose extending the line to Kalabagh on the Indus, and to Jhelum. Government steam-vessels have been established on the Ganges, and considerable sums expended on the removal of obstacles to navigation below Allahabad. The Manaar Gulf, between Cape Comorin and Ceylon, has been surveyed at a cost of £24,625; and the Paumban Passage, between Ceylon and the main land, has had a practicable channel opened by an expenditure of £16,394. Several undertakings (not intended for government purposes) have received aid from the public treasury: such as plantations and farms for extending the culture of cotton, tea, &c.; establishments for improving the breed of animals; docks, and other objects of maritime utility.

† The volume of water available for irrigation which flows from the Himalaya mountains during the dry season, has been estimated at 24,120 cubic feet per second; Ganges, 6,700; Jumna, 2,870; Ravee, 3,000; Chenab, 5,000; Sutlej at Roopur, 2,500; Jhelum, 4,000: each cubic foot, per second, will irrigate 218 acres; and efforts are now being made to prevent the waste of this treasure. The whole stream of the Jumna has been directed from the main channel into two canals, east and west; the latter measuring, with its branches, 425; the former, 155 = 580 m. The great undertaking—now completed, and termed the Ganges Canal—has for its object the irrigation of a large portion of the N. W. Provinces: it is 810 m. long, including branches, and has been constructed on a slightly elevated ridge of land which lies along the Dooab (or country between the Ganges and the Jumna), from Hurdwar to Allyghur, where it diverges into two channels, one proceeding to Cawnpoor, the other to Humeerpoor and Etawa, with three offsets—Hurdwar to Allyghur, 180; thence to Cawnpoor, 170; Allyghur to Humeerpoor, 180; branch to Futtehghur, 170; to Bolundshuhur, 60; to Coel, 50 = 810. The cost is about one million and a-half sterling. In the Punjab, the *Ravee* canal will proceed from the canal head of the Ravee river to Deena-nuggur, and there throw off a branch to the eastward; while the main channel, taking a southerly direction, is to send another branch to the westward. Lahore and Amritsir will be supplied by minor channels: the expense not yet ascertained; £500,000 have been sanctioned. Several works to promote irrigation are in operation. The *Cauvery* 'anicut' (dam thrown across the river to bank up its waters) has cost about £50,000; a like sum has been sanctioned for the *Godavery* anicut; and £150,000 for works on the *Kistna* river.

‡ The practical application of science is working wonders in the sight of the Indian population; the "fire-horse" (steam-engine) surprised, but the darting of intelligence by lightning has astounded them; they behold with utter bewilderment the electric wires connecting points 3,500 miles apart. The telegraphic works were confided by Lord Dalhousie to Dr. O'Shaughnessy. It is to be hoped that this marvellous mode of communication will, ere long, bring India and England into daily intercourse: the route might be from Kurachee to Bussorah, along the shores of the Persian Gulf, 1,400 m.; thence to Bagdad, 300; to Erzeroum, 500; to Sinope *viâ* Trebizond, 350; and to Constantinople, 300 = 2,850 miles English. The cost of construction in India has been about £40 per m.; allow £50 for the overland communication = £142,500. Say the expenditure were twice that sum, and the money would be well spent.

§ An arc of the meridian, 1,400 m. in length, has been measured with great care and precision: it extends from Cape Comorin to the sub-Himalayan mountains, and was completed in 1840. The various elevations, the river courses, and the positions of every place have been accurately laid down in a magnificent Atlas of India, now in progress of engraving by Messrs. Walker, upon a scale of four m. to the inch. Of this great work, comprising 177 maps, each 3 ft. 3 in. by 2 ft. 1 in., a large portion has been already executed; when finished, it will be a noble contribution to geographical science. Minute territorial surveys, based on triangular admeasurement, are now being made in each presidency for land revenue settlements; that of the N. W. Provinces has been completed at the following cost: revenue survey, £235,655; revenue settlement, £337,069 = £572,069.

the people, schools and colleges have been formed, and systematic education has become an essential part of state policy. A supreme Legislative Council has been established, with representatives from each presidency, whose deliberations are carried on *apertis foribus*, subject to the freest animadversion or comments of the local journals; and there is no repressive tendency,—but, on the contrary, encouragement, for the advancement of liberal institutions.

In England, the high prizes of civil office have been thrown open to general competition: genius, intelligence, and industry are invited to enter into the service of the government of India, the proceedings of which are no longer recorded in a closed book, examined only at intervals of twenty years, but subject to the annual revision of the British parliament, who have power to redress as well as denounce injustice, and to replace wrong measures with right ones.

It remains to notice the means by which England has become possessed of the brightest jewel in her crown,—the Koh-i-Noor of her maritime possessions. History records many great results as being developed from small beginnings; but surely none much more surprising than that the successors of the struggling band of merchants whose enterprise Elizabeth cherished with the grant of a charter, should, in their original capacity of traders, after passing through a fierce ordeal of financial difficulties, have been carried away by the energy of their representatives, until they found themselves, almost in their own despite, transformed from buyers and sellers into the arbiters of the destinies of men of many nations and tongues,—the wielders of a sceptre far more extensive than that of the Mogul empire in its palmiest days,—the undisputed masters of a prize for which, in past ages, Cæsar sighed, Alexander fought, and, in modern times, Portugal and Spain, Holland and France, have been unsuccessful candidates.

Whatever may be the public feeling towards trading associations in the present epoch, and however deeply grounded the views entertained against every remnant of monopoly, it would be ingratitude in the nation or the Crown to overlook or set aside the obligations incurred to the E. I. Cy. It is true their leading conquests were all achieved with the aid of the national troops, but the expense has fallen exclusively on the revenues obtained by the company from their Indian territories. At its commencement, the distant Asiatic trade could be carried on with a reasonable prospect of success only in two ways—namely, by the government, or by a chartered association, encouraged by the concession of exclusive privileges, to make a large immediate outlay, and risk heavy loss for the chance of proportionate gains.

The experience of various continental nations has demonstrated that Elizabeth and her successors acted wisely in resigning the arduous enterprise into the hands of the persons immediately interested in its results; and they have proved themselves, through ensuing generations, well fitted to uphold the political interests of the nation while following their mercantile pursuits. In developing the indigo, silk, cotton, and other branches of Indian trade, they created a class of mercantile shipping which has in no small degree contributed to establish the maritime supremacy of England; while their growing hold on India, to the exclusion of other powers, has been scarcely less effective in establishing the high rank of the British isles among cotemporary nations. It is not in war only that reputation is strength; in peace it is the best security for the continuance of power: and whatever may be the opinion of statesmen at home, it is indubitable that abroad the admiration and respect so widely entertained for England, is conceded to her as the greatest of colonising nations and the mistress of India.

Great Britain may well be proud of an organised body whose enterprise has been attended with such brilliant and useful results, while similar associations, in other countries, although powerfully aided by their respective governments, have been almost invariably attended with failure. Let a comparison be drawn between the occupation of British India, and the invasions of the Spaniards in South America, or the Portuguese in different countries;—with the French in Algeria, or the various gold-seeking and colonising operations prosecuted in America, the West Indies, Africa, Australia, New Zealand, and other places where the aborigines have been extirpated or greatly diminished; and after such an examination, the philanthropist—having made due allowance for the circumstances of the different cases—will probably find abundant reason to rejoice that our proceedings in India were prosecuted under the auspices of a company whose mercantile objects, and subsequent territorial acquisi-

tions, immediately, as well as permanently, associated their interests with the welfare of the native community, even before their chartered privileges were merged in the controlling and co-operative authority of the ministers of the Crown.

Whatever be the theoretical objections to the past system, it has practically worked well; and however anomalous the conjoint or double rule, it is far preferable to the mode in which the wide-spread colonies of the Crown are now governed by a single secretary of state, changing with the political wheel of fortune twice or even thrice a year; so that the ink may be scarcely dry on one authoritative missive, before another, of counter-tendency, be dispatched by a new functionary. In India the domestic government has been slowly but effectively organised with forethought and care; and the directing power in London is enabled to act unbiassed by political partisanship, or by the national caprices which more or less sway the British cabinet.

Before closing this volume, it may not be supererogatory to advert briefly to some of the advantages derivable by England from the possession of India; although it is difficult to appreciate aright a subject so intimately interwoven with the various phases of social life and public weal. India has been no burden on the British exchequer,—quite the contrary; the latter is largely indebted to the former. The Egyptian expedition (in 1801), the Java and Mauritius conquests, the China war, and other undertakings—all required heavy advances from the Bengal treasury, which were never entirely liquidated. Thirty thousand of the Queen's infantry and cavalry, and 250,000 native troops, though paid from the Indian revenues, are available for the service of the whole empire; as is also the case with a small but well-organised armed marine.

The money which England has received from India during the last seventy years, is almost incalculable. If the remittances be taken at £3,000,000 sterling per annum for the last fifty years, they amount, at the Indian rate of interest, to a sum exceeding our national debt; and the capital thus abstracted is never replaced, but has its fructification here. Indeed, there is scarcely a county in the United Kingdom but has had the value of its landed property increased by investments of fortunes, the reward of civil or military services, or of commercial success in the East. Turning to a less tangible but no less important consideration,—how many British statesmen and commanders have had their genius elicited, or their talents improved, in the wide arena of thought and action which Hindoostan affords? A noble field has been annually opened for the enterprising sons of the middle classes, and an expansive tone given to society by the constant discussion of great subjects. Then again, the merchant and the manufacturer know the value of a large, increasing, and lucrative market, devoid of high or hostile tariffs, with an almost unlimited quantity of the raw commodities, the certain supply of which is so essential to the steady employment of our operatives; while both imports and exports furnish profitable employment to the best class of mercantile shipping. Thus England has, in various ways, derived immense benefits from her dominions in Asia.

If, however, past experience and present evidence be rejected, and the national will unhappily accord with the fallacious and unsubstantiated assertions promulgated by a leading exponent of public opinion—that transmarine possessions "are no accession of power or wealth to a country, but rather a burden, a risk, and an expense,"*—it follows that the arguments above adduced are futile in the sight of the majority, who deplore, rather than rejoice in, the acquisition of the vast domains of the Crown: and the minority, who do not share these opinions, may lament the fatuity of an age in which Englishmen are unable to appreciate the enduring efforts, the heroic patriotism, the self-sacrifice, which enabled their ancestors, throughout two generations of strife, anxiety, and peril, to construct the most wonderful oceanic empire that ever existed.

But if this acknowledgment of decadence, by the abandonment of territorial acquisitions, be not generally desired,—if the birthright inherited be deemed a prize of great value, and a conviction be felt that the Giver of all power bestows on His responsible agents many attendant blessings,—then, indeed, the nation may well rejoice at the opportunity vouchsafed for the extension of Christian civilisation among heathen multitudes; and may confidently rely on the aid of the Supreme Governor of the world, in the fulfilment of the duties inseparably connected with her commanding position among the kingdoms of the earth.

* *Times*' editorial article, 27th August, 1855, referring to alliance between England and France.

| SINDE.† | | | | | | | | | | | | |
| PEGU.‡ | | | | | | | | | | | | |

* The ancient and modern possessions are not stated separately after 1829-'30.
† The Land Revenue is not shown separately, but is included in the general head "Receipts of the Province of Sinde," in the Bombay accounts. ‡ No return.

*Locality and Physical Aspect of Districts, Provinces, and States of India.*

PUNJAB, or region of the "five rivers;" adjoining Afghanistan on the E.,—A plain, sloping from N.E. to S.W.; north part, near Himalayas, hilly and mountainous. Pasturage and grazing-grounds.

CIS-SUTLEJ TERRITORY,—Between Sutlej and Jumna, and a strip of land between the Ghara river and Rajpootana. Bhawulpoor and Sirhind, a plain; hill-slates on Himalaya ridges, mountainous and richly wooded.

CASHMERE,—Western Himalaya. Cashmere Proper, a fertile valley, enclosed by mountains. Elevation of bottom, 5,500 to 6,000 ft.: lofty snow-clad ranges, N.W. to S.E., constitute the general configuration.

BUSSAHIR,—Wonderful maze of some of the highest mountains in the world; general rise from S. to N.

GURHWAL,—Ranges of enormous height, with several valleys; the whole drained by the Ganges. Slope from N. and N.E.

SINDE,—Lower course and delta of Indus; between Beloochistan mountains and Great Desert. Low and flat. Some short ridges of hills in the W. part; towards the E. a desert. Mouths of Indus continually changing.

CUTCH,—S.E. of Sinde. Two parallel hilly ranges nearly intersect province.

WESTERN RAJPOOTANA,—Between Sinde and Bhawulpoor and Arravulli range. Mostly a plain, interspersed with sand-hills: rocky ridges extend in various directions.

EASTERN RAJPOOTANA,—Between Arravulli mountains and Malwa. Near the Arravulli a table-land, declining to N.E.: continuous parallel hilly ranges extend N.E. to the vicinity of Delhi.

GUZERAT,—S. of Cutch and Rajpootana. Very rugged, especially in Kattywar: hills connected with Vindhya, and part of W. Ghauts.

MALWA (Central India),—Between Guzerat and Bundelcund. A plateau, supported by Vindhya range; elevation diminishing towards Northern Gangetic valley.

BHOPAL, MALWA,—Greater part a table-land, resting on N. side of Vindhya; declivity to N. A few streams find their way, through gorges in the chain, into Nerbudda, which flows along the S. frontier.

GWALIOR, or SCINDIAH,—Central India. N.E. part level, bare, and much cut up by ravines; S., the country becomes hilly; middle part, a plateau; slope to the N.; S. part crossed by Nerbudda valley.

AHMEDABAD and KAIRA,—Head of the Gulf of Cambay. Almost a perfect level; appearing as if the sea had abandoned it at no very remote period.

KANDEISH,—Both banks of Taptee river. Valley of Taptee, enclosed by hills 1,000 to 1,800 ft. high. Tracts formerly cultivated; now covered with jungle and infested with tigers.

NORTHERN and SOUTHERN CONCANS,—Along the sea from lat. 16° to lat. 20°, including Bombay. Valleys enclosed by spurs from W. Ghauts, through which a clear stream flows, until influenced by the tides. Ravines and gorges filled with jungle, harbouring beasts of prey, especially tigers.

POONA,—Deccan. High table-land; slope from N.W. to S.E. Intersected by numerous spurs from W. Ghauts: elevation diminishing towards S.E.

SATTARA,—Deccan. High table-land; slope from N.W. to S.E. Gradual but rugged declivity from W. Ghauts to S.E.

DHARWAR, BELGAUM, and SHOLAPOOR,—Deccan. Undulating plains, elevated from about 2,000 to 2,500 ft.; slope to the E. and N.E.

HYDERABAD, or NIZAM'S DOMINIONS,—Deccan. For the most part an undulating plain; declivity from W. to E.: many isolated hills and ranges, of moderate elevation.

WESTERN DIVISION: MADRAS PRESIDENCY,—Malabar coast. Low sea-coast, rising towards culminating ridge of W. Ghauts. Numerous narrow shallow rivers flowing E. to W. from Ghauts. Country hilly.

TRAVANCORE,—Malabar coast. Low sandy sea-coast; behind the W. Ghauts; attaining in some places an altitude of 7,000 ft.

SOUTHERN DIVISION: MADRAS PRESIDENCY,—Between Mysoor and Travancore, and Coromandel coast. E. parts level; towards the W. rising into mountains: Neilgherries and E. Ghauts supporting table-land of Mysoor.

MYSOOR,—S. of Deccan. High table-land; here and there huge masses of rock, apparently thrown tumultuously together.

CENTRAL DIVISION: MADRAS PRESIDENCY,—Between Mysoor and Coromandel coast. Bellary and Cuddapah district; a table-land, resting on stupendous wall of mountains. Coast districts low, interspersed with hills.

NORTHERN DIVISION: MADRAS PRESIDENCY,—W. side of Bay of Bengal. Low sea-coast (except a ridge extending along sea-shore in Vizagapatam district), hilly and mountainous to W. delta of Godavery and Kistna rivers.

CUTTACK,—Orissa coast. Low sandy shore; delta of Mahanuddy; inland, the Moghalbandi, a dry tract; then rises the hill country, closing down to the sea near Chilka lake, and near Balasore.

CUTTACK MEHALS,—Inland of Cuttack province. Very hilly. Forests of fine timber.

SOUTH-WEST FRONTIER OF BENGAL. Table-lands of Chota-Nagpoor, Sirgooja, and Mynpat; and mountains of Palamow, &c.

ORISSA,—Inland of Northern Circars. Table-land, supported by E. Ghauts: slope to W., to Godavery; to S., to Bay of Bengal, the rivers flowing through *ghats*, or passes; and to N. and N.E., to Mahanuddy.

NAGPOOR, or BERAR,—Between Saugor and Nerbudda, and the Circars; and the Godavery and Wein-Gunga, and upper course of Mahanuddy. In general of considerable elevation; slope from N.W. to S.E. Lanjhee range divides the territory into two basins—one into Mahanuddy, and the other into Godavery. N. part rugged and mountainous; S.E. part hilly and woody.

SAUGOR and NERBUDDA TERRITORY,—On each bank of upper course of Nerbudda river. Considerably elevated tract: E. part a table-land, declining to W., to valley of Nerbudda; to the S. are the Sautpoora and Mahadeo mountains; to the N. the Vindhya, which is but the brow of a rugged plateau; elevation diminishing towards the N.

REWAH,—Adjoining Nerbudda territories on the N.E. W. and N.W. mountainous, rising in three successive plateaux: intersected by valley of Sone from W. to E. S. of this a table-land, contiguous to that of Sirgooja.

BUNDELCUND STATES,—Between Nerbudda territory and N. W. Provinces. Plain, little elevated above valley of Jumna; on the W. and S. a continuous range of hills; to the E. they close down upon the Ganges. Some of the rivers flow through the plain, or are precipitated in cascades over the brow of the high land.

ALLAHABAD,—N. W. Provinces. Plain, sloping from N.W. to S.E. Banks of Jumna high in some parts of Banda district.

AGRA,—N. W. Provinces. Plain, sloping from N.W. to S.E. A slightly elevated ridge extends along the Dooab, about midway between the Ganges and Jumna.

BHURTPOOR,—Gangetic plain. Level; slope to E. Small detached hills in N. part.

MEERUT,—N. W. Provinces. Plain; slope in Suharunpoor, Mozuffurnuggur and Meerut districts, from N. to S.; in Boolundshuhur and Allyghur, N.W. to S.E.

DELHI,—N. W. Provinces. Mostly level. Ridges in Goorgaon district 400 to 600 ft. above surrounding country.

KUMAON,—N. W. Provinces. Well-defined mountain system. S. limit, Ghagur mountain; successive ranges rise higher and higher, until ultimately crowned by the culminating ridge of the stupendous Himalaya.

ROHILCUND,—N. W. Provinces. Level; slope from N.W. to S.E., and from N. to S.

Oude,—Gangetic plain. Plain; declivity (avg. 7 in. per m.) from N.W. to S.E. Sub-Himalaya range on N. frontier.

Nepaul,—S. of Himalaya; sustained by sub-Himalaya. Table-land average about 4,000 ft. Valleys, enclosed by lofty chains; sides covered with forests, surmounted by culminating ridge of snow-clad Himalaya.

Sikkim,—Himalaya. Spurs from Himalaya; enclosing deep valleys.

Benares,—N. W. Provinces. Plain on either side of Ganges. Declivity from N.W. to S.E., and from W. to E. In S. part of Mirzapoor dist., surface rises into a rugged table-land, being a continuation of the Vindhya chain.

Patna,—Gangetic plain, Bengal. Sarun and Patna districts; and along Ganges, level; table-land in S.W. part of Shahabad, descent very abrupt; a rocky ridge in S. part of Behar district.

Bhagulpoor,—Gangetic plain, Bengal. Generally flat: slope from W. to E. Rajmahal hills rise on river bank of Ganges, and stretch S. and S.W. through Bhagulpoor district. Tirhoot diversified by undulations.

Moorshedabad,—Bengal. Rungpoor and Pubna dists. low; Rajeshaye flat; hilly to W.; W. parts of Moorshedabad and Beerbhoom hilly.

Jessore,—Delta of Ganges, and river bank of Hooghly river (Calcutta district.) Greater part level; even depressed in Jessore district; in W. parts of Hooghly, Burdwan, and Bancoora, rises into slight eminences.

Dacca,—E. Bengal. Declivity from N. to S.; intersected by Brahmapootra. Jyntea, hilly; Silhet, a hollow, swampy basin, enclosed on three sides by mountains.

Garrow and Cossyah States,—Assam. Hilly and mountainous; numerous streams.

Cooch Behar,—Bengal. Level; slope to S.E.

N.E. Frontier: Assam,—N. of Burmah. Intersected by Brahmapootra, which receives the drainage of the sub-Himalaya from the N.; Garrows, Cossyahs, and Nagas from the S.: numerous clumps of abrupt hills.

Bhotan,—Foot of E. section of Himalaya. Imperfectly known: a table-land resting on the sub-Himalaya, which rise from 5,000 to 6,000 ft. above Assam.

Naga Tribes,—Upper Assam. Range of mountains dividing Burmah from the British dominions.

Tipperah,—Bengal. Wild hilly regions: fertile tracts on Megna.

Muneepoor,—Burmese frontier. Valley, enclosed by precipitous mountains.

Chittagong,—Mouths of Brahmapootra, and N.E. side of Bay of Bengal. Sea-coast: plains,—backed by parallel ranges of lofty mountains, throwing off spurs in a W. direction. Drainage from E. to W.

Arracan,—E. side of Bay of Bengal. Extensive flats, intersected by numerous navigable salt-water creeks: ranges of mountains extending N. and S. Islands and fine harbours.

Pegu,—Lower course and delta of Irawaddy. Gradual slope from N. to S. N. of Prome, hilly: range skirting E. shore of Bay of Bengal, diminishing in height towards C. Negrais. Numerous passes.

Tenasserem Provinces,—E. side of Bay of Bengal. Generally rugged: parallel ranges N. and S., and E. and W.: also extensive plains. High, bold islands, with many harbours.

*Islands on the Coast of India—Name, Locality and Position, Extent, Physical Features, and Remarks.*

Karoomba,—Gulf of Cutch; lat. 22° 27′, lon. 69° 47′. 1½ m. broad, and 3 m. long.

Beyt, or Bet,—Gulf of Cutch; lat. 22° 28′, lon. 69° 10′. About 3 m. long, and greatest breadth about ½ m. On the banks are situate a castle or fort, compact and imposing; lofty massive towers, mounted with iron ordnance. Many temples and shrines in honour of Crishna.

Diu,—Kattywar; lat. 20° 42′, lon. 71°. About 7 m. long; breadth, varying from 1½ to 2 m. (See *Diu*—"Ports and Havens.")

Perim,—Gulf of Cambay; lat. 21° 38′, lon. 72° 19′. About 2 m. long, and ½ m. broad. Numerous organic remains embedded in conglomerate: various antiquities extant.

Bassein,—Concans; lat. 19° 25′, lon. 72° 50′. About 11 m. long, and 3 m. broad; 35 sq. m. Irregular surface; amongst other eminences a high hill of tabular form, and a conical peak not quite so elevated.

Salsette,—Concans; lat. 19°—19° 18′, lon. 72° 54′—73° 3′. 18 m. long, 10 m. broad; about 150 sq. m. Diversified by hills, some of considerable elevation. Keneri commands an extensive view.

Bombay,—Concans; lat. 18° 57′, lon. 72° 52′. Length, 8 m.; average breadth, 3 m. Two parallel ranges of rocks of unequal length are united at their extremities by hills of sandstone. Malabar, Mazagon, and Parell hills are the principal elevations.

Elephanta, or Gara-pori,—Bombay harbour; lat. 18° 57′, lon. 73°. Rather less than 6 m. in circumference. Composed of two long hills, with a narrow valley. Famed for its excavated temples.

Kolabah,—Concans; lat. 18° 38′, lon. 72° 56′. Long neglected, as a barren rock, but fortified by the Mahratta, Sevajee.

Malwun,—Concans; lat. 16° 4′, lon. 73° 31′. Little elevated above the sea, and not easily distinguished from the main-land.

Ramiseram,—Gulf of Manaar; lat. 9° 18′, lon. 79° 21′. 14 m. long, and 5 m. broad. Low, sandy, and uncultivated. Sacred in Hindoo mythology; great pagoda.

Saugor,—Mouths of Ganges; lat. 21° 42′, lon. 88° 8′. 7 or 8 m. long, and 4 m. broad. Salt manufacture formerly carried on. Island held in great veneration by the Hindoos.

Don Manick Islands,—Mouths of Megna; lat. 21°55′, lon. 90° 43′. Flat.

Labador,—Mouths of Megna; lat. 22° 22′, lon. 90° 48′. Low.

Deccan Shabazpore,—Mouths of Megna; lat. 22° 30′, lon. 91°. Flat.

Hattia,—Mouths of Megna; lat. 22° 35′, lon. 91°. Level.

Sundeep,—Mouths of Megna; lat. 22° 30′, lon. 91° 32′. About 18 m. long, and 6 m. broad. Level; fertile, and abounding with cattle.

Kootubdea Islands,—Chittagong; lat. 21° 50′, lon. 91° 55′. About 12 m. long. Low and woody.

Muscal,—Chittagong; lat. 21° 35′, lon. 92°. 15 m. long, and 7 m. broad. Some small elevations.

Shaporee,—Arracan; lat. 20° 46′, lon. 92° 24′.

St. Martin,—Arracan; lat. 20° 36′, lon. 92° 25′. Two divisions united by a dry ledge of rocks.

Bolongo,—Arracan; lat. 20°, lon. 93°. Mountainous, woody, and rugged.

Peny Kyoung,—Arracan; lat. 20°, lon. 93° 4′. 26 m. long; 6 m. broad. Mountainous, woody, and rugged.

Angey Kyoung,—Arracan; lat. 19° 50′, lon. 93° 10′. 20 m. long; 3 m. broad. Mountainous, woody, and rugged.

Ramree,—Arracan; lat. 19° 5′, lon. 93° 52′. About 50 m. long; extreme breadth, 20 m.

Cheduba,—Arracan; lat. 18° 40′—56′, lon. 93° 31′—50′. About 20 m. long, and 17 broad; 250 sq. m. Hill and dale; some parts picturesque. Hills in the north part covered with jungle.

Flat,—Arracan; lat. 18° 37′, lon. 93° 50′. About 4 m. long. High towards the centre.

Negrais,—Pegu; lat. 15° 58′, lon. 94° 24′. Circumference, about 18 m.; area, 10 sq. m. Rendered conspicuous by a hill forming the E. high land on the coast.

Pelew Gewen,—Mouth of Saluen river; lat. 16° 20′, lon. 97° 37′.

Kalegouk,—Tenasserim; lat. 15° 32′, lon. 97° 43′. 6 m. long; 1 m. broad.

Moscos Islands,—Tenasserim; lat. 13° 47′—14° 28′, lon. 97° 53′. Safe channel between them and the coast.

Tavoy,—Tenasserim; lat. 12° 55′—13° 15′, lon. 98° 23′. About 20 m. long, and 2 m. broad. Of moderate height.

CAROSSA,—Mergui Archipelago; lat. 12° 48′, lon. 97° 58′. Moderately high.

KING,—Mergui Archipelago; lat. 12° 31′, lon. 98° 28′. Length, 26 m.; breadth, 10 m.

ELPHINSTONE,—Mergui Archipelago; lat. 12° 21′, lon. 98° 10′. 13 m. long; 4½ m. broad.

ROSS,—Mergui Archipelago; lat. 12° 54′, lon. 98° 12′.

BENTINCK,—Mergui Archipelago; lat. 11° 45′, lon. 98° 9′. 20 m. long; 6 m. broad.

DOMEL,—Mergui Archipelago; lat. 11° 40′, lon. 98° 20′. 26 m. long; 5 m. broad.

KISSERANG,—Mergui Archipelago; lat. 11° 34′, lon. 98° 36′. 20 m. long; 10 m. broad.

SULLIVAN'S,—Mergui Archipelago; lat. 10° 50′, lon. 98° 20′. 36 m. long, and 3 m. broad.

CLARA,—Mergui Archipelago; lat. 10° 54′, lon. 98° 4′. High; having small peaks, one very sharp, like a sugar-loaf.

*Harbours and Havens on the Coast of India—Name, District, Position, Dimensions, Soundings, and Remarks.*

KURRACHEE,—Sinde; lat. 24° 51′ N., lon. 67° 2′ E. Spacious; about 5 m. N. from Munoora point, and about the same from town. Entrance, 1¼ fath. at low-water; 3 ft. at spring-tides. W. side, from 2 to 4 fath. at low-water. Position of great importance: the only safe port in Sinde. Population, 22,227. Railway from port to navigable part of Indus.

POORBUNDER,—Kattywar; lat. 21° 37′, lon. 69° 45′. Entrance obstructed by a bar. Much frequented by craft from 12 to 80 tons burthen; trading with Africa, Sinde, Beloochistan, Persian Gulf, and Malabar coast. Exp., grain and cotton. Imp., various kinds.

NUVVEE-BUNDER,—Kattywar; lat. 21° 28′, lon. 69° 54′. Available only for small craft. River Bhader, navigable for 18 m. above town.

DIU,—Kattywar (on an island); lat. 20° 42′, lon. 71°. Good haven, 3 and 4 fath. Small harbour E. of Diu head, from 2 to 3½ fath. A Portuguese town, well fortified; little traffic.

MOWA,—Kattywar; lat. 21° 3′, lon. 71° 43′. 7 to 10 fath. Anchorage without shelter from the S.; with the flood-tide a vessel must lie with a reef of rocks right astern; considerable traffic.

GOGO,—Kattywar; lat. 21° 39′, lon. 72° 15′. Excellent anchorage; safe during S.W. monsoon; water always smooth. Ships touching here may procure water and refreshments, or repair damages.

BHOWNUGGUR,—Kattywar; lat. 21° 45′, lon. 72° 10′. Good and safe harbour. Place of extensive trade.

BROACH,—Bombay; lat. 21° 42′, lon. 73° 2′. River (Nerbudda) 2 m. wide, but shallow; at flood-tide there is a deep but intricate channel. Navigable only for craft of 50 tons burthen at all times. Town walled.

SURAT,—Bombay; lat. 21° 10′, lon. 72° 52′. A barred harbour. Roadstead dangerous in spring, when S. and W. winds prevail.

DAMAUN,—Bombay; lat. 20° 24′, lon. 72° 53′. 2 ft. on bar at low-water; spring-tides, 18 or 20 ft. inside. Rise of tide, 17 or 18 ft. Outside bar, a roadstead 8 fath. Excellent place for small vessels during S.W. monsoon, and for repairs. Portuguese town fortified.

BOMBAY,—Concans; lat. 18° 57′, lon. 72° 52′. Excellent and extensive haven. Continuous breakwater for nearly 10 m. Lighthouse, 150 ft. above sea, at S. extremity of Colaba Island. Great facilities for shipbuilding. Large docks, and strongly fortified.

JINJEERA, or RAJAPOOR,—Concans; lat. 18° 18′, lon. 73° 1′. 4 to 5 fath. at entrance, and same depth inside at low-water. No bar; shelter from all winds. Fortified.

BANKOTE,—Concans; lat. 17° 58′, lon. 73° 8′. 5 fath. low-water. Small haven at the mouth of the Savitree. Fort Victoria, on a high barren hill, S. side of entrance.

GHERIAH, or VIZIADROOG,—Concans; lat. 16° 32′, lon. 73° 22′. 5 to 7 fath. entrance, and 3 to 4 fath. inside at low-water. Excellent harbour; land-locked and sheltered from all winds. No bar.

VINGORLA,—Concans; lat. 15° 50′, lon. 73° 41′. Small bay; sheltered from every point except the S. About 2 m. from the main-land are the Vingorla rocks, —dangerous.

GOA,—W. coast, S. India; lat. 15° 30′, lon. 74°. Fine harbour, formed by an arm of the sea, into which flows a small river. Ancient Portuguese city, now falling into decay.

SEDASHEVAGHUR,—Malabar coast; lat. 14° 52′, lon. 74° 12′. Entrance to river 25 ft. at high tide; hazardous and intricate. Anchorage outside in Carwar Bay, sheltered by several islets. Fortified.

HONAHWAR,—Malabar coast; lat. 14° 17′, lon. 74° 30′. 7 m. long; 3 m. broad; 15 sq. m.; 5 or 6 fath. Though not a good haven, it can receive large ships.

MOOLKY,—Malabar coast; lat. 13° 6′, lon. 74° 51′. Place of shelter for coasting and fishing craft. Mulki rocks outside.

MANGALORE,—Malabar coast; lat. 12° 52′, lon. 74° 54′. Estuary, a fine expanse of water, separated from the sea by a beach of sand. The utility of the haven is greatly impaired, as the depth at the entrance is liable to vary.

CANANORE,—Malabar coast; lat. 11° 52′, lon. 75° 26′. Small bay, open to the S., but sheltered on the W. 5 and 5½ fath. abreast of the fort. Water-shoals and rocky bottom near the fort.

TELLICHERRY,—Malabar coast; lat. 11° 45′, lon. 75° 33′. Abreast of the fort is a ledge of rocks, between which and the land small craft may anchor. A shipping-place for produce of coast.

MAHE,—Malabar coast; lat. 11° 42′, lon. 75° 36′. 5 or 6 fath. from 1½ to 3 m. from shore. Vessels of considerable burthen must anchor in the road. In fair weather, small craft can cross the bar of the river safely. A small French possession.

CALICUT,—Malabar coast; lat. 11° 15′, lon. 75° 50′. 5 or 6 fath. from 2 to 3 m. from land. No river or haven. A capacious haven said to have existed formerly; now filled up by drifted sand.

PONANY,—Malabar coast; lat. 10° 48′, lon. 75° 58′. 3 or 4 m. to sea is a shoal, but anchorage between it and land. 4 fath. on shoal, 6 fath. inside between it and shore. River navigable only for small craft. A railway from Madras is contemplated.

COCHIN,—Malabar coast; lat. 9° 58′, lon. 76° 18′. Outside the mouth of the Backwater there is a bar with 14 or 15 ft., inside about 25 or 30 ft. Injuriously affected by the S.W. monsoon.

QUILON,—Malabar coast; lat. 8° 53′, lon. 76° 39′. A bight where ships may anchor, under shelter, at about 2½ or 3 m. from the fort. Formerly a place of note.

TUTICORIN,—Gulf of Manaar; lat. 8° 48′, lon. 78° 12′. Safe roadstead; good anchorage, sheltered on all points. Pearl oyster banks exist in the vicinity.

NAGORE,—Coromandel coast; lat. 10° 49′, lon. 79° 54′. 8 ft. on the bar at high-water. Several vessels of 200 or 300 tons burthen belong to this place.

PORTO-NOVO,—Coromandel coast; lat. 11° 31′, lon. 79° 49′. Ships must anchor 2 m. off shore, in 6 or 7 fath. River small at its mouth; admits only coasting craft.

CUDDALORE,—Coromandel coast; lat. 11° 43′, lon. 79° 50′. River small, and mouth closed up by a bar. Admits coasting craft; good anchorage off shore 1½ m.

PONDICHERRY,—Coromandel coast; lat. 11° 56′, lon. 79° 54′. 7 or 8 fath., about ¾ of a mile from land; 12 or 14 fath. in the outer road. Mouth of a small river, capable of admitting coasting craft. French possession; lighthouse, 89 ft.

MADRAS,—Coromandel coast; lat. 13° 5′, lon. 80° 21′. Anchorage 2 m. from shore, 9, 10, or 11 fath.; 300 yards from beach, varying from 12 to 25 ft. Vessels obliged to anchor 2 m. from shore, exposed to a heavy swell rolling in from seaward. Surf at all times sufficient to dash to pieces any European boat. During the S.W. monsoon no communication with the shore can be held without great danger. Fort St. George, strong.

NIZAMPATNAM,—Coromandel coast; lat. 15° 55', lon. 80° 44'. No vessel of great burthen can approach the place. A considerable coasting trade.

MASULIPATAM,—Golconda coast; lat. 16° 10', lon. 81° 13'. Very shallow, ½ fath. for nearly a mile. Ships must anchor 4 or 5 m. from the land, and abreast of the town.

CORINGA,—Golconda coast; lat. 16° 49', lon. 82° 19'. Bar at entrance, with 12 or 14 ft. at spring-tides. Within, from 2½ to 4 fath. Best place on this coast for building or repairing small vessels.

VIZAGAPATAM,—Orissa coast; lat. 17° 41', lon. 83° 21'. Bar at entrance passable for vessels of from 150 to 200 tons burthen. 8 or 10 ft. on bar; anchorage off land, 8 fath. In the S.E. monsoon, ships anchor S. of the Dolphin's Nose; in the N.E. monsoon, from 1½ to 1¾ m. from land.

JUGGURNATH, or POOREE,—Orissa coast; lat. 19° 49', lon. 85° 53'. No harbour for town. Surf here very violent; landing can be effected only by boats similar to those used on the Coromandel coast.

BALASORE,—Orissa coast; lat. 21° 30', lon. 87°. 12 to 15 ft. on bar at spring-tides. Large ships cannot enter the river; they must lay in Balasore-roads, where they are in some degree sheltered. Dry docks, to which vessels may be floated during spring-tides.

KEDJEREE,—Bengal; lat. 21° 53', lon. 88°. 6 or 7 fath.; a bank has reduced the depth to 2 or 2½ fath. at low-water. Telegraphic communication with Calcutta, to announce arrivals and intelligence.

DIAMOND HARBOUR,—Bengal; lat. 22° 12', lon. 88° 10'. So called as a part of Hooghly river. Formerly the resort of the large "Indiamen."

CHITTAGONG,—Bengal; lat. 22° 29', lon. 91° 54'. Formerly a place of considerable trade, but now declining; other ports having supplanted it.

AKYAB,—Arracan; lat. 20° 10', lon. 92° 54'. Good harbour. Suited for a commercial town.

KHYOUK PHYOU,—Arracan; lat. 19° 24', lon. 93° 34'. Harbour said to be one of the finest in the world. Safe ingress for largest-sized ships at any season of the year.

GWA, or GOA,—Arracan; lat. 17° 33', lon. 94° 41'. Barred. Harbour for vessels of 200 tons burthen.

BASSEIN,—Pegu; lat. 16° 45', lon. 94° 50'. Deep river channel affords a safe passage for large ships.

RANGOON,—Pegu; lat. 16° 46', lon. 96° 17'. Anchorage off the town in river. Rangoon river, a branch of the Irawaddy river.

MOULMEIN,—Tenasserim; lat. 16° 30', lon. 79° 42'. An excellent well-sheltered haven. Fine seaport town. Forests in the neighbourhood, with other advantages favourable for ship-building.

AMHERST,—Tenasserim; lat. 16° 4', lon. 97° 40'. Harbour large, difficult of access, and, during the S.W. monsoon, dangerous.

TAVOY,—Tenasserim; lat. 14° 7', lon. 98° 18'. Obstructed by shoals and banks. Inaccessible for large ships within some miles of the town.

MERGUI,—Tenasserim; lat. 12° 27', lon. 98° 42'. Harbour spacious, secure, and easy of access and egress for ships of any size. Town inaccessible for vessels of large burthen, as a bank obstructs the stream.

[a] The accounts of most of these banks are vague and unsatisfactory; there is a mystification which renders it difficult to ascertain their solvency. [b] Last dividend, 8 per cent. [c] Last dividend, 9 per cent.
[d] Last dividend, 10 per cent. [e] Corporation date of charter, 30th of August, 1851. [f] At 27th Sept., 1855.
[g] Bills of exchange and promissory notes not bearing interest. [h] A lending bank; and from its accounts in June, 1855, I can derive no definite view of its assets and liabilities. *Branches.*—Agra, Madras, Lahore, Canton, and London.
[i] *Branches.*—Bombay, Simla, Mussouri, Agra; and they draw on Delhi and Cawnpoor.
[k] Agents in London, Calcutta, Canton, and Shanghae. [l] Agents in London, Calcutta, Bombay, and Madras.
[m] *Branches.*—London, Calcutta, Colombo, Kandy, Canton, and Shanghae. Last dividend, 8 per cent.
[n] Drafts and bills in circulation.

Commercial Tariff of India.—The chief provisions of the tariff of 1855 may be thus stated:—*British imports*—Cotton and silk piece goods and manufactures, woollens, marine stores, metals, porter, beer, ale, cider, and similar fermented liquors, and all manufactured articles not named, 5; *foreign imports* of above, 10—per cent. Cotton thread, twist, and yarn, British, 3½; foreign, 7—per cent. Bullion and coin, grain, coal, ice, horses and other animals, free. Books, British, free; foreign, 3 per cent. Coffee, 7½ per cent. Alum, camphor, cassia, cloves, coral, nutmeg and mace, pepper, vermillion, and tea, 10 per cent. Spirits (London proof), 1 rupee 8 annas per imperial gallon; wine and liqueur, 1 rupee per imperial gallon. There are a few export duties: viz., indigo, 3 rupees per maund (about 82 lbs); lac, 4 per cent; silk wound, 3 annas; silk, raw filature, 3½ rupees per seer; sugar and rum to foreign ports, 3 per cent.; tobacco, 4 annas per maund. These duties refer to Bengal: there is little difference at Bombay and Madras, except in the export dues. With regard to salt, the duty on import into Bengal, is 2 rupees 8 annas per maund of 80 tolas; at Madras, 12 annas per maund; at Bombay, free; salt exported from Bombay to Madras, pays ¼ anna per maund; salt exported to Malabar, Cochin, and Travancore, 1 anna per maund; and it may be exported free to foreign or British ports not in India or Ceylon. Salt exported to Bengal pays excise duty, but receives credit for amount in adjustment of local duty. The shipper exporting salt to Madras has to give security for payment of full duty failing to produce certificate from place of import. All port-to-port trade throughout British India, except in the articles of salt and opium, was rendered free by Act 6 of 1848, and Act 30 of 1854.

Coins, Weights and Measures.—*Bengal Coins.*—2 double = 4 single pysa; 12 pie small = 1 anna; 16 annas = 1 rupee; 16 rupees = 1 gold mohur. When accounts are kept in sicca rupees, they use the imaginary pie of twelve to an anna. Small shells, called cowries, are also made use of for paying coolies, &c., which are reckoned as follows: viz., 4 cowries = 1 gunda; 20 gundas = 1 pun; 5 puns = 1 anna. These rates vary from time to time. *Gold and Silver Weights.*—4 punkhos or quarter grain = 1 gram or dahn; 4 dahns = 1 rutty; 6 3-8ths rutty = 1 anna; 8 rutty = 2 massa; 100 rutty, or 121 massa or 16 anna = 1 tola or sicca rupees; 1061 rutty, or 13, 28, 152 massa, or 17 annas = 1 gold mohur. A gold mohur weighs 722 and nine-tenths troy weight, containing 187,651 fine gold and 17,051 alloy. A sicca rupee weighs 7, 11 and two-thirds ditto, containing 175,928 fine silver and 15,993 alloy. *Cloth Measure.*—3 corbe = 1 angualæ; 3 angualæ = 1 gheriah; 8 gherries = 1 haut, or cubit, 18 inches; 2 haut = 1 guz or yard.

# BRITISH POSSESSIONS IN THE INDIAN AND PACIFIC OCEANS, RED SEA, MEDITERRANEAN, ETC.

## SECTION I.—CEYLON.

Ceylon, known in ancient writings under the terms Singhala, Serendib, Taprobane, Lanka, and other designations, has been, from very remote times, an island of great celebrity. It was visited by Onescritus, the Macedonian admiral, during the Indian expedition of Alexander: it was imperfectly described by Diodorus Siculas, B.C. 44. Ovid refers to Taprobane as a place so far distant, that it would be no advantage for his fame to be extended thither. Pliny extolled the isle for the purity of its gold and the size of its pearls; and during the reign of Claudius, the Singhalese monarch sent one of his rajahs, or head-men, on an embassy to the imperial city.*

Oriental researches furnish some knowledge of the civilised state of Ceylon previous to the Christian era.† Anuradpoora, the capital, founded B.C. 437, had a walled area sixteen miles square; a list of streets is said to be still in existence. To the north of the ruins of this site there are, or were, not long since, six immense *dagobas* (temples) of hemispherical, or rather bell-shaped form, with spires,—completed A.D. 310; the largest, named Jayatawanarama, was originally 315 feet high, built of brick, and entirely covered with chunam (prepared lime, polished like marble.) In 1832, the elevation was 269 feet; and with the materials of which it is composed, a wall of brick might be constructed twelve feet high, two feet wide, and ninety-seven miles long. There are many other extraordinary ruins, comprising the sites of cities; vast tanks or water reservoirs, sixteen miles in extent, formed by huge blocks of well-cut stone; excellent arched bridges; extensive canals, one estimated at five to fifteen feet deep, and forty to one hundred feet wide; and various buildings, ascribed by the natives to a race of giants,—those who dug the great canal especially, are traditionally mentioned as men of forty feet in height. The *Abhayagiri* dagoba, built by King Waldgam between the period of his restoration to the throne, B.C. 88, and his death, B.C. 76, is stated by Major Forbes to be the largest ever erected in Ceylon; its elevation was originally 405 feet, and the platform on which it stands, the fosse and surrounding wall, proportionately extensive. The height of the ruin was, in 1828, 230 feet; and the length of the outer wall, one mile and three-quarters. *Toopharamaya* dagoba, constructed B.C. 307, was more elegant in design; low, broad at the top, and surrounded by four lines of pillars, twenty-seven in each line (fixed in an elevated granite platform); height, twenty-four feet; bases, square; shafts, octagonal; capitals, circular; base and shaft, cut in one stone, fourteen inches thick and twenty-two feet long; capitals much broader than base, and highly ornamented. *Ruwanwelli-saye* dagoba, nearly completed B.C. 140, stands on the usual elevated square platform; it is formed of large dressed granite slabs,—each side of the square about 500 feet, and surrounding fosse seventy feet broad. The scarp of the platform is sculptured to represent the fore parts and heads of elephants, projecting and appearing to support the massive structure. The *Lowa-Maha-Paya* dagoba, or Brazen Palace, erected B.C. 142, had an altitude of 270 feet, and was covered with one sheet of metal. It contained 1,000 apartments for priests; the loftiest chambers nine stories high. Of this building there are still extant 1,600 stone pillars, placed in forty parallel lines, forty pillars in each, and occupying a square space, each side of which is 234 feet in

* For various details, traditions, and historical notices of facts which are beyond the limits of this work, *see* Mr. C. Pridhave's *Historical, Political, and Statistical Account of Ceylon*, in 2 vols.: Major Forbes' *Eleven Years in Ceylon*, in 2 vols.: Sir J. E. Tennent's instructive work, *Christianity in Ceylon*, in 1 vol.: Lt.-colonel Campbell's *Excursions in Ceylon*, in 2 vols.; and the writings of Turnour, Knox, Cordiner, Bennett, Sirr, and Knighton.

† According to Singhalese and Pali records, Wijaya, a leader of 700 followers, landed in Ceylon B. C. 543, founded a government at Tamana-oowara, and married the daughter of a native prince. A narrative yet extant of the proceedings of successive sovereigns, for upwards of 2,000 years, relates the maritime expeditions, foreign wars, internal contests, intestine feuds, famines, pestilences, and murders, which form the chief incidents in Asiatic history.

length. The columns in the middle of the ruin are eleven-and-a-half feet above ground, two feet in breadth, and one-and-a-half feet thick, slightly ornamented.* Some of the carvings in granite, strewn for miles around Anuradpoora, which (excepting one reign) was, for upwards of 1,200 years, the capital of Ceylon,† attest the high degree of art the Singhalese had attained. In the figures of men and animals the proportions are more correct, and the action more animated, than is usually seen in modern Oriental sculptures.

Near Mantotte, on the north-west coast, there are ruins of a very large city, whose houses were built with bricks and mortar. At a short distance there is an artificial tank, the basin of which covers an area of about sixteen miles; an embankment nine miles in length is formed of huge stones eight feet long, four feet broad, and three feet thick, cemented together by lime; the length of the dam is 600 feet; breadth, about sixty feet; height, eight to twelve feet. Mantotte is said to have been the capital of a kingdom which the Hindoos established in the northern part of Ceylon. In some of the structures of more remote date, in other parts of the island, no mortar has been used; the stone blocks are neatly cut, and morticed into each other. Kandelly Lake (near Trincomalee), fifteen miles in circumference, is formed by a parapet which connects two hills; the stones twelve to fourteen feet long, broad and thick in proportion; base of parapet, 150 feet wide; summit, thirty feet: there are arches on it; some traversed conduits like those constructed by the Romans in Italy.

The wedge and chisel were used for splitting and shaping huge granite blocks, and were probably similar to those still employed by the Chinese, who, at the present day, cut immense columns of granite from its native quarry; one I measured was twenty-five feet in length. Sir J. E. Tennent, in 1848, visited, at some hazard from wild beasts and malaria, the ruins of Pathavie tank, in the great central forest of the Wanny, about seventy miles N. of Trincomalee, and twenty-five miles from the sea. His notes furnish a graphic description of "the largest as well as most perfect of these extraordinary works."‡ The tank occupies the basin of a broad and shallow valley, about twelve to fifteen miles long, with a breadth varying from six to ten miles. The embankment by which the waters were accumulated within this area is nearly seven miles long, 300 feet broad at the base, tapering to twenty at the top, and upwards of sixty feet high, faced throughout its whole length by layers of squared stone. One of the existing sluices examined, consists of hewn stones six to twelve feet long: these rise into a ponderous wall immediately above the vents, which regulate the escape of the water; each layer of the work is kept in its place by the frequent insertion endways of long plinths of stone, whose extremities project from the surface, with a flange to prevent the several courses being forced out of their places. The ends of these retaining stones are carved with elephants' heads and other devices, like the extremities of Gothic corbels. The front embankment has been estimated to contain 7,744,000 cubic yards of stone, and the cost to have been, for that portion of the work, above £870,000 sterling. At some unknown period, a breach about 200 feet broad and 100 feet deep, in the embankment, injured the efficiency of the work, and was not repaired. The surrounding country, which must have been at one time thickly peopled, is now desolate; elephants, buffaloes, alligators, pelicans, flamingoes, and other sea-birds, being the only living things seen for miles. There are

* I visited several of these extraordinary ruins; but am indebted to Major Forbes for the measurements and accurate descriptions.

† Robert Knox, who saw Anuradpoora in 1679, when escaping from captivity, mentions in his account of Ceylon, published in 1681, "a world of hewn stone pillars, and other heaps of hewn stones, and, in three or four places, ruins of bridges built of stone, some of them yet standing upon stone pillars: they report ninety kings have reigned there successively." It is remarkable that Mr. Turnour, in his valuable historical epitome, names ninety-two kings who reigned at this capital between 437 B.C. and 729 A.D. = 1,166 years, which would give an average of nearly thirteen years sovereignty to each. In India there were sixty-five Mohammedan rulers between Mahmood the Ghaznivede, in 1001, and Shah Alum, in 1760 = 759 years, showing an average duration, for each reign, of nearly twelve years. In England, between William I. (1066) and William IV. (1837) = 770 years, there have been (including Oliver Cromwell and son) thirty-five rulers;—average for each, twenty-two years. In France, between the reign of Pharamond (A.D. 427) and Louis Philippe (1848) = 1,421 years, there were (including Napoleon Buonaparte) seventy-nine rulers;—average for each, eighteen years: or from the reign of Hugh Capet (A.D. 987) to that of Louis Philippe = 861 years, thirty-nine rulers, or little more than twenty-two years to each,—about the same duration as that of the sovereigns of England. In China, between 1001 B.C. and 1850, there have been about 166 rulers;—average to each, seventeen years.

‡ Tennent's *Christianity in Ceylon*, p. 337.

about thirty immense tanks, and from five to seven hundred scattered over the island; many still repairable. Sculptured stones, with inscriptions in an unknown tongue, are still extant, and probably, if readable, would reveal the names of the founders of these gigantic and useful structures.

The cave temples which abound in Western India, and which seem to have been identified with Buddhistic rather than Brahminical worship, have their counterparts in Ceylon. One at Dambool, constructed B.C. 100, has been formed under a mass of gneiss, which is nearly 500 feet high; it is profusely decorated. Another singular rock temple, called *Gal-Wihare*, situated about a mile from the numerous ecclesiastical, pallatial, and other vast ruins which indicate the site of *Jayatawanarama*, has the perpendicular face of a sloping cliff, sculptured into colossal statues of Buddh: one, forty-five feet long, in a reclining posture; a second twenty-five feet high, erect (similar to those at Bamian in the Hindoo-Koosh); a third, in the sitting posture, has an altitude of sixteen feet. In another place there is a statue of Buddh, fifty-eight feet high, constructed of brick, with a coating of polished chunam, which gives it the appearance of marble.

In the great forest near Kornegalle, an European, when hunting recently, suddenly came on a magnificent erect and dressed statue of Buddh, fifty feet high; the right hand, as usual, elevated, with the fore-arm bent, and the left hand resting on the shoulder. The figure is carved in the solid stone of the mountain, to which it is still connected at two parts, to maintain the sculpture in its place; the rock is scarped to serve as a wall on either side, on which a timbered roof formerly rested. The work is of unknown antiquity. Some years since, when travelling on a then unfrequented route from Baddula to Kandy, I saw in the forests several gigantic statues, near each of which a priest had his solitary residence; my Singhalese guide was rather unwilling to let me see these venerated spots to which pilgrims resort at stated seasons, and I was unable to find my way thither again.

At Topare, the site of Pollanarua (the Kandian capital between 700 and 1400 A.D.), the forest, for many miles around a vast tank, contains immense ruins of temples and other edifices erected during the 10th and 12th centuries, which, in the opinion of Sir James Tennent, "display a beauty of design, and an excellence of execution, far surpassing anything, either of a remote or more recent origin, to be seen in other parts of the island." Sir James—himself an experienced connoisseur in the fine arts, as his interesting work on Belgium demonstrates, and whose testimony on these beautiful relics of Oriental architecture is therefore valuable—says, that in many points the ruins of Topare present a striking similarity to the ancient buildings discovered in Mexico and Central America.

It is probable that Ceylon was, before the Christian era, a commercial emporium* for Eastern and Western Asia, and that the Chinese, in their former extensive maritime traffic, made it a station of resort. Marco Polo, A.D. 1284, and Sir John Mandeville, half a century after, visited the island. In 1505, Lorenzo de Almeida (son of the viceroy of Goa), while in command of a fleet of nine vessels, was accidentally driven on the coast of Ceylon. The Portuguese allege that the Singhalese monarch entered into an engagement to furnish them with 250,000 lbs. weight of cinnamon, in return for their defence against all enemies. This is apocryphal, as the Portuguese did not again visit Ceylon for twelve years; when, in 1518, Alvarenzo arrived with a large fleet, commenced erecting a fort, and was attacked by the natives. Despite opposition, the fort was built, in 1519-'20, at Colombo. Contests ensued with the Singhalese; the invaders were shut up for five months in the citadel; a reinforcement of fifty men arrived from Goa, and with a force of 300 soldiers, a successful sortie was made, and the king compelled to sue for peace.

In 1524, the garrison at Colombo was reduced to a factor, secretary, and fifteen men; but these, aided by strong defences, were able to resist the attacks of a body of Malabars, who arrived by sea to aid in their expulsion. It would be tedious to narrate the varied contests, successes, and defeats of the Portuguese and Singhalese for many years; as usual, rival aspirants for power sought European aid,—were throned or de-

* A work, of which only one copy (Arabic text) is known to be extant, entitled *The Travels of the Two Mohammedans*, written in the year 237 of the *Hegira* (A.D. 851), and translated by the Abbé Renaudot in 1718, contains the recital of a merchant named Soleyman, who voyaged to Ceylon and to China; to this is superadded a narrative compiled by Abu Zeyd Hassan, a geographer, from the travels of several navigators. In this valuable record the extensive commerce and extraordinary riches of Ceylon are mentioned, and likewise the unhappy passion for gambling which still characterises the people.

throned as puppets: war and bloodshed, public crime and private assassinations fill the record. At the close of the 16th century the Portuguese army in Ceylon consisted of 1,500 well-appointed Europeans, together with numerous "half-breed" and native auxiliaries; yet they were, on one occasion, driven back from the interior, and forced to take refuge at Colombo. In 1630 they marched to Ouva, in the interior, but were routed, and their commander slain. In 1638 they again attacked the Kandian territories, with 2,300 regulars and 6,000 native troops, occupied the capital, and committed many atrocities, in return for the king having previously caused several Portuguese to be trampled to death by elephants. Deserted by the Asiatic soldiery, the Europeans retreated to a small fort three miles from Kandy,—were surrounded and defeated by Rajah Singa, the commanders killed, seventy prisoners taken, and none escaped from the rout. The heads of the fallen enemies were cut off and piled before the heir-apparent. The Portuguese do not appear to have again attempted the conquest of the interior, but restricted their exertions to the subjugation of the peaceable and timid natives of the coast, where they built forts at Point de Galle, Jaffna, and other places. The Dutch, in pursuance of the policy practised towards the Portuguese for their expulsion from the coasts of India (*see* Division X. of this work), did not long leave their rivals unmolested in Ceylon, and obtained sufficient influence at the court of Kandy, so early as 1614, to induce the king to refuse permission to the Portuguese to erect a church and convent at his capital. In 1636, the king addressed a letter to the Dutch governor of Palliacotta, complaining of the dishonourable and violent conduct of the Portuguese, and inviting the Dutch to enter into an alliance for their expulsion from the coast of Ceylon. An embassy was sent to the king from Batavia, who plainly declared that no union with the Portuguese was safe; that, despite all treaties and engagements, they violated his territory, plundered his country, fired the villages; and so long as they had any footing in the island, there could be no protection from their tyranny, and no security from their insults.* An agreement was entered into, under which the Dutch were to be permitted to erect forts on the eastern coast, to facilitate their operations against the Portuguese on the west coast; the King of Kandy was to bear all the expenses of the war, and the Hollanders were to place in his possession all the fortresses and positions wrested from their common enemy. The Dutch, inflamed with personal hostility and religious zeal against the Portuguese, assaulted them with great violence, and treated the Romanists in pretty much the same spirit that Moslems would have evinced towards idolaters.†

Aided by the Kandians, the Dutch captured Colombo, Galle, Jaffna; and, in 1656, finally expelled the Portuguese from the island. The king, however, discovered that he had only exchanged one set of European neighbours for another: the Dutch refused to surrender the territories which they had been the chief instruments in conquering, and soon became involved in a war with their recent ally; but every effort to obtain a position in the interior was frustrated, either by open resistance or by treachery, until 1763, when a powerful Dutch force penetrated to Kandy, after considerable opposition, but were unable to retain the city, which, with surrounding conquests, to the extent of twenty miles, was abandoned under a humiliating treaty.

The attitude assumed by the English in India towards the close of the 18th century, and the necessity for a good haven on or near the Coromandel coast, naturally induced the government to covet the possession of at least a part of Ceylon; the more so as Holland was coalescing with France and Spain as an enemy of Britain. In 1782, the governor of Madras, Lord Macartney, dispatched a body of troops under Sir Hector Munro, on board the royal fleet, commanded by Sir Edward Hughes. Trincomalee was captured after a brief resistance, and an envoy (Mr. Boyd) was dispatched to Kandy to secure the favour of the Singhalese monarch; but with little effect. Hughes, after several indecisive naval engagements with the French admiral (Suffrein), then cruising with a large combined fleet in the Indian Ocean, returned to Madras, to embark the E. I. troops he had on board. Suffrein landed, on the 27th of August, a body of troops at Trincomalee,—

* Baldæus, chap. xix., p. 703.

† The Captain-general of Colombo, in describing to his government the siege of that fort, says, "his pen wants words to describe the affronts put on their holy things by the heretics, who took the statue of the apostle St. Thomas, and after they had cut off the nose, knocked it full of great nails, and shot it out of a mortar into our ditch."

besieged the small British detachment there, which capitulated on being permitted to march out with the honours of war, and return immediately to Madras. Three days after, Hughes appeared with twelve sail off the harbour, and finding the French flag hoisted, stood out to sea. Suffrein, with a superior force, followed him, and fought a desperate action, only a part of the Gallic ships being engaged: the enemy suffered severely; the English very little. Suffrein retired to Trincomalee; Hughes to Madras.

By the peace of 1783, Trincomalee was restored to the Dutch, but was again attacked by the English in 1795, on the union of the Batavian government with that of France. A large force was sent from Madras, under General Stuart, to expel the Hollanders from the island. After much fatigue and some loss during the siege, the fortress of Trincomalee surrendered; as did also the forts of Jaffuapatam and Negombo, on the first summons. Early in 1796, Stewart, accompanied by a fleet along the coast, marched from Negombo by land, with three European, three native regiments, and a detachment of artillery, to attack Colombo on the land side. The road for twenty miles might have been defended by a small force, but no resistance was offered. At the Kalane-Gunga, four miles from Colombo, where there was a small fort to protect the Grand Pass, or little neck of land on the south side of an insulated tract, the British paused; but ere two days elapsed, it was found that the guns had been dismounted, the fort evacuated, and that the troops had retreated to Colombo. There the garrison were in a state of complete disorganisation: a small body of Malays, headed by a gallant Frenchman, made an ineffectual resistance near the fort, but Governor Van Angelbeck surrendered to Stuart without firing a shot; Galle, and other Dutch forts, were similarly abandoned, together with a belt of land of unequal breadth all round the island. By the treaty of Amiens, in 1801, this territory was finally annexed to the British Crown.* For a few years, the provinces thus acquired remained under the direction of the Madras authorities, who again opened a fruitless negotiation with the Kaudian monarch. In 1798, the Hon. F. North (afterwards Earl of Guilford) was sent from England in a nondescript position, but was ultimately appointed governor-in-chief, under the direct control of the minister of the Crown. The proceedings of Mr. North, in reference to the invasion of Kandy in 1802–'3, and the subsequent destruction of the British troops there by the king, have been variously related. I avail myself, therefore, of a manuscript memorandum, drawn up from official documents for the governor-general in 1803, which I found among the Marquis Wellesley's papers. It accords with some of the published statements which refer to this epoch, but is fuller and more explicit:—

"A short time after the return from Madras to Ceylon of Mr. North, in July, 1799, there was reason to believe that the court of Kandy† began to entertain suspicions of the intentions of the British government, in consequence of an embassy, which it had been taught to expect, not having been sent to that court. These suspicions were increased by the measures which were adopted by Mr. North to place the Malay corps on a respectable footing; and at last assumed so serious an appearance, as to induce Mr. North to send a confidential native agent for the purpose of demanding an explanation from the first

* The Marquis Wellesley, in 1798, urged his Majesty's ministers to retain the Cape of Good Hope and Ceylon in case of any treaty hereafter. Respecting the island, he said—"The possession of Ceylon is universally held to be indispensable to the preservation both of our power on the continent, and of our commerce on the seas of India. I am persuaded that the possession of Ceylon, either in the hands of France or of her bond-slave Holland, would enable the French interest in India to rise, within a very short period, to a degree of formidable strength never before possessed by them. On this subject I find no difference of opinion in the minds of any persons acquainted with India."—(*Despatches of the Marquis Wellesley*, when governor-general of India, vol. i., p. 31.) The advice thus given was followed; but a similar suggestion, with regard to the Cape of Good Hope, was rejected: that colony was nominally restored to the Dutch, but really given over to the French at the definitive treaty of peace signed at Amiens 27th March, 1802; and its recapture by England in 1806 became an urgent necessity.

† At the period of the British occupation, the form of government at the court of Kandy, and the administration of the laws, are thus described:—"Before a king dies, he girds his eldest prince with the golden sword, and delivers to him the government, in presence of the two chief *adigaars* (ministers) and the four greatest dessaves, and the heads of five provinces (Udoonoowana, lattanoowany, Haraseepattoo, Toonpamaha, and Doombara), after which each of them ought to kneel down before the prince. In case of their refusing, the father encourages them by kneeling himself down. Should the king die without having appointed a successor, the priests of four temples, the two adigaars, and four of the chief dessaves, after consultation, nominate the next heir to it, invite the inhabitants of the aforesaid five provinces to inform them of it, and with their consent they deliver to the new-selected king the government, with the devotion above-mentioned. His Majesty goes hereafter, with the people and priests, to the three temples (Wishnoo, Kadragamay, and Patieny), to offer there the necessary sacrifices. From hence he proceeds to Nateeivalley, where the greatest sacrifices are to be performed, and his instalment as king takes place. He himself puts on his head the diadem, and girds himself with the golden sword: after this, he goes with his whole suite to the principal temple (Dalledagay); pays, according to

adigaar or minister of the government of Kandy.* In consequence of this communication, the first adigaar requested Mr. North to grant him an audience at Setaraea, on the frontiers, as he had something to communicate which was of the greatest importance to the British government.

"Accordingly an interview took place on the 5th of January, 1800, between Mr. North and the first adigaar. Previously to this interview, Mr. North had reason to think, from the information of the native agent whom he had deputed to Kandy, that the object of the first adigaar was to establish an English military force in Kandy, and to pay for it a tribute in areka-nut and other productions, to the British government; and that this military force was to protect his own power, together with that of his nominal master the King of Kandy, in whose name it was supposed the first adigaar intended to continue to govern the kingdom. At the interview, however, on the 5th of January, 1800, the first proposal made by the adigaar to Mr. North, was to *depose* the reigning king, who had been placed on the throne by the first adigaar, in direct violation of the laws of the kingdom of Kandy. This proposal was rejected in the most positive manner; as Mr. North, very justly, did not think himself warranted to join in a conspiracy against a prince in perfect amity with the British government, and who had been recognised by Mr. North as the legitimate sovereign, on the grounds of his being in possession of the throne on

custom, the usual worship, receiving the blessings and good wishes from the four high priests; ascends the throne, and passes about a whole month in festivals. If there be no prince to succeed, one of the nearest relations of the royal family is chosen, and if still in his minority, the kingdom is managed by the adigaar, and he educates the prince by wise instructions and admonitions till he arrives to his majority. If the king be without issue, and no prince of the royal blood exists, a prince is brought over from Madura, and appointed to be king. Some state affairs are settled by the king alone, and some by conferring with his ministers: it often happens that the latter, influenced by envy and malice, or bribery and avarice, gives such information to the king, that the guilty are acquitted, and the innocent sentenced to the death or other punishments. If a decree shall be made, the two adigaars, the four great dessaves, the two mohottiaers of Attapattoo court, and the rataralas ought to be previously consulted. Without the consent of the ministers and dessaves, the king cannot declare war of his own accord. Office is granted only by the king, consulting first with the two adigaars. If by the above-mentioned members of the council any affair is determined and represented to the king, he either accepts it and gives his sanction, or rejects if it does not agree with his opinion. If a subject wishes to petition the king, and cannot get it delivered by the adigaars, he must address himself to the public treasury, or in a lesser court in the village, on which the chief of it is obliged to represent his cause to the king; and if any should suffer injustice, he climbs upon a tree next to the palace, and cries so loud that the king may hear it, bid him to come down, and inquiring into his case, may grant him relief. When the adigaars, the four great dessaves, the mahamohottiaer, the mohottiaer of the Attapattoo, and the rataralas have examined any cause, and represent to the king their opinion that a guilty person is deserving death, he is either killed or punished in another way, and banished to a miserable place. When the king goes out in state, he is attended by high officers, with elephants, and the mohandarum of the stable, with the horses. Various flags are borne—one with a crescent moon, another with a lion, another with a goose; also white and red flags, appropriate to particular districts; and music of various descriptions. Four times in the month or more, the priests are obliged to give instruction in their religion, and such books are also given to the king. He who is well acquainted with the principles of the law, and exercises himself therein, may be employed, without regarding the caste, as priest and high priest; but to be the chief of one of the four temples, or the highest priest, one of the caste of Bellaby is necessary. If priests advance to the station of high priest, they are called before twelve of the latter, who are well versed in religious law; and when they have been examined, and have read and explained some of their sacred books, the most able one is confirmed by the senior high priest; after which an oath is taken from him. Neither priests nor high priests are allowed to marry. Those priests who do not observe the religious laws, act against the duties of their priesthood, and keep concubines, are neither honoured nor trusted, but are regarded as devils, and despised as enemies of the law. Formerly there was only one adigaar, called Pallegampuha; but the king, Rajah Singa, intending to go to Colombo with the said adigaar to turn out the Portuguese, placed a second to take care of the court, and intrusted to him the management of the half of his kingdom. From that period there were two adigaars, who are equal in rank. There are four great dessaves; viz., one of the four Korles, another of the seven Korles; the third of Dowry, and the fourth of Matooley. The other dessaves enjoy the privileges granted to the four great dessaves, only in their districts, but nowhere else. The four latter are authorised to be preceded by the beating of tom-toms, in both the Upper and Lower districts. Both the superior and inferior dessaves have the power of punishing the guilty, according to their offences, in different manners; but not to kill or torture. The two adigaars are permitted to make use of whips, which is a particular honour. When they retire from the palace to the foot of the mountain, the other side of the river Mahavillagunga, from thence the beating of tom-toms is permitted; everywhere else in the dessavinces they may use both insignia of rank—viz., whips and tom-toms. Everything is determined and settled according to the law laid down in several old books. An adulterous woman may be deserted by the husband, either arbitrarily, or with a previous knowledge of the dessaves; but if a husband is guilty of the same crime, his wife cannot separate from him as she pleases, but must address herself to the judges: a reconciliation is allowed. A man deserting his wife is sentenced by the dessaves to give the half of his estate to her; but if the wife deserts him, she gets nothing, except the children issued from him. A man may keep concubines besides his lawful wife. [The shameful practice of polyandria is thus sanctioned.] Two or three brothers may keep one and the same wife, if they agree upon it. In case four or five brothers live together, and a bride is brought for one of them, whom he does not like, another may choose her. None of a low caste can be raised to a higher one; a male of the high class may be reduced to a lower one. Delinquents of the nobility are beheaded; but others are hanged, killed by elephants, put on a pike, or punished after their crimes. A testator disposes of his property by writing in presence of witnesses. The estates of intestates devolve on the children; after them on the brothers; after which follow the other nearest relations; but if there be none existing, it falls to the public treasury."—[MS. prepared for Ceylon government, and found among Lord Wellesley's papers.]

* "This event took place about the year 1798. The account given by the adigaar was, that the country had formerly been inhabited by *devils*, who had been expelled by *Seredin*. From this period, a regular succession of kings of the Singhalese race followed for ages. These, in return, were afterwards expelled by the accession to the throne of Kandy of the race of Malabar kings. About the year 1781, the adigaar's brother, who had also been adigaar, placed on the throne a prince of Malabar extraction; and, in 1798, the existing adigaar, in the midst of civil discord, succeeded in obtaining the throne for the reigning prince, although he had no legal pretensions to it, and was in fact illegitimate."

Mr. North's accession to the government of Ceylon. But although Mr. North did not think himself justified in contributing, in any degree, to the deposition of the King of Kandy, he was not disposed to insist on that prince's retaining any large portion of authority in his dominions, and conceived 'that he provided much more effectually for the king's security and happiness, by placing him under the protection of a British military force, than by leaving him in the hands of a daring and ambitious minister, or of a faction which had proclaimed him an illegitimate usurper.'

"Mr. North, therefore, felt no hesitation to promise the adigaar support 'in obtaining all authority *short of royalty* in the country, in case he should be able to prevail on the king to ask for a British subsidiary force, and to put himself and his country under the British protection.' The motive for inducing Mr. North to take this resolution, was the hope which he entertained that the measure was the best mode of ascertaining the extent of the minister's power, which he had reason to think was greatly weakened. 'If he (the first adigaar) succeeds,' Mr. North says, 'in inducing his majesty to make such an application, it may, I think, be complied with without hesitation; for it would prove either that his power is so great, that the establishment and recognition of it would take nothing from the king of what he really possesses; or, that they both are in such a state of alarm, that they would willingly sacrifice their independence for their safety. If he should not succeed, it will prove that his power is no longer what it was, and that the king is in a state of independence in his own dominions, which we have no right to diminish, and which it would be both impolitic and unjust to attack.' Mr. North, in this conference, informed the first adigaar of his intention to send General Macdowall as ambassador to the King of Kandy, with valuable presents. Major-general Macdowall was instructed to negotiate the treaty with the King of Kandy, founded on the principles stated in the conference which took place between the first adigaar and himself on the 5th of January, 1800, to which the first adigaar had agreed, and which he had promised to carry into effect. Another important object of the embassy was to obtain a perfect knowledge of the situation of the court of Kandy, which was essential to the improvement of our general interests, as well as to prevent the dangers which it was apprehended would attend the implicit observance, on the part of Mr. North, of the directions of the first adigaar, whose intentions Mr. North 'knew to be atrocious, and such as he could never abet.'

"General Macdowall arrived on the frontier of Kandy on the 20th of March, 1800, where, according to appointment, he met the first adigaar, accompanied by two officers of inferior rank, and by a great number of followers. On the 8th of April, General Macdowall arrived at Gunarora, and, on the 9th, had his first audience of the King of Kandy. He was received with every demonstration of respect and kindness, and soon after his audience entered on the subject of his mission. The treaty proposed by General Macdowall embraced the following objects:—1. The preservation of the reigning king: 2. The permanent establishment of a British force in the Kandian territories: 3. The obtaining some commercial advantages: 4. The prevention of immediate bloodshed and future civil war, by the delivery of the chiefs of the persecuted party into the hands of the British government: and, 5. The procuring the administration of the revenues of the country, or at least such powers as might prevent the continuance of the wretched system which had hitherto prevailed, to the detriment of its natural resources.

"The treaty, however, was rejected by the ministers of the court of Kandy, who proposed a counter-project, nearly similar to one which had been formerly offered to the government of Madras. The general refused to enter on the discussion of the counter-project, and demanded his audience of leave. The ministers then consented to the proposed treaty, with the exception of the article which provided for the establishment of a considerable body of troops near the town of Kandy. They wished to reduce the number to 400; but, as such a modification was little calculated to afford security to the British territories, General Macdowall declined the proposal, and quitted the town of Kandy. The ministers also rejected three modified proposals from Mr. North; and the negotiation here terminated.

"The whole of these transactions were officially submitted to the notice of the supreme government of India, who have stated their sentiments on the subject in a letter under date the 28th of May, 1800. The governor-general in council observes:—'We agree in opinion with your excellency respecting the advantages which would result to the British interests in India from establishing a subsidiary force at Kandy, whenever a favourable opportunity may offer for that purpose. At the same time, we highly approve the motives which induced your excellency to reject the adigaar's unwarrantable proposal for the deposition of the King of Kandy. The other objects which your excellency proposes to obtain by the embassy of Major-general Macdowall, and which are detailed in the project of the treaty transmitted with your letter of the 15th of March, are certainly important, and many of them extremely desirable. We confess, however, that we entertain considerable doubts, not only of the sincerity, but of the power of the adigaar to aid your excellency in the accomplishment of the proposed plan. Under circumstances of such delicacy, we trust that your excellency's prudence and discretion will be exerted to avoid any step which might eventually expose the British character to the hazard of any invidious reflection, or might provoke discontent or jealousy at the court of Kandy.'"

Mr. North was amiable and learned, but unfit for the position in which he had been placed, and in the interior he injudiciously persisted in interfering in the political intrigues carried on.

The Marquis Wellesley, as governor-general of India, advised the governor of Ceylon to pause in the proceedings contemplated with regard to Kandy; and in private letters which I found among his lordship's papers, the same caution is reiterated. Thus, on 28th November, 1800:—"My dear North,—I have this moment received your official despatch of the 28th October, and I lose not a moment in acknowledging it in this private form, for the purpose of urging you in the most earnest

manner to avoid, by all possible means, any rupture with the court of Kandy.*

* * * * "I am, &c.,

"WELLESLEY."

---

In 1802, the administration in Ceylon was rendered entirely independent of the supreme government of India; and on 29th January, 1803, Mr. North assembled a force for the purpose of invading the Kandian territories, the king having refused to accept the terms proposed by the governor, on the plea of avoiding further collisions, and preventing incursions on the British frontiers. One portion of the army, under Major-general Macdowall, marched from Colombo; another from Trincomalee, under Colonel Barbut: the whole, amounting to about 3,000 men, were to unite on the banks of the Mahavillagunga, a river which nearly surrounds Kandy, at a distance of three miles from the city. (The ensuing details are given in small type to economise space.)

Hostilities commenced on the 19th of February, by the attack and capture, by Colonel Logan of the 51st regiment, of two strong posts called Gallegederah and Giriagamme. On the same day, Colonel Barbut, of his Majesty's 73rd regiment, advanced with a detachment towards Mahavillagunga river, the banks of which, together with the village of Wallapoala and the neighbouring hills, were occupied by the enemy in force. A few shots from two mortars and one 6-pounder soon, however, compelled the Kandians to retire, and the detachment crossed the river on the morning of the 20th of February, and took possession of the village of Wallapoala, situated within one English mile and a-half of the town of Kandy.

General Macdowall marched into Kandy on the evening of the 20th, and found it totally deserted, the king having left it with the adigaar on the 19th of February, 1803, and removed all the treasure from the palace, and the inhabitants from their houses. Prior to his flight, the king caused the magazines to be blown up, set fire to his palace, and to the principal temples, and then retired into the distant province of Ouva to the south-west. The fugitive monarch refused to accept the terms previously offered him, and did not even prepare to negotiate with General Macdowall; but, after the delay of a fortnight, answered Mr. North's letter to him, without taking the least notice of the conditions which had been formally proposed for his acceptance. "The abdicated throne" was thereupon offered to, and accepted by, Prince Budha Sawmy, who would have succeeded to it on the demise of the last king, if the intrigues of the adigaar had not intruded the present fugitive prince, in the intention of deposing him to make way for himself. Colonel Barbut was in consequence detached, soon after the capture of Kandy, to Trincomalee, for the purpose of escorting him to that capital. The inauguration was witnessed by but few of the inhabitants of Kandy; and his whole suite, exclusive of the British force, did not exceed fifty followers. The detachments sent out in pursuit of the former king met with some losses, and failed in effecting his capture.

About this period, a dreadful endemial fever broke out in the interior of the island, and deprived the English of several valuable public officers, and a very large portion of the European troops employed in the Kandian territories. This most fatal malady appeared under the form of a violent bilious remittent, and was attended with nearly the same symptoms in all cases. The extent of the disease will be fully comprehended from the following facts. The 51st regiment, which marched from Colombo 560 strong, lost before its return one-fifth of the men, besides having 170 men sick in the hospital. A detachment of the 65th regiment, consisting of one captain, three subalterns, and eighty men, employed in keeping open the communication with Kandy, and covering a depôt of stores and provisions, lost twenty-seven men, besides having fifty in the hospital: of the four officers, one died, and two returned dangerously ill. The native troops, however, did not suffer in an equal proportion; and it is a curious circumstance, that a journey of eight or ten miles from the sea-coast should lead to a country where the influence of this endemial disease is so powerful as to affect almost every European constitution exposed to its influence.

The circumstances that immediately followed the capture of the town of Kandy are imperfectly known:† but a treaty was entered into between the new king and Mr. North, for the restoration of peace and the general security of the inhabitants of the island. By this arrangement, it was stipulated that restoration should be made to Mootoo Sawmy of the town of Kandy, and all the possessions dependent on the crown of Kandy, then occupied by the British troops, excepting the province of the seven Korles, the two hill forts of *Giriagamme* and *Gallegederah*, and a line of land across the Kandian territories, sufficient to form a direct road from Colombo to Trincomalee, which province, forts, &c. were ceded to his Britannic Majesty in perpetual sovereignty. Provision was made for the identification of the interests of the British government with those of Budha Sawmy, the former party engaging to recognise their *protégé* as the legitimate sovereign of Kandy, so soon as he should have assumed that title with the usual solemnities, and they consented to maintain a British subsidiary force for the preservation of his authority, whenever it might be required. The remaining articles provided for the future intercourse between the subjects of the two states, for the regulation of the internal duties and commerce, the safety and maintenance of the king lately on the throne, and for the residence at Kandy, whenever it might be required, of a public minister on the part of the British government. After the conclusion of this treaty, Mr. North determined to hold a conference with the two adigaars of Kandy, for the purpose of procuring their consent to the establishment of a secure and permanent peace. In consequence of this

* Foreseeing the danger which might arise from Ceylon being placed beyond the control of the supreme authority in India, which would, however, have to furnish men and money for its defence, Lord Wellesley strongly deprecated the plan of making a comparatively small island independent of the adjacent general government: patronage, however, was sought by the minister of the day, and cogent arguments were unheeded. (*Despatch* to Lord Hobart, 23rd November, 1803; *Despatches*, vol. iii., p. 476.)

† Sir J. E. Tennent's new work on Ceylon elucidates several matters hitherto unexplained.

resolution, Mr. North left Colombo on the 28th of April, and reached Dombaderria on the 1st of May. On the 3rd of May a conference took place at Mr. North's bungalow,* in which it was proposed that the adigaars and the principal nobles of Kandy should become parties to the treaty lately concluded between the British government and the prince Budha Sawmy, on certain additional conditions, which, after some discussion, were finally agreed to by the adigaars, and sealed, signed, and delivered by the respective parties on the following day.

This convention stipulated that the new king, Budha Sawmy,† should deliver over the administration of the province belonging to the crown of Kandy to the first adigaar, with the title of "grand prince" during the term of his natural life: that he should reside at Jaffnapatam, or in such other part of the British territories as might be agreed upon between Budha Sawmy and the British government: that the first adigaar should engage to pay an annual sum of 90,000 rix dollars for the maintenance of Budha Sawmy; and that for the better payment of this sum, as well as for the allowance proposed to be granted to the king lately on the throne of Kandy, the first adigaar should deliver to the British government, in the course of every year, a certain gratuity of areka-nut (20,000 ammonams), taken at a specified valuation (six British dollars per ammonam), the price of which should be paid to the agents of the first adigaar by the British government, in coined copper, or in such other articles as might be agreed upon between the parties; in which case, the British government agreed to charge‡ itself with the payment of the allowances (about 40,000 rix dollars) stipulated for Mootoo Sawmy, and for the king lately on the throne: that the first adigaar should cede in perpetuity to the British government the village and district of Gungavelle (now called Fort Macdowall), in exchange for the hill fort of Giriagamme, which the British government agreed to cede again to the first adigaar: that all the princes and princesses of the royal family then in confinement, should be set at liberty, and be allowed to retire with their property wherever they might think proper; and that a general amnesty should be proclaimed, on both sides, to all who might have supported or opposed the claims of Budha Sawmy in the late or any former contest: finally, that the preceding articles should be carried into effect as soon as the prince lately on the throne of Kandy should be delivered into the hands of the British government; and that until that event should take place, a truce and cessation of hostilities should continue between all the contracting parties.

This truce continued until the month of June, when it was broken by the treachery of the Kandians, who, under the first adigaar, did not scruple to avail themselves of the earliest opportunity to make war upon the British garrison at Kandy. Colonel Barbut was seized with fever while attending the governor at Dombaderria, and died at Colombo on the 21st of April. General Macdowall returned to Kandy on the 23rd of May—was similarly attacked, and proceeded to Colombo on the 11th of June, leaving Major Davie, of the Ceylon regiment, in command; but the major was devoid of energy, and utterly unfit for such a duty. On 1st April, the Kandian garrison§ consisted of 300 Europeans and 700 Malays, and Indian artillery, besides a considerable number of sick in hospital. When the siege commenced (23rd June), the British force consisted of seventeen European officers, twenty European soldiers, 250 Malays, 140 gun Lascars, and 150 sick soldiers in hospital, of whom 120 were English, belonging to H.M. 19th regiment.

Mr. North had already made preparations, towards the middle of June, for evacuating Kandy, and a detachment of Malays was on its march to that place from Trincomalee, with a number of doolies to bring away the sick and wounded. The governor of Ceylon had also agreed to a proposal from the adigaars to relinquish Kandy, provided the garrison might be permitted to retire unmolested. Accordingly, Major Davie, the commander above-mentioned, vacated Kandy, under a capitulation with the first adigaar, on the 24th of June. He was permitted to retire with his arms and ammunition, and was promised every mark of attention.‖

The remainder of this distressing statement may be given as recorded in the sworn depositions of Mahommed Gani, a free Malay, and late servant to Ensign Robert Barry, of the Malay corps in Ceylon, who deposed—

"That he went to Kandy from Trincomalee, in February last, as a servant to Ensign Barry. About four o'clock on the morning of Friday, the 24th of June, the Kandians began to fire upon the palace where the British troops were quartered. About five o'clock, the Malays in the service of the King of Kandy, headed by Sanguylo, their chief, attempted to force the palace. Sanguylo entered, and was seized by Lieutenant Blackney, of the 19th regiment, and struggling with him, they both fell on the ground, when Sanguylo, with his crise,¶ stabbed Lieutenant Blackney near the eye, of which he died instantly; and while Sanguylo was still on the ground, Lieutenant-adjutant Plenderleath thrust a bayonet through his body, and a soldier gave him also a stab, of which Sanguylo died on the spot.—That the second in command of the Kandian Malays, who followed Sanguylo in the attack, was shot without the door of the palace. These deaths

* It was subsequently ascertained that the adigaar had planned to seize the governor, and was only prevented by the timely arrival of Colonel Barbut with a strong detachment of Malay soldiers.

† On account of the inertness of his own character, and the timidity of his friends, Mr. North says—"If he consents by his own signature to exchange a turbulent power, which he never could fully obtain, nor securely exercise, for the peaceable enjoyment of high power and an affluent income, we have no reason to oppose his wishes."

‡ The advantage of this arrangement was as follows:—The areka was to be sold to the British government at six rix dollars per ammonam. That article, however, pays a duty, on exportation, of ten rix dollars, and is sold at Colombo, before the payment of that duty, at from fourteen to eighteen rix dollars per ammonam. The clear gain to government, therefore, is about twenty rix dollars per ammonam; and, on the whole quantity (viz., 20,000 ammonams), is 360,000 rix dollars, after paying the specified allowance of 40,000 rix dollars.

§ The governor of Ceylon, on learning the weak state of the Kandian garrison, ordered a native regiment from Colombo; but the soldiers were unable to march for want of coolies (attendants to carry baggage), who had suffered much in the campaign, and were deterred by the Kandians from re-entering the British service. The strongly fortified posts of Giriagamme and Gallegederah were surprised and taken by the Kandians, whereby communication with Colombo was intercepted.

‖ Memorandum drawn up from commissariat documents.

¶ A *crise* is a long knife or dagger worn by the Malays.

frightened the Kandian Malays, and they retreated. In this attack the adjutant of the 19th regiment was wounded in the thigh, and two Malay soldiers were killed, and one man of the artillery was also killed.—That, after this, no attack was made by the Kandians near the palace; but they continued in great numbers, all around upon the hills, firing on the garrison with their grasshopper guns, of which the shot reached the palace, until about two or three o'clock in the afternoon, when the British officers, having consulted together, hoisted a white flag, on which the firing ceased on both sides. Many of the Kandians then approached, and Major Davie and the Malay captain, Nouradin, went out and conversed with them; on which the Kandians who conversed with Major Davie, went away to speak to the adigaar, who was at a considerable distance: and when they returned, Major Davie and Nouradin went also to the adigaar; and when they returned, preparations were made by the whole garrison to leave Kandy, except such of the sick as could not walk, who were to remain behind; the adigaar having promised (as the deponent was told) to take care of the sick, and send them down to Colombo when they could be removed. Accordingly, between five and six o'clock, the whole garrison that could move marched out with their arms, and, without molestation, came to the banks of the river on the road towards Trincomalee, about two miles from Kandy. Here they stopped all night, as the river was not fordable, and no boats to cross it. On the morning of Saturday they began to cut bamboos to make rafts; but, from the rapidness of the current in the river, they could not get a rope taken across it. About seven o'clock it was observed that Kandians in numbers began to assemble near them, and many also on the other side of the river. About mid-day some Kandians of the rank of Arratzies and Canganis came from Kandy, and spoke with Major Davie, telling him that the king had been angry with the adigaar for allowing the garrison to go away, and had thrown him into prison on that account; but, if they would give up Mootoo Sawmy, the king would send them boats and every sort of assistance to cross the river and proceed to Trincomalee. Major Davie said he would not give Mootoo Sawmy unless they brought a written order from the king to the above effect. Upon this the Kandians went away, and returned not long after, and again discoursed with Major Davie, who talked with Mootoo Sawmy, and delivered him up to the Kandians who were sent to take charge of him, who conducted him away towards Kandy. About four or five o'clock in the afternoon, some Kandians came, and seemed to make some preparations for enabling the troops to pass the river; but night came on before anything sufficient was completed, and they went away, promising to return in the morning with boats. On the morning of Sunday, the Kandians, armed, again assembled in numbers near them; but no boats or other preparations were made by them to pass the river. Captain Humphreys had, however, succeeded in fixing a rope on the other side. About eleven A.M. some Kandians came out from Kandy, and told Major Davie that it was the king's order that all the garrison should again return into Kandy, without arms; to which, if they did not consent willingly, they would all be killed. On this, Major Davie *ordered the troops to ground their arms*, which was done; and the officers also gave up their swords and pistols, and all proceeded towards Kandy: when near that town, a crowd of Kandians were drawn up, leaving room for the English, Malays, &c., to pass. When in the middle of this line of Kandians, a Malay of the King of Kandy came up and ordered them to halt, saying it was the king's order that the English Malays should march on before; on which all the Malays (except Captain Nouradin and his brother, a lieutenant, and the deponent, who attended his master, and had refused to go on before) were separated from the English officers and troops. When the Malays were separated and out of sight, a mohottiaer came from the adigaar (who was at this time in sight, accompanied by several other chiefs), and called Major Davie and Captain Nouradin to come and speak with him, which they did; and, after conversing with them, Captain Nouradin's brother was sent for, and all three were sent on into Kandy. After this a man came, with a sword in his hand, from the adigaar, and said that all the rest of the officers were to go and speak with him; which they all did. When they came before the adigaar, he inquired what was the rank of each. When this was explained, Captain Humphreys and Captain Rumley were ordered away into Kandy under a guard of Kandians. There now remained Mr. Holloway, Lieutenant Phantaum, Lieutenant Ormsby, Ensign Barry, Lieutenant Mercer, Ensign Smith, with two other officers, whose names the deponent does not know, who were all seized in consequence of the adigaar's order, and separated. The deponent wished to follow his master, but was prevented by the Kandians, who now put all the officers seized as above-mentioned to death.

"*Question.* How do you know that they were put to death?—*Answer.* I saw the mangled bodies of some of them lying on the ground, and I understood from common report that the others were also murdered.

"*Question.* When the garrison marched out of Kandy, as you have mentioned, how many men were there do you think?—*Answer.* I think about thirty Europeans, including the artillerymen; 300 Malays, sick and well; twelve royal Lascars, and thirty pioneers.

"*Question.* What became of the European soldiers when the officers were murdered, as you have mentioned?—*Answer.* At the time the officers were murdered, the Kandians fell upon them, and killed them also; and some of the Bengal Lascars and pioneers were also killed along with them, and some got off into the wood.

"*Question.* What became of the sick that were left in the hospital?—*Answer.* I heard that their brains were beat out with stones."

The foregoing document too truly set forth the facts of the case: the sick were stoned to death; the troops, at the orders of Major Davie, finding they could not cross the river, and faint after two days' fasting, grounded their arms, and were taken aside in small numbers to a sloping bank, and there all butchered, except the Malay corps, as the king wished to induce them to enter his service. One English soldier (Corporal Barnsley) whose head had been nearly severed from his body, was thrown down the hill, and lay some time among the dead,

but escaped by swimming across the river, and making his way to Fort Macdowall. Mootoo Sawmy and five relatives were surrendered by the British to the infuriated king, and instantly massacred; one of the temporary monarch's followers (a deserter) was impaled alive, and eight of the unfortunate prince's attendants were deprived of their noses and ears. Major Davie, captains Rumby and Humphreys, and a sub-assistant-surgeon were not slain; the sub-assistant escaped in September, the two captains died of sickness, and Davie lived a prisoner until his death, about the year 1810. The Malay prisoners were kept for some time; several entered the service of the king, but escaped ultimately, having failed in the endeavour to carry him off to the British. Their two native officers refused to join the Malay corps in the Kandian employ, in which their brother held a command,—they were beheaded, and their bodies thrown to the jackals. The small British detachment at Fort Macdowall, on hearing of the proceedings at Kandy, evacuated the place, and marched to Trincomalee. Ensign Grant bravely held the post of Dombaderria, in the seven Korles, until relieved by a force from Colombo. Thus ended this disastrous expedition—undertaken, like the Afghan war, without just cause or adequate means, and conducted without ability.

The Kandians, elated with success, attacked different outposts on the British frontier, but were in every instance repulsed; the king advanced with a large force to Hangwelle, within eighteen miles of Colombo, which was garrisoned by only one hundred men, who behaved so well that the Kandians were routed, leaving 270 bodies on the field of battle, while the British had only two wounded. Many Malays and gun Lascars escaped from the enemy, and retired to their respective corps. Captain Johnson, with 305 men, penetrated to Kandy, passed through the capital, and then fought his way for 130 miles to Trincomalee. The maritime provinces were cleared of the invaders, and all remained quiescent until 1812, when Pilime Talawa, the treacherous adigaar who had been the main instrument in the tragedy of 1803, having failed in a plot to assassinate the tyrant, was himself, together with his nephew and six inferior chiefs, put to death by the king. The second adigaar, Eheylapola, succeeded Pilime Talawa; but two years afterwards fled for his life to Colombo, leaving his wife, children, relations, and adherents at the mercy of his sovereign, by whom they were massacred in the most cruel manner.* The sanguinary character of the king now fully developed itself: the second high priest was executed, various chiefs† beheaded, and ten British subjects (traders) so tortured, that only three survived to reach the English territories. Sir Robert Brownrigg saw the time had arrived for dethroning the despot and assuming the dominion of the whole island; and to that effect measures were judiciously planned and well carried out. War was declared 10th of Jan., 1815; the principal chiefs joined the British forces, who entered Kandy on the 14th of February: on the 18th, the king was captured in the mountains of Donobora.‡ On the 2nd of March the native chiefs proclaimed his dethronement, and their allegiance to the British monarch.

After the deposition of the king, the Kandian nobles were retained in their respective offices, and the people left, to a great extent, under their rule; the chiefs and the Buddhist priests soon began to chafe against a foreign government, which overlooked and controlled them. A rebellion was organised, extensively and secretly; many head-men and leaders (including Eheylapola, whose wife and children had been destroyed as below described), while

* The wife of Eheylapola, and her four young children (the eldest eleven years of age, and the youngest at the breast), were brought to Kandy; the children were beheaded in front of the queen's apartments in the palace; each of the heads put in a rice mortar, and the mother, under fear of disgraceful tortures, was compelled to pound the mangled faces of her children,—the milk in the mouth of the babe actually mingling with its life-blood. After this fiendish act, the mother, who conducted herself with singular fortitude, was thrown into a lake with a heavy stone round her neck: three female companions shared her untimely fate; another narrowly escaped being impaled.—(*See* Forbes' *Ceylon.*)

† Petty chiefs are designated "Head-men."

‡ The ex-king, Sri Wikrema Rajah Singa, was removed to Vellore fortress, in the Madras presidency,—received a large annual pension, and died there of dropsy, 30th January, 1832, æt 52. Major Forbes says—"His features were handsome, his figure manly, and his general appearance dignified; but the qualities of his mind appear to have been a compound of the meanest with the most violent passions, without one redeeming virtue to weigh against selfishness, cruelty, and cowardice: he was equally destitute of any amiable quality which could excite compassion for his fate, even among those who had served about his person, or had been advanced by his power."—(*Eleven Years in Ceylon*, i., 477.)

still professing allegiance to British authority, favoured and aided the rebels, and sanctioned the setting up of a pretender who was really a low-caste man, and had been a priest, but who was now alleged to be a scion of the deposed royal family. Mr. Wilson, of the Ceylon civil service, was killed at Welasse: the insurrection spread rapidly through the Kandian provinces; a protracted warfare ensued at the numerous detached military posts scattered throughout the country; the troops were harassed for nine months by incessant marches through a mountainous and wooded district, in pursuit of the rudely armed population, who followed the leading of their chiefs; and upwards of a thousand of our soldiers died of disease: few fell in actual combat with an enemy who was often heard, but seldom seen. Our government, annoyed at the conduct of the chiefs, contemplated abandoning the interior; but disunion among the conspirators led to the exposure of the fraud of setting up a pretender: the insurgents gradually dispersed; their leaders were captured; two were beheaded, and a few, including Eheylapola, were banished to the Mauritius.

The paramount authority of the chiefs was now set aside. British officers, civil and military, were placed in the different districts to collect the revenue and administer justice; and the inferior head-men, instead of being nominated by their chief, received the appointment direct from government. Sir Edward Barnes, who succeeded Sir Robert Brownrigg as governor, spared no exertions or expense to form good roads throughout the interior: mountains were turned into valleys, tunnels cut, viaducts constructed, substantial bridges erected, every province rendered readily accessible by carriage-ways, available at all seasons;—and the Singhalese experienced the blessings of peace.

In 1831, Sir Wilmot Horton, who had distinguished himself as an advocate for colonisation, and who had been under-secretary of state in the colonial department, was appointed governor. During the ensuing year, a commission of inquiry sent from England investigated the state of the island, and suggested various amendments which were carried out, the most important of which was the abolition of compulsory service—a custom which the Kandian government had enacted. Major Forbes says, "the native inhabitants passed in a day from a state more bitter than slavery to the most perfect freedom."* A charter providing for the due administration of justice by supreme, district, and circuit courts, followed this righteous act; trial by jury was adopted; every situation was thrown open to the competition of the Singhalese, and three gentlemen, natives of Ceylon, were appointed members of her Majesty's Legislative Council, on a footing of perfect equality with the other unofficial European members.

In 1835, several chiefs and priests endeavoured to organise another insurrection: it was proposed to poison and massacre all the isolated Europeans residing in the interior. The conspiracy was early discovered; several of the ringleaders were tried before the supreme court for treason, by a jury composed of six Europeans, and seven Singhalese of high rank; the evidence against them was strong, but the prisoners were saved by their countrymen forming the majority. The chiefs who were unworthy of confidence were removed from office, the supporters of government rewarded, tranquillity was restored, and agriculture and commerce advanced with rapid strides, by means of the influx of British capital for investment in coffee planting, which became a mercantile mania, and led to much speculation. One more event, which occupied the attention of parliament for two years, requires notice in this unavoidably brief historic sketch.

Viscount Torrington was appointed governor in 1847. He states that when he arrived in Ceylon, he "found the finances in a most unsatisfactory state; the revenue declining and commerce sinking; and that unless some measure of relief were instantly adopted, the island would become an unproductive colony." The net deficit for 1846 was £74,857. The financial and commercial measures proposed by the governor for the relief of the settlement, and adopted by the Executive and Legislative Councils, are thus set forth by his lordship when addressing the Hours of Peers on the subject, 1st April, 1851:—

"The export duties were abolished except the duty upon cinnamon, which was reduced by two-thirds, viz., from one shilling to fourpence the pound. The import duties were equalised, differential duties being abolished. Generally the taxes reduced were to be estimated at £42,163. As to the export duties, which were abolished, he (Lord Torrington) estimated the relief given to certain classes as follows:—to the cinnamon growers, about

* Vol. i., p. 57.

£15,000 per annum, estimated upon the crop of 1847; to the coffee growers, about £12,000 per annum; to the tobacco growers of the northern districts, the cocoa-nut planters, and native cultivators, about £3,000 per annum. The judicious removal of duties pressing upon production, and the general revival of trade and credit since the mercantile depression of 1847 and 1848, were concurrent with the improvement in the trade of the island, which was shown by the following returns:—In 1846 the coffee exported amounted in value to £328,791; in 1847, to £387,150; in 1848, to £456,624; in 1849, to £534,456. The increase in the first quarter of 1850, beyond that of 1849, was £122,797. The cinnamon exports of 1846 amounted to £40,165; and in 1849 to £73,387, while the increase in the first quarter of 1850, beyond that of 1849, was £4,081. The cocoa-nut oil exports, in 1846, amounted in quantity to 192,723 gallons, and in 1849 to 401,672 gallons; the increase in the first quarter of 1850, beyond that of 1849, being 8,693 gallons. The sale of salt also increased, in 1849, £4,580 beyond 1848; and the tolls increased in 1849, £2,348 beyond 1848. An amendment of the Stamp Act, which was found to be desirable in consequence of the increasing wants of the European community, was passed, and was found to be exceedingly beneficial to the island. A road ordinance had also been passed, with the unanimous concurrence of the Legislative Council, by which every male from the age of sixteen to sixty was required to contribute six days' labour to the improvement of the roads, or to pay a commutation tax not exceeding three shillings for the six days. This measure was carried through in 1849, and was found exceedingly beneficial to the island; for, while attempts were made to excite the people against it, they were so satisfied of the benefits resulting from it, that in many instances they gave double and even treble the time to it that they were obliged to do."*

A gun license, passed by the council, was deemed a salutary precautionary measure, as the Kandians had then probably 60,000 stand of serviceable fire-arms.† A police-tax was also imposed on dogs, these animals having become by their numbers a great nuisance, and given rise to much barbarous slaughter, which was repugnant to the feelings of the Buddhists, who are averse to the taking of life.

The public expenditure was reduced, in 1847, £53,441; in 1848, £15,223; in 1849, £11,115 = total in three years, £78,780 less than in 1846; and in the first nine months of 1850, a further saving of £16,408 was effected, exclusive of that made in the road department. A revised tariff for the relief of trade was enacted, as the *Chamber of Commerce* declared, on 5th August, 1848, that "both the agricultural and commercial interests were labouring under the most severe depression."

* *Times*, 2nd April, 1851.

† When disarmed in 1818, they had no more than 10,000, of which two-thirds were matchlocks, and almost useless.

While reformatory measures were in progress, a rebellion broke out in some of the Kandian provinces in 1848. It was alleged that this insurrection was caused by the imposition of new and oppressive taxes. Such was not the case; a conspiracy had long been organising by the head-men and the Buddhist priests, with a view to the overthrow of the British government. As before, a pretender was set up as king of the Kandians, and solemnly crowned by a large body of deluded people at an ancient temple where the former rulers of the country received royal investiture. The confederates planned the simultaneous attack of the British posts scattered all over the territory, and garrisoned by about 800 men. At Kornegalle, the town was to be occupied while the troops were at church. Lord Torrington naturally felt solicitous, not only for the preservation of the military detachments, but for that of the numerous European coffee planters, with capital invested to the amount of two to three million sterling, whose crop for 1848 was valued at £748,311; the duty paid thereon in England amounting to £661,551. The governor, on receiving this alarming intelligence from Kandy, immediately consulted Quartermaster-general Frazer, who had been instrumental in suppressing the rebellion in 1818. That officer advised the proclamation of martial law, which was promptly done, and subsequently approved by the council. The insurrection was nipped in the bud; but unhappily some excesses were alleged to have been committed, and a Buddhist priest was hanged; but for these, it is asserted, the governor could not be held accountable; "martial law" simply meaning the law laid down by the military officer commanding, his will or authority being supreme. Viscount Torrington vindicated his proceedings, and set forth the motives which actuated his conduct, in a speech to the House of Peers on 1st April, 1851. It affords strong evidence of the exaggerated and, in many respects, utterly unjustifiable censure cast upon his lordship: he demonstrated that the cordial approval of the independent mercantile community, and European coffee planters and gentry, was given to his proceedings, and that his resignation was considered by them a grievous misfortune to the island. Some personal knowledge of the Kandian provinces,—of the credulous character of the people,—of the hopes cherished by the head-men for the recovery

of their despotic power, and of the ardent desire of the Buddhist priests (who dread the destruction of their religious influence) to extinguish British sway, leads me to the conclusion that measures of severity were indispensable, not merely for the maintenance of our supremacy, but for the protection of the lives of the Europeans, who would have been as ruthlessly and treacherously massacred by the rebels, as were the unarmed soldiers under Major Davie, on the confines of Kandy, in 1803. Furthermore, the contiguity of Ceylon to British India, rendered it necessary to adopt prompt and stringent measures for the suppression of any insurrectionary proceedings in the island. Lord Torrington left England with a good business character, acquired as chairman of a large railway company; and he maintained his reputation by the manner in which the finances of the colony were improved, and its commerce renovated, during his administration. Into the private correspondence, petty intrigues, calumnious statements, counter-statements, and misrepresentations which marked two years of acrimonious parliamentary warfare respecting the Ceylon rebellion, it is not my province to enter; they were of little interest except to those engaged therein.* Viscount Torrington candidly admitted, and feelingly deplored, before his compeers, the single act of indiscretion committed in reference to a private letter; and the position which his lordship has since maintained at the court of his sovereign, demonstrates that his character is unsullied. No event worthy of comment has since occurred in this island.†

Physical Features.—The position of Ceylon, near the southern extremity of India, and at the western entrance of the Bay of Bengal, is very advantageous, and especially so to a maritime power possessing, as England does, sway over the adjacent shores. On the north-west the island is separated from the Coromandel coast by the Gulf of Manaar, which is about 120 miles from east to west and 100 from north to south. This gulf is divided from Palk's Strait, to the northward, by a ridge of rocky islets and sandbanks, about seventy miles in length, termed *Adam's Bridge*. The strait is about eighty miles wide, with a similar length. The distance from nearest point of Ceylon to that of the mainland is forty miles.‡ The shape is somewhat pyramidal, with the apex to the north: length, from Point Pedro to Dondera Head in the south, 275 miles; extreme breadth, from east to west, 140; average breadth, 100; circuit 750 miles; and area (including the islets on the north and north-west coast), nearly 25,000 square miles: lat. 6° to nearly 10° N., lon. 80° to 82° E.§ The coast line is flat, but rises from thence by successive terraces and low hills, towards an elevated plateau and mountainous region, sixty-two miles long by fifty-six broad, which occupies an area of about 3,600 square miles in the central southern portion of the island. The northern districts are very flat; and the coast on either shore, towards the extreme, is broken into verdant rocky islands and long narrow peninsulas; one termed Jaffnapatam. Another of these elongated and almost insulated strips of land, about forty miles long, named Navekarre, is situated about the middle of the west coast. In consequence of the lowness of the sea-shore, numerous salt-water lakes, of various extent and depth, are found in different parts, especially to the eastward about Batticaloa, where communication is maintained between the maritime districts by canals and lagoons. Small vessels from

* It is said that the personal disputes among the officials were caused by the appointment of Sir James Emerson Tennent to the Ceylon secretaryship, direct from England, without his having passed through the successive grades of the island civil service. The exertions of Sir James for the reform of the financial system of the colony, which was much needed, also gave rise to secret and malevolent opposition from those who were affected by the retrenchments and salutary measures recommended by Sir James.

† The expenditure incurred by the parliamentary inquiry was very large; the printing and paper of the reports of the committee, cost £3,280; witnesses to 30th July, 1851, received £5,583, including Sir A. Oliphant, chief justice, £1,077; Sir J. E. Tennent, colonial secretary, £1,542; Captain Watson, £606; Lieutenant-colonel Braybrook, £554; J. Selby, £726; H. C. Selby, £625; Lieutenant Henderson, £390. Mr. Rhode, of the Madras civil service, appointed "to investigate the alleged forgery of documents purporting to be signed by Captain Watson, of the Ceylon rifles," received through the Madras authorities from England, £600. There were also various other disbursements.

‡ Ceylon is a central station for steam navigation in the eastern seas; the distances, in miles, to several places are as follows:—Trincomalee to Madras, 335; to Calcutta, 1,080: Colombo to Bombay, 1,175; Pont-de-Galle to Aden, 2,650; thence England, *viâ* the Mediterranean and Marseilles, about 5,550; Galle to Algoa Bay (Cape of Good Hope), about 5,480; Galle to Singapore, 1,850; to Java Head, 2,060; to Swan River (Western Australia), 3,880 miles.

§ Round numbers are given to facilitate the remembrance of figures.

India may land their cargoes at Calpentyn, in the Gulf of Manaar, and have them conveyed by inland navigation to Colombo. From Chilaw to Putlam, thirty miles north of Caltura, there is an interior water communication for a distance of thirty miles. By these means considerable facilities are afforded for irrigation, rice cultivation, and the preparation of salt.*

Mountains.—Two main chains, distant from each other forty miles, have an east to west direction; the northern for about forty, the southern for about fifty miles: their western extremities are connected by irregular ranges, which stretch from north to south (Kornegalle to Ratnapoora) for about sixty miles; the eastern extremities of the parallel ridges approach towards Badulla and Binteune, leaving a distance of thirty-five miles without any marked series; the dip of the table-land being from east to west, and thence to the northward along the course of the Mahavillagunga river. Nearly in the centre of the plateau is an elevated crest, of about thirty-five miles from north-west to south-east, on which the beautiful sanitary station of Newera Ellia is situated. The greatest elevations are on the southern ridge: here the Horton Plains, which are about ten miles in extent, rise 7,000 feet above the sea; and three mountains (Saduhugalla, Lunugalla, and Totapella) ascend from thence to a height of seven to eight hundred feet. Adam's Peak, at the south-west part of the plateau, is 7,420; Newera Ellia plain, 6,210; and Pedrotallagalla Mount, which bounds it to the northward, is 8,280—feet above the sea. The heights, in English feet, of some of the principal mountains, &c., in the interior of Ceylon, are (L. by levelling; Δ by geodesical operations):—Upper Lake in Kandé, 1,678, L.: Matteá Pattanna, the hill above it, 3,192, Δ; Oorraggalle, the rocky ridge of Hantanné to the southward of the town, 4,310, Δ; Hoonassgiria Peak, 4,990, Δ; "The Knuckles," a part of the same chain, 5,870, Δ; highest point in the road leading through the Kaddooganawa Pass, 1,731, L.; Adam's Peak, 7,420, Δ; Nammoonnakoolle, near Badulla, 6,740, Δ; Amboolluawa, near Gampalla, 3,540, Δ; Pedrotallagalla, close to the Rest House of Newera Ellia, 8,280, Δ; Diatalawé, near Hangooranketté, 5,030, Δ; Alloogalle, near Amoonapooré, 3,440, Δ.

* It is proposed to construct railroads in Ceylon, which would be useful for the transmission of produce.

Rivers.—The rivers, as may be expected, are numerous; in fact, the whole island abounds with perennial mountain streams, rivulets, and rivers, the latter more numerous on the south and west than on the north-east. The principal are—the Mahavillagunga, which is navigable for boats and rafts during a great part of the year, from Trincomalee (where it falls into the sea) nearly as far as Kandy (in the centre of the island), where its course is impeded by a ledge of rocks; the Calanygunga, or Mutwal, is not inferior in importance to the former, and is the medium for much internal intercourse for fifty miles from Colombo to Ruanwelle; the Welawe and Gindora.

Towns and Forts.—*Colombo*, on the S.W. coast, 6° 57′ N., 80° E., is the seat of government. The fortress, an irregular octagon, 1¼ miles in circumference, is defended by eight bastions. One-half of the citadel is surrounded by the sea, the other half or land side, by a permanent inundation, which leaves only two narrow causeways of approach. There is a covert-way to the land fronts; but the glacis has never been finished. The revetments are of masonry generally composed of cabrook and lime-mortar, and are (with some exceptions) in tolerable repair. The outworks, from having a full moat in front, are imposing; the ditches are broad, well supplied with water from the inundation, and sufficiently deep. There are neither casemated barracks nor casemated storehouses within the fortress. The wells afford slightly brackish water, but the water fails on a continuance of dry weather. There are several powder magazines in the interior, the whole of which are in a serviceable state. This stronghold, which mounts about 300 pieces of cannon, overlooks the harbour, into which none but vessels of small burthen can enter; it cannot be said to command the roadstead, because vessels may anchor with safety from one to fifteen miles from the shore; it encloses within its lines of defence the residence of the governor, the head-quarters of the army, and the public offices. Although the plan of the body of the place does not conform to the science of more modern war, being of the days of Louis XIII., and according to the system of Chevalier de Ville; still, with good outworks, and casemated cover for troops' stores, constructed in the body of the fort, and the ramparts, &c., placed in an efficient state of repair, Co-

lombo, from its situation, and the great difficulty of approaching it by land, ought, under an intelligent and intrepid governor, to make a protracted defence; with naval support, the fortress could, when menaced by a land attack, receive succour from seaward. *Trincomalee*, on the east of the island, in 8° 32′ N., 81° 17′ E., is one of the finest harbours in the world. The physical aspect is that of a narrow neck of land, or isthmus, connecting the peninsula which juts out into the sea. To the west, this isthmus gradually expands into a plain of considerable extent, bounded on the south-east by a ridge of lofty mountains, on the north-west by low wooded hills, and on the west by the inner harbour, about one mile distant. *Fort Frederick* is situated on the east side of the peninsula, projecting into the Indian ocean. The works of defence consist of three irregular fronts, with a cavalier and a citadel; one front with an unfinished ravelin, occupies the narrow isthmus; the ditches of this front are dry: the two other fronts follow the direction of the ground. The cavalier stands on elevated ground, in the rear of one of the bastions of the land front, and is connected with the bastion by a curtain. The citadel stands behind the cavalier, and on still more elevated ground. The face has twenty feet of escarp, but the revetments are of good masonry. The ground gradually rises from the glacis to the flagstaff, a height of about 300 feet, and then slopes toward the sea, till abruptly terminated by a perpendicular cliff, from which a plummet may be dropped into the water a distance of 240 feet. The fort is well supplied with water. There are several powder magazines within, in a serviceable state.

*Fort Osnaburg*, nearly three miles from Fort Frederick, is built on the termination of a ridge of hills that partly form the boundary of the inner harbour, which the works protect; the government dockyard, immediately below their base, is washed on three sides by the sea. The bay is diversified with verdant islands, would hold all the fleets of Europe, and is accessible at any time. Within the anchorage there is a considerable depth of water: in some places it has not been fathomed. Vessels may lie close alongside the rocks in safety.

*Galle Fortress*, situated on the south shore of the island, and on a peninsula projecting into the sea, commands the only harbour on that side of Ceylon, into which large ships can enter; but is itself overlooked by a range of hills 700 yards distant. The lines of defence on the land side, or across the isthmus, consist of one bastion with a cavalier, two half bastions with faussebrayes, and two curtains, with a half-finished ditch in front of the whole, but without casemated barracks or storehouses.* The salient angles of the half bastions are appuyed to the harbour and sea. The construction of this fort does not follow any regular system. The remaining defences consist of substantial lines built on the edge of the outline of the peninsula, the base of which is constantly washed by a heavy surf. The face is irregular, in some parts bold, but from the small height of the faussebraye, requires a wet ditch in order to guard against escalade. The revetments are composed of rubble stone and coral laid in lime-mortar, and are in tolerable repair. The place is tolerably well supplied with water.

*Jaffna.*—The fort of Jaffna is situated on the north-west side of the island, on an inlet of the Gulf of Manaar. The work is an irregular pentagon, with five bastions connected by curtains; the lines of defence are good, and the flanks perpendicular to the curtains: it has four land and one sea front. The former have ravelins: a covert-way throughout, with the exception of the ravelins, to which there is none, the communication passing by gallery under the flanks of the ravelins; also a glacis. The body of the place has a wet ditch, but the ravelins a dry one. The profile has twenty-two feet of escarp: above the level of the wet ditch the revetments are of masonry, and in a good state of repair. The fort contains twenty-five wells, two of which afford good, and the remainder brackish water. This position is held by a small garrison, stationed in a remote part of the island, and surrounded by a dense native population. Independent of the above four principal posts, there are detached ones on the coast, generally occupied by detachments, with a field-work for their protection. In the interior of the island, the principal place is Kandy, an open town situated in a valley, with four unfinished redoubts on the surrounding heights.

The Roads in the maritime country lie through groves of cocoa-nut trees along the sea-coast. Carriage-ways extend from Colombo as far as Chilaw to the northward, and from Colombo through Galle as far as

* The fortresses and fortified posts in Ceylon have recently undergone considerable improvement.

Matura to the southward. The main road from Colombo to Kandy (the Simplon of the East, now regularly traversed by a "mail coach and four") is a work of stupendous magnitude; hills have been levelled, valleys filled up, and (near Kandy) a tunnel *five hundred feet long, cut through the mountain*, while rapid and unfordable torrents and rivers have had substantial iron and wooden bridges thrown across them. A capital road has been opened between Trincomalee and Colombo, and, before a few more years have elapsed, every town in the island will probably be connected by roads passable at all seasons.

Paradeinia bridge, which has been thrown over the rapid and unfordable river Mahavillagunga, consists of a single arch with a span of 205 feet, principally composed of sappan wood; its height above the river at low-water mark is sixty-seven feet, and the roadway is twenty-two feet wide. The arch is composed of four treble transverse ribs, distant from each other five feet from centre to centre; the average depths of these ribs is four feet, which, with two intervals of two feet each, makes the whole depth of the arch eight feet; the arch-beams, with the exception of those next the abutments, are sixteen to seventeen feet long, and twelve inches thick, abutting against each other with an unbroken section, secured at the joints by the notched pieces which support the roadway, the latter being held in their position by means of cross-ties below and above the arch, and immediately under the roadway; these cross-ties, with the aid of the diagonal braces locked into them, serve to give stability and firmness to the whole structure, which has no other material but timber in its construction.

Geology and Soil.—North division sandy and calcareous, resting upon madrepore, and but little elevated above the level of the sea; the surface of the higher lands of Saffragam and Lower Ouva is much stronger and better adapted for tillage; the granite detritus of the interior produces the most luxuriant crops wherever there are a sufficiency of hands to call forth the reward of industry. The southern plains are sandy, resting on a strong red marl termed "*cabook*," the base of which is granite. In the neighbourhood of Colombo, the lands are low and subject to inundations from the Mutwal river. The foundations of the island are evidently calcareous, yet the greater proportion of its soil is siliceous; in many places (as in the cinnamon gardens near Colombo) the surface being white as snow, and formed of pure quartz sand. The surface is in general traceable to the decomposition of gneiss, granite, or clayey ironstone, the principal ingredient being quartz in the form of sand or gravel, decomposed felspar in the state of clay, combined with different proportions of oxyde of iron, quartz in most instances being the predominating substance, and in many places forming nine-tenths of the whole; the natural soils seldom containing more than three per cent. vegetable matter. The most productive earths are a brown loam resulting from the disintegration of gneiss or granite abounding in felspar, or a reddish loam originating from the decomposition of clayey ironstone; the worst soils are those where quartz prevails, proceeding from the disintegration of quartz rock, or of granite and gneiss, containing a very large proportion of quartz. Regular granite is not of very common occurrence; well-formed gneiss is more abundant, but sienite is not frequent: pure hornblende, and primitive greenstone, are far from uncommon; and dolomite, sometimes of a pure snow white, well adapted for the statuary, occasionally constitutes low hills in the interior; limestone is principally confined to the northerly province of Jaffnapatam. The island appears to be surrounded by an uninterrupted chain or belt of sandstone, interspersed with coral. The coral of the Paumban banks is not the zoophite of the Mediterranean and the South Seas, but a light, porous, crumbling substance, formerly cut and shaped into bricks by the Dutch, and more frequently burnt for lime. Of this species of lime the late fort of Negapatam was built; and so great was the hardness which it acquired by long exposure to the weather, that when Major De Haviland, some years ago, requested a specimen of the masonry of the fort to be procured and sent up to him, the iron crows and other instruments used in detaching the blocks were blunted and bent in all directions by the solidity of the chunam, which proved more adhesive than that obtained from shells. A material capable of being converted into so durable a cement, would well pay the expense of excavation. The ridge called "Adam's Bridge," consists of a mass of loose sand, with no firm foundation of rock or clay for its support. The sand appears to be deposited in great quantities on one side or other of the dividing bank, according to the direction of the monsoon; the violence of the surf washes the sand over to the lee side; in other parts, where the ridge is broad, large heaps, in a dry state, are carried across by the sole force of the prevailing wind. The channels have been surveyed at an expense to the E. I. Cy. of £24,625, and a passage rendered navigable for vessels of moderate size, at a cost of £16,294.

Minerals.—The metallic resources are as yet undeveloped; plumbago has been procured to some extent; gold has been found in the mountain streams, but not in sufficient quantity to pay the labour of obtainment: iron, silver, and quicksilver are said to exist. The geological formation indicates the presence of the most valuable ores. The amethyst, topaz, sapphire, garnet, cinnamon stone, rubies, cat-eye, and other precious stones are found in various places. Alum, nitre, and salt are plentiful.

Climate.—Ceylon is under the complete influence of the monsoons, the north-east prevailing from November to February, and the south-west from April to September; the intervening or equinoctial months having variable winds or calms. The eastern side of the island is hot and dry like the Coromandel coast, during the sway of the north-east monsoon; the opposite division is temperate and humid, like the southern Malabar shore during the continuance of the south-west monsoon; the climate, however, of the southern coast is more congenial to Europeans than perhaps any part of intertropical India. On

the whole, the north and north-east may be said to be dry, and the south-west moist. The south-west wind prevails generally over the island; for both at Colombo and Trincomalee it is felt five months in succession; whereas the north-east blows at Colombo only in the months of December and January—seldom beyond them. Among the mountains of the interior, the winds are modified by local circumstances, according to their proximity to the east or west coast: and the highest and most central lands have peculiarities of their own. Thus, at Badulla, in Upper Ouva (where there is an excellent hospital and military station), the wind for three-fourths of the year is from the north-east, and in June, July, and August variable. Owing to its intertropical position, the quantity of rain that falls in Ceylon is large. At Colombo the annual quantity is stated at about one hundred inches, of which eighty fall in April, May, October, and November.* Though infrequent, the showers are very heavy while they last, a depth of two or three inches being not uncommon in twenty-four hours; the average of the Alpine region is about eighty-four inches. Less rain falls on the east than on the west side of the island; a lofty mountainous ridge often acting as a line of demarcation, one side of which is heavily drenched, while the other lies scorching beneath an unclouded sun. On one part of the island, and even on one face of a mountain, the rain may fall in torrents, while in the contrary aspect the earth is parched and the herbage withered;—here the inhabitants may be securing themselves from expected inundations,—there they will be found husbanding with care the little water of a former season which may yet remain in their wells and tanks. Thus throughout the southern division, where the rains are copious (owing, probably, to its exposure to the southern ocean), canals are not less useful in draining the lowlands, than in the conveyance of produce; and embankments are much required to secure the crops from destruction during the rainy season; while in the northern division of the island, tanks and watercourses are in the greatest request, to secure the inhabitants against the terrible effects of frequent droughts to which their districts are liable.

Owing chiefly to its insular position, no climate is more favoured than Ceylon, its temperature being moderate when compared with the scorching heat of India. Along the sea-coast the mean annual temperature may be taken at 80° Fahrenheit; the extreme range from 68° to 90°; and the medium from 75° to 85°. The climate of the mountains is of course cooler, but the vicissitudes greater. At Kandy, which is 1,467 feet above the sea, the mean annual temperature is 78°; at the top of Namini Cooli Kandia, 5,548 feet high, Dr. Davy found the temperature, at eight A. M., 57°. At Colombo (the capital) the mean daily variation of the temperature does not exceed 3°; while the annual range of the thermometer is from 76° to 86½° Fah. At Galle, the mean daily variation is 4°, and the annual range 71° to 87°. Jaffnapatam—mean daily variation, 5°; annual range, 70° to 90°: Trincomalee—greatest daily variation, 17°; annual range, 74° to 91°. At Kandy (the capital of the mountain or table-land in the interior), mean daily variation, 6°; annual range, 66° to 86°. At Newera Ellia, a military convalescent station, mean daily variations as high as 11°, and annual variation from 35° to 80°.† The climate, where the ground is not cleared, is undoubtedly subject to pernicious malaria, arising from stagnant marshes, and dank and noisome jungles; and even after the removal of these incentives to disease, it requires the continuous healthy action of the sun for some time before the unhealthy miasma is dissipated: at certain seasons, therefore, endemic fevers still appear in situations favourable to their propagation, but the whole island is growing more uniformly salubrious as it becomes cleared and cultivated. The environs of Trincomalee, which were formerly very unhealthy, have become much less so by clearing the jungles in the environs.

[a] Badulla is situate on a plain, in a mountainous country surrounded by hills, with an elevation of 1,000 to 3,000 feet, towards the south-eastern extremity of Ceylon, having the sea at 40 to 50 miles distant on the east, south, and west sides; the elevation of Badulla, above the ocean level, is 2,107 feet.

[b] *Remarks by a Kandian Chief, the result of Sixty Years' Observation.*—Jan. Heavy rains, and very cold nights. Feb. No rain; hot. March. A little rain, and warm. April. No raiu; very warm. May. Light rain; wiudy. June. No rain; hot and dry. July. Ditto; very hot. Aug. Ditto; hot. Sept. Ditto; ditto. Oct. Heavy rains, and cool. Nov. Ditto, ditto. Dec. Hot and dry; very cold nights.

[c] The Rain Gauge, showing a total of 84.3 inches, is for Kandy (in 1819), in the interior, which constitutes the average of the mountain districts; on the sea-shore, as at Colombo, the average annual fall of rain is from 80 to 100 inches.

* At an estate in the Hunasgiria Mountains, 3,000 feet above the sea, the range of the thermometer from 16th September to 16th October, was 62° to 72° Fah.; the fall of rain 27 inches; wind westerly.

† Our troops have suffered much in Ceylon; but it should be recollected, that as compared with the Indian army, their routine of duty is of a severe description. The insular force have not the

A delightful station has been formed at Newera Ellia, south-west from Kandy fifty miles, fourteen from Fort M'Donald, fifteen from Maturatte, and 122 from Colombo. The road between Newera Ellia and Kandy leads through a wild and mountainous country; the scenery, always picturesque, is sometimes magnificent in the extreme: at one time, the traveller is surrounded by steep and inaccessible mountains, whose sides are clothed with dense forests; while rocks of enormous size, deep and precipitous ravines, and cataracts rushing with foaming velocity from the heights, diversify the picture. The elevation of Newera Ellia plain (four miles long, and one and a-half broad) is 6,000 feet above the sea, and surrounded by steep mountains of irregular height, covered with wood to the very summit; one in particular, rises 2,000 feet above the level of the Newera Ellia river, which meanders through lovely banks across the plain. The climate is agreeable, never approaching tropical heat in summer, with sometimes ice in winter; the mean temperature, by day and night, for the entire year, 55°. So that visitors who have recently quitted a climate within a few degrees of the equator, often learn with astonishment, that a fire is always enjoyed by night, and frequently in the day. The water is so pure as to form a transparent solution with nitrate of silver; several chalybeate springs have been met with. The daisy, buttercup, violet, ribwort, dandelion, barbery, briar, &c., flourish indigenously; the rose, pink, mignionette, and carnation, are fragrant as in England; delicious strawberries are abundant, and potatoes, carrots, artichokes, peas, beans, salads, cabbages, turnips, parsnips, and in fact all British culinary vegetable thrive perfectly. The soil is of a deep black mould, resting on a stratum of yellow clay and gravel: numerous varieties of beautiful quartz exist.

[a] This gallant regiment suffered much during the Burmese war, and the disproportionate mortality was owing to the unhealthiness of Rangoon, and other exceptional causes.

[b] The mortality in the 73rd regiment was owing to great fatigue and exposure during the Kandian war, and subsequent rebellion, which involved the detention of the troops in mountainous and swampy districts.

The above table shows the military returns of a past period, since which great improvement has taken place in the salubrity of Ceylon. By the latest data it appears that the average mortality of the troops (the criterion generally referred to) has considerably diminished, and may now be taken at four per cent. per annum.

POPULATION.—The immense ruins extant demonstrate that the island was formerly extensively peopled. An area of nearly 25,000 square miles could readily support 300 mouths to each square mile = 7,500,000. The number of inhabitants had evidently been declining for several centuries; the tide has now turned, and a progressive augmentation may be expected. In 1814, the maritime provinces had 475,883; in 1824, 595,105: the total of the island was then about 852,940. In 1832, the population

facilities of water communication which the Ganges and its tributaries afford; the one country is in many parts quite unpeopled, and the other comparatively civilised; add to which a pernicious system prevails in Ceylon of making the troops commence marches at midnight, than which nothing can be more injurious. A late intelligent deputy-inspector-general of the hospitals in Ceylon (H. Marshall, Esq.), drew up the above comparative table of the health and mortality of troops in India, Ceylon, and Mauritius; but it must be remembered, in the first place, that his data for Ceylon were collected some time ago, since which period the country has already materially improved; and in order to judge accurately, we should know the ages of the deceased and invalided, and the tropical service endured. I give, however, the table, in the hope that it may induce further inquiry based on the valuable records already framed by medical officers of the British army, than whom, no class of persons can have better opportunities for this peculiar investigation; and certainly none have contributed more generally to the diffusion of the literature and science of England throughout her colonies.

was stated to be 1,009,008; of whom there were—whites, males, 3,213; females, 3,154 = 6,367: the slaves* were then—males, 11,373; females, 11,616 = 22,989. In 1836, a return made shows—males, 645,492; females, 584,336 = 1,229,828: of these, the whites were—males, 5,407; females, 3,506; including military—males, 2,495; their wives and children, 577 = 11,985: the slaves were stated to be—males, 14,108; females, 13,289 = 27,397. The population of Colombo fort, Pettah or native town, and Korles or divisions, was, in 1831—fort, 432; Pettah within, 4,760; without, 26,357; Korles, 203,242. The statistics of population are thus stated in the *Blue Book* for the year 1852, but on what data the estimate was formed is not recorded.

| Military and their families | — | 1,909 | 322 | 2,540 | 1,673 | — | — | — | — | — | 200 | 79 | 164 |

The total fixed inhabitants therefore seems to be—males, 879,784; females, 800,409 = 1,680,193, which shows an increase of upwards of half a million in twenty years. The number of mouths to each square mile are now about seventy; the island could well support four times that density, or six to seven million occupants. There is a considerable migration of labourers to and from the islands: in 1853, the number of *arrivals* were—men, 36,582; women, 2,042; children, 653: *departures*—men, 27,129; women, 981; children, 378. This annual influx of the working classes may tend to explain the otherwise unaccountably rapid increase of population.

Although comprising a variety of different nations, the inhabitants may be divided into four distinct classes. 1st. The Singhalese or Ceylonese proper (descended, by some accounts, from the Sings or Rajpoots of Hindoostan, and by others from the Siamese), who occupy Kandy, and the south and south-west coasts of the island from Hambantotte to Chilaw. 2nd. The Malabars or Hindoos, who invaded Ceylon from the opposite coast, and are in possession of the north and east coasts, and of the peninsula of Jaffnapatam. 3rd. The Moors, who are dispersed all over the island, and in Putlam district form the mass of the population. 4th. Veddas or Beddas, the aborigines of the island, who dwell in the great forests which extend from the south to the east and north, and also in the more inaccessible parts of the interior. There are some Malays, Kafirs, and Javanese, a few Chinese, and Parsee traders, and a good many of mixed race, the offspring of Portuguese, Dutch, and even English intercourse with natives, scattered over the island. *Caste,* as respects the Singhalese and Malabars, is scrupulously preserved, and very widely ramified, almost every occupation having its distinct class. There are, for instance, the gold and silversmiths caste, the fishers, the barbers, the washer*men,* the manufacturers of jaghery (sugar), the toddy drawers, the lime-makers, &c.; but the highest and most esteemed is that of Vellalahs or Goyas, whose occupations are exclusively agricultural; yet as land is assigned in part payment of every description of service, the practice of husbandry is not confined to the Vellalahs, but exercised by persons of all castes for subsistence. By the Kandian laws intermarriage between the high and low castes is prohibited, and many are the distinctions recognised and enforced, by which the latter have been degraded and reduced, by slow degrees, to a state of hereditary servility. While the Malabars professing the Hindoo faith maintain the *religious* as well as the *civil* distinction of caste, the Singhalese or Buddhists have abolished the former and retained the latter.

In colour the Singhalese vary from light brown or olive to black; the eyes sometimes hazel, but the hair almost always black, long, and silky; in height they are 5 ft. 4 to 5 ft. 7; clean made, with

* Slavery is now totally abolished throughout Ceylon.

firm muscle, and small bone; the chest capacious, and the shoulders broad; and in the mountainous districts, like most other highlanders, they have short but strong and rather muscular legs and thighs; the hands and feet, like those of the Hindoos, are uncommonly small; the head well shaped, perhaps longer than the European; the features often handsome, and generally intelligent and animated; the beard is unshorn, giving manliness to the youthful countenance, and dignity to that of age. The women, particularly those of the maritime provinces, are very attractive. Yet there are some strange points in the *beau ideal*, drawn by a Kandian courtier, of the attributes of an Eastern Venus:—"Her hair should be voluminous, like the tail of a peacock—long, reaching to the knees, and terminating in graceful curls; her eyebrows should resemble the rainbow, her eyes the blue sapphire, and the petals of the blue manilla-flower; her nose should be like the bill of the hawk; her lips should be bright and red, like coral, or the young leaf of the iron-tree; her teeth should be small, regular, closely set, and like jessamine-buds; her neck should be large and round, resembling the herrigodea; her chest capacious; her breast firm and conical, like the yellow cocoa-nut, and her waist small—almost small enough to be clasped by the hand; her hips wide; limbs tapering; soles of feet without any hollow; and the surface of her body in general soft, delicate, smooth, and rounded, without the asperities of projecting bones and sinews." The latter feature may be considered generally characteristic of the Singhalese, who are rather remarkable for agility and flexibility of fibre than for strength and power of limb. Whatever may have been the extent of civilisation in Ceylon at a remote period, at the present time the people are not superior, if indeed equal, to the Hindoos, in the domestic and fine arts; although many branches of manufactures, such as the weaving of cotton and silk, the smelting of, and working in, gold, silver, iron, copper, &c.; the cutting and setting of precious stones, the glazing of pottery, application of lacker, preparation of gunpowder, casting of cannon, distillation of spirits, &c., are carried on with extraordinary success, considering the simple instruments employed and the scanty aid obtained from science.

The "Moormen" constitute the active traders of Ceylon. At Colombo they are principally connected with the coffee operations; at Trincomalee they are engaged in the ebony, satin, and other cabinet-wood felling and export; at Batticaloa, they own the coasting craft which ply with the adjacent continent; in the interior they are pedlars, bartering European goods for native produce; and wherever there is a favourable opening for business, they are established as shopkeepers; their colour is darker than that of the Singhalese; their language that of Southern India (Tamil); and their religion the Sheah sect of Mohammedanism. They are industrious, frugal, and wealthy; shrewd at a bargain, always ready to buy or sell, and form a valuable class of society. I found this active, intelligent race in all the towns, whether Arab or Portuguese, along the coast of Eastern Africa. They have no tradition of their origin: some suppose them to be a remnant of the Persians, by whom Ceylon was frequented A.D. 500; others suggest their being Arabs by descent, but their features do not sustain this opinion. My own impression is, that they are emigrants from Morocco and Western Africa; that they traded along the shores of that continent, and thus reached India; and that they belong to the race formerly known as Moors, and still found on the banks of the Senegal and of the Gambia rivers.

The Veddas are a remnant of the aborigines who possessed the eastern part, if not the whole of the island, when it was invaded by Vegeya and his followers, B.C. 543. They are divided into two classes: the first have fixed residences, cultivate small patches of land, and communicate, but do not mix with the Singhalese; the second are foresters—rove from place to place in search of game, and do not till the earth. They exchange venison preserved in honey for arrow-heads, the only manufactured article much coveted. Both classes are nearly naked, and are considered to be rude rather than savage: those I saw near Badulla resemble somewhat the Gonds and Koles of India, alike in their appearance and worship (*see* Div. XI., p. 505.) Among the resident aliens there are some Kafirs (of whom the 2nd Ceylon regiment was formerly composed), Malays, Javanese, Chinese, Parsees, and a good many descendants of the Portuguese and Dutch—a mixed race; to these are now being added many children born of native mothers, whose fathers are of British blood.

The national character of the Singhalese is unfavourable: among the dwellers on the

coast-line and flat country, apathy, sloth, and servility abound;—among the Kandians, or people of the mountain region, cruelty, cunning, and deceit;—among all, lying, theft, sensuality,* and cowardice. Such are my own impressions after personal intercourse with both classes. Sir J. E. Tennent says—"Jealousy, slander, litigation, and revenge prevail to an unlooked-for excess; licentiousness is so universal that it has ceased to be opprobrious, and hatred so ungovernable, that murders are by no means rare. Falsehood, the unerring index of innate debasement, is of ubiquitous prevalence; theft is equally prevalent; and deceit, in every conceivable shape, in forgery and fraud, in corruption and defamation, is so notorious and habitual amongst the uneducated mass, that the feeling of confidence is almost unknown; and in the most intimate arrangements of domestic life, the bond of brotherhood or friendship, of parent and of child, inspires no effectual reliance in the mutual good faith and honour of the interested parties."†

The Religion of the majority of the Singhalese‡ is Buddhism. When it arose, and whether as an offshoot of Brahminism, or the primary stock of that creed, are questions which have given rise to many learned discussions, and still remain unsolved. In the opinion of some Hindoo sages, *Budh* or *Boodh*, is supposed to be the ninth avatar of *Vishnu* (the second person of the Hindoo triad, and god of preservation), who reappeared for the purpose of reclaiming the Hindoos from many abominations into which they had fallen, and teaching them more benevolent forms of worship, than through the means of human and animal sacrifices which they *then* extensively practised.§ These doctrines being too simple, and therefore interfering with the privileges of the Brahminical priests, a religious war ensued between the old and new sects, and the Buddhists were ultimately expelled from the peninsula of India.|| But the Buddhists in general will not tolerate the idea of superior antiquity being conceded to the Brahminical faith; they deny the identity of Buddh with the ninth avatar of Vishnu, which they declare was a mere manifestation of his power. They do not acknowledge a *creation* of the universe, but assert that it has been destroyed many times, and, by some extraordinary operation, as often reproduced. They enumerate twenty-two of these regenerated worlds, each of which was consecutively governed by Buddhas, and say that the present universe has been ruled successively by four, of whom *Gotama-Gaudama-Sakya* is the fourth; a fifth, Maitree Buddha, is yet to come, previous to which this world will be changed.

Gaudama, stated to have been the son of the sovereign of the celebrated kingdom of Magadha (Bahar),¶ was born at Pataliputra (? Patna) B.C. 623, and after traversing India and Ceylon for the propagation of his faith, died B.C. 543, æt. 80. Two centuries after his demise, the Singhalese, who then worshipped demons and serpents, were converted to Buddhism, the doctrines of which were reduced to writing in the Pali language between 104 and 76 B.C.

Mr. Turnour, a distinguished Singhalese scholar, asserted that there are veritable records in Pali relative to Buddhism since the year 500 B.C.; beyond this time the Buddhists admit that all is legendary. There is a wide diversity of opinion as to the character of the religion connected with the name of Buddh: some (including Mountstuart Elphinstone) contend that it is atheistic; others (including Colonel Sykes) say it is theistic. There can, however, be no doubt that it is highly metaphysical, capable of varied interpretations, full of subtleties, and well adapted for the subjugation of the mass of its disciples to priestcraft, through the instrumentality of monasteries, mummeries, sacred relics,** and

* Marriage until recently was unknown, and polyandria was general.

† *Christianity in Ceylon*, p. 252.

‡ At Jaffna, and in the north of Ceylon, the people are of the Brahminical faith.

§ *See* Coleman on the *Mythology of the Hindoos.*

|| Among the absurdities gravely argued in reference to this point, it is dogmatically asserted, that "the *final* overthrow of Buddhism in Bahar, and its expulsion from Hindoostan, took place probably between the 7th and 12th centuries of the Christian era. Colonel Sykes, however, extends the period to the 13th or 14th."—(*Asiatic Journal*, vol. iv., p. 331.) From hence it would appear that a "*final overthrow*" was in progress of accomplishment for five or seven hundred years!

¶ For a notice of Magadha, see previous history of India in this work, Div. xi., p. 18.

** The greatest object of veneration is termed the *delada*, or tooth of Buddh, which is a piece of discoloured ivory about two inches in length, in shape and dimensions resembling the formidable tusk of a boar. It is said to have been originally deposited at the temple of Juggernath in Orissa, then a Buddhistic shrine: about 1,500 years ago it was removed to Ceylon, and retained as a palladium, the possession of it being deemed inseparable from the sovereignty of the island. There are doubts of its

other delusions. The foundation of the creed consists of commands enjoined by Buddh; these were originally *five* (necessary to the attainment of perfection); to which were added five injunctions, meritorious but not imperative. The first five are—1st. Not to kill a living creature of any kind; 2nd. Not to steal; 3rd. Not to commit adultery; 4th. Not to speak an untruth on any occasion; 5th. Not to use intoxicating liquors or drugs. The discretional commands are—not to eat after midday; and not to sleep on costly, soft, or elevated beds (but on clean mats), or indulge sensually. The others inculcate, generally, virtue and benevolence, and the practice of rigid abstinence.

By obedience to these rules, and the practice of virtue (including the forgiveness of injuries), every human being may, it is asserted, through his own efforts, and unaided by any Divine spirit, attain the highest degree of bliss in this world and in the next—*Nirwana,* a state resulting from the total subjugation, or rather extinction, of passions and desires, but which probably means, according to our translation of the word, a mystical condition of perfect peace and imperturbable repose.

In the Buddhistic theology there are twenty-six heavens, placed one above another; there are also several hells: both differ in their glory and in their terror, and have, as Plutarch and Dante figured, distinct gradations in the scale of happiness or of misery. The doctrine of metempsychosis (which prevails in several forms of religion as well as in Brahminism) involves the permission of individuals whose etherialisation is incomplete, to revisit this earth in future births, to attain the bliss of *nirwana.* Misfortune is supposed to be the result of moral demerit in some previous stage of existence, as neither in heaven nor on earth can man escape the consequences of his acts, for which he must personally atone. Matter is eternal, but subject at remote intervals to decay and reformation, and, together with animal life, is spontaneous in origin, and operating by procession. Buddhism is said to be "less a form of religion than a *school of philosophy;* and its worship, according to the institutes of its founders, consists of an appeal to the *reason,* rather than an attempt on the imagination through the instrumentality of rites and parade."* Surely it is a misnomer to dignify such contradictory ideas and absurd hypotheses with the name of "philosophy" or of "reason." Spontaneity of material existence, devoid of thought, plan, and wisdom of design, will not, in reference either to our own structure and being, or to all we see around, from the minutest insects to the revolving plants, bear the slightest intellectual test, or any attempt whatever to found thereon a philosophical system.

A further exposition is beyond my limits; but I may observe, after a personal observation of the effects of Buddhism in Ceylon and in China, that notwithstanding nearly 2,000 years' trial, under the most favourable circumstances in Ceylon, it has utterly failed, either for the expansion of reason, the inculcation of philosophy, or the promotion of social happiness. The Singhalese, where not brought under the influence of Christian teaching or example, are as cruel, sensual, lying, faithless, vicious, debased, and superstitious as any other Pagans; indeed, far below many other benighted

authenticity; and it is said the Portuguese destroyed the original tooth and substituted the present tusk, which is kept in a small and elegant temple. The relic chamber is hung with cloths of golden tissue; and on a table of massive silver, richly chased, is a small *dogoba,* hung with gold chains and other ornaments, and containing the sacred caskets, within the innermost of which the tooth is enshrined amidst the leaves of a golden lotus. The paraphernalia has a profusion of pearls, brilliant sapphires, large emeralds, rubies, cat's-eyes, amethysts, and other precious stones; the whole valued at £60,000. On our final occupation of Kandy, a guard of soldiers was placed over the temple, which the Kandians prized as a mark of respect for Buddhism, but which had reference to the wealth of the shrine and the tradition attached to its possession. Christians objected to the use made of our governmental care for the tooth, and in 1848, the relic was given over in charge to the Dewa Nilleme, or Kandian chief of highest rank, and with him was associated the high priests of the province: one key of the temple was kept by the principal British officer at Kandy. Subsequently, when fears were entertained that the *delada* might be used as heretofore to excite rebellion among the population, government resumed its sole custody; but in May, 1853, it was again consigned to the care of those to whom it had been entrusted in 1848, and they are held responsible for its safety. The Buddhists delight in relics of their leader. The learned Chinese, Fa Hian, whose recorded travels in the fifth century through various parts of Asia are extant, states that he saw at Ladak a vase in which Boodh had spat, and a tooth, in honour of which latter a tower had been erected by the king. Cuttings of the hair and nails were preserved in monasteries; and at Nankin, Fa Hian was shown a *shadow* of Buddh, but he was unable to describe how it had been preserved.

* Tennent's *Christianity in Ceylon,* p. 220.

races in the exercise of those virtues which they so highly extol. And every creed fails that is not of Divine origin. He that created man,—who breathed into his nostrils the breath of life, and made him a living soul,—can alone frame the theology which links us with eternity. I cannot speak of Buddhism as "a code of morality for mankind in general, *second* only to that of Christianity itself."* I cannot recognise any "second" or degree in relation to falsehood and truth. Christian morality springs *from*, does not cause, regeneration: works arise from faith, not faith from works. Christianity denounces the sinful thought as equal to the sinful act; enjoins us to *love* our enemies antecedently to the forgiveness of injuries; and declares there is but *one mode* by which we can be purified from the taint of original sin which pervades every descendant of Adam.

Another topic on which I think misapprehension exists, requires a brief comment, especially as it has been promulgated by a high authority, who says—"Looking to its (Buddhism) influence at the present day over at least 350,000,000 of human beings (exceeding one-third of the human race), it is no exaggeration to say that the religion of Buddh is the most widely diffused that now exists, or that has ever existed since the creation of mankind."† This would indeed be lamentable were the statement founded on statistical data. Buddhism extends over part of Ceylon; a small sect of it, under the name of Jains, is scattered in Western India and in parts of Nepaul; it predominates in Tibet, Burmah, Siam, Cochin China, Japan, and in a very small portion of China, where its worship is fast decaying. It would be a large admission to say that the votaries of Buddh amount to 100,000,000, or *one-tenth* of the human race, instead of one-third of mankind.

With reference to "*wide diffusion*," Buddhism is by no means so extensively diffused as Mohammedanism, which prevails over the whole of Africa, is found in every corner of Asia, throughout the Asiatic islands, and in the east of Europe. As regards "*influence*," that of Christianity is more general than any other creed: it is felt throughout the entire of Europe and America; in Western Asia; at various parts of Western, Southern, and Eastern Africa; over all India, from Cape Comorin to the Himalaya; from Afghanistan to Burmah; in the Eastern Archipelago, in Australia, New Zealand, and over the wide-spread isles of the Pacific; and in China, where the insurrection involves more or less the teaching of Christianity: in fact, there is no part of the habitable globe where the "influence" of the Gospel is unfelt, and which is not being gradually but surely filled with the knowledge of the only true God.

There is a tradition that some Christians settled in Ceylon many centuries since, and subsequently retired from the island; but the Singhalese in general, seem to have derived their first knowledge of the gospel from the Portuguese, who here as in India probably considered that "Pagans may be brought over to our religion, not only by the hopes of eternal salvation, but also by temporal interest and preferment." Thus John III. directed, that when any of the Indians professed Christianity, they were to be provided with places in the customs, to be exempted from impressment for the navy, and sustained by the distribution of rice from the public treasury. Such a policy, in conjunction with the close resemblance between the forms of Romish worship and those of Buddhism, procured many nominal converts. But the process not being found sufficiently rapid, the Jesuits, in their zeal, resolved on the adoption of a course of policy which they assumed to be justified by the saying of Paul—of becoming all things to all men: in fact, they acted the part of some Puseyites in the present day, who go half-way over to the Romanists, in the expectation of bringing the latter into the church of England fold; an experiment which often terminates in their own renunciation of the reformed faith.

The Jesuits assumed the character of Brahmins of a superior caste from the western world,—conformed to the heathen customs, and, in support of their pretensions, produced a deed, forged in ancient characters, to show that the Brahmins of Rome were of much older date than the Brahmins of India, and descended in an equally direct line from Brahma himself. They also composed a pretended Veda, in which they profanely strove to insinuate the doctrines of Christianity in the language and phraseology of the sacred books of the Hindoos. The Cavy, or orange robe, peculiar to the Sanyassees, the fourth and most venerated of the Brahminical caste, was worn by the Jesuits, some of whom hung a tiger's robe from their shoulders, in imitation of Siva; abstained from animal food, wine, and prohibited

* *Christianity in Ceylon*, p. 219.
† *Ibid.*, pp. 192—200.

vegetables; performed the ablutions required by the shastras; marked their foreheads with sandal-wood powder (a distinctive emblem of Hindooism), and spurned the Pariahs and lower castes who could lay no claim to the inherent nobility of the Brahmins.*

Abbé Dubois, the Roman catholic missionary who records these facts, argues in favour of that communion, as calculated to make more impression in India than the Protestant, because "its external pomp and show are well suited to the genius and disposition of the natives: it has a *pooja* or sacrifice, processions, images, and statues; *tirtan* or holy water, feasts, fasts, and prayers for the dead; invocation of saints, and other practices which bear more or less resemblance to that of the Hindoos." The Jesuits availed themselves of these coincidences; images of the Virgin and of the Saviour were placed on triumphal cars, imitated from the orgies of Juggernath; the dancers (women of the most abandoned profligacy) of idolatrous temples were invited to celebrate the ceremonies of the Romish church, in chapels fitted up with theatres and stages for the exhibition of the mysteries and representations of the great historical events of the Jewish and Christian epochs, in which the grotesque and the profane were mingled as a means of inducing the Pagan beholders to profess themselves disciples of the new and holy creed.

It is not surprising that many of the Singhalese Buddhists, as well as Tamil Hindoos, enrolled by the Portuguese as Christian converts, retained all the superstitions and most degrading characteristics of their Pagan faith; nevertheless chapels and convents arose in every direction around the European settlements, many of which attest, to the present day, the care and expense bestowed in their erection.

When the Dutch became dominant in Ceylon, they bitterly denounced the intrigues of the Romish clergy. In 1658, a proclamation was issued, though not it appears enforced, forbidding, on penalty of death, the harbouring or concealing a priest: in 1715, public assemblies or private conventicles of the Roman catholics were prohibited; neither were their pastors suffered to administer baptism under any circumstances: in 1748, the education of the obnoxious ministry was declared unlawful, as also the celebration of the mass. At Jaffna the Dutch took possession of the Romish chapels, and established Presbyterian schools in connection with them. Persecution for religious faith makes men cling to it the more: many of the Romanists in Ceylon adhered to their form of worship; but others, tempted by the declaration of the ruling power,—that honourable public employment, the farming of land, &c., could only be granted to legally registered government Christians, became members of the dominant communion, and subscribed to the doctrines contained in the Helvetic confession of faith. The list of converts swelled apace: it was soon announced that there were 65,000 *Christian(?)* men and women in Jaffna; and as baptism was deemed a mark of good caste, children were placed in rows, sprinkled *en masse*, and declared to be admitted into the kingdom of heaven; and the ceremony became so popular, that an "unbaptized wretch" grew to be a Singhalese term of reproach. Fines were imposed to compel the attendance of the natives at church and at school; and those who had property and remained unbaptized, might be deprived of a third of their possessions. At the same time hostility was waged against the Buddhists, their idolatrous ceremonies suppressed, and their temples near the Dutch stations closed. In 1722, Valentyn gives the number of nominal Christians in Ceylon thus:—In Jaffna (Tamils), 189,388; Singhalese in other places, 179,845; at Galle, 55,159 = 424,392; besides 2,799 young men and 1,493 girls, candidates for baptism.† Whether these numbers increased or decreased down to the period of the arrival of the English in 1796, there is no record; but soon after our occupation, the Dutch Christians had almost entirely disappeared, while Romanism revived after the abolition, in 1806, of the disabilities under which members of that creed laboured, the governor (Sir Thomas Maitland) having admitted them to "all civil privileges and capacities" throughout the island. Under the auspices of the British government, several Protestant missionary bodies speedily commenced their labours in the field where Portuguese and Dutch had made few converts beside Christian Buddhists.‡

* *Christianity in Ceylon:* by Sir J. E. Tennent.

† Tennent; Hough's *Christianity in India:* Abbé Dubois' *Letters; Asiatic Researches*, vol. xiv.

‡ The nominal Christianity of the natives declined so rapidly, that in 1813 the ecclesiastical establishment consisted of three English chaplains, two German presbyterians, and six proponents, a clerical functionary of the Dutch church, with the functions of a catechist and deacon. In a few years there will be no Dutch congregation in the island.

The new teachers reached Ceylon in the following order:—In 1804, three German missionaries, from the London Missionary Society, arrived: in 1812, a deputation from the Baptists stationed at Serampore: in 1814, some Wesleyans came to the island; but their distinguished leader, Dr. Coke, died on the voyage: in 1816, three clergymen were dispatched by the American Board of Foreign Missions: and in 1818, four ordained missionaries of the church of England were sent out.

The success of these and later fellow-labourers has not as yet been great in the conversion of adults, but it has been satisfactory in character. The remark previously made on conversion from Hindooism, when treating of missionary labours among the Hindoos, applies here with equal force. There is little hope of regeneration from men and women who have been nurtured in idolatry and superstition: it is to the education of children we must look; and herein the missions now engaged in Ceylon have been very successful, not only with boys, but with girls, whom they have induced to enter into boarding-schools, and to view instruction as conducive to success in life.

The total Protestant mission establishment is thus stated, for 1852, by the Rev. J. Mullens:—Mission stations, 55; missionaries, 60; local preachers, 98; English churches, 9; native chapels, 81; native Christians, 18,046. Schools: *boys*—vernacular schools, 1,347; pupils, 47,504; boarding-schools, 7; pupils, 247; English schools, 34; pupils, 1,373: *girls*—day-schools, 85; pupils, 2,747; boarding-schools, 5; pupils, 203. According to the Ceylon almanac for 1854, the missions in the island were as follows:—*Society for the Propagation of the Gospel in Foreign Parts*—missionaries, 13; stations, 29. *Church Missionary Society*—missionaries, 14; stations, 7; number in congregation, 3,957. *Wesleyan* missionaries, 15; stations, 11; communicants, 1,456. *Baptist* missionaries, 14; stations, 3; members, 489. *American Mission*—missionaries, 12; stations, 8; number of converts not stated. *Roman Catholic Mission*—missionaries, 35; stations, 18; number of converts not stated.

The Bible has been translated into Singhalese (40,000 copies printed), and the Testament into the Pali language. Fourteen thousand copies have been printed of an Indo-Portuguese Testament.

Education.—The governmental schools are under the supervision of a commission. The number of children under tuition, in 1853, is thus shown:—Three superior schools, 206 children; nine elementary ditto, 327; thirty-seven mixed ditto, 1,106; four superior female ditto, 219; ten English female ditto, 123; four vern. female schools, 47; twenty-nine vern. boys' schools, 908; twenty-six Jaffna grant schools, 1,137. Total schools, 122; total children, 4,073. In addition to these there are—regimental schools, 12: Society for the Propagation of the Gospel ditto, 47; scholars, 2,358: Church Mission ditto, 93; scholars, 3,994: Wesleyan ditto, 89; scholars, 3,737: Baptist ditto, 38; scholars, 1,166: American ditto, 88; scholars, 4,062: Roman Catholic ditto, 35; number of pupils not stated: private seminaries, 177=1,052; which, with the government establishment, shows a total of about 2,000 schools; and allowing an average of 50 scholars, would indicate no less than 100,000 children under instruction.

The Public Press is of small extent: there is an excellent book almanac, with numerous annual returns; and from the mission printing-offices several useful publications, in English and in Singhalese, are issued.

---

Government.—A governor and executive council of five official members; these, with the addition of four other officials, and six private gentlemen nominated by the Crown, constitute a Legislative Council, empowered to frame laws, subject to the disallowance of the Queen in council. There is a well-organised civil establishment, the members of which retire on pensions after a certain period. The civil list amounts at present to £25,000 per annum. The military force consists generally of two Queen's regiments of European infantry, a detachment of the royal artillery, some gun Lascars, and an excellent corps termed the *Ceylon rifles*, about 1,800 strong, composed of Malays, officered by Europeans. All these troops are, at any moment, available for service on the continent of India. The British officers receive certain colonial allowances. The amount disbursed from the island revenues, for military purposes, is £34,000; that defrayed by Great Britain, £50,000.

The revenue of the island was, in 1827, about £200,000; of which nearly one-half was derived from government sales of cinnamon and cinnamon oil—a system abandoned in 1836; in 1837, the revenue was

£371,994; in 1852, £411,806; in 1853, £412,835: expenditure in 1853, £386,519; excess of revenue over expenditure, £26,316. Of the revenue, the customs yielded, in 1853, £121,741: among the other chief items are, in round numbers—land returns, £45,000; rents (exclusive of land), £27,000; licences, £67,000; stamps, £25,000.

Cash balances in the treasury, May, 1854, £118,066; of which £78,733 was in coined money, and £38,303 in treasury notes.

The military expenditure defrayed from the British treasury, in 1854, amounted to—commissariat, £49,645; ordnance, £10,963 = £60,608. The colonists contribute £2,000 a month = £24,000 per annum, towards the pay of her Majesty's troops: making the total military charges, £84,608. The Malay rifle regiment is available for service in any part of the East; a portion of the corps has been recently doing garrison duty at Hong-Kong.

The amount expended on roads is large: —1848 to 1850 (inclusive), £121,597; 1851 to 1853 (inclusive), £167,745. The main road from Colombo to Kandy (75 miles), is a heavy expense; the repairs only, for eight years ending 1853, was £86,613. It is in excellent order; there is great traffic thereon, and the tolls for 1853 amounted to £15,877. Salary of the governor, £7,000: servants of the Crown all liberally paid. Local revenues for public purposes, £33,000.

TARIFF,—moderate, and devoid of differential duties. Goods, wares, and merchandise (including cotton and woollen manufactures, not otherwise discriminated), pay on importation five per cent.; metals at various rates—7*s.* to 18*s.* per ton; spirits, 5*s.*; wine in wood, 1*s.* 6*d.*; in bottle, 2*s.* 6*d.* per gallon; coal, books, and numerous articles, *free.*

*Coins.*—British monies.

*Weights and Measures.*—The *Singhalese* or dry measure is 4 cut chundroons = 1 cut measure or seer; 4-5ths = 1 coornie; 2 1-12th = 1 marcal; 2 = 1 parrah; 8 = 1 ammonam; 9 3-8ths = 1 last. The weight of the parrah measure, according to the custom-house account is, for coffee, from 50 to 35 lbs.; pepper, 27 to 30 lbs.; salt, 52 to 55 lbs.; paddy (unhusked rice), 30 to 33 lbs.; rice, 42 to 46 lbs.; the Kandy or Bahar = 500 lbs. avoirdupois, or 461 lbs. Dutch troy weight.

Weights of ozs., lbs., &c., are also used throughout the island, British standard. A bale of cinnamon contains nearly 92½ lbs.

*Liquid Measure.*—2 half-drams = 1 dram; 6 half-drams = 3 drams = 1 half-pint; 12 half-drams = 6 drams = 2 half-pints = 1 pint; 24 half-drams = 12 drams = 4 half-pints = 2 pints = 1 quart; 48 half-drams = 24 drams = 8 half-pints = 4 pints = 2 quarts = 1 half-gallon; 96 half-drams = 48 drams = 16 half-pints = 8 pints = 4 quarts = 2 half-gallons = 1 gallon; 10,560 half-drams = 5,280 drams = 1,760 half-pints = 880 pints = 440 quarts = 220 half-gallons = 110 gallons = 1 pipe; 14,400 half-drams = 7,200 drams = 2,400 half-pints = 1,200 pints = 600 quarts = 300 half-gallons = 150 gallons = 1 leaguer, or legger.

*Long Measure.*—Three barley-corns make 1 inch; 4 inches make 1 hand; 12 inches make 1 foot; 3 feet make 1 yard: 5½ yards make 1 rod, pole, or perch; 4 perches make 1 chain of 100 links; 40 poles or perches make 1 furlong; 8 furlongs make 1 mile; 69½ miles make 1 degree.

*Land Measure.*—Nine square feet make 1 square yard; 30¼ square yards make 1 square perch; 40 square perches make 1 square rood; 4 square roods make 1 acre; 640 acres make 1 square mile.

*Kandian Land Measure.*—Eight lahas make 1 coornie; 10 coornies make 1 peyla; 4 peylas make 1 ammonam; a coornie is equal to 10 15-16ths square perches; a peyla is equal to 2 square roods, 29⅜ square perches; an ammonam is equal to 2 acres, 2 square roods, 37½ square perches.

TRADE.—Maritime commerce has largely increased, as shown by comparing two periods:—Imports of goods, 1828, £329,933; 1853, £1,181,149. Exports, 1828, £215,372; 1853, £979,874. Shipping inwards, tons, 1828, 60,070; 1853, 251,957.*

The trade with the United Kingdom, in 1853, was, in value—Imports, £218,000; exports, £671,000. Shipping to United Kingdom, 30,000 tons.

The export of some principal articles, at two periods, was—Cinnamon, 1828, 470,020 lbs.; 1853, 956,280 lbs.. Coffee, 1828, 4,669 lbs.; 1853, 37,172,752 lbs. Cocoa-nut oil, 1828, 173,420 gals.; 1853, 443,699.† Arrack, 1828, 645,102 gals.; 1853, 170,000. Rice and paddy, 1853, £515,182; coir, 1853, 37,512 cwt.‡

The coffee exported, in 1852, was 322,994 cwts.; value, £637,595. Cocoa-nut oil, for the manufacture of candles and other purposes, has also largely augmented.

In 1854 the imports amounted to £2,597,328, of which £1,371,955 was specie; of this there was re-exported £682,807; and of goods, £325,542; leaving about £900,000 worth for the consumption of the island. Shipping, inwards, 325,656 tons: of the total imports, £417,219 in value were from Great Britain, and £2,070,860 from India and other British possessions.

The produce of Ceylon exported in 1854 was, in declared value, £1,236,938; of this, total to Great Britain, £962,572.

Among the principal articles of produce thus exported, the following may be enu-

* For 1852. † For 1852. ‡ For 1852.

merated:—Coffee, 410,000 cwt.; value, £853,000: cinnamon, 787,000 lbs.; value, £45,000: cocoa-nut oil, 1,200,000 gals.; value, £150,000: cocoa-nut kernels, 52,000 cwt.; value, £30,000: cocoa-nuts, 1,870,000; value, £4,400: coir-rope, 46,000 cwt.; value, £31,700: coir-fibre, 10,000 cwt.; value £11,000: jaghery (a coarse sugar), 34,500 cwt.; value, £1,700 (showiug the value of articles, the produce of the cocoa-nut-tree alone, about £228,000): tobacco, value, £44,000: timber, value, £12,000: ebony, 7,000 cwt.; value, £2,000: pepper, 4,000, cwt.; value, £5,000: plumbago, 17,400 cwt.; value, £4,000: arrack, 30,000 gals.; value, £1,700: Ceylon brandy, 4,000 gals.; value, £4,500: Ceylon rum, 26,500 gals.; value, £2,000: sugar, value, £3,700: areka-nuts, 45,000 cwt.; value, £32,000: coornies (small shells, used as coin in India and other countries), value, £10,000: cotton-wool, £11,600: tobacco, £44,000; and horns, in value, £4,000.

The live stock in the island, in 1854, consisted of—horses, 2,675; horned cattle, 669,991; sheep, 37,427; goats, 43,353. Number of acres in cultivation, 738,348; ditto uncultivated, 5,373,413.

Vegetable Productions.—From Tangalle to Chilaw, a distance of 135 miles, it is nearly one continued grove of cocoa-nut, bread-fruit, and jack fruit-trees. Cotton grows well; whether Nankin, Bourbon, or Brazil, the buds are ripe within four months after the seed is sown.

Every village or hut has its patch of sugar-cane and tobacco; the latter, in many parts of the island, yielding a delicious aroma. Coffee grows luxuriantly, and is of excellent quality. The pepper vine is found all over the island. Cardamom plants are equally plentiful. The much-sought-after areka-nut is of the finest species, and unequalled in any part of the East. The rice of Ceylon has a richness of flavour I have never found in any other country. Teak forests abound, and excellent masts and yards of the largest size are everywhere procurable. Calamander, ebony, satin, rose, sappan, iron, &c., and other rare and beautiful cabinet woods, are in great profusion. The jack-tree is of great size, very umbrageous, and of magnificent appearance, with its dark-green foliage and abundance (100 to 150) of fruit, weighing each 10 to 50 lbs. The rough green-rinded husk contains a great number of kernels, each half the size of a pigeon's egg, embedded in a luscious, yellow, viscid substance, much prized by the natives as a delicacy: the kernels roasted are not unlike chestnuts, and they constitute a main ingredient in the excellent Ceylon curries. The jack wood is valuable for house furniture and other domestic purposes: it resembles the common sort of mahogany. The *talipot* is another of the remarkable trees of an island whose vegetation is more varied and rich than any other country I have visited. This singular palm rises perpendicularly to a height of eighty or even a hundred and twenty feet, and is crowned by a pyramid of white plumes, which give an addition to the altitude of about twenty-five feet. The leafless trunk has a girth of seven or eight feet near the ground. When about twenty years of age the leaf is in perfection, fifteen or sixteen feet in width, and with the petiole or foot-stalk twenty-five feet in length: it folds like a fan; is used as an umbrella, for thatching houses, and making tents or temporary habitations; prepared and cut into strips, two or three inches broad and thirty inches long, they form the Singhalese books, which have lasted for many centuries. The talipot attains maturity at about eighty years, and its dissolution is then preceded by shooting up a great spike, which envelopes numberless flowerets. Groves of Palmyra palms surround the villages to the northward of the island, and like the cocoa palms in the south, are useful to the peasantry in seasons of drought.

It has been calculated that along the coast between Dondra Head and Calpentyn (184 miles) there are ten million cocoa-nut trees.

The *laurus cinnamonum*, although cultivated in many tropical places, has its principal habitation in Ceylon, which is capable of yielding a sufficient supply for every country in Europe: the tree whence the cinnamon bark is derived grows to the height of from fifteen to twenty feet, with an irregular and knotty stem, branchy and ligneous roots, fibrous and inodorous wood; *external* bark rough, thick, scabrous, and of an ash colour; inner bark reddish (the young shoots are often delicately speckled with dark-green and light-orange colours); branches umbrageous, inclining horizontally and downwards; leaves oblong and in pairs, from six to nine inches in length, and three broad, petiolated; colour, dark-green; flowers clustered on one peduncle, white, wanting calyx; smell resembling a mixture of rose and lilac; fruit an oval berry, larger than a black currant; receptacle thick, green, and hexangular. The roots have the pungent smell of camphor, and the delicious odour of cinnamon, yielding camphor by distillation; the leaves have the taste of cloves; the berries, when boiled, afford an unctuous substance like wax, which has an agreeable odour, and was formerly used as candles exclusively by the Kandian court. Cattle of every kind eagerly feed on the luxuriant foliage, while pigeons, crows, and other birds, devour the berries with avidity. The industry of man is employed on the bark, the varieties of which depend on the nature of the soil, the mode of cultivating and peeling, and on the age and healthiness of the plant. About 2,000 acres of land are laid out in cinnamon plantations in Ceylon, and about 30,000 persons employed thereon. The *stripping* of the trees begins in May and ends in October: the peelers (chalias, a distinct caste in Ceylon) commence the process by striking a sharp bill-hook into a shoot which seems sufficiently ripe; if on opening the gash the bark separates gently, it is fit for decortication; if otherwise, the gash is carefully closed, and the sucker left for future examination. The shoots found ready for immediate use (generally from three to five feet long, and three-quarters of an inch in diameter) are cut down, conveyed to sheds, and there cleared of leaves and twigs; by means of two longitudinal slits the bark is peeled off in semicircular slips; a sufficient number of these being collected, the sections are placed in close contact (as two quill-halves would be laid one within the other), and the

whole bundle is firmly pressed and bound up together for twenty-four hours, until a degree of fermentation is produced, which facilitates the removal of the cuticle; subsequently the interior side of each section of bark is placed upon a convex piece of wood fitted to its size, and the epidermis, together with the green succulent matter carefully scraped off (if any of the outer pulpy substance be allowed to remain, the cinnamon has an unpleasant bitterness); a few hours after the removal of the cuticle, the pieces are again placed in each other, and the bark in drying gradually contracts and rolls itself into a quill-like form. During the first day it is placed under shelter on open platforms; afterwards it is thoroughly dried in the sun, and made up into bundles of about thirty pounds' weight. A plantation requires to stand seven or eight years before yielding produce; the tree is least advantageously multiplied by seeds—layers and shoots, or transplanted stumps, are the best means of propagation.

Pearl Fishing has been carried on in the Gulf of Manaar from time immemorial. The Dutch were interrupted in this pursuit by a quarrel with the native authorities on the Coromandel coast, who then prevented the divers resorting thither. For about five-and-twenty years the trade was stopped, but resumed by the British in 1796, when a fishery was announced, and rented for £60,000; in 1797, for £144,000; in 1798, for £192,000: the next year it fell to £30,000, the pearl oysters having been all destroyed. In 1806 the farming out of the produce was resumed, when it yielded £35,000, and was continued with varying success, giving sometimes a revenue of £40,000; at others, of £25,000; until, twenty years since, when government prevented any more search, to give time for the reproduction of the pearl oyster; during this year (1855), the pursuit has been recommenced, with good prospects of success.

The pearl banks, according to Dr. Ruschenberger. are formed by coral ridges from six to ten miles off shore: their general depth is from five to seven fathoms; but it is on the banks of Arippo, where the coral rising nearly to the surface of the water, forms a shelter against the violence of the monsoons and currents, that the pearl oyster chiefly arrives at perfection. The young oysters, when they first escape from the egg, are seen floating about the sea in immense clusters; a little increase in size and solidity makes them sink to the bottom, where they immediately attach themselves to the rocks by means of a beard with glutinous matter secreted from it. There they remain in security until age has enfeebled the fibres of the fastening, or deprived it of adhesiveness, and then they drop from their coral supports and lie in heaps on the sandy bank beneath. The pearl-divers say that the oyster is about six years and a-half old when it drops from the rock; it is supposed to arrive at perfection in seven years, and to die soon after. During their clinging period they accumulate on the rocks in heaps, sometimes eighteen inches or two feet deep. The best pearls are generally found in the most fleshy part of the oyster, near the hinge of the shell, but they are not confined to any part of the fish. Instances have occurred of a single oyster containing above sixty pearls; yet the rarity of these treasures is manifest from the fact that oysters cost less at Arippo during the fishery than at Faversham or Colchester.

During the calms of November the banks are examined by experienced officers, and samples of the oysters are forwarded to the seat of government. If the result of the examination prove favourable, then the fishery is announced by an advertisement, stating when and on what bank it is to take place, how long it is to continue, and how many boats will be allowed to engage in it. These boats are of very rude construction, generally from eight to fifteen tons burthen, and without decks. They leave the shore at midnight, favoured by the land winds, and anchor near the government guard-vessel and the fishing bank. A little after dawn in the morning a signal is given for the diving to begin, and a gun is fired at noon, on which it ceases. The following description of the mode of proceeding was written by Dr. Ruschenberger, on the spot.

"The crew of a boat consists of a Tindal or master, ten divers, and thirteen other men, who manage the boat and attend the divers when fishing. Each boat has five diving-stones (the ten divers relieving each other); five divers are constantly at work during the hours of fishing. The weight of the diving-stone varies from 15 to 25 lb., according to the size of the diver; some stout men find it necessary to have from 4 to 8 lb. of stone in a waist-belt, to enable them to keep at the bottom of the sea, to fill their net with oysters. The form of a diving-stone resembles the cone of a pine; it is suspended by a double cord.

"The net is of coir-rope yarns, eighteen inches deep, fastened to a hoop eighteen inches wide, fairly slung to a single cord. On preparing to commence fishing, the diver divests himself of all his clothes, except a small piece of cloth; after offering up his devotions, he plunges into the sea and swims to his diving-stone, which his attendants have slung over the side of the boat; he places his right foot or toes between the double cord on the diving-stone—the bight of the cord being passed over a stick projecting from the side of the boat; by grasping all parts of the rope he is enabled to support himself and the stone, and raise or lower the latter for his own convenience while he remains at the surface; he then puts his left foot on the hoop of the net and presses it against the diving-stone, retaining the cord in his hand. The attendants take care that the cords are clear for running out of the boat.

"The diver being thus prepared, he raises his body as much as he is able; drawing a full breath, he presses his nostrils between his thumb and finger, slips his hold of the bight of the diving-stone, and descends as rapidly as the stone will sink him. On reaching the bottom he abandons the stone, which is hauled up by the attendants ready to take him down again, clings to the ground, and commences filling his net. To accomplish this, he will sometimes creep over a space of eight or ten fathoms, and remain under water a minute; when he wishes to ascend he checks the cord of the net, which is instantly felt by the attendants, who commence pulling up as fast as they are able. The diver remains with the net until it is so far clear of the bottom as to be in no danger of upsetting, and then begins to haul himself up by the cord hand over hand, which the attendants are likewise pulling. When, by these means, his body has acquired an impetus upwards, he forsakes the cord, places his hands to his thighs, rapidly ascends to the surface, swims to his diving-stone, and by the time the contents of his net have been emptied into the boat he is ready to go down again.* One diver

* A diver who descends four to eight fathoms usually remains under water for a minute; the longest period noted by Master Attendant Stuart was 87 seconds: the ex-

will take up in a day from one to four thousand oysters. They seldom exceed a minute under water; the more common time is from fifty-three to fifty-seven seconds; but when requested to remain as long as possible, they can prolong their stay to something more than eighty seconds. They are warned to ascend by a singing noise in the ears, and finally by a sensation similar to hiccup."

The divers have much faith in a person called the shark-charmer, and many of them will not descend unless he be present: he is therefore paid by government. One-fourth of the oysters taken up belong to the divers, the remainder are disposed of by public sale. The pearl oysters are sold to speculators at prices varying from 14*s*. to 120*s*. per 1,000. The number of large pearls found is very limited compared with the mass of seed and defective gems, which are frequently pounded and used as an ingredient in a highly-prized electuary. They are also burnt into chunam or lime, and masticated by the wealthy with betel-leaf and areka-nut.

ANIMALS abound, from the gigantic elephant to the many-coloured chameleon; indeed earth, air, and water are instinct with life. The elephants of Ceylon have long been famed for their size and docility; but some writers assert that the African species is the larger. I have, when traversing parts of Ceylon and districts of Africa, had ample opportunities of comparing both beasts in their wild state.

The Asiatic quadruped generally stands higher than any I ever saw in Africa; the head is not so large, neither are the limbs so unwieldy; and according to the respective accounts of those who catch and domesticate them, the former is a much more valuable animal than the latter to man. Though still numerous in Ceylon, these extraordinary creatures will doubtless disappear before cultivation and civilisation. They have been for some time used in government works, in drawing timber and stones for bridges, and in conveying the baggage of a regiment when on the march, a duty for which their surefootedness over the mountains, no less than their great strength, renders them peculiarly adapted.

The tiger of Ceylon is a formidable and destructive animal, and so bold that it has been known to come into a bazaar and snatch off some unfortunate cooley, or seize on an European soldier's child while the mother has been spreading out her washed clothes on the hedge opposite her dwelling. The buffalo in its wild state is also a very dangerous opponent, particularly if his antagonist wear a red coat or jacket. The elk assimilates in appearance to the fossil remains of those found in Ireland. Deer of every variety are plentiful, and their flesh, when preserved in honey for two or three years by the wild Veddas, forms a feast which a London alderman once tasting would never forget.

Snakes are numerous; but of twenty different kinds, examined by Dr. Davy, sixteen were found harmless. The *tic polonga* of the *coluber* species is the most deadly in its poison; I have seen a powerful dog die in fifteen minutes after being bit, and a fowl in less than three minutes: the *cobra capello, carawalla,* and three or four others, are nearly equally fatal. The natives say the *tic polongo* lies in wait on the roadside to dart out on travellers; my observations led me to believe such is really the case. A large snake called the *pimberah* exists, the length of which is thirty feet. While travelling through Ouva and the central provinces, I have been assured by the Mohanderems of the districts, particularly towards Ruanwelle, of the existence of boa-constrictors of more than thirty feet in length. The alligator is found in most rivers, and the jackal in every tope; the mountain provinces are infested with a small leech, that clings with peculiar tenacity to the bare flesh, and draws much blood; its bite, acting on a diseased system, is productive of considerable after-suffering.

Wild peacocks are abundant in the interior. The jungle cock is a splendid bird, equal, if not superior, in plumage to the golden pheasant. The quail, snipe, and woodcock of the upper districts would please any epicure, and a fish gourmand, whether on the coast or inland, need never feel satiety, if variety and exquisiteness of flavour could ensure appetite. The beef is small, but sweet, and the mutton of Jaffnapatam almost equal to "*South Down*."

The resources of this fine island are as yet but very imperfectly developed: numerous valuable oils, resins, dye-stuffs and woods, and various peppers, cardamoms, spices, and drugs, are produced naturally, and require but rude labour for their preparation. An excellent botanic garden has been formed for the trial of various tropical products; and as the island has abundance of waste land, plenty of cheap labour, and security for life and property, skill and capital are alone wanting to make this fine colony one of the most lucrative tropical estates belonging to the Crown of Britain; to which it is no expense, but, on the contrary, a source of profit and advantage.*

pert can descend 14 fathoms = 84 feet; but the superincumbent pressure is dangerous to life. A fortunate diver may bring up 4,000 oysters a day, and if pearls abound his share would average 9*s*. But the fishery is a lottery; one oyster may contain 150 seed-pearls—and 150 may be opened in vain.

* Sir J. E. Tennent, in his report to the secretary of state in May, 1847, states, that "in Ceylon agriculture, in all its branches, must be regarded as an art almost unknown. Notwithstanding all its advantages in variety of soil, graduations of temperature, and adaptability of climate, the cultivation of rice may be said to be the only successful tillage of the natives. And yet with the favourable circumstances alluded to, and the expanse of surface to be applied, it is impossible to foresee the extent to which the productions of nearly every other country might be domesticated and extended throughout this island. In the highlands and mountain regions, and particularly in the wooded valleys and open plains which are found at an elevation of from three to seven thousand feet, there is an encouraging field for the introduction of most of the *grains and vegetable productions of Europe*; and from the limited experiments which have been made up to the present time, there is good reason for believing that more extended operations would be attended with very beneficial results to the colony. In this conviction, the government has had numerous applications for lands in the hills suitable for the rearing of stock and European crops, for which a ready market would be found in the coffee districts and the towns and villages of the central province; and the intimation of your lordship's readiness to permit the leasing of lands for these purposes is likely to give a rapid extension to such undertakings."

# SECTION II.

## MAURITIUS, OR ISLE OF FRANCE AND ITS DEPENDENCIES.

Mauritius, or, as it is usually termed, *Isle of France,* is situate in the Indian Ocean, forty leagues to the N.E. of the Isle of Bourbon, and 160 from the great island of Madagascar, between the parallels of 19° 58′ and 20° 32′ S. lat., and the meridians of 57° 17′ and 57° 46′ E. long. It is nearly elliptical in form, measuring in length about forty miles* from north to south, and thirty-two from east to west, and comprises an area of 432,680 superficial English acres, or 676 square miles.

The island was discovered in the year 1507, by Don Pedro Mascarenhas, a navigator of the Portuguese government in India, under the orders of Governor Almeida. Mascarenhas named the island *Cerné.*† The Portuguese do not seem to have made any settlement during the period they were masters of the island, which comprehended almost the whole of the 16th century; but they placed some hogs and goats on *Cerné* and Bourbon, to furnish food in the event of any of their vessels being wrecked thereon.

In 1598, the Dutch admiral, Van Neck, at the head of a large squadron, landed on and took possession of *Cerné,* which he named *Mauritius,* in honour of the Prince of Orange. The Hollanders did not, at this time, settle permanently on the Mauritius, but occasionally touched there to water. Fifteen years later, Captain Castleton, the commander of an English ship, visited the island, which he found still uninhabited; and thus it continued until some pirates in the Indian seas located themselves on its shores; but at what precise period, it is impossible to say.

In 1644, the Hollanders erected a fort at South-East Port, anticipating by a few days a French expedition from Dieppe.

In 1648, slaves were procured from the French settlement in Madagascar,‡ and the usual course of enormities followed: many of the captives fled to the mountains, became Maroons, and harassed the whites (*see* "Jamaica" section of this work), who retired from the island. It was subsequently re-occupied for the benefit of the Dutch shipping to and from India; but ultimately abandoned to the hostile Maroons in 1712.

In 1715, the French from Bourbon having heard of the evacuation, sent Captain Du Fresne, R.N., to take possession, and name the territory *Isle de France.* These proceedings were approved in Paris, and the king ceded the island to the French E. I. Cy., under whose sway it remained from 1722 to 1767. The inhabitants, however, for a long time were chiefly composed of adventurers, refugees, or pirates, from all nations, and it was not until 1730 that the home government and the French E. I. Cy. began to pay attention to the island, by sending engineers and other persons to form a regular establishment; the real founder and father of the colony being M. de la Bourdonnais, who was sent out as governor-general of the Isle of France, Bourbon, &c., in 1734.

Previous to the arrival of this celebrated man (*see* "British India" section of this work, p. 247) in 1735, the French E. I. Cy. had been at considerable expense in maintaining the Mauritius, which was considered to be solely fit for a refreshing station for their ships, while Bourbon was made a great coffee plantation. La Bourdonnais, in order to benefit the company's finances, introduced the culture of the sugar-cane, established manufactures of cotton and indigo, attended to agriculture and commerce, defeated the Maroon negroes by arming a part against the remainder, founded a court of justice, made roads, fortified the coast,

* The greatest diameter of the oval is 63,780 yards, and its breadth 44,248 yards. Some estimate the length at 35, and the breadth at 20 miles.

† The denomination of *Cerné* was said to have been applied by Pliny to Madagascar, but it does not seem probable that the Roman historian was acquainted either with that island or Mauritius.

‡ Mr. Pridhave, in his useful work on this island, says that Pronis, the French governor, kidnapped a number of Malagashes who had settled under his protection, including some of the highest class of natives, and sold them to the Dutch.—(vol. i., p. 11.) Madagascar for many years supplied slaves to the Mauritius.

formed aqueducts, arsenals, batteries, fortifications, barracks, wharfs, &c., and in the eleven years during which his government lasted, changed the whole face of the country, laying the foundation of a state of prosperity which subsequent disasters, however, almost entirely destroyed.

The French nation had their attention more strongly directed to the island, when they witnessed its great utility in strengthening and succouring Admiral Suffrein, who was thereby enabled to injure materially the commerce of England in the East. The renewal of the charter, or rather the reformation of the French E. I. Cy., in 1784, was carried through with a proviso that all merchant ships from France should be permitted to proceed thus far towards India, and that the islanders might prosecute trade with every possession of the French company, commercial intercourse with China being, however, forbidden. The transmission of ample annual supplies of European merchandise was guaranteed to the Mauritius, which now became an entrepôt for oriental commerce, and several mercantile factories were established.

As may be supposed, these measures gave incitement for the formation of a commercial depôt, rather than encouragement to an agricultural colony; but the population rapidly augmented, and the settlement proceeded successfully. The supreme control was entrusted to a governor and intendant, who acted in a most arbitrary manner; and the breaking out of the revolution in the mother country, in 1789, gave the signal to the restless and discontented community to declare in favour of a National Assembly, and endeavour to overthrow the established government. As the French revolution materially influenced colonial affairs, a brief narration of its results in this settlement may be desirable, in order to show the disadvantages arising from anarchy in a powerful and leading state.

Until the arrival of a ship from Bordeaux, in January, 1789, the Mauritius had been despotically governed; this vessel brought the exciting news of the great power usurped to itself by the National Assembly at Paris, and as the captain, officers, and crew, wore the tricoloured cockade, a similar emblem was soon generally adopted by the colonists, and advertisements posted in the streets, inviting all the *citizens* to form themselves into primary assemblies (after the example of those which had taken place in all the *communes* of France), in order to draw up memorials of complaints and demands.

General Conway, the governor, sent some soldiers to arrest the young men who had caused the advertisements to be posted up, but the people collected in the square at Port Louis, liberated the prisoners on the road to the gaol, compelled M. Conway to wear the national cockade, and on the following day united themselves into a primary assembly, and constituted different authorities, to whose discretion they confided the interior government of the colony. At this crisis, M. de Macnamara, commander of the French marine in the Indian seas, arrived, and did not conceal his displeasure on being made acquainted with these insurrectionary proceedings. The soldiers of the 107th and 108th regiments, who formed the garrison of the island, following the example of the army in France, adopted the cause of the revolutionists. Macnamara thought it his duty to acquaint the minister of marine with the state of affairs. His intention was betrayed—a copy of the letter being sent to the barracks, the soldiers threatened summary vengeance, to execute which the grenadiers seized upon the boats and canoes, and proceeded to the flag-ship to seize the person of Macnamara, who ordered the cannon to be loaded and pointed; but the moment the insurgents approached and hailed the seamen in the republican style, the latter refused to defend their commander, and actually suffered him to be carried off as a prisoner to the self-constituted authorities then assembled in the church. These, with the desire of saving the brave admiral from the fury of the populace, after a few formal interrogatories, ordered him to be conveyed to prison, but thoughtlessly left him to be conducted thither by the soldiery. The admiral, on his way to confinement, passing the shop of a watchmaker of his acquaintance, rushed in at the door, and endeavoured to defend himself with his pistols; but the soldiers threw themselves on him, and almost instantly massacred him. The people now formed their Colonial Assembly, consisting of fifty-one members. M. Conway proceeded to France, and, in 1792, M. de Malartic, named by the king as governor-general, arrived at his post, and gave the sanction of the state to the laws of the assembly. Affairs might have now gone on quietly, but that the news of the power of the Jacobin clubs in France gave a stimulus to the discontented; and a revolutionary assemblage, called the *Chaumière*, was established, which soon overawed the constituted authorities. Such was the power of this club, that M. de Malartic was forced to grant its members a vessel to carry one hundred men to the contiguous isle of Bourbon, for the arrest of the governor, civil commissary, and commandant of the marine, who were to be conveyed thence as prisoners to the Isle of France, on the charge of having corresponded with the English. These functionaries were landed at Port Louis, marched by an armed deputation to the *Chaumière* club then sitting, where the president (formerly a police-officer) thus addressed them—"*The people accuse you, and the people will judge you!*" They were then fettered and conducted to a dungeon, where they remained six months. A guillotine was established by order of the *Chaumière*, and but for the prudence of the Colonial Assembly, in ordering that the prisoners of the Jacobins should be judged only by a court-martial, named by all the citizens of the colony, united in primary assemblies, each in his own district, much blood would, undoubtedly, have been shed by these unprincipled and infuriated men. Sufficient delay was gained to afford the assembly time to concert together, so that the choice of

members of the commission should fall upon upright persons. In spite of these precautions, the proceedings of such a club would have rendered the guillotine an object of well-founded terror; but at this moment the aspect of the political horizon was wholly changed by the tidings of the general decree of the French republic for the immediate abolition of slavery.

In a community of 70,000 persons, where upwards of 55,000 were slaves, such a summary order, without a word about pecuniary compensation, may well be supposed to have created alarm; the Jacobin club was annihilated, the guillotine removed from the public square, the prisoners set at liberty without a trial, and the late popular leaders, to the number of thirty, arrested, and sent on board a ship bound for France. The planters, with the news of what was occurring at St. Domingo continually arriving, knew not what steps to take; some proposed declaring the colony independent of the French republic, and others sought to temporise, at least by delaying the promulgation of the decree.

While deliberating (18th July, 1796), a squadron of four frigates, under Vice-admiral Sercy, with two agents from the French Directory (named Baco and Burnel), reached Port Louis; the colonists protested in vain against the debarkation of the new functionaries, who, dressed in the directorial costume, landed in state, and proceeded to the Colonial Assembly, to take on themselves the government of the colony, in which they were to be aided by 800 men of the revolutionary army, and two troops of artillery, all brought from France. Before three days had elapsed, the menacing tone of the agents was such as to create general alarm: they threatened to hang the governor, and proceeded to enact various severe measures, but without promulgating their intentions respecting the slaves. At length, says Baron Grant, in his interesting narrative, "twenty young creoles devoted themselves to the welfare of the colony, and vowed the death of those instruments of republican despotism;" and eventually the agents owed their lives to the governor and assembly, by whom they were conveyed on board a ship (*Le Moineau*), with orders to be landed on the Philippine Islands, as the place most distant from France.

No stranger instance of the working of the revolutionary leaven can well be desired than the fact, that on the day after the *Moineau* sailed on her route towards the Philippines, the agents dressed themselves in their directorial costumes, harangued the ship's company, induced them to mutiny against the orders of the captain, and steer for France.

Meanwhile the colonists gave full vent to rejoicing over the dangers they had escaped, and the soldiers who had stood by the assembly were honoured and caressed in every place, while money and largesses were liberally bestowed on them. The troops brought by the agents threatened to prove dangerous, as they resolved on freeing the negro women who lived with them; but Governor Malartic contrived to ship them off for Batavia, under pretence of reinforcing the Dutch against the common enemy, the English. There now only remained in the island the skeletons of the two old regiments before mentioned, and the colony remained tranquil until May, 1798, when these soldiers also formed a plan of proclaiming liberty to the slaves, in order to frustrate which, the Colonial Assembly obtained an order from General Malartic for the two grenadier companies to embark on board the frigate *La Seine*, then ready to sail on a cruise. A rumour was raised and extensively circulated among the troops, that the result of compliance would be either to place them in the power of Tippoo Sultan, with whose cruel character they were well acquainted, or to expose them to the destructive climate of Batavia. The grenadiers, influenced by these anticipations, refused to obey the order for embarkation, and induced the other companies to mutiny, take up arms, seize the field-pieces which were in their quarters, and even to break open the doors of the armoury where the cartouches and cartridges were kept. Fortunately the officers of the regiment restrained the fury of the men, and kept them from rushing out of their quarters in arms. In this crisis, the Colonial Assembly were not idle; they summoned every freeman capable of bearing arms, from all parts of the island, and at daybreak on the 25th of April, each one at beat of drum was at the post assigned him; a battery planted upon a hill commanded the court where the soldiers had been under arms the whole night, and twelve field-pieces, supported by the young national guard of the colony, advanced in four columns to attack the troops in their quarters. General Malartic then advanced at the head of the newly raised force, and again commanded the grenadiers to embark, which, however, they refused to do; the matches were lighted, and a bloody contest was on the eve of commencing, when the acting committee of the Colonial Assembly proposed that the two regiments should be permitted to proceed to France in the *Seine* frigate and a merchantman, and allowed until noon to make up their linen and knapsacks and depart; after some hesitation the soldiers consented, and a few hours later, the Mauritius was freed from 800 armed stipendiaries of the French republic. The colonists now sought for and expected peace; they had freed themselves from the agents and troops of the French Directory; and the assembly, renewed every year by the nomination of the citizens of the colony, was linked, as it was thought, with the happiness and prosperity of the colony. But disputes soon arose respecting the laws about to be established for the repayment of debts contracted in paper currency, the depreciation of which (as issued by the administrators of the French republic) was so great as to be but *a thousandth* part of the sum it nominally represented.

As soon as intelligence reached the island respecting the laws which the two governing councils of France had decreed, relative to the payments of the debts contracted in the paper currency, the creditors, who were greatly favoured by these laws, demanded the execution of them: the debtors, on the other hand, represented with great force and truth, that the circumstances in general under which the various engagements had been made in the colony being different from those which had taken place in France, it would evidently be unjust to apply the same arbitrary mode of settlement, when there was a manifest diversity in the conduct of previous proceedings. The Colonial Assembly, acting on principles of equity, was on the point of arranging these differences, when the creditors, to frustrate the aims of the assembly, blinded and maddened by self-interest, entered into a conspiracy on the 4th Nov., 1799, seized the guns, and loudly demanded of General Malartic to dissolve the obnoxious assembly. This demand the governor was obliged to comply with, in order to save the most distinguished members from being murdered on the instant. Several of the

confederates rushed forwards, and obliged the senators to escape by the back doors. This summary dissolution did not satisfy the malcontents: they compelled the general to sign an order for the imprisonment of twelve different members of the assembly, with a view of preventing, by any possibility, the passing of any law which should enact the reimbursement of the debts contracted during the course of a depreciated paper currency. The "*sans culottes*" now formed themselves into armed associations, and the creditors, whom they had aided in dissolving the Colonial Assembly, became in turn alarmed when they perceived the march of the country-people on Port Louis (the capital), to rescue it from the dominion of the *sans culottes;* the latter, finding themselves abandoned by the creditors, and being, like most men in a bad cause, weakened by internal strife, offered no resistance to the entry of the country national guard into the town: and the riots were concluded by shipping off the chief ringleaders for France. The Colonial Assembly having been dissolved, Governor-general Malartic, in conjunction with the primary assemblies of the colony, formed another legislative body (twenty-one members), less numerous than the former (fifty-one members), whose number had proved a source of much inquietude; the new members were in the proportion of fourteen for the country, and seven for the town,* nominated by the primary assemblies of each canton in the island.

From this period the colonists enjoyed tranquillity, and the cultivation of the island rapidly extended. Buonaparte saw at a glance its important position for the hinderance of British commerce; and under the government of General Decaen, with the aid of a strong naval squadron, commanded by Admiral Linois, the Mauritius assumed a leading part in the eastern hemisphere, to the great injury of our trade.

The Marquis Wellesley, when governor-general of India, in 1800, projected and fitted out an expedition destined for the conquest of the Mauritius and Bourbon, the command of which was offered to his brother Arthur, then Lieutenant-colonel Wellesley, who was to have assumed the governorship on their conquest. The expedition of the Indian army to Egypt took the place of that designed against the Mauritius, but it was urgently pressed on the home government by the marquis that no time should be lost in destroying the nest of French pirates which these islands harboured. In all their enterprises against British commerce, the French were materially assisted by a set of desperate American speculators, who infested the whole of our possessions in the East: they brought fast-sailing ships to the Mauritius, fitted them out, met them at fixed stations, gave intelligence of the progress of all our trade; bought not only the cargoes of the prizes for the American markets, but the hulls of the ships to carry back to our own settlements; and there are strong reasons to believe collusive bargains were entered into in anticipation of the captures made in consequence of such intelligence: in short, the island became a rendezvous for free-booters of every nation to assemble at their ease, fit out privateers, and commit depredations on English property.

To put a stop to these proceedings, a strong armament of 12,000 troops, with twenty ships of war, was simultaneously dispatched from India and from the Cape of Good Hope, for the conquest of the Mauritius in 1810: a landing was effected some distance from Port Louis; and after the French troops and the national guard had suffered several repulses, a capitulation was entered into, and the island became a dependency of the Crown of Great Britain. At the peace of 1814, the possession was finally ceded to us, and it has since remained a colony of the empire, without any occurrence deserving of comment.

---

Physical Aspect.—From whatever quarter the Mauritius be approached, its aspect is exceedingly romantic and picturesque;† the land rises from the coast to the middle of the island, and chains of mountains intersect it in various radii, from the centre to the shore: three principal ranges rise 1,800 to 2,800 feet above the sea; few presenting bare rock, except at their very summits.‡

Plateaux of several leagues in circumference, and of different elevations, form the districts of Moka and Pleins Wilhems. Several streams have their source among the mountains, running generally through deep ravines, pervious, however, to the breeze and to the rays of the sun.

The principal rivers are named *Port Louis, Latanier, Pleins Wilhems, Moka, Rampart, Great and Little Black Rivers,*

* The population of Port Louis was then estimated at three-fifths of that of the whole island, which contained 48,000 slaves, and 8,000 Europeans and mulattoes.

† The Mauritius scenery depicted by Bernardin de St. Pierre, in *Paul and Virginie*, is strictly correct; but the narrative, charming as a fiction, has few claims on the score of truth.

‡ The following are the names and heights, in *yards*, of the principal mountains:—Long Mountain, flagstaff, 178; Port Louis, ditto, 332; the Pouce, 832; Pieterbooth, 840; Corps de Garde, 738; Rampart, 792; Trois Mammelles, 684; Bamboo, 644; Little Black River, 848; Post Mountain, 618; Morne Brabant, 566; Mountain of Savanne, 710.

*Post, Creole, Chaude, Savanne, Tombeau;* and about twenty others of less note.

Grand River rises in the interior of the island, takes its course through the hollow of a deep ravine, receives many tributaries in its progress, divides the district of Moka from that of Pleins Wilhems, and falls into the sea, on the west side of the bay. In its passage several considerable cascades are formed, which, added to the great perpendicular height of the banks, varied with the richest foliage and abrupt masses of rock, present to the eye many picturesque and beautiful views. The stream itself is shallow, but navigable for boats for a few hundred yards before its entrance into the bay. The water is excellent, and conveyed to Port Louis by an aqueduct three miles in length. A pretty village, surrounded by many country seats, is built on both sides of the river, which is crossed by a bridge with five arches. The beauty of the scene is enhanced by a chain of mountains, of which the *Decouvert* forms one termination, the *Pouce* nearly the centre, and *Au Riz* the opposite limit; the whole constituting nearly a semicircle. Black River, situate on the west or leeward side of the island, and distant from Port Louis about nineteen miles, takes its rise from behind a chain of southerly mountains, after traversing a deep ravine at the foot of the Peton; and flowing between them and the mountain called Black River, it passes over a pebbly bed with a gentle current (except in the wet season), and is barred where it joins the bay by a bank of sand and coral.

The two principal Ports are—*Port Louis,* to the north-west or leeward; and *Mahebourg,* or Grand Port, on the south-east or windward shore.

Port Louis (the seat of government) is a neat town, well laid out, and contains many handsome buildings, with good markets. The shops are numerous, and are characterised by a more European aspect than those of any other colony. The shipping lies close to the busy town, and adds to the picturesqueness of the scene. Behind Port Louis the *Champ de Mars* extends in a gradual slope to the mountains; around this park there are many neat villas, shaded by groves of various trees. The buildings erected by the French are generally creditable to their taste. The government house is a large misshapen building, but commodious within. The town and its envirous are encompassed by a chain of lofty eminences, except on the north-west side, which is bounded by the sea; the plain is about 3,700 yards in length, and 3,200 in breadth, divided, however, towards the centre by a ridge called the *Small Mountain,* which joins at right angles the great chain of the *Pouce* (so called from its resemblance to the thumb of a human hand), which is 2,496 feet above the sea. Further eastward, in the same chain, is the *Pieterbooth* mountain, 2,500 feet high, terminated by a natural obelisk of bare rock, surmounted by a cubical mass larger than that on which it is balanced, and looking like a pyramid, with an inverted cone on its summit: this extraordinary pinnacle was ascended by a party of four British officers on the 7th of September, 1832, and the ensign of England planted on the dizzy height, where never before flag waved, or human footstep trod.* The contiguous *Pouce,* whose summit is within 260 feet of the height of the *Pieterbooth,* was ascended by lieutenants Fetherston, Clark, and myself, in 1825.

The harbour of Port Louis has on its north-east Tonnelliers Point. It was formerly insulated, but, previous to the British capture, joined by a causeway to Port Louis, termed Chaussée Tromelin. The river Lataniere here enters the harbour in many streamlets.

*Fort Blanc* is at the opposite side of the harbour to Fort Tonnelliers; and the batteries on both sides command the entrance into the port.† Flacq (a military post) is situate on the north-east coast, in an open, well-cultivated plain, the country rising gradually towards the interior, bounded by a chain of mountains from six to eight miles distant, and watered by *La Poste* river.

Port South-East has two entrances, but on account of the difficulty of getting out of

* A very interesting account of the ascent, written by Lieutenant Taylor, of the royal engineers, has been published in the Transactions of the Royal Geographical Society.

† During the war, four of our frigates attempted to enter Port Louis to cut out some Indiamen captured by the French vessels: they ran aground and were exposed to the cross-fire of the batteries; one of their commanders (Captain Willoughby) would not allow his colours to be hauled down; and when his crew were all *hors de combat,* the British vessel was boarded by the French, and Willoughby was found sitting on the capstan, his arm dangling in its socket, his eye hanging on his cheek, singing "Rule Britannia!" Even thus maimed, the dauntless sailor fought until overpowered by numbers.

the harbour, it is not so generally practicable a haven as Port Louis; but is used by the coasting vessels. About five miles to the northward of Grand Port is situated the lofty eminence called *Leon Couché*. The *Bamboo* mountain, which is the principal height around the port, rises 966 yards above the sea.

There are several Lakes: the principal, called the *Great Basin*, is situated on the most elevated plain in the island, and surrounded by wooded heights, which attract the clouds, and feed the streams running from the lake, which is of considerable depth.

The Caverns are extremely curious, and appear like vast quarries of stone, originally resting upon earth which has since abandoned them, giving the semblance of vaults formed by human labour: they are all situated on gentle declivities. I entered one, accompanied by guides with torches; but after traversing a considerable distance, the men refused to attend me further, alleging that the dreary passage communicated beneath the ocean with the island of Bourbon. Although some distance from the sea, the roar of the waves was as distinctly audible as if they had been actually rolling over our heads.

---

Geology.—The appearance and composition of the island would indicate it to be of volcanic origin. The rocks are disposed in strata, which rise from the sea-shore, and form in the centre of the island an elevated plain, upon whose declivity are several rocky eminences. These may be regarded as the remains of an immense exhausted volcano, the sides of which have fallen in, either by the effects of a violent eruption or by an earthquake, leaving the firmly supported walls standing. The structure around consists of ironstone, and a species of lava of a gray colour, the soil produced from the decomposition thereof forming an earthy substance composed chiefly of argyl and an oxyde of iron.

The tops of the mountains are in general indented with points like the comb of a cock; the few which have flat summits present the appearance of a pavement.

A bank of coral surrounds the shore for the distance of a quarter of a league: where the coast is steep, rocks prevail, as at the Quoin de Mer, &c. Wells have been sunk forty to fifty feet near Port Louis, where nothing but a bed of flints was found, and a kind of clay which contained talc and lenticular stones; although excavated to the level of the sea, no coral was arrived at, nor any coral or shells discovered in the elevated parts of the island, though so plentiful on the sea-shore—a proof that the ocean has not covered the land, or, in other words, that it is not of diluvian origin: no trace of a volcanic crater, however, exists.* A mineral spring near Port Louis is much resorted to by invalids.

The Soil is in many parts exceedingly rich; in some places it is a black vegetable mould, in others a bed of solid clay or quaking earth, into which a stake of ten feet in length may be thrust without meeting any resistance. The surface of the plain at Port Louis is of coralline or calcareous rock, with a slight covering of vegetable soil: at St. Denis it is of a reddish hue, lightly spread over a stratum of stone; the Field of Mars is a bed of rich clay mixed with flints; but more generally the earth is of a reddish colour, mixed with ferruginous matter,† which often appears on the surface in small orbicular masses; in the dry season it becomes extremely solid, and resembles potters' earth from its hardness; after rain it becomes viscid and tenacious, yet it requires no great labour in cultivation. Many of the plains and valleys are strewed with huge blocks of stone, but there is no real sand in the island.

---

The Climate is salubrious:‡ there are four seasons; the first begins in May, accompanied by south-east winds, when squalls and rains occur; the second, with September or October, when the south-east changes to the north-west; the sun then approaches the zenith, and the atmosphere becomes genial: the rains and winds return again in December, when the third period commences; and this gives place in March to the fourth or dry season, which lasts for only about eight weeks. These are the seasons as regard the cultivator; but they

* There is one at Bourbon which not unfrequently sends forth flames.

† This description of soil is found well adapted for the growth of the sugar-cane in the West India Islands. (*See* Jamaica, Montserrat, St. Kitts, &c.)

‡ There are no marshes or swamps on the island. At Port Louis, and some of the other parts of the coast, there are flats occasionally overflowed by the tide: it may have been the malaria arising from these, aided by the peculiar state of the atmosphere, that the epidemic cholera raged in 1819. It is alleged that this fearful disease was brought by a trading ship.

may be generally divided into two, when the winds blow from the south-east to south, and from the north-east to north, forming a kind of monsoon. The south-east gales, although they never exceed a certain degree of force, are always more or less strong and violent; they give a freshness to the air, yet, while they blow, vegetation is imperfect. The winds from the south prevail in winter, and are cold; east winds are infrequent, and generally accompanied by abundant rain. The north-west and west winds are hot, often gentle, interrupted by calms, violent storms, and great rains. "Violent commotions in the atmosphere," says Dr. Burke, "have from long experience been generally observed synchronous, with the changes of the moon."

The following meteorological table will show the state of the climate at Port Louis, situated on the north-eastern, and probably the hottest side of the island:—

| Months. | Thermometer. | | Barometer. | | Prevailing Winds. | Weather. | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Maximum. | Minimum. | Maximum. | Minimum. | | Days of Rain. | Rain. Inches | Rain. Dec. | Thunder |
| January . . . . | 87 | 77 | 30 | 29 | S.E. & N.W. | 7, 10, 11, 17, 18. | 8 | 47 | 1 |
| February . . . | 87 | 79 | 30 | 29 | — | 7, 9, 12, 13, 15, 16. | 10 | 19 | — |
| March . . . . | 85 | 78 | 30 | 29 | N.W. & S.E. | Ditto. | 10 | 4 | 3 |
| April . . . . . | 85 | 76 | 29 | 29 | S.E. & N.W. | Rain and tempests. | 4 | 91 | 6 |
| May . . . . . | 79 | 71 | 30 | 29 | S.E. & N.W. | Ditto and cloudy. | — | 85 | — |
| June . . . . . | 79 | 73 | 30 | 30 | S.E. | Cloudy. | — | 57 | — |
| July . . . . . | 75 | 71 | 30 | 30 | — | Do. 18, 19, thunder. | — | 56 | — |
| August . . . . | 77 | 72 | 30 | 29 | — | 1, 2, 5, 6, 15, rain. | 1 | 59 | — |
| September . . . | 79 | 70 | 30 | 29 | S.E. & N.W. | 2, 3, 6, 9, 20. | — | 86 | — |
| October . . . . | 93 | 73 | 30 | 29 | S.E. brisk. | None. | — | 86 | — |
| November . . . | 84 | 72 | 30 | 29 | — | 8, 9, 11, 22, 23, rain. | — | 40 | — |
| December . . . | 96 | 77 | 30 | 29 | E. & S.E. | Showery. | — | — | 1 |

At Black River Post the atmosphere is in general mild and dry, as the rains do not often reach the shore, for the lofty mountains in the neighbourhood attract the laden clouds. The months of September, October, and November, are dry and moderately warm; the mean of the thermometer 79, and the prevailing winds S.E., N.N.E., and N.W. In December, January, February, and March (which form the wet season), the heat is greatest; mean 86, winds N.N.W., W., and S.W. April, May, June, and July, cool and refreshing; mean 70, winds S. and S.E. in strong breezes. At the *Powder Mills* the mean heat throughout the year, is at sunrise 70, afternoon 86, and sunset 72. On the mountain eminences the climate is that of a temperate region.

Many of the E. I. Company's civil and military officers seek and find health at Mauritius; and I have myself, when suffering from an African fever, found the air, especially at Moka, elastic and invigorating.

The hurricane months are January, February, and March; but these tempests do not occur every year: their return is uncertain; nor does it appear that of late years they have been so numerous or so severe as they were wont to be. At Tonnelliers battery a large 24-pounder was shown me, which, in a *coup de vent,* was blown from the rampart, whirled about in the air like a feather, and then dropped several hundred feet from its original position. The inhabitants travelling on the roads cannot keep their feet when the hurricane is blowing in its strength.*

* Owing to the purity of the atmosphere, the sky at the Mauritius is of an intense blue; and the mountains stand out in bold relief. Connected with the atmospheric rarity, is the singular fact of a Frenchman (I think M. Fillifay by name) having discerned ships at sea some hundred miles distant. The time for observation was at morning dawn, when the observer proceeded to a gentle eminence, and looked in the sky (not on the horizon), where he beheld, *with the naked eye,* the object inverted within his peculiar vision, which was of course extended or contracted according to the rarity of the atmosphere. The reality of this strange faculty was verified by several striking instances of correctness, viz., when the British vessels were assembling at Rodrigue (300 miles to the eastward of Mauritius), in 1810, to attack the island, M. Fillifay stated so to the French governor, and was, it is said, imprisoned for raising false alarms: at another time he discerned what he described as *two vessels* joined together, or if there were such a thing, a *four-masted ship;* in a few days an American *four-masted schooner* entered Port Louis: again he saw an Indiaman dismasted when nearly 400 miles from the island, and afterwards announced her to be erecting jury-masts and steering for the island, which proved to be the case. When at Port Louis I went on shore frequently with my brother-officers at noon, when M. Fillifay, in his ancient dress (somewhat like our Greenwich pensioners), rode on his stout mule down to the wharf to inform the port officer what vessels were in (*his*) sight. When asked, his answer would perhaps be, "a ship north-east 200 miles—nearly becalmed;—a schooner west, will make the land to-morrow;—two brigs standing to the southward," &c., &c.: his "report," which was invariably accurate,

The range of weather round the coast is thus shown; the average being deduced from the different military stations:—

| Months. | Thermometer. | | Weather. |
|---|---|---|---|
| | High-est. | Low-est. | |
| January . | 86 | 74 | Warm and rainy, storms, sometimes thunder. |
| February . | 86 | 74 | Violent gales, occasional hurricanes and thunder. |
| March . . | 85 | 74 | W.S.W., rain less frequent, heat moderate. |
| April . . . | 88 | 73 | Fine season, delicious temperature. |
| May . . . | 82 | 70 | Winds westerly, dry, and air fresh and agreeable. |
| June . . . | 80 | 70 | S.E. constant, rain in drops. |
| July . . . | 79 | 64 | Ditto, strong breezes by day, calm by night. |
| August . . | 80 | 71 | Rain more or less daily, mountains cloud-capt. |
| September | 79 | 68 | Ditto, ditto, principally harvest weather. |
| October . . | 80 | 65 | Temperate, sometimes warm. |
| November | 83 | 71 | Winds variable, heat increasing, storms. |
| December | 86 | 73 | Ditto, ditto, sun vertical, heat moderated by clouds and rain. |

Population.—The first settlers at Mauritius and Bourbon were European pirates, who obtained wives from Madagascar. Their importance, in 1657, in the Eastern seas, may be estimated from the following occurrence, which took place at Bourbon, on which isle the French East India Company had then an establishment. The Portuguese viceroy of Goa anchored one morning in the roads of St. Denis, and disembarked purposing to dine with the governor: he had scarcely landed before a pirate ship of 50 guns came into the roads, and captured his vessel; the victorious commander then went on shore, demanded to dine with the governor and viceroy, and seated himself at table between these gentlemen, declaring the latter to be his prisoner. Wine and rich cheer put the pirate in good humour: at length M. Desforges, the governor, asked what the viceroy's ransom was to be rated at? "A thousand piastres," was the reply; "that," said M. Desforges, "is too little for a brave fellow like you to receive from a great lord —ask enough, or ask nothing." "Well, well, I ask nothing," said the corsair; "let him as your guest go free;" which the viceroy instantly did, and the court of Portugal recompensed the French governor.

After the colonisation of Mauritius by the French, a great number of adventurers flocked to the island from Europe, and other places, and slaves were introduced from Madagascar and Mozambique; but at what precise period we have no record. It would seem that the island was more populous during the period prior to the French revolution, than subsequent to that event, as it is on record that, in 1792, 20,000 persons perished of smallpox in the Mauritius. In 1799, the population was stated by Baron Grant, at—slaves, 55,000; whites and mulattoes, 10,000: total, 65,000. The armed force, national guard, blacks and mulattoes, numbered 2,000; blacks and mulattoes (to serve as chasseurs), with the artillery, 3,000: giving a total of 5,000.

In 1767 the population was 18,777, of whom 3,163 were whites, and 587 free blacks; the remainder slaves: in 1787, whites, 4,372; free blacks, 2,235; slaves, 33,832 = 40,439: in 1797, whites, 6,237; free blacks, 3,703; slaves, 49,080 = 59,020: in 1807, whites, 6,489; free blacks, 5,919; slaves, 65,367 = 77,768: in 1817, whites, 7,375; free blacks, 10,979; slaves, 79,493 = 97,847: in 1827 there were whites, 8,111; slaves, 69,076; free coloured, 15,444 = 92,631: in 1832, slaves—males, 38,124; females, 24,932 = 63,056: total population about 99,000. These must have been somewhat vague estimates. In 1836 the numbers are said to have been—general population, males, 5,926; females, 14,485 = 20,411; negro apprentices (formerly slaves), males, 33,189; females, 20,602 = 53,791: total, 74,202. It is alleged that a large number of slaves were clandestinely introduced into the colony previous to emancipation; certainly there was a great waste of human life shortly before that period.

The compensation awarded to slave-owners by the British parliament, in 1834, was—for 1,404 claims on account of 26,830 predial slaves attached to the soil, £912,059: for ditto non-attached—claims, 1,077; number of slaves, 7,594—£262,732; for non-predial slaves, including tradesmen, overseers, domestics, &c. —claims, 4,905; number of slaves, 22,275—£811,307. The average rate of purchase was thus £38 per head.

When slave emancipation was decreed, the Mauritius government determined to attempt providing a supply of free labour by encouraging immigrants from British India. In 1834, the number introduced was seventy males; from year to year there was an augmentation of this valuable class from Calcutta, Madras, and Bombay, who were under indentures to labour a fixed number of years, and then to be conveyed back to their native country, partly at the expense of the local government. The statistics of this population movement stood thus between 1835 and 1852:—*Increase* by arrivals in twenty years was—males, 126,212; females, 20,365 = 146,577; by births—males, 5,856; females, 5,455 = 11,311. The *decrease* by departures—males, 31,912; females, 3,186 = 35,098; by deaths—males, 19,449; females, 3,157 = 22,606. This shows a severe mortality among an adult population, arising too probably from being overworked and under-fed. The rate of mortality varied from two to eight per cent. per ann.

was written down at the captain of the port's office, M. Fillifay being a *pensionnaire* on the treasury. The practice or science was, he alleged, teachable; and I understood that a lady was learning to announce vessels under the instructions of the far-sighted Frenchman.

In August, 1846, the resident population amounted to 158,462, and the military and crews of the mercantile shipping, to 2,627 = 161,089. The last census shows the number of fixed inhabitants, by districts, at 180,823. Exclusive of Port Louis (38,000) the number of mouths to each square mile is 158.

*Population by District Census on 20th November, 1851.*

| Districts. | Area in sq. miles. | General Population. | | | Ex-apprentices and their children. | | | Hindoos and other Indians. | | | Total. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Males. | Fem. | Total. | Males. | Fem. | Total. | Males. | Fem. | Total. | Males. | Fem. | Total. |
| Port Louis and Vicinage[a] . . . | 10 | 14,471 | 13,635 | 28,106 | 5,788 | 5,192 | 10,980 | 8,989 | 1,834 | 10,823 | 29,248 | 20,661 | 49,909 |

| Total Residents . | — | 28,406 | 26,091 | 54,497 | 26,633 | 21,677 | 48,330 | 64,282 | 13,714 | 77,996 | 119,343 | 61,482 | 180,825 |

[a] Including Grand River, Vallee des Pretres, and Rochebois.

*Note.*—The military population, not included in the above, consisted of—males, 1,315; females, 209 = 1,524; crews of commercial shipping, 1,159: grand total, 183,508. Total Indian population in 1854—males, 96,142; females, 25,131.

The number of pure white inhabitants is not stated. The classification of population according to country, shows, of the British race born in the United Kingdom, or their offspring—males, 1,264; females, 683 = 1,947: in British colonies—males, 1,373; females, 738 = 2,111: in France—males, 635; females, 242; their offspring—males, 313; females, 336 = males, 948; females, 578 = 1,526. Of Africans and their descendants, 102,993; Asiatics and ditto, 72,236; Americans, 33; not stated, 1,583. Proportions employed in commerce, trade, and manufactures, 20·2; agriculture, 7; other occupations, 21·7. Proportion of *insane* in Creoles, 9 in 10,000; Africans, 22; Hindoos, &c., 11. *Blind*—by classes, and to each 10,000—Creoles, 11; Africans, 66; Hindoos, 7. Number of deaf and dumb, 107; infirm, 3,214. In all the above there has been a progressive increase since 1846.

The number of apprentices (formerly slaves) in February, 1835, was—males, 18,049; females, 12,979 = 31,028: children born between 1835 and 1846—males, 8,604; females, 8,698 = 17,302. In November, 1851, this class of the population numbered—males, 26,653; females, 21,677 = 48,330, which shows an augmentation, since 1835, of 17,302. Had emancipation not taken place, the decrease would probably have been equal to the present increase.

State of Religion.—We have no useful or cheering returns on this important subject. The different denominations of religion are stated in the census of 1851, to have been professed as follows:—Church of England, 904; Presbyterians, 71; Independents, 1,032; Protestant, not distinguished, 3,884; Roman Catholics, 93,561; Christians, not distinguished, 1,052; Mohammedans, 11,587; Hindoos, 48,838; Boodhists, 1,241; others, 3,487; non-baptized, 3,718; not stated, 10,338 = 180,823.

The ecclesiastical establishment paid from the public revenues, consists of a bishop and civil chaplain of the church of England, one minister of the church of Scotland, and a bishop and nine priests of the church of Rome: the bishop receives £720, and the priests £200 each per annum.

The statistics of education, in 1854, are thus shown:—

| Denomination of Schools. | No. | Scholars. | | Total. | Expenditure. |
|---|---|---|---|---|---|
| | | Males. | Fem. | | £ |
| Government . . . . | 23 | 1,441 | 448 | 1,869 | 4,635 |
| Church of England . | 2 | 69 | 20 | 89 | — |
| Church of Rome . . . | 13 | 475 | 453 | 908 | 685 |
| Private . . . . . | 32 | 1,100 | 1,056 | 2,156 | — |
| Royal College . . | — | — | — | 296 | — |
| Total . . . . . | 70 | 3,085 | 1,977 | 5,318 | 5,320 |

This is a very small extent of instruction for youth, among a population of about 200,000. Allowing one in ten to be capable of receiving education, the number ought to be 20,000, instead of less than 6,000.

Education is little attended to by the planters; and, unhappily, our missionary societies have not extended their valuable labours to the Mauritius.

There are several newspapers—one in French, another in English, and a third in both languages, daily; one weekly, and one bi-weekly. A good almanac, with statistical and other information, is published annually.

Government.—A governor, the commander of the troops, the colonial secretary, and the advocate-general, form an *Executive* Council; these, with the addition of four official, and twelve non-official members appointed by the Crown, constitute a *Legislative* Council, which was organised in 1837.

*Military Force.*—A detachment of artillery, and two of H.M. infantry regiments. The officers receive island allowances in addition to their regular pay.

*The revenue*, in 1812, was £112,000; at the period of emancipation (1834), £170,000; it is now £370,000; of this sum, custom duties on imports yield £100,000; licenses and permits, £100,000; assessed taxes, £40,000; harbour dues, £16,000; registrations and mortgages, £16,000; postage, £3,000; fines and fees, £7,000; and other minor items. The local expenditure is less than the income by about £20,000. The ecclesiastical charges are but £5,500; education, £12,000; police and gaols, £26,500; judicial, £30,000; medical, £10,000; immigration of cooly labourers, £50,000 (in 1854); colonial pay and allowances to military, £15,000; contribution towards military expenses, £20,000; roads, streets, and bridges, £12,000; pensions and retired allowances, £10,000; public works, £18,000. The remainder is devoted to the civil government. Salary of governor, £6,000. Municipal income of Port Louis, £23,000 per annum.

*Coins.*—Accounts kept in British money; all sorts of coins are in circulation.

*Weights.*—In the transactions with the military commissariat department, imperial weights are used. With this exception, the weights in use in this island are the same as they were in France before the revolution, viz.—100 lbs. French, *poids de marc*, equal to 108 lbs. English; and the same proportions in the subdivisions, which are the ounce, gros, and grains. 16 ounces make one pound, 8 gros make 1 ounce, 72 grains make 1 gros. The quintal is 100 lbs. French. The ton is 20 quintals. Sugar is reckoned per pound or per quintal; coffee, per bag of 100 lbs. (net French); cotton, per bale of 250 lbs. Rice is sold per bag of 150 lbs.

*Measures.*—In the transactions with the military commissariat department, imperial measures are used; but the measures in general use are French. The French foot is to the English in the proportion of 100 to 92,89, or in common practice of 16 to 15. 12 lines make 1 inch, 12 inches 1 foot, 6 feet 1 toise, 5 feet 1 fathom. The aune is 44 inches, and it is to the English yard as 9 to 7. Every kind of cloth is measured and sold in this island by the aune or ell. The velt is equal to 1 gallon 7 pints 4-5ths English, but it is always taken as 2 gallons in commercial transactions; it is by the velt that every liquid is measured here. 3 gills make 1 pint, 2 pints 1 quart. 4 quarts 1 gallon, 2 gallons 1 velt. Nine English quart bottles are generally considered equal to a velt, and 40 drams to 1 gallon. A cask measures 30 velts. The ton of sugar is 2,000 lbs. French; ebony wood, 2,000 lbs.; coffee, 1,400 lbs.; cotton, 750 lbs.; cloves, 1,000 lbs.; grain, 1,400 lbs.; liquids, 120 velts; square cut timber, 32 cubic feet; boards, 386 feet; shingles, 3,300. The arpent, or acre, is 100 square perches; the perch is 20 feet French. The tonnage of cases, 42 cubic feet measurement.

Commerce, during the French and English occupation of the island, has flourished, as the Mauritius has been an entrepôt for the supply of goods to Madagascar, Africa, and other places. In 1833 (previous to the abolition of slavery), the value of imports and exports stood thus:—

Imports, 1833, £577,420; exports, £639,910; tons, 72,000: imports, 1855, £1,500,000; exports, £1,300,000; tons, 166,000.

The imports of goods in English ships from Great Britain, is about £450,000 per annum. Assuming the population to be now 185,000, it shows an importation at the rate of about £2 10s. per head annually.

*Tariff.*—Custom duties on manufactures of silk, 15; of woollens and leather, 10; cotton and all other textiles, 5—per cent. Paper, glass, hardware, cutlery, tea, and coffee, 10 per cent.: beer, 13s. per hogshead; per dozen bottles, 9*d.*; wine in cask, at the rate of 16s. per 30 gallons; in bottle, 2s. per dozen; spirits, 6s. per gallon; bacon, butter, cheese, ham, &c., 4*s.* per cwt. Unenumerated goods, ware, and merchandise, 6 per cent. *ad valorem.*

The climate and soil are adapted to the growth of various descriptions of tropical produce.* Sugar has long been the staple export of the colony; in 1812–'13, the exportation averaged 700,000 (French); in 1820, 15,000,000; in 1830, 67,000,000; in 1832 (the highest year of production during the slavery period), 73,000,000; in 1836, 63,000,000—lbs. In consequence of the abundant supply of labour, the sugar cultivation has been more than trebled; in 1840–'1, the crop amounted to 77,174,253; in 1854, to 250,000,000—French lbs. To furnish this large supply other species of culture have been neglected, and almost every article of food is imported. It is to be feared that it will be impossible to continue the production, as the land—of which there is but a limited extent available for sugar—cannot be replenished after the abstractions caused by the cane, even by the aid of the rotation of crops recently adopted, or the most plentiful supply of guano. Despite vacuum-pans and centrifugal machines, a severe reaction may, ere long, be looked for in the trade of the Mauritius, unless other articles of export be developed, for which the soil and temperature are adapted.

Dependencies of the Mauritius—Rodrigue, Seychelles, &c.—The island of *Rodrigue*, the *Seychelles islands*, the *Amirante isles, Diego Garcia*, &c., are subject to the authority of the governor of the Mauritius. Rodrigue, about 300 miles to the eastward of Mauritius, in 19° 13′ S. lat., (about twenty-six miles long by twelve broad), is mountainous, or, more properly speaking, a succession of hills, clothed with verdure;

* *List of fruits cultivated at the island of Mauritius.*—Mango, cherimolia, ramboutan, guava, plantain, lime, bergamot, jambosa, mabolo, celebes mangosteen, carambole, mammee, apple, jack, fig, Tartarian mulberry, vontac, grape, tamarind, sweet hovenia, custard apple, alligator pear, Otaheite apple, Chinese guava, lemon, citron, Seville orange, jar plum, sapadilla, European plum, bilimbi, date, quince, St. Helena almond, voaving, blackberry, pomegranate, carandas, Otaheite chestnut, sour sop, litchi, hog plum, pink guava, orange, mandarine, combava, Brazil cherry, mangosteen, Madagascar plum, cocoa-nut, cashew-nut, bread-fruit, sorindi, jubeb, raspberry, grenadilla, cantor, wampi, sugar apple, longane, Indian plum, papaya, shaddock, Madagascar orange, rose apple, sapota, Cochin Chinese ditto, Chinese plum, double cocoa-nut, peach, rima, Japan medlar, pine-apple, strawbery, cacao, Indian fig, cookia. *Spices.*—Pepper, camphor, tea, sago, nutmeg, clove, allspice, cinnamon, coffee, betel-nut, &c.—Wages of predial labour, 13*s.* to 16*s.* a month. Bread, $2\frac{1}{2}$*d.* to 3*d.*; meat, 7*d.* to 1s. per lb.

the valleys are full of rocks and stones, which cover the surface to a great extent, leaving, however, a large portion of fertile soil. This is cultivated by a few French colonists from the Mauritius, with which a constant intercourse is kept up in transporting turtle from the former to the latter. There is abundance of fish around, but it is singular that those caught outside the reefs in deep water are poisonous, and several sailors have died from eating of them. One sort taken near the island resembles a whiting, and from its destructive qualities is named by the French *mort au chien*.* The early French settlers narrate that they found eels of an exquisite flavour on the island, so large that *one* of them was a load for *two men* to carry. On the north side of the island there is a bay affording excellent anchorage, a secure shelter for ships of all dimensions,† and abundance of wood and water. The air is delightful, the water clear, the vegetation luxuriant. Rodrigue is useful as a haven for shipwrecked mariners,‡ and likewise as a cruising station.

The SEYCHELLES or MAHE ISLANDS, situate to the northward of Madagascar, between the parallels of 4° and 5° S. lat., were partially explored by M. Lazarus Picault, in 1743, by order of Mahé de la Bourdonnais, the famous governor of the Mauritius; but in all probability they were previously known to the Portuguese, as were the Amirantes, a low and comparatively insignificant group, eighty miles distant; if, however, the Portuguese saw them, it seems strange that they were not explored, as we should then have had an earlier account of the *coco de mer* peculiar to those islands.

The Seychelles capitulated to the English in 1794, after which their flag was considered neutral by the English and French, when belligerents: on the capture of the Mauritius, these isles were taken possession of as a dependency of that colony, and have since remained under the superintendence of an agent appointed by the governor-in-chief.

The size of the principal islands is thus shown:—

| Names. | Acres. | Names. | Acres. |
|---|---|---|---|
| Mahe | 30,000 | Conception | 120 |
| Praslin | 8,000 | Felicity | 800 |
| Silhouette | 5,700 | North Island | 500 |
| La Digue | 2,000 | Denis | 200 |
| Curieuse | 1,000 | Vache | 200 |
| St. Anne | 500 | Aride | 150 |
| Cerf | 400 | | |
| Frigate | 300 | Total acres | 50,120 |
| Mariane | 250 | | |

There are above fifteen smaller islands, resting on a bank of sand and coral.

*Mahé*, the chief island in the group, is sixteen miles long, and from three to five broad, with a steep and rugged granitic mountain in the centre. The town of *Mahé* is situate on the north side, in a small glen, irregularly built, and containing some good houses; the principal persons being, however, in the environs. The scanty population, when I visited the group in 1825, was—whites, 582; free coloured, 323; and slaves, 6,058: total, 6,963. There is, however, a scattered population on many of the flat islands spread about those tranquil seas; sometimes on approaching one of these low verdant isles, the recent creation of the coral insect, we were surprised by a boat pushing off from the lonely shore, and a dark-coloured Frenchman, or Portuguese, would come on board our frigate, bringing welcome presents of eggs, milk, and fowls, at the same time declaring that the island was his estate, and that his family would receive us hospitably if we would land. On several of the Seychelles and Amirante group we found no human inhabitants, but abundance of hogs and goats, as also papaws, cocoa-nuts, and other edible fruit; indeed a cruise in the Seychelles archipelago is very charming; the beauty of the skies, the serenity of the atmosphere, the purity of the breeze, give a peculiar charm to the soft scenery around. The oldest resident of these peaceful isles never witnessed a gale of wind; but the sea-breeze is constant, and tempers the heat so as to divest a nearly

* The existence of poisonous fish has never been properly accounted for; we know of no birds or animals that are poisonous; even the most venomous snake, when decapitated, is good eating. Some think that the fact is owing to copper banks, on which the fish feed; but it is remarkable that those caught on the same bank are at one time poisonous and at another edible. Some sorts are, however, poisonous at all times, and I have seen a dog die in a few minutes after eating one. Mariners ought to reject fish without scales, unless they know them to be good; and a silver spoon, if boiled with the fish, will turn black should it be noxious.

† The squadron which was collected from India and the Cape, for the conquest of the Mauritius, in 1810, rendezvoused here.

‡ A vessel from Bombay (the *Eldon*), laden with cotton, took fire at sea in October last (1834), and the crew, after being many days in an open boat, reached Rodrigue when almost perishing, and from thence the Mauritius. Cases have occurred proving the value of the island in time of war.

vertical sun of the ill effects of its fervid rays. I spent whole days wandering from island to island among the Seychelles group, and revelling in their romantic scenery, with no other protection from a tropical sun than a broad-brimmed straw hat, yet without feeling the slightest inconvenience, and with but little fatigue. The thermometer varies from 84° to 64°, its mean being 70° to 72°; the healthiness of the station is indicated by the great age and large families of the inhabitants.

Although the bank on which this archipelago is situated is of coral formation, all the islands except two are of granite; huge blocks of which, generally piled up as it were in a confused mass, form their peaks, which are covered with verdure. Lieutenant (now Captain) R. Owen, R.N., and myself, with a party of seamen, ascended North or Fearn Island after two hours and a-half difficult climbing. Towards the summit, for many feet, there was nothing but huge blocks of granite, piled on each other as a number of paving-stones would be on an Irish *cearn;* several of these rocks were of the magnitude of a small-sized house, and some so nicely poised that they might be moved with the hand.

The Seychelles possess many excellent harbours, and being never visited by tornadoes, the neighbourhood is frequented by whalers who fill up their vessels rapidly with sperm oil. The inhabitants cultivate cotton of a superior quality, spices, coffee, tobacco, rice, maize, cocoa-nuts, &c., and carry on a lucrative trade in the numerous small vessels which they possess, in articles suited to the Indian, Mauritius, and Bourbon markets.* The vegetation around is extremely luxuriant; the most remarkable specimen is the *coco de mer*, so called because the nuts were found on the shores of Malabar, and on the coasts of the Maldive Islands, many years before the place of their growth was ascertained; each nut then sold for three or four hundred pounds, from its supposed medicinal quality. This fruit is confined in its growth to the Seychelles, and even there to two islands—Praslin and Curieuse. It springs from a species of palm, sixty to eighty feet high, with full leaves; from their junction hangs the nut, one foot long, eight inches thick, with a light-coloured tasteless jelly in each of the compartments; the seed-vessel is about two feet long and three inches diameter, studded with small yellow flowers issuing from a regular projection, which resemble those of the pine-apple. The smell arising from the flower is by most Europeans considered intolerable, its offensiveness increasing the longer the flower is kept.

Various spices grow on Mahé, &c., such as the cinnamon plant, cloves, nutmeg, and pepper, which were introduced by order of M. de Poivre, the intelligent governor of the Mauritius, with a view of rivaling the Dutch in the Moluccas. The plantation† was tended with great care as a national undertaking, until, at a critical period, the French became apprehensive that the islands might be attacked by a British squadron, when orders were given by the governor of the Mauritius to surround the spice garden with bundles of dried faggots, and other combustible matter, and the moment a British vessel of war hove in sight, to set fire to the whole. A large vessel shortly after appeared off the island with English colours, the spice trees were immediately burned, and the ship of war came into Mahé harbour, with the *tricolour* flag, it being a French man-of-war that had used a *ruse*, to ascertain whether the islands had a British force on them. The feelings of the French, while the valuable plantations were being consumed, may be readily imagined.

*Diego Garcia*, about four degrees from the equator, is one of those numerous coral islands with which these seas abound. It contains plenty of turtle, and has a few residents from the Mauritius.

The Amirante and other dependencies are flat, and require no separate notice. The population (chiefly African) of the thirteen islands included under the name of Seychelles, was, in November, 1851—males, 3,626; females, 3,185 = 6,811: of these, Mahé contained 5,541; Praslin, 461; Ladigue, 442; the Amirantes, 30; Seven Isles, north-east of Madagascar, 61; Chagos Archipelago, 334; Rodrigue, 495; Agalega, 242; Cotiny, 28: total of these dependencies—males, 4,476; females, 3,525 = 8,001.

Should a British trade hereafter arise with the eastern coast of Africa, the Seychelles may become a useful entrepôt.

* Some ships are afraid to fish on this bank, the whole being very violent when wounded.

† The central position of the Seychelles for trade with the eastern hemisphere, is thus shown:—*Mahé* to Madagascar, 576 miles; Comoros, 828; Mauritius, 928; Mombas, 930; Delagoa Bay, 1,800; Bombay, 1,680; Arabia, 1,230; Cape of Good Hope, 2,640 miles.

# SECTION III.—ADEN.

This singular-looking, desolate spot, owing to its excellent harbour and position, has from an early date been an object of attraction for commercial pursuits. When Constantine reigned, it is said to have been a great city, and was honoured with the title of "Romanum Emporium." The Mohammedans assert, but produce no proof, that its citizens were honoured by the preaching of Mohamet.*

For the following account of Aden, and its annexation to the British Crown, I am indebted to Captain Haines, the really estimable though unfortunate† governor of the settlement when I visited it in 1845:‡—

By the "doomsday-book" of Lahidge it appears that about A.H. 1141 [A.D. 1763], the Sheikh Foudthel ibn Ali ibn Foudthel ibn Sellah ibn Selim, declaring himself the chief of the Abdali tribe, and throwing off all subjection, prepared, in concert with the neighbouring tribe of Yaffai, to make himself master of Aden, stipulating first, that they should enjoy the revenues of the port alternately.

A.H. 1148, Aden fell into the hands of these two chiefs; and before six months had elapsed, the Sheikh of Lahidge, whose craftiness fully equalled his courage, turned his colleague out of the place, and made himself sole governor. His rapacity and extortion extinguished the few sparks of commercial enterprise yet remaining, and from this period may be traced the rapid downfall of Aden.

Sultan Foudthel ibn Ali was treacherously killed by the Yaffai, A.H. 1155, leaving two sons, Abdel Kerim and M'Houssan, and two daughters. He was succeeded by Abdel Kerim, who reigned seventeen years, during which Aden was governed by a favourite slave. This sultan deservedly bore the name of a wise and benevolent man, but the spirit of indolence prevented his people from profiting by the mildness of his rule. He died 1172, leaving five sons, viz., Abdul Hadi, Foudthel, Nasser, Ali, and Ahmed. Ali was killed by the fall of a stone on his head from one of the houses in Aden; Ahmed died early in life; and Abdul Hadi succeeded to the throne of his father. Tradition relates, that during the reign of Sultan Kerim, a dispute with reference to some ground took place between the Sayud of Hydroos and the sultan, which ended in one of the sons of the Sayud being treated with great severity. Fired with the insult to his sacred calling, the Sayud implored the vengeance of the Almighty on the tyrant, and prayed that he might never be blessed with posterity. His prayer was heard: the elder sons of the family had no children, and the "fukht" or throne of the Abdali chief was occupied by the descendant of his younger son, M'Houssan Foudthel ibn Ali, who, in the year 1190, was killed by order of his nephew Abdel Hadi. In this year the present Sultan of Lahidge was born. On the death of Sultan Abdel Kerim, A.H. 1172, his eldest son Abdul Hadi succeeded him, and reigned nineteen years, during which his cousin, Foudthel M'Houssan, caused him great trouble and annoyance. Repeated insurrections took place, and Aden, during the year 1185, was stormed by Azab Mukki Akrabi, who kept possession of it for two days, when he was driven out. Towards the close of his reign he became unable to attend to public affairs, and his brother Foudthel was employed in keeping the tribes in subjection.

The people, however, were not quieted until the instigator of all disputes, the uncle M'Houssan, was waylaid and murdered by the creeses (or daggers) of the sultan's slaves, in 1190.

In the year following the sultan died of smallpox, with nearly one-fourth of the inhabitants of Lahidge and surrounding villages; and it is worthy of remark, that though Aden was crowded with fugitives from the interior, the disease did not intrude within its limits.

In three instances since Aden has become a British settlement smallpox has appeared, but never spread; until the year 1845 afforded the melancholy

* Sultan Selim annexed Egypt to his dominions in 1517, and Suleyman the Magnificent succeeded him in 1520. There can be no doubt that when Selim endeavoured to annex Arabia to his dominions, a fresh stimulus was given to the trade of Yemen; and during his administration and that of his sons, every attention was bestowed upon Aden, as the principal station from which all their Indian conquests and expeditions against their formidable rivals, the Portuguese, were to emanate. Its importance is mentioned by that quaint old historian Ibn Batuta, and its eventual decay was doubtless caused by the Turkish evacuation of the country. In 1839 a few aqueducts, tanks, and ruined towers were all that was left to mark its former splendour. Man alone had not changed, and the Bedouin who daily enters the bazaar of Aden, is in all respects the same as his forefathers were a thousand years ago.

† Unfortunate in regard to pecuniary defalcations, caused by native treachery.

‡ Yemen (in which Aden, *the eye* thereof, is situated) is thus described by the Arab historian Ab-el-Rahman ibn Ali Dthabi:—"Yemen the blessed, is a large and populous country, endowed with every blessing by the Almighty." Sanâ is now, as formerly, the principal town in Yemen: it is termed by the Arabs the "Paradise of the earth," where the ark of Noah rested after the deluge, and where Ham built a temple and constructed a well, which were destroyed by Mohammed, or one of his successors. A. Hegira 921, in the month Suffer, sixteen Frank (Portuguese) vessels reached Aden, disembarked troops, but were driven out again by the Arabs. This Mohammedan account agrees with the statement of Albuquerque, who, A.D. 1513, invaded Aden, and was defeated with great loss, when he sailed away for Camaran Island, and was probably the first European who navigated the Red Sea. A. Hegira 923, Sultan Selim I., having overthrown the Mameluke power, determined on the conquest of Yemen, collected a strong force at Suez, under Suleyman Pasha, who made himself master of Aden. A. Hegira 1019, eighteen Portuguese vessels again unsuccessfully attempted to take Aden. The Turks and Arabs frequently contested the possession of Sanâ and Aden; but between the years A. Hegira 1043 and 1141, the governing family of Lahidge threw off all yoke, declared Lahidge and Aden free, and until August, 1844, no demand for tribute was ever made.

proof that the town was not invulnerable to the assaults of infectious disease, the smallpox having (probably owing to the crowded state of the population) spread to a considerable extent amongst the Jews and Mussulmans.

A.H. 1191, Abdul Hadi was succeeded by his brother, Sultan Foudthel ibn Abdel Kerim, who, after a peaceful and prosperous reign of sixteen years, died without issue (thus verifying the prediction of the Sayud of Hydroos); and in the year 1207 A.H., or 1791 A.D., was succeeded by his brother Ahmed ben Abdel Kerim ibn Foudthel ibn Ali.

This prince I saw at Aden in the year 1820: he was then a very handsome man, much beloved by his people, and a great promoter of agricultural pursuits. The long-continued years of anarchy and confusion that preceded his reign had, however, made the people habitual marauders; and it was in vain for Sultan Ahmed to attempt to suppress it. It was with this prince that Sir Home Popham entered into a treaty in the year 1800 A.D.

After a reign of thirty-six years, this sultan died; and though he was anxious to benefit his country, and behaved with extreme liberality to all foreigners, he left not one single monument to perpetuate his name. During the latter part of his life he became avaricious and miserly, and his successor rejoiced, on ascending the throne, to find the treasury stored with 50,000 German crowns.

A few years before his death, A.H. 1235 (A.D. 1819), the sultan was surprised by a party of 8,000 Burlakis, led on by their sultan Abdulla ibn Fureyd: unable to resist, he agreed to pay down 7,000 German crowns, which terms were accepted; but when the time came for the disbursement of this sum, he pleaded poverty, and the "Burlaki chief," ignorant of the true state of his finances, accepted half in goods, and returned to his own country, since which he has not made another attempt, although threats have been held out of attacking him this year.

The first treaty, so far as I can discover, entered into by the British with the Sultan of Aden, was that of Sir Home Popham, in 1800–'1, on the part of the governor-general of India and Sultan Ahmed Abdel Kerim, the uncle of the present chief. This treaty was made, doubtless, for political as well as commercial reasons; indeed, we availed ourselves of Aden as a rendezvous for a division of the troops sent under the command of General Baird, to expel the French from Egypt. Colonel Murray commanded this portion of the force, which remained at Aden some time, whilst the transports watered and refitted; and to this day the Arabs remember and speak of the visit of the English with pleasure. After the return of the troops from Egypt, Aden and its commercial treaty were alike forgotten, except by passing vessels, which occasionally watered there; and the once flourishing city had already sunk into an insignificant village, when, in 1829, some coals were sent to Aden and landed on Seera Island, for the use of the first steamer built in India, the *Hugh Lindsay*. This vessel, on her arrival, was six days and a-half taking in 180 tons of coals, owing to the indolence of the natives, who could not be induced to work except at intervals, notwithstanding Sultan M'Houssan Foudthel had promised Captains Pepper and Moresby, of the Indian navy, to do his utmost to expedite the coaling of the steamers, for which he had received valuable presents, amongst which were two 6-pounder field-pieces, with train complete. Owing to this serious detention, and to the distance of Aden from Bombay, Maculla was chosen as a coaling port, and Aden once more sank into oblivion.

About A.D. 1831, Turki Bilmass, the then governor of Mocha, sent a brig, with a mission on board, to arrange for the reoccupation of Aden by the Turks. The embassy was received by the sultan with every demonstration of respect, and were sumptuously entertained; but on the first night of their arrival, twenty-seven of their number were treacherously murdered by the orders of the chief, and the brig escaped to Mocha. Had not Mocha been shortly after stormed and taken by Ali ibn Mejittel, the Assyrian chief, Turki Bilmass would, doubtless, have brought the Sultan of Lahidge to a heavy reckoning for this base and perfidious conduct.

In the course of my survey of the south coast of Arabia, I found the Sultan of Aden the most inveterate plunderer of unfortunate vessels wrecked on the coast, especially in the instance of a ship from Java, that struck on one of the rocky patches to the westward of the place, and ran into Aden for safety; in several bugalows that ran ashore near the town; and, lastly, in the case of the Madras ship *Deriah Dowlut*, whose crew and passengers were treated with the greatest barbarity.

I had reported the conduct of this chief previously to government, in the naval department; but on hearing of their shameful conduct towards the *Deriah Dowlut*, I at once stood over to Aden, and whilst surveying its harbour trigonometrically, personally remonstrated with the sultan, telling him, that as a British officer, on the part of government, I held him responsible for the plundered property which was then selling in the bazaars. This occurrence was duly reported by me, in the naval department, to the Bombay government, who, in December, 1837, were pleased to appoint me as a commissioner for the arrangement of British affairs at Aden, in the following points, viz.—

1st. To obtain satisfaction from Sultan M'Houssan for his unwarrantable plunder of the *Deriah Dowlut;* and, in the event of this being satisfactorily arranged, to obtain Aden by purchase, if possible.

The honourable company's 18-gun sloop *Coote* was at that time at Mocha, and I was authorised to proceed in her to Aden. The *Berenice* steamer conveyed me to Mocha, when I immediately shifted into the *Coote*, and weighing a few days afterwards, reached Aden on the 28th of December. The following day, in answer to a letter from me, I received a notification from the sultan that he would meet me on the 4th of January in Aden, on which day I landed, and had my first interview with him. The sultan strenuously denied all knowledge of, or participation in, the plunder—offering to swear on the Koran, and calling God to witness, that neither he nor his tribe had anything to do with the business. As, however, I knew the very godowns in which plunder was then lodged, and I had seen the sale of part of it in Aden bazaar previously, I paid no attention to his protestations, and on the 6th demanded 12,000 dollars, or the restoration of the whole of the property. This occasioned great excitement in the town; but I persisted in my demand, although every effort was used to induce me to change my decision. A large body of Bedouins were perpetually paraded in front of our party, which consisted of Lieutenant Hamilton (Indian navy), Dr. Arbuckle, and myself, with three marines in a storehouse, and some threats were held out; but I remained firm in my decision,

and the sultan appeared equally determined to remain firm in his. At sunset I decided upon moving the sloop round, under the pretence of her being nearer to receive me, and I therefore wrote to the sultan, saying, that since he was determined to grant no satisfaction, I requested that my note might be sent to the *Coote*, which vessel, on its receipt, would come round to Seera to receive me; and during the interval of perfect silence which prevailed for three hours after the receipt of my note, we prepared to defend ourselves to the best of our power.

They stopped my note, and begged for one hour longer; at ten, P.M., the eldest son of the sultan came over, attempting an apology for his father's false and deceitful conduct—offered to give the required articles, which was done the next morning, the 10th of January; but many having been sold in Aden, I received nominally only 7,808¾ German crowns' worth of plunder, and a bill at twelve months' sight for 4,191 German crowns; and thus the affair was peacefully settled, to which effect I gave a certificate to the sultan, dated the 11th of January, 1838.

Having, after considerable labour and (if we may judge from the murder of the Turkish commissioner) some personal risk, accomplished the first part of my instructions, for the execution of which government were pleased to honour me with their approbation, I then commenced the more delicate task of amicably effecting a transfer of Aden to the British government, as a coal depôt and harbour.

To accomplish this, great tact was required, as the sultan possessed all the cunning, avarice, and dishonesty of an Asiatic,—was notorious from childhood for treachery and deceit, and now endeavoured to obtain a sum of money without granting an equivalent. The fear of his tribe prevented his openly granting the place to the British, as he would then have to divide the annual sum he received from the government amongst them. His favourite idea was to receive in secret a regular stipend: to use his own words, he wished for a monthly sum to be paid him like the Nabob of Surat. After many difficulties he gave me the promise of a transfer of Aden on the arrival of troops to take possession; and it was secretly arranged between us, that he was to receive, including everything, 8,700 German crowns per annum. He declined accepting the money at once, as he feared to excite the suspicions of his tribe; but, in writing, he gave me permission to build at once, and to send up troops in March.

This arrangement was concluded on the 23rd of January, 1838, and on the following day Sayud M'Houssan Weiss, Sultan Ahmed (the sultan's eldest son), and Hadji M'Houssan, were directed to meet me, to be personally present, and to witness the sultan's agreement with the British.

On the 27th of January, no horses came for either myself or my party. I therefore sent my interpreter to inquire into the cause, and pulled up in the *Coote's* pinnace to the head of the bay. After passing Ras Hedjaf, we observed the interpreter with spare horses, who called out lustily for me to pull in to where he was, and on doing so I was informed of a most determined piece of villany which was to be attempted to secure my person and papers. The plan had been revealed to my interpreter by a female slave, and corroborated by Rashed ibn Abdullah; but the forethought of my interpreter, Mulla Jaffer, defeated their purposes. This villany *is a fact*, and now acknowledged by many at Aden; amongst whom are the Sayud of Hydroos, Ali ibn Bon Bekr, and Rashed, who, on his death-bed, confessed the whole. Their words to me were —"God truly favoured you throughout, or you would not have ruled over the destinies of Aden since."

The worthy Sir Robert Grant, in his letter on the subject, said, that "this villany was from report, and all would deny it." In this he was perfectly correct; but the truth is *now* known, and Sultan Ahmed, from fear and an evil conscience, has never entered Aden since. It was strange that I had suspicion of treachery, and, on pulling up, had arranged with Lieutenant Hamilton, that in case of any attempt on the part of the Arabs, he was to shoot Sayud M'Houssan Weiss, whilst I was to fire at Sultan Ahmed; after which we were to make our way to the horses, and thus effect our escape. Thanks, however, to the slave-girl of Rashed and Mulla Jaffer, we are now alive and well. After this evil intent on the part of the son, I wrote to Sultan M'Houssan to inform him that I had all papers connected with the transfer safe in my possession, and should proceed to Bombay to report all particulars, when the government could act as they considered he deserved.

In September, 1838, I was again sent to Aden in the honourable company's sloop of war *Coote*, with a detachment of one officer and thirty Europeans as a body-guard, and accompanied by the late Lieutenant Western, of the engineers. We arrived at Aden on the 24th of October, and I wrote to the sultan, requiring him to give up Aden at once, in conformity with the treaty of the January previous. I pitched my tents on Ras Tarsheim, and the following day was visited by Rashed ibn Abdullah, and a Banian named Damjee, who brought me a message, saying that Sultan Ahmed would not give up Aden or the property, unless I returned him the bond for the 4,191 German crowns, and the grant of Aden given to me by his father. He himself believed that government did not require Aden, or they would have taken possession of it in March; and he required me to produce proof that I was authorised to receive Aden in the name of the British. I produced my authority, and then informed Sultan Ahmed that I required his father's authority for his conduct, and that I awaited a reply to my letter.

On the 27th of October, Captain Denton sent to Aden for supplies for the use of the *Coote*, which were refused, and he was not allowed water. I wrote to the governor, telling him that the refusal to sell us provisions was tantamount to a declaration of war, and that, if inclined, I could with ease seize their flocks that were daily sent to graze outside.

On the 30th of October, I received a letter from Sultan M'Houssan Foudthel, of which the following is a copy:—"Your letter has reached me, and I understand the contents: my feet are bad, and I cannot rise from my couch. My agents in the affair are Ahmed, who is now with you in Aden, and others. I now send, and I pray of you to settle this affair as may be most advantageous to us both."

[Seal.]

From Sultan Ahmed I also received the following:—"May God be with you: you must know that your letter to Ali Abdullah has been received, and I understand it. It is my duty, and you had better take care. Sultan M'Houssan is not now above me, nor are his answers (to you.) If you remain quiet, I will be on your head (*i.e.*, I will

protect you.) I am superior to you as well as to my father. If you come to the gate, I will permit you to enter, and then be upon you (*i.e.*, protect you.) This is the language of my Bedouins. Sultan Ahmed is our sultan, and we are his servants. If he order, we will obey, *and be upon you suddenly*. —Signed and sealed by Sultan Ahmed."

With this letter I also received a threat that our throats should be cut, and our tents and ships taken by boats; and as it was evident that friendly remonstrance was of no avail, I determined, for the safety of life and property, to strike my tents, and remove to the ship. On the 20th of November, to my surprise, the *Coote's* pinnace, under Lieutenant Hamilton, was suddenly fired upon by a party of matchlockmen, two men slightly wounded, and the boat shot through in several places. This act was without the slightest provocation or insult on the part of the British. I had certainly prevented their date-boats from entering the port of Aden, in return for their having refused supplies to the *Coote*—a measure which, had it extended to their whole trade, I should have been fully justified in adopting; but I was anxious to gain my point, viz., the quiet cession of Aden to the British, after a promise had been made to that effect. After this insult had been offered, and after British blood had been spilt, I gave the order, in my letter to Com. Penton, dated the 20th of November, 1838, to stop the trade by every means in his power.

Repeated skirmishes followed, as whenever a boat from the *Coote* approached the shore, she was sure to be fired at. A native boat having been seized by the *Coote*, was fitted out at my request, to secure a bugalow belonging to the sultan, which she captured, and I had her fitted as a mortar boat. On the 14th of December the Arabs begged for a truce of two days, which I willingly granted; but it was to no purpose, as I received a letter from the Somali coast, enclosing a letter of Ahmed M'Houssan's during the interval. This letter contained the offer of a bribe of 200 German crowns to Seyarat (on the opposite coast), to induce the people to refuse us water, and to murder any European who landed. The arrival about this time of the honourable company's schooner *Mahé*, and the barque *Ann Crichton*, laden with coal, first induced the Arabs to believe that we were in earnest. On the 11th of January, a smart and very gallant skirmish took place off Seera, between the battery on the Mole and the schooner *Mahé*, with two gun-boats. Two Englishmen were wounded, and between twenty and thirty Arabs killed and wounded. On the 16th of January the following squadron, from Bombay, reached Aden:—Her Majesty's ship *Volage*, 28 guns, Captain Smith; her Majesty's ship *Cruiser*, 16 guns; with 300 European and 400 native soldiers, under Major Bailie.

I immediately sent a peremptory letter to Sultan M'Houssan, who was then in Aden with 700 Bedouins, to deliver the place up. The answer being evasive, and hearing that he had sent for 1,200 Foudthlis, I decided at once on bombardment and storm of the town, and wrote the letters marked A and B* to the respective military and naval officers. I supplied Captain Smith with a plan of attack, according to my ideas, and had the honour to take the *Volage* to her position. My report C,† after the capture of the place,

* (A) "Sir,—All negotiations with the chieftains of the Abdullah tribe having failed in bringing them to perform their written promise of transferring Aden to the British, and their having declared war by opening fire on the honourable company's ship of war *Coote*, and her boats,—in fact, after all reasoning and every strenuous endeavour has been employed by me to bring the deceitful and dishonourable tribe to their senses by mild and conciliatory measures have proved unavailing, I am under the necessity, as the last and only resource left to obtain satisfaction for the repeated insults offered to the British, to solicit that force may be used to compel them to evacuate the ground of Aden to the British, as agreed to under the sultan's seal in January, 1838. I have therefore the honour to request that you will, with the squadron under your command, in co-operation with the troops under the command of Major T. Bailie, adopt such measures for the immediate capture and occupation of Aden as may appear to you both best calculated to obtain it. I take the liberty of pointing out that many of the poor inhabitants of Aden have been compelled by the chieftains to remain there, consisting principally of Jews, Banians, and Zoores; I therefore earnestly solicit that, if possible, their lives be preserved. I also beg, that if fortune should place the sultan or his sons, any chieftains or sayuds, in our possession, that their lives be spared, and that any individual so captured be secured to await future decision regarding them. Having a perfect knowledge of the localities of the place, I shall feel most happy to afford you any information on the subject; and if from a thorough knowledge of the bay and anchorage, my services or advice be advantageous, I shall feel proud to accompany the commander of any vessel of the squadron in taking up a position for the destruction of their strongest battery. I have the honour, &c. (Signed, S. B. Haines, Political Agent.)—Aden, 16th January, 1839.

"To Capt. Smith, H.M.S. *Volage*, and sen. officer, Aden."

(B) "Sir,—All negotiations having failed in obtaining Aden by mild and conciliatory measures, I have the honour to request you will, with the force under your command, in co-operation with Captain Smith and the squadron under his command, adopt such measures for the immediate capture and occupation of Aden as may appear to you both most advisable. There are several Jews and Banians, and a few Zoores Arabs, who have been compelled, contrary to their inclination, to remain in the town: may I solicit that, if possible, their lives be spared; and should it be our good fortune to obtain possession of the person of the sultan or his sons, any chieftain or sayud, I request they may be treated with respect, and secured to await further decision. I shall be most happy to afford you every information in my power. I have the honour, &c. (Signed, S. B. Haines, Political Agent.)—Aden, January 16th, 1839.

"To Major T. Bailie, commanding the military force."

† (C) "Sir,—I have the honour to inform you, for information of the honourable the governor in council, that the force for the occupation of Aden arrived on the 16th January, when I immediately dispatched the letter marked A into the town, addressed to all the chieftains; the answer was frivolous and unsatisfactory, and with it I received a secret message from Rashed Abdullah, saying they only wanted time to obtain Bedouins, and they were preparing the great guns for service. In consequence of the above information, I considered it advisable to lose no time in capturing it, more particularly as we had but a few days' water for the troops, and therefore wrote the letter marked No. 3 Political, to Major Bailie [marked B, and given in previous note.] In offering an opinion on the plan of attack, I gave to Captain Smith a rough sketch, laying the *Coote* close to the battery, with the troops to storm, in two divisions, when the fortifications were destroyed. This idea was followed in the attack, with the only exception of Captain Smith wishing to place his own ship where I placed the *Coote*, and the latter in Hakat Bay. Captain Smith accepted my services in taking his ship in, and I feel proud to say that he was pleased with

will explain what was done at the time. The loss was—fifteen killed and wounded; amongst the latter, Lieutenant Nisbett, I.N., severely, and I received a mere bruise from a ball that first struck the capstan of the *Volage*. The loss of the Arabs was 150 killed and wounded.

Aden, when captured, was defended by 700 fighting men from the interior. It was a miserable village, of about 600 huts (belonging principally to Jews), situated within the largest crater, with stupendous natural battlements surrounding it. The dilapidated remains of former magnificence were in many places visible. Three brass guns, sixteen to seventeen feet in length, and conveying a ball of from eighty to a hundred pounds, cast in Anno Hegira 901, and mounted on rude carriages, were found, and presented by the captors to her Majesty. Their united weight was nearly sixteen tons.

My first object, after the taking of Aden, was to keep all the tribes quiet until the troops had thrown up temporary defences, in which I succeeded; the field-works and redans, with the ditch, were erected by Lieutenant Western, of the engineers, on the line of the old Arab wall (the Durub el Huraibi.) Fortunately these temporary works were completed before the Arabs had been brought over, by the influence of the sultan, to make one more struggle for the recovery of Aden. On the morning of the 11th of November, 1839, the wall was attacked by a body of about 5,000 men, who were defeated, with a loss of 200 men killed and wounded. Some days after this defeat the sultan wrote to me, saying —"You have thrown dust in our eyes. You have, by kind words and gifts, blinded us, whilst you were throwing up forts to destroy us. O, commander, pity me; for it is the fault of my tribe! Forgive me, and restore me my pension."*

On the 15th of March, 1840, and the 10th Mohurrun, 1256 A.H., Sultan M'Houssan Foudthel wrote to the Bombay government, and acknowledged the grant of the hond, asserting at the same time, incorrectly, that I had extorted it from him, when, in reality, he sent it to me in secret from Lahidge. This he also acknowledges under his own hand, as follows:—"A great number of Arabs having assembled, I informed Commander Haines that I would apprise them of the engagement *agreed upon between us and that officer*, and impress upon them the benefit of the arrangement; but he did not consent to it. He resolved upon hostilities, plundered our houses, killed our subjects, and carried off our property."

This letter acknowledges the transfer; but the latter part is untrue, as hostilities commenced on the part of the Arabs, who had a body of men in the town to defend the place, and whose only object in soliciting further delay was to give time for their Foudthli friends to enter and strengthen the garrison. Whilst the crafty Sultan M'Houssan was writing to me repeatedly for forgiveness after his first attack, nay, whilst he was writing the letter above quoted, he was engaged in secretly congregating the tribes to renew the attack upon Aden. A second attempt, with a force of four to five thousand men, was made on the 20th of May, 1840, and again defeated, with great loss on the part of the enemy, whilst the British had only six wounded. This second defeat exasperated the sultan beyond measure; and notwithstanding the significant proof he had received that a good look-out was kept, and that my information regarding his movements was invariably true, he

the position I gave her. Everything being prepared, with the troops in the boats under cover of the ships, and the reserve on board the honourable company's sloop *Coote*, the *Volage* stood in and took up a position at 9.30 A.M., within 300 yards off their strongest battery. The *Cruiser* ten minutes after took up her's, as did the schooner *Mahé*, in Hakat Bay. The fire of the three vessels was tremendous and destructive. The battery and town were soon brought down, but still the defenders of Seera lay under cover of the point, ready to fire on the troops as they pushed off. The *Mahé* schooner weighed and took up another position, flanking the Bedouins at fifty yards distance, when the fire on her was very heavy, but her return soon drove them out, and they retreated and fired from every cover they could find, until, from the cross-fire of the *Volage*, *Cruiser*, *Coote*, and *Mahé*, and bomb-vessel, they were afraid to show themselves. At 11.45, the troops left in two divisions, each party landing nearly at the same interval, and met with but little opposition, the sultan's sons and the greater part of the Bedouins having retreated out of the town on the boats pushing off for the shore. About ten minutes after landing the British flag was hoisted on the sultan's palace, and about 12.30 the boat of the *Mahé* schooner, and one from the *Volage*, took possession of Seera, hoisted the union-jack, and took 139 prisoners, who were marched into the town. I could not but admire the splendid fire from the shipping and mortar vessel, and the behaviour of the little *Mahé* drew forth the admiration of every person; and it is only wonderful how the prisoners lay so close under the rocks, or that any of them escaped. Nothing could have been more regular than the landing; the men were steady to a degree; they behaved with courage and stormed the place gallantly; but what is still more to be admired, and a greater proof of their discipline is, that after landing, neither male or female was molested. The loss on the side of the British, as will be seen by Major Bailie's letter, which I have the honour to forward, was very trivial until the unfortunate insurrection of the prisoners from Seera. The killed and wounded, including navy and army, are fifteen; eight of these casualties occurred after the place was in our possession. The loss of the enemy has been very severe; 139 are now said to be missing, besides many wounded inland; and we have twenty-five men, two severely wounded, to return inland. Among them is one chieftain, Sheik Ruggub Hazzabee, and Ali Salaan, a nephew of the sultan. I have supplied the unfortunate sufferers with food and everything to make them as comfortable as circumstances will admit of, and they receive kind medical attention from Dr. Malcolmson, of the 24th regiment. I have also given a few dollars for the support of their families. My best thanks are due to Captain Smith, the senior naval officer, for most willingly attending to every suggestion, and particularly in preventing his men from plundering and insulting the people. My best thanks are also due to Major Bailie for his kind attention to my request both at the period of storm and afterwards. The inhabitants were driven for safety to the Musjud el Hydroos, where a strong guard was placed by Major Bailie for their security. On the day after the storm, the inhabitants, afraid to return to their houses, would not do so until I reasoned with them and informed them I was about taking up my quarters in the town. It would appear like presumption in me to point out peculiar instances of merit; I therefore leave it to the senior naval and military officers to do so; and merely state that it is my firm conviction that British soldiers and sailors could not have behaved better. I have the honour, &c. (Signed, S. B. HAINES.)—Aden, 25th January, 1839.

"To J. P. Willoughby, Esq., Secretary to Government."

* The pension had been given by the British government, on the occupation of Aden, according to the original terms, viz., 8,700 dollars per annum; and this of course was stopped when Aden was attacked by order of Sultan M'Houssan.

determined upon a third attack, which was duly notified to me by my confidential agents inland. About fourteen days previous to the time fixed upon, I stopped all communication with the interior, the interim being employed in stationing a block-boat to protect the left flank, and constructing snme small towers for extra guards. My closing the roads was a measure that the sultan had never thought of. He had considered that we could not subsist without supplies from the interior, and my now cutting off all communication, filled him with dismay. On the 5th of July, 1840, at forty-five minutes past two, A.M., the third attack took place, the Arab force mustering fully 5,000 men, under their principal chiefs, with the sultan of the Foudthli tribe, and Sultan M'Houssan's eldest son Ahmed leading them. They advanced with their usual impetuosity, when a sudden and unexpected fire from the block-boat, within a distance of twenty yards, and the gun-boat within a hundred yards, staggered them, whilst the fire from the wall completed their discomfiture, and they retreated with a loss of one of their principal chiefs, and nearly 300 men, without the slightest injury having been sustained by the British.

This defeat had such an effect upon the interior chieftains, that many of them swore never again to risk their lives in attacking Aden. I, of course, was abused: my conduct was considered treacherous, as "I had prevented their entering Aden, whilst I was preparing traps for their destruction; and immediately after they were driven back, I opened the gates for trade as usual:" in addition to which, I had blockaded the Foudthli sultan's bunder, cut off his annual supplies, and knocked down his castle,—a mode of retaliation so effective, that I persevered in it until he sued for peace.

After the third defeat, repeated applications for peace were made by the sultan, always, however, with the proviso that the pension was to be restored. This, however, was declined until they had by their peaceful behaviour given proof of their good intentions; whilst I adhered to the original determination that two sons of the sultan should be sent in as hostages. On the 10th September, 1841, a body of perhaps 400 men, just as it was dark, crept close to the wall and fired at the sentries, fortunately without effect. The return fire killed and wounded eleven men and three camels.

From the 10th September, 1841, Aden has enjoyed comparative quiet; and in the beginning of February, 1843, Sultan M'Houssan entered Aden and sued for peace, which was granted, though the question of the pension was reserved for the future decision of the government. The annexed treaty,* marked (D), was then agreed on between Sultan

* "*This treaty is made by Sultan M'Houssan Foudthel, his heirs and successors, the tribes of the Azeebi and Selamee, on their visit to Aden on Saturday, the 27th day of Shai el Hadz el Haram,* 1258.—Being anxious to make peace with the British government, Captain Stafford Bettlesworth Haines, in the name of the British government, has given his consent, and has made peace with Sultan M'Houssan Foudthel and his adherents; and on this treaty has Sultan M'Houssan Foudthel placed his seal, and Captain Stafford Bettlesworth Haines, on the part of the British government, has set his seal. Inasmuch as peace is good and desirable for both parties, the Sultan M'Houssan Foudthel of Lahidge, in the name of himself, his heirs, successors, and the tribes of Selamee and Azeebi, and Captain Stafford Bettlesworth Haines, on the part of her most gracious Majesty Queen Victoria I., of Great Britain and Ireland, have made this holy agreement, that between the two governments shall exist a firm and lasting friendship that shall never be broken from the beginning unto the end of all things; and to this agreement God is witness. *Article 1st.* In consideration of the respect due to the British government, Sultan M'Houssan Foudthel agrees to restore the lands and property of all kinds belonging to the late Hassam Abdulla Khateel, agent to the British at Lahidge, after such property shall be proven. But the Sultan M'Houssan expects in return, that certain revenue and territorial books styled Deiras, said to be in the possession of the Khateel family, should be restored to the government of Lahidge, and then their persons shall be safe should they wish to go inland. *Article 2nd.* The sultan will, on the same consideration, and has, in the presence of witnesses, settled all claims made by Shumaiel the Jew. And he will also attend to all claims that may be brought against him during his fifteen days' residence in Aden. *Article 3rd.* Such transit duties as shall be hereafter specified shall be exacted by the sultan, who binds himself not to exceed them. The sultan will also, by every means in his power, facilitate the intercourse of merchants; and he shall, in return, be empowered to levy a moderate export duty. *Article 4th.* The sultan engages to permit British subjects to visit Lahidge for commercial purposes, and to protect them, allowing toleration of religion, with the exception of burning the dead. *Article 5th.* Should any British subject become amenable to the law, he is to be made over to the authorities at Aden, and in like manner are the subjects of the sultan to be made over to his jurisdiction. *Article 6th.* The bridge of Khor Maksa is English property, and as such, shall be kept in order by them; but should it be proved that it is destroyed by the followers of the sultan, he shall repair it. *Article 7th.* The sultan binds himself, as far as he can, to keep the roads clear of plundering parties, and to protect all merchandise passing through his territories. *Article 8th.* British subjects may, with the permission of the sultan, hold in tenure land at Lahidge, subject to the laws of the country; and, in like manner, may the ryots of the sultan hold property in Aden, subject to the British laws. *Article 9th.* Such articles as the sultan may require for his own family shall pass Aden free of duty; and, in like manner, all presents and all government property shall pass the territories of the sultan free from transit duty. *Article 10th.* With regard to the stipend of the sultan, it entirely rests with Captain Haines and the British government. The sultan considers the British as his true friends; likewise the British look upon the Sultan of Lahidge as their friend.—This treaty is concluded on the 11th day of Shai Mohurrun el Haram Ashoor, in the year of the Hegira 1258 (11th February, 1843.)—Signed and sealed by SULTAN M'HOUSSAN FOUDTHEL, STAFFORD BETTLESWORTH HAINES (Captain, Indian Navy), Political Agent, Aden." A further bond was obtained by Captain Haines from Sultan M'Houssan prior to granting him his monthly salary, after his repeated attacks on Aden.—"The right honourable governor-general of India having been graciously pleased to grant to me a monthly salary of 541 German crowns, so long as I continue to act honestly and amicably towards the British, in every respect adhering to the terms of my late bond dated February 11th, 1843, especially sworn and delivered to Stafford Bettlesworth Haines, Esq., captain in the Indian navy, and political agent at Aden, I hereby solemnly attest the religious sincerity thereof; and moreover declare that in all things relating to the peace, progress, and prosperity of Aden, I will use every effort to arrest calamity, and lend my utmost aid to support the interest of the British flag; and I will conform, in all intention and purpose, to the articles specified in my late bond dated February 11th, 1843. I further bind myself by oath, that should any breach of faith or trespass on the aforesaid bond, either as concerning myself, children, chiefs, or

M'Houssan and myself, dated 11th February, 1843; but it was not until February, 1844, that the monthly stipend of 541 German crowns (equal to his former pension) was granted; and through the kindness and generous liberality of the government, he received at the same time one year's back pay, he having entered Aden to sue for peace in February, 1843. Prior to paying this treacherous old chief his pension, I considered it advisable to further ensure his fidelity by an additional bond to the treaty of the 11th February, 1843 (11th Shai Mohurrun el Haram Ashoor, 1258.) This second bond is stringent in the extreme, and dated 20th February, 1844. [*See* Note below.]

The principal tribes in the neighbourhood of Aden are as follows:—The Abdali tribe, amounting to about 4,000 fighting men; Foudthli, 3,100; Houshebi, 6,000; Shezebi, 4,000; Yaffai, 49,000;* Ourlaki, 12,000; Joud, or Ratfan, 8,000; Ameer, 4,000; Allooi, 500; Subchi, 10,000; Dathun, 4,000; Oudelli, 2,500; Resass, 6,000 fighting men. Of these, the Abdali tribe is subdivided into thirty clans, viz., the Azeehi, 400 men (Sheikh Azabe); Muntsir, 100 (Hussein Muntsir), Sowayhthi, 70 (Isslim Soin); residence, Feeoush: Dunnum, 30 (Abi Ba Saleh); Feeoush: Badtha Batan, 90 (Mohammed Selhah); Feeoush: Harraina, 20 (Aouth Syud); Harraina: Musheheira, 80 (Aouth Saleh); Durrb: Ambutein, 30 (Nassebin Abdullah); Durrb: Al Mehella, 200 (Saleh Mohammed Abdullah); Mehella: El Asaisa, 40 (Foudthel Ali); El Wahul: Ahl Seyla, 120 (Foudthel Hydera); Seyla: Beit Eyath, 200 (Homeidi); Eyath: Al Sumsam, 10 (Nassur Foudthel Sumsam); Sumsam: Bin Seloon, 120 (Hydera bin Salem); Ober e Seloon: Bin Dthuroob, 30 (Murmish Dthurbee); Ober e Seloon: Saadryn, 200 (Mohammed Syud Miswad); Saadyn: Shudtheif, no fighting men (Ali bin Ismail); Shudtheif: Haskie, 100 (Sheikh Mukbil Hadi el Azidi); Haskie: El Hejjil, 100 (Saleh Selhah); El Hejjil: El Kidam, 200 (Foudthel e Noin); El Kidam: El Hassaini, 30 (Mohammed Kumesh); El Hassaini: El Selam, 70 (Selhah bin Ahmed); Mujhaffa: El Deyyan, 70 (Mansur bin Ali); Hurran: Thaleb, 150 (Ali bin Abdullah Kaisi); Thaleb: El Hammera, 400 (Salem Selhah el Ban); Hammera: Ober Bedr, 120 (Awuth bin Abdulla); Ober Bedr: Tharoor, 20 (Nassur Mufaili); Tharoor: El Meidan, 500 (Sheikh Mehdi); Meidan: El Thol Yemani, 200 (Yaffer Yemani); residence Thol: Houth Sufian Syud Mohammed Weiss, and about 10 men at Sufian; Thoseim, 20 (Nassur Foudthel); residence, Feeoush. Making an aggregate of rather more than 4,000 fighting men.*

Physical Aspect.—Aden consists of a mountainous peninsula, whose greatest altitude is 2,000 feet; it is connected with the mainland by a narrow, sandy isthmus, 120 yards wide, which helps to form a harbour sheltered from all winds. The prospect is very desolate: the heights present the appearance of black lava; only in a few ravines, where some stunted shrubs grow, is there any sign of vegetation. The town, which consists of mean and dingy habitations, is situated in the crater of an extinct volcano, which has a diameter of more than a mile; the cone walls have an altitude of 600 feet, and a circumference along the Sham-Shan ridge (which has an altitude of 1,776 feet) of about four miles. The building ground occupies an area of 380 acres.

The pass by which the crater is entered is strongly fortified, as are also other commanding positions; and a wall across the isthmus forms an outwork against the Arabs, and marks the limit of the British territory. From Steamer Point, where passengers land at an English hotel, there is an excellent road of about three miles,† along the margin of the bay,‡ to the camp and town of Aden, and skirted the entire distance by a lofty volcanic wall, of gloomy

any other person or persons of any tribe, or those in my pay, or any individual whomsoever in any way or by any means connected with my government or my jurisdiction, or should one or any of the aforesaid persons be in any manner convicted of having been privy to, or accessory to such breach of faith or trespass on the treaty, or of committing any act of plunder whatever on the roads leading into Aden from the interior, to take the whole responsibility on myself, and to be answerable to the British; and if I, or others above-mentioned, either openly, or by secret machinations, protect any offender, and do not render entire satisfaction to the British, I freely and solemnly swear to relinquish all claim to the salary granted by the right honourable the governor-general of India, and declare myself perjured before all men. I further swear, that if I do not strictly abide henceforth by the bond dated 11th February, 1843, and the above-mentioned conditions, all claims I may have on the kindness, friendship, and generosity of the British government is rendered null; and consequently, for any breach of truth or aggression on my part for the future, I render myself open to the severest retribution. Dated February 20th, 1844.—Signed and sealed by Sultan M'Houssan Foudthel of Lahidge."

* The Yaffai is the most powerful tribe in Yemen. They extend from the Foudthli country to the borders of Sanâ; they are under seven chiefs, who each have 7,000 fighting men under them. Of their country nothing is yet known. Its products are coffee, fooah, wuruss, and grain. They are celebrated for their horses, and are esteemed a brave race of men. The Houshebi country is very fertile, and produces grain, coffee, fooah, wuruss, aloes, honey, ghee, and senna. Aden is supplied with flour and grain chiefly by this tribe. From the Foudthli country hardly anything is produced beyond Kirbee and Jowari. The Shezeebee country is equally as fertile as the Houshebi mountains. Grapes of a very superior quality are brought from Taez, and the "Kaat" plants are a great luxury in Yemen, the leaves of which, when chewed, produce slight intoxication similar to the effects of opium. The remaining tribes all occupy fertile hill ranges, affording ample supplies, and enabling them annually to export large quantities of grain. The only barren soil, in fact, in Yemen, is the belt of sandy country that intervenes between the hills and the sea; and even in this the people supply themselves with Jowari grain sufficient for their own consumption. There is but one mountain stream in the neighbourhood of Aden, which is at El Ghyle, in the Houshebi country. It occasionally reaches Lahidge, where it is collected in a large shallow reservoir, the surplus water being lost in the sands.

† Cost about 26,000 rupees.

‡ The tides rise 6 ft. neap, and 8 ft. spring.

aspect. The territory within British jurisdiction comprises a circuit two miles and a-half inland by two and a-half alongshore; all the harbour, and neighbouring bays and coast, within soundings; and all the islands within those limits.

Geology,—undoubtedly of igneous origin; in fact, a huge mass of volcanic slag and charred rocks, with the town erected in the centre of its huge crater. It has the appearance of having been once an island, but in that case it must have been at a very remote period; for the peninsula of Aden is the same as it has been for ages, and many severe battles are stated to have been fought on the low isthmus that unites the mountain of Aden with the mainland. Large masses of conglomerate, composed of lime, shells, and pebbles, abound: coarse black granite, porphyry, and quartz in crystals, are also found. The greater part of the rocks of the peninsula are more or less vesicular, and present an amygdaloid structure: calcedony frequently occurs. The volcanic ashes at Steamer Point are 500 feet above the sea, mixed with decayed shell (*murex inflatus*, common on the coast): glassy slag, or obsidian, though not plentiful, is sometimes seen in veins or streams down the sides of volcanic peaks, like lava, flowing in cascades, and assuming fantastic shapes. At some very distant period, the greater part of this coast must have experienced the effects of powerful volcanic agency; for traces of fire are everywhere visible.

Climate may be divided into two seasons. From the 15th of April to the 15th of October, the weather is exceedingly warm, and the whole peninsula, with the exception of the western and southern points, visited at intervals with strong hot gusts of wind and dust from S.S.W. to W.S.W. (raising the mercury, in Fahrenheit's scale, to 104°), which sometimes last for several hours, and then suddenly subside into a calm, during which the heat is very trying to the garrison and inhabitants. But it should be observed, that during these strong winds, which, taking the average for six years, are said to blow with violence for thirty-eight days, the weather at the west point is pleasant, the mercury ranging only between 76° and 88°.

Notwithstanding the great heat above stated, there is no increase of sickness; on the contrary, it has been remarked that there is less sickness than during the remaining months of the year, when rheumatism and severe colds are experienced, in addition to other diseases.

From the 15th of October to the 15th of April following, is called the cold season, during which the winds are cool and pleasant, blowing strong or mild, according to the moon's age, from E.N.E. to S.E., with now and then an interval of land and sea breezes. Rain sometimes falls in December, January, February, and April; the mercury, in Fahrenheit's scale, ranging between 68° to 82°. During this period the climate is agreeable, and Capt. Haines considered equal in salubrity to any part of India.

In the cold season, catarrh, dysentery, fever, and rheumatism (with the Yemen ulcer among natives only), are the prevailing diseases. In the warm months, fever, hepatitis, and debility are general.

On the whole, the climate has proved healthy to our troops. In Sept., 1845, a regiment of Madras native infantry, 950 strong, had only thirty-four in hospital. H.M. 17th foot were also free from disease:†

* Received from Dr. Menzies, her Majesty's 94th regiment, through Lieutenant-colonel Milner.

† *Statement showing the reports of the state of health of her Majesty's 17th foot at Aden—strength 550 men.*—November 30th, 1841.—A considerable improvement in the health of the men that came in the *Auckland*; they landed at Aden fifty-five sick. Detachment per *Zenobia* look very sickly; twenty-

but hepatitis is said to be the result of long-continued residence; and a softening of the brain, and even lunacy, is not unusual among the European soldiery.* The Arabs are of the usual athletic, sinewy make.

The population in September, 1845 (independent of the garrison and official persons), consisted of—Europeans, 3: Portuguese, males, 136; females, 20: Arabs, males, 8,960; females, 3,210: Soomalies, males, 1,430; females, 620: Jews (of fair complexion), males, 590; females, 480: Banians, (a trading class of Hindoos), 196: Parsees, 38: East Indian shopkeepers, 100: Boras (Indian traders), 100: Afghans, 180: African Seedees, 180: Egyptians, males, 146; females, 80. Total males, 12,160; females, 4,410 = 16,270. There are no recent returns of the number of inhabitants.

The Arabs bring abundant supplies to the camp. I noticed, in one day, that 505 camels and 23 donkeys entered Aden: the average for the year is 350 camels daily. Prices in Sept., 1845:—Sheep, $1=4s.; bullocks, $5; milch cows, $7; kids, four for a rupee = 2*s.*; fowls, 8*s.* a dozen, and very good; eggs, sixty-four for a rupee = 2*s.* Fruits brought from the interior—grapes, apples, pears, musk and water-melons, quinces, apricots, lemons, plantains, cocoa-nuts; also various esculent vegetables. The best coffee is produced within three days' journey of Aden. Excellent wheat is grown in districts adjacent, viz., Katabah and Yafefaane: bread, 2*d.* per lb.; flour, 5*s.* a barrel of 84 lbs. Foreign supplies are free of duties.

five of them in hospital the day they landed; one died at sea, one in the harbour, one on shore, and several very bad cases in hospital: total sick, the day after landing, 138. January 4th, 1842.—Reported to the commander-in-chief that sickness has much decreased during the month, and that only sixty-one remain. January 30th.—The men of the 17th may now be considered healthy—only forty-five remain. February 28th.—Twenty-seven men remain in hospital. March 30th.—Reports that the 17th regiment continue in good health. April 30th.—Good health prevails in the regiment. May 31st.—Ditto, ditto. June 29th.—Reports the 17th healthy. July 29th.—Reports, for the information of the commander-in-chief, the decrease of the sick during this month, and the death of one brevet-major and four soldiers. August 29th.—Reports the 17th regiment in good health; only twenty-seven men in hospital, among which several from venereal disease. September 30th. — The 17th regiment very healthy this month. October 31st. — Ditto, ditto. November 30th. — Seven men in hospital, and general health of the remainder extremely good. December 30th. — The 17th regiment continues in good health; fourteen trifling cases in hospital this morning. January 30th, 1843.—Ten men of the 17th regiment in hospital, and the remainder are in good health. March 2nd.—The 17th regiment healthy, notwithstanding the sick in hospital have increased to twenty-five, but the cases, however, in general, slight. March 31st.—Reports the decrease of the sick in hospital; only nineteen men of the 17th regiment, two casualties, one died of dysentery, and one man accidentally drowned; seventeen sick remaining in hospital on April 1st, eight of which venereal. May 1st.—Reports, for the information of the commander-in-chief, that fifteen sick remain in hospital: no casualty during April. May 20th.—Reports one man of the 17th regiment shot himself in the barracks. May 29th.—Reports the 17th regiment extremely healthy. June 29th.—Reports the sick in hospital increased during the month, and one private died of fever; nineteen cases in hospital, but the regiment very healthy. July 28th.—Reports the 17th regiment in good health; one casualty occurred, a case of fever. August 29th.—Reports the 17th regiment healthy; no casualty during the month; only twenty-one were in hospital on the 28th, nine of which venereal. October 1st. — The 17th regiment healthy; no casualty during the month of September. October 30th.—Sixteen men in hospital; two casualties during the month, one fever case, and one worn-out soldier invalided. November 29th.—Reports the 17th regiment in very good health. January 1st, 1844.—The 17th regiment very healthy. January 29th.—Five casualties during the month of December last; the remainder extremely healthy; sixteen men in hospital. March 1st.—The 17th regiment continues in good health; no casualty during the last month—February. March 30th.—Reports nineteen men of the 17th regiment in hospital, and that one-half of the men are slightly affected with scurvy. April 29th.—The 17th regiment very healthy; the number of sick, during the month, is twenty; nine of which venereal. May 20th.—Very healthy, only thirteen men in hospital. June 27th.—Considerable increase in the sick list of the 17th regiment; thirty-two men in hospital, but for a very trifling nature, principally venereal. July 29th.—Thirty men in hospital this day. August 29th.—The 17th regiment continues very healthy; no casualty. September 30th.—The 17th regiment continues healthy; one casualty during the month (the hospital sergeant.) November 1st.—Thirteen men in hospital, the remainder healthy. December 30th.—The sick in hospital greatly reduced. January 31st, 1845.—The 17th regiment continues very healthy; four cases in hospital; one casualty during the month. February 28th.—Ten cases in hospital; the remainder continue very healthy. Her Majesty's 17th regiment left Aden in March, 1845, with only two men sick, after forty-one months' service. The 17th were in Aden three years and five months, and lost sixteen men by sickness, one drowned, and one shot himself: total, eighteen deaths, among 550 men, in forty-one months.

* *Return showing the proportion of sick and deaths in the right wing of her Majesty's 94th regiment of foot, at Aden, for seven months.*—Average strength of the wing for the period, 524; total number of sick treated, 694; total number of deaths, 16; proportion of deaths to number of sick treated, 1 in 43 six-sixteenths; proportion of average sick to average strength, 99 one-seventh—about five per cent.

*Note.*—The vessels under the British flag consist principally of those belonging to the Honourable East India Company, and to the Peninsular and Oriental Steam-packet Company, which convey the bi-monthly mails between England and India. The position of Aden is advantageous for a coasting and refitting station; and in the event of war, it is a commanding position, enabling us to maintain a dominant attitude in the Red Sea.

Water is plentiful within the crater: all the wells in the lower grounds nearest the sea yield a brackish fluid; those under the adjacent mountain range afford pure supplies.

There is no taxation, no transit or custom dues, no ground-rent: in fact, the place is in every respect a free port.

Great credit is due to Captain Haines, for the simple and effective government which he organised at a small expense. In civil cases a *punchayet*, or jury chosen according to caste, decides between the litigants. Drunkenness is punished by fine or the stocks; the latter proving very effective in preventing a repetition of the offence. The cost of the police was only £300 a-year. The total charge for Aden, irrespective of the garrison, is defrayed from the local revenues, including a pension of 1,158 rupees a-month to the sultan—which may be viewed as a ground-rent.

The government sea-custom receipts amounted, in 1843-'44, to 18,798 rupees; in 1844-'45, to 21,377.

COMMERCE.—Imports, 1843-'44 — value, 1,237,802; exports, 348,758 — rupees: 1844-'45 — imports, 1,263,016; exports, 492,121—rupees: shipping inwards, 1844-'5 —number, 58; tonnage, 24,170.*

Number and tonnage of small craft for one year—1st May, 1844, to 30th April, 1845: number, 383; tonnage, 7,808.

The importance of Aden, with its spacious bay eight miles long by four miles broad, is unquestionable. The honourable Caleb Cushing, formerly ambassador for the United States of America and China, and now one of the cabinet at Washington, visited the station in November, 1843, and has expressed in forcible language his sense "of the extraordinary natural features of this new stronghold of the Island Queen which commands the Red Sea and the Sea of Arabia, as Gibraltar does the Mediterranean and a portion of the Atlantic." "Aden is," he adds, "even more than Gibraltar, a castle of nature's own construction. At Gibraltar, England has excavated for herself a citadel in the heart of a limestone mountain; at Aden, she has planted herself in an ancient crater, and sits secure within the primeval fortress formed by the lofty sides of an extinct volcano."

In a commercial point of view the position deserves an attention it has not yet received. The natural resources of the great Arabian peninsula, and of Abyssinia, with the adjacent African regions, are yet unexplored. It will be seen from the annexed tables of imports and exports that there is already a fair prospect of extensive traffic; and as there are many million intelligent and active inhabitants in the surrounding countries, all eager for trade, having numerous wants, and possessed of divers articles required in Europe, it is to be hoped that English skill, enterprise, and capital will be directed to the singular emporium which unites the geographical limits of Asia and of Africa. For one Arabian article alone there is an almost unlimited demand, viz., gum arabic, of which about 60,000 cwt., valued at £150,000, are annually imported into England. According to Dr. Vaughan of Aden, the gum is yielded by a small shrub of a dry and withered appearance (sometimes, however, rising twenty to thirty feet

* Under British flag—number, 52; tons, 22,831.

merchants of the east: and as they acknowledge one true and living God, they might through His grace, and by English instrumentality, be brought to the conviction of a necessity for one sufficient atonement and ever-present Mediator. Christianity has attempted less in Arabia than in any other region; it should specially aim at the subjugation of Islamism in its stronghold.

# SECTION IV.

## PENANG (OR PRINCE OF WALES' ISLAND), MALACCA, AND SINGAPORE.

The picturesque island of Penang, on the west coast of the Malay peninsula, in 5° 15′ to 5° 29′ N. lat., and 100° E. lon., extends sixteen miles north and south, is twelve miles broad at the north end, and decreases to eight at the south, with a range of lofty hills in the centre; the area is computed at one hundred square miles.

When first known to Europeans the island was an untenanted waste, covered with forests, and formed part of the possessions of the King of Quedah on the neighbouring coast. In 1785, Captain Light, the commander of a "country ship" in India, having married the King of Quedah's daughter, received the gift of the island as a marriage portion; and having transferred it to the E. I. Company, they entered into a treaty with the Malay ruler (professedly to last as long as the sun and moon gave light!), and agreed to pay him six thousand dollars annually, which sum, in 1800, was raised to ten thousand, in consideration of the additional concession of a tract on the mainland opposite Penang, extending thirty-five miles along the coast, and four miles inland from the south bank of the Qualla Mudda to the north bank of the Krian river, lat. 5° 20′ N.: area about 140 square miles. To this territory the name of Wellesley Province was given, in honour of the distinguished nobleman, then governor-general of India.

Physical Aspect.—The valley of Penang, about three miles in breadth, is the level part of the island on its eastern side, and extends from the hills to the sea: it is of a triangular shape, the ranges of mountains forming the base, the apex, called Tanjong, jutting into the harbour, and having George Town and the fort of Penang built on it; while private houses extend three miles in every direction from the point. Almost the whole of the northern shore is mountainous, and through the centre of the island runs a range of hills, which decrease in height and magnitude as they approach the south coast. On the west and south of the mountains there is a considerable quantity of level ground of good quality, and generally well cultivated. Indeed, two-thirds of Penang is level, or has a gentle inclination. The east, owing to its moistness, is covered with rice-fields; the south and west valleys, though partly tilled for the same purpose, are chiefly laid out in pepper gardens and spice plantations. Everywhere close to the coast, as in Ceylon, there is an extensive belt of cocoa-nut trees; and scattered over the island, in various groups, are groves of the graceful areka palm (or Penang), from which the isle takes its Malay name. The hills and low grounds, where not cultivated, are thickly covered with wood. Vegetation is extremely luxuriant, and for several miles the eye rests on one dense mass of mountain forest. Besides George Town (the capital) there is only one large assemblage of houses, entitled James Town, situated on the sea-shore, four miles to the southward. Numerous small villages and Malay topes are scattered over the island, especially on the south side, often beautifully and romantically situated on the coast, or amidst spice groves in the vales.

The hill called the "Highlands of Scotland" is 1,428 feet above the sea, and the situation and climate is delightful. The whole of the valley is of alluvial formation; and it would appear that the sea once washed the base of the mountains; for on the opposite shore of Quedah, successive deposits of alluvial matter have been traced for several miles inland, indicating the gradual retirement of the ocean, ridges being observable running parallel with the present line of coast.*

The harbour of George Town is capacious and well defended, with good anchorage; it is formed by a strait about two miles wide, that separates Penang from the opposite Quedah coast on the Malayan peninsula: the whole navy of Great Britain might find shelter therein. The sea is placid throughout the year, and the periodical effects of the monsoons little felt, the winds partaking more of the character of land and sea breezes.

When storms rage at sea the tides are affected, and become irregular in their flow

* Several interesting details of this picturesque island were published by Dr. Ward, of the Madras service, in the *Singapore Chronicle* of July, 1833.

through the islands, sometimes running in one direction for several days with great rapidity, and then changing to another. The town is neat; the streets wide, straight, and at right angles; the buildings are respectable, and the Chinese shopkeepers (who are the principal tradesmen) lay out their "godowns" (or warehouses) tastefully. The roads are among the best in India.

Climate.—January and February are dry and hot months; November and December rainy ones; but excepting during the two first-named, a week seldom elapses without refreshing showers. The thermometer on Flagstaff-hill (2,248 feet high) never rises above 78° Fah. (seldom to 74°), and falls to 66°; on the plain it ranges from 76° to 90°. The climate is considered remarkably healthy. The temperature of the high land of Penang resembles that of Funchal at Madeira, possessing the advantage of a very limited range of thermometer, the greatest variation in twenty-four hours being 11°, and generally only three or four. The lightness and purity of the atmosphere elevate the spirits when suffering from the depression usually caused by long residence in the tropics, while the splendid and varied scenery, formed by stately forests, hill, and dale, the calm ocean around studded with rich verdant isles, and the opposite coast of Quedah with chains of mountains towering ridge over ridge, combined with the health-inspiring breezes, render a residence among the gardens of Penang a delightful restorative to invalids, who not unfrequently resort thither.

Geology.—The mountains are entirely composed of fine gray granite, and the smaller hills are of the same material, excepting some near the coast which are formed of *laterite*, as is also Saddle Island, on the south-west of Penang. A tin mine was worked some years ago in the hills, and probably many valuable minerals exist, equal in quality to those of the contiguous Malayan peninsula.

The Soil is generally a light black mould mixed with gravel and clay; in some parts there is a rich vegetable ground, formed by the decayed leaves of the forest, with which the island has for ages been covered: the coast soil is sandy, but fertile.

Vegetable Kingdom.—The botany of the island is rich and varied. On the mountains grow the poon, bitanger, rangas, red poon, dammerlaut, wood-oil tree, the cypress, and some superb species of arborescent ferns. The caoutchouc or elastic gum winds round all the trees in a spiral form. All the Malacca fruits, with the exception of the *duku*, grow in great abundance: the sugar-cane and pepper-vine are extensively cultivated: the quantity of pepper annually produced is large: cloves and nutmegs thrive well; the former cover the tops of the cleared summits; the latter are found in every part of the valley: one plantation alone, belonging to the hospitable planter whom I visited in 1844,* oc-

* The value of Penang, as a spice island, has been manifested from a period nearly cotemporary with that of its first settlement. Pepper engrossed the consideration of capitalists for many years, until the market price fell so low that their returns scarcely more than repaid the outlay. But previous to this check another source of gain had been opened by the cultivation of the nutmeg and clove tree. In 1798 a few spice plants were imported from the Dutch spice islands; and two years later there were brought from Amboyna 5,000 nutmeg and 15,000 clove plants. In 1802 a further and larger supply arrived, the collection of the government agent, Mr. Hunter, comprising no less than 25,026 seedling nutmeg trees, and 175 plants of ages varying from four to seven years. Shortly before this last period a government spice garden had been established, comprising 130 acres of land, lying on the slopes which skirt the base of the hill near Amie's Mills, a romantic spot, and well watered by a running stream now called Ayer Putih. This plantation, in some respects a mere nursery, contained, in the year above mentioned, 19,628 nutmeg plants, varying from one to four years' growth, 3,459 being four years of age. There were also 6,259 clove trees, of which 669 were above six and under seven years' growth. In the same year (1802), Mr. Smith, the botanist of the E. I. Company, reported that he had imported, in all, to the island at that date, 71,266 nutmeg and 55,264 clove plants, out of which a few were reserved for the botanical gardens at Kew, Calcutta, and Madras. Most of the plantations now in a productive and healthy state have been propagated from nuts yielded by some of the original importations, and a number of nutmeg trees which had been planted on the face of a hill and abandoned, were, after the lapse of about four years, rescued from thick jungle and found to be in a lively condition and bearing fruit. The wild nutmeg is indigenous to Penang, being an inhabitant of the hills. It is a tall forest tree, and bears a more oval-shaped fruit than the nutmeg of commerce. Both the nut and mace are less pungent and more astringent than the true spice, yet the Chaliahs have been in the habit of gathering them and selling them in the native bazaars. Several varieties are cultivated at Penang, and are chiefly distinguishable from one another by the tinge of the leaf and shape of the nut. In some, the former is small and light in colour, in others dark and large. In one the nut is oval or egg-shaped, hanging on separate tendrils of four or five inches in length; in another it resembles a small peach; and in a third it is small and nearly circular. In 1805 there were only twenty-three bearing clove

cupies a space of several square miles; coffee yields abundantly; extensive fields of pine-apples are found at the foot of the mountains; the tea plant grows wild; ginger, cinnamon, cotton, tobacco, and in fact every intertropical production is capable of being brought to the highest state of perfection.*

Zoology, &c.—The Malayan elk (*cervus equinus*) is found in the deep forests; the mouse and the spotted deer are very abundant; monkeys, the lemur volans, the wild cat, otter, and bat, form the only indigenous animals; and the snakes, as in all tropical isles, are numerous; a species of boa (the *python* of Cuvier), eighteen to twenty feet long, is found in the hills. Beef, mutton, and pork of excellent flavour, and a great variety of fish, furnish the bazaar.

Population.—When the company's establishment was formed at Penang, in 1786, the only inhabitants were a few miserable fishermen on the sea-coast. In consequence of the disturbances in the Malayan principalities, and the encouragement given to settlers by the E. I. Cy., a native population of various descriptions arose. The population of the settlement was, in 1821, 38,957; in 1828, 60,551, viz., about 33,500 on Penang, and 22,600 on Wellesley Province: 33,500 were Malays; 10,000 Chinese; 6,000 Chaliahs; and the remainder consisted of various neighbouring tribes. In 1853, the numbers were computed to be—on Penang, 39,589; on Wellesley Province, 51,509 = 91,098.

The returns of trade, revenue, and statistical information generally, are very imperfect; the island, and also Malacca, are under the authority of the governor of Singapore, who occasionally resides for a brief period annually at either settlement.

As a commercial and maritime station, Penang has many advantages; serving as an entrepôt for the various produce of China, the eastern islands and Straits, the native merchants from which take back in return British and Indian goods. It was at one time contemplated to form an extensive arsenal and ship-building depôt at George Town; and several fine vessels were built there, but the object was ultimately abandoned. It formed a rendezvous for the British squadron in the Indian seas during the Burmese war, for which purpose its position, salubrity, and abundant supplies admirably qualify it.†

---

Malacca.—The Malayan peninsula is 775 miles long, with an average breadth of 125 miles. Near its southern extremity, in 2° 14′ N. lat., 102° 12′ E. lon., is situated the British settlement of Malacca, extending about forty miles along shore by thirty inland, and containing an area of 1,000 square miles: bounded on the north by Salengore, at Cape Rochado; on the south by Johore, at the river Muar; on the east by the Rumbo country; and on the west by the Straits of Malacca.

History.—The Malayan peninsula, although the great majority of the inhabitants are Malays, is not the original country of those active, restless, courageous, but too generally vindictive and ferocious people. The present possessors (or Malayan princes and their subjects) migrated hither in the middle of the 13th century from Palembang in Sumatra, and founded the city of Malacca about the year 1252. As they extended their colonisation, the aborigines of the peninsula, who were oriental negroes with woolly hair, jet black skin (the Malays are copper-coloured), thick lips, and flat nose, like the African, and of diminutive stature, were driven inland to the mountains, where some of their posterity still exist. The Malayan chiefs soon became involved in hostilities with their neighbours, partly, perhaps, because their sultan, Mohammed Shah, adopted the Mohammedan religion from the Arabs, then the great

trees in the company's gardens; and in October, 1834, these gardens were sold for the trifling sum of 9,658 dollars. They contained then 5,103 nutmeg trees, 1,625 clove trees, and 1,050 seedlings. The whole being sold in lots, many of the trees were dug up and transplanted to other quarters of the island, and thus dispersed; numbers were lost from mismanagement. In 1810, the total number of nutmeg trees on the island was about 13,000, of which some hundreds only were in bearing, and from such clove trees as were then productive, a supply of 20,000 plants was obtained. There are now probably not less than 100,000 nutmeg trees in the island of Penang,

* Sugar is now being cultivated with success. When I visited the island, in 1844, the merchants and planters justly complained of the disadvantages under which they laboured: their spices were in fact subject to heavier duties, when entering the British markets, than those of their competitors the Dutch; and their sugar was absolutely prohibited in England. I submitted these grievances to Sir Robert Peel, in 1845, and they were promptly remedied.

† The inhabitants of Penang are chiefly Europeans and Chinese; the Indians and Malays preferring (as the French traveller, Dr. Yoan, truly remarks) to dwell in the country, under shady fruit-trees and fragrant flowers.—(*Six Moischezles Malays.*)

traders in the east. Although the rulers of Malacca were able to resist the attacks of the Siamese on their chief city, they were compelled to yield to the conquering Portuguese, who, in 1511, obliged Sultan Mohammed Shah, the twelfth of his dynasty, and the seventh of the city of Malacca, to retreat, after an obstinate resistance, to the extremity of the peninsula, where he founded the principality of Johore, which still exists. The Portuguese held Malacca until 1640, though with great difficulty, against the repeated assaults of the sultans of Acheen; it was then assailed by the Dutch, who gained possession after a six months' siege. In 1795 it was seized by the British, but restored to the Dutch at the peace of Amiens, in 1801. On the breaking out of the European war, in 1807, it was again taken by the English, but restored at the peace of 1815; finally, in 1825, it was obtained by England, together with the fort of Chinsurah on the river Hooghly, twenty miles from Calcutta, in exchange for the British settlements on the large and valuable island of Sumatra.

Physical Aspect.—The sea-coast is rocky and barren, with detached islets of cavernous rocks, which the Chinese used as places of sepulture. The interior is mountainous, being a prolongation of the Tenasserim Alpine chain, which is continued to the extremity of the peninsula; the greatest elevation (named by the natives *Lealdang*, by the Portuguese *Mount Ophir*) has an altitude of 4,000 feet above the sea. Colonel Farquhar was nearly six hours ascending to the table surface on the summit, which does not exceed forty yards square. The whole mountain appears to be a solid block of granite, here and there thinly covered with decayed vegetable soil; stunted firs are found near the top; and the vegetation is quite different from that met with in the plains and valleys. The principal rivers are the *Muar* and *Lingtuah;* small streams and rivulets are very numerous. The extreme point of the peninsula is a cluster of islets; the roadstead is safe; and in the south-west monsoon, vessels not drawing more than sixteen feet of water are secure in a harbour under the lee of the fort. Violent tempests are never felt in its excellent anchoring ground: the Sumatra squalls, which are common to the Straits, seldom last above an hour or two.

Climate.—The climate is reckoned one of the healthiest in India, the temperature being uniform, the thermometer ranging from 72° to 85° the whole year round. The mornings and evenings are cool, and sultry nights like those of Hindoostan are rarely experienced. There is no regular monsoon, but the rainiest months are September, October, and November. The fluctuation of the barometer throughout the year is trifling, the range being 30·3 to 29·83, giving an annual variation of only one-fifth of an inch. The average of casualties in the garrison, for seven years, was at the rate of only two per hundred.

Population.—The population of the settlement of Malacca,* during the palmy days of Portuguese power in the east, was probably very considerable. In 1750, the inhabitants only numbered 9,863; in 1766, 7,216; in 1817, 19,627; in 1822, 22,000: in 1836 the amount had augmented to 33,162, with 6,449 houses; of these 233 were whites, 2,289 descendants of Portuguese, 23,300 Malays, and 5,000 Chinese. In 1853 there were 54,021 inhabitants in the settlement.

Education.—A valuable institution, called the Anglo-Chinese college, was established in 1818, by the joint efforts of the late Rev. Drs. Morrison and Milne. The object in view was the reciprocal cultivation of Chinese and European literature, and the instruction of native youths in the principles of Christianity. Several valuable and interesting translations were made of the leading Chinese books, and English standard works were translated into Chinese: a foundry for types was established, paper manufactured, and a periodical commenced. The opening of China to British intercourse has diminished the necessity for this establishment.

Natural Productions.—The staple of the settlement is the tin mines, all of which are within a circuit of twenty-five miles round Malacca. In the valleys vegetation is extremely luxuriant; rice yields from 200 to 300 fold; the sugar-cane is equal to any produced in other parts of the globe; coffee, cotton, indigo, chocolate, pepper, and spices have all been tried, and thrive remarkably well. The spontaneous productions of the soil are numerous, consisting of an almost endless variety of fruits and vegetables. The country is covered with durable timber for ship and house building; the *Murbon* tree, which is nearly equal to teak, is extremely abundant. Canes

* The inhabitants of Malacca, in 1830, came to a unanimous resolution to liberate every slave in the settlement on 31st December, 1841.

and rattans form a considerable branch of the exports; the forests yield gums, resins, and oils in abundance; the camphor tree grows near the south-east extremity of the peninsula; a variety of medicinal plants and drugs may be observed in the woods; and the nutmeg is indigenous. If the gold and tin mines in the vicinity of Malacca were scientifically worked, they would prove of great value; at present, the Malay and Chinese miners seldom dig below six or ten feet, and, as the veins become thin, remove from place to place.* The gold from Hoolo Pahang, 100 miles inland from Malacca, is of the purest quality; and there are some small mines of gold at the foot of Mount Ophir, called Battang Moring, about thirty-six miles from Malacca.

Wax, cutch, dammeer, fish maws, sharks' fins, and birds'-nests (for Chinese soups), rattans, camphor, betel-nuts, gold-dust, sago, dragon's blood, ivory, hides, aguilla and sappan-woods, &c., are among the principal productions; poultry, hogs, buffaloes, and fish are plentiful and cheap. During the progress of the expedition against Java in 1811, thirty thousand troops, with their followers, were daily supplied with fresh provisions in great variety.

Commerce.—Malacca, being situate between the two great island emporiums of the Eastern Archipelago—Penang and Singapore, the one at the north-west, and the other at the south-east of the Straits—has necessarily a trade limited to its own consumption and produce. Before the establishment of commercial settlements at Penang and Singapore, and during the monopolising sway of the Dutch, Malacca was a place of considerable traffic.

*Weights and Measures.*—Throughout the Straits of Malacca the common weights are the pecul, catty, and tael. The Malay pecul, three of which make a bahar, is heavier than the common or Chinese pecul, which is = 133½ lbs. Rice and salt are usually sold by the coyan of forty peculs nearly, and gold-dust by the bunkal = 832 grs. troy. The gantang (by which grain, fruit, and liquids are sold) = 1¼ English gallon, is divided into two bamboos. Twenty gantangs of rice make a bag, and forty bags a coyan. Cloth is measured by the astah or covid of eighteen inches nearly. Land, by the orlong of twenty jumbas = 1⅓ acre.

The *Currency* of the Straits is Spanish dollars.

---

Singapore (*Singhapura.*) — This large trading settlement is situate on the southern extremity of the peninsula of Malacca just described, in 1° 17′ 22″ N. lat., 103° 51′ 45″ E. long.† It is elliptical in form, from twenty-five to twenty-seven miles in its greatest length from east to west, fifteen miles in its greatest breadth from north to south, and contains an estimated area of 275 square miles. Some fifty small isles, within ten miles around it, are scattered in the Straits; these have an area of about sixty miles; the whole settlement embracing a maritime and insular dominion of about 100 miles in circumference.

History.—The Malay annals relate that in A.D. 1252, Sri Iskander Shah, the last Malay prince of Singapore, being hard pressed by the King of Majopahit, in Java, returned to the mainland, where he founded the city of Malacca. That the Dutch or Portuguese may have settled on the island is probable, from the remains of religious buildings and other structures, which indicate its having been once thickly inhabited. On the design of Sir Stamford Raffles, the settlement of Singapore was first formed in February, 1818, and its sovereignty in its present extent confirmed to Great Britain in 1825, by a convention with the King of Holland and the Malay princes of Johore.‡

* The Chinese and Malay miners use lead and antimony for the adulteration of the tin. Antimony has the effect of hardening the admixture with lead, thereby increasing the difficulty of detection, as regards external appearance. The mode of working the mines in places appropriated by the Malays and the Chinese separately is very nearly similar, except at Sungie Hujong, where the Chinese chain-pump is advantageously used for raising the water out of the mine-pit. The apparatus is simple, consisting of a common water-wheel, a circular wooden chain about forty feet in circumference, and a long square box or trough, through which it runs in ascending. The wheel and chain revolve on a common axis, so that the motion of the former necessarily puts the latter into action. The chain consists of square wooden floats, a foot distant from each other, and strung as it were upon a continuous flexible axis, having a movable joint between each pair. As the float-boards of the chain successively enter the lower part of the box or trough (immersed in water), a portion of water is constantly forced up by each, and discharged at the top. At one of the mines the simple but efficient mode of its application is thus described:—There are three distinct planes, or terraces, rising above each other. On the middle one is the wheel; the lower is the pit of the mine: from the higher a stream of water falls and turns the wheel, which puts the whole machine into motion, and brings up another stream from the pit; these two streams from above and below, unite on the middle plane and run off in a sluice, by which the ore is washed.

† This is the position of the town.

‡ A pension of 24,000 Spanish dollars a-year is, I believe, paid by the E. I. Company to the Malay prince rajah of Johore, as an equivalent for the cession of Singapore and the neighbouring isles.

When taken possession of by the E. I. Company, Singapore had been inhabited for eight years by about *one hundred and fifty Malays*, half fishermen and half pirates.

Physical Aspect.—The island is separated on the northward from the neighbouring Malayan peninsula by a very narrow strait, which in its narrowest part is not more than a quarter of a mile wide. About nine miles distant from the opposite coast lies an extensive series of almost desert isles; the channel between these and Singapore (which may literally be called "*a corner shop*") is the main route of commerce between eastern and western Asia. The surface is low and level, with an extensive chain of saline and fresh-water marshes: several portions are covered with lofty timber and luxuriant vegetation; and here and there are rounded sand hills, interspersed with flat spots, the soil composed of a ferruginous clay with a sandy substratum.

The town stands on the south coast, on a point of land near the west end of a bay where there is a salt creek navigable for lighters nearly a mile from the sea; on the east side of the town is a deep inlet affording shelter to native boats. The town consists generally of stone houses two stories high, but in the suburbs called Campong-Glam, Campong-Malacca, and Campong-China, bamboo huts are erected on posts, often in the midst of stagnant water. On the east side of the harbour enterprising British merchants have constructed substantial and ornamental houses fronting the sea, presenting a strong contrast to the wretched tenements of the Malays. The ground is generally raised three feet, and the mansions have a handsome entrance by an ascent of granite steps, surmounted by a portico supported by columns of every order of architecture: the rooms are lofty, with Venetian windows down to the floor, and furnished in a luxurious manner; each dwelling being provided with baths and billiard-tables; while the grounds are tastily laid out with shrubs of beautiful foliage, and combine to give the town a picturesque appearance when viewed from the roadstead.

Climate.—Owing to proximity to the equator, and generally level surface, there is a high degree of temperature throughout the year, the mercury varying only from 73° to 85° Fah. The barometric range is also exceedingly small.

The periodical rains are indistinctly marked, and of short duration; the rainy days during the year are about 150. Evaporation is very rapid. The climate is not insalubrious even for Europeans, many of whom have resided here successive years in perfect health.

Geology.—Principal rock a red sandstone, which changes in some parts to a breccia or conglomerate, containing large fragments and crystals of quartz. The whole of the contiguous isles before-mentioned as scattered around Singapore, are apparently of submarine origin, and their evulsion probably of no very distant date.

Population.—In 1820 (the year after British occupation) the island began to be peopled and frequented; and the protection of the British flag induced many to resort to the place. In 1823, there were 10,683 permanent dwellers, of whom 74 were Europeans; Malays, 4,580; Chinese, 3,317; Buggies and other adjacent islanders, 1,851; the remainder consisted of natives of India, Armenians, Arabs, &c. In 1833, the population numbered 21,000—namely, Euro-

peans, 119; Chinese, 8,517; Malays, 7,131; and the remainder Indians, Armenians, &c. The males numbered 15,000; the females, 6,000. In 1853, the residents had augmented to 57,421, of various races. To the foregoing must be added about 1,000 convicts; with military establishment and camp followers, 600: making a grand total of about 60,000 persons, where a few short years ago there were not 100! The leading merchants, agents, shopkeepers, and auctioneers are Englishmen. There are several wealthy Chinese merchants; indeed the bulk of the traders, and the most valuable part of the citizens, are "the Celestials," several thousand of whom arrive annually from China by the yearly trading junks; about 1,000 settle at Singapore, and the remainder disperse themselves over the neighbouring islands. The Malays are chiefly fishermen, and the natives of the Coromandel coast boatmen.

There is a minister of the church of England and a few missionaries, who receive all possible encouragement from the excellent governor, Colonel Butterworth.

Natural Productions.—The island itself has few indigenous productions; it is in fact a commercial emporium, and probably will never be much more. Its chief staple is the agaragar of the Malays (*fucus saccharinus*), a fern-like plant, which abounds on the coral shoals around Singapore, and produces in China from six to eight dollars per pecul, in its dry bulky state. By the Chinese it is converted into glue and paint, used to glaze their cottons, and "sacrifice paper;" the finest portion is made into a rich jelly, which forms a delicious sweetmeat when preserved in syrup. The harvest of this sea-weed is from 6,000 to 12,000 peculs annually. There are about ten sago manufactories at Singapore, giving employment to 200 Chinese manufacturers. The famous gutta-percha* is chiefly brought from the neighbouring islands. Sugar, nutmegs, and other spices are now being successfully cultivated by the Chinese.

Commerce.—As a trading entrepôt, Singapore presents a remarkable illustration of the advantage of position. In 1820, a few months after the British flag was hoisted, no less than 55,000 tons of European shipping called at the place to trade and for refreshments; and native vessels, of 13,000 tons burden, sailed with goods for neighbouring islands.

In 1821, one vessel cleared with a cargo of Straits produce for European markets; in 1822, four; in 1823, nine; in 1824, twelve (value of cargoes—Sp. dollars, 1,035,868); in 1825, fifteen; and so on increasing. In 1824, the exports were valued at 6,604,601; imports, 6,914,536 = 13,519,137 Sp. dollars.

The following statement shows the imports and exports of the settlement:—

| 1851–'52. | Merchandise. | Treasure. | Total. |
|---|---|---|---|
| | Rupees. | Rupees. | Rupees. |
| Imports . | 30,262,080 | 4,614,871 | 34,876,951 |
| Exports . | 24,586,807 | 5,683,060 | 30,269,867 |
| Total . . | 54,848,887 | 10,297,931 | 65,146,818 |
| | Trade of 1851–'52 . . . . . | | 58,689,225 |
| | Increase in 1852–'53 . . . . | | 6,457,593 |

The total arrivals and departures of European or American vessels, in 1852–'53, was 1,058, of which 733 were British, 135 Dutch, and 61 American: the total tonnage was 273,955. The total number of native vessels was 2,107, with a tonnage of 70,194.

Government.—A lieutenant-governor, appointed by the governor-general of India, aided by a small council. A recorder performs biennially, or more frequently, legal circuit through the settlements.

Finance.—The receipts from the three Straits Settlements, in 1849–'50, amounted to 674,196 rupees; the charges to 689,020 rupees: balance paid from Indian revenues, 14,824 rupees = £1,390.

* *Gutta-percha* (*taban*), which now forms a large item of export from the Straits Settlements and the adjacent regions, has become an article of commerce within the last ten years, and already upwards of 3,000 tons have been imported into England. In 1844 I saw the article used at Penang for riding-whips, the only purpose to which it was then applied. The gum is obtained from a tree which grows sixty to eighty feet in height, and from two to three feet in diameter, with but a few small branches. The tree is cut down, and incisions made round it at intervals of about sixteen inches: the gutta or milky juice rapidly concretes, and, before boiling, has a dry ragged appearance like shreds of bark; it is light, tough, and with little apparent cohesive qualities. It would require twenty trees, according to Dr. Oxley, to produce 133 lbs. Mr. P. L. Simmonds (who deserves credit for the attention he has paid to the gums, resins, and oils of commerce) estimates that about one million of trees of full growth must have been destroyed during the past nine years. The natives entertain no fear of the supply being exhausted. Various other inferior gums, the produce of trees quite different from the *taban* proper, are now used in the adulteration of gutta-percha. The present import of this useful article amounts to about 21,000 cwt., at £5 10*s.* per cwt. = £120,000. The importation of the kindred substance (caoutchouc) is 27,000 cwt., at £7 per cwt. = £189,000. The sago pith is brought from the neighbouring islands.

# SECTION V.—HONG-KONG.

Shortly after the war commenced between England and China, in July, 1840, the island of Hong-Kong was occupied by the British, under the directions of Captain Elliott, partly on account of the harbour which it forms in conjunction with the mainland, and partly because it was a convenient station for the opium smugglers, from whence to dispatch this deleterious drug to different parts of the Chinese coast. Previous to the treaty of Nankin and the termination of hostilities in July, 1842, the dependents, connections, and officials of her Majesty's plenipotentiary in China, and the leading opium traders, had secured the few eligible spots on which buildings could be erected,—formed markets, and were deriving an income from these and other sources. When, therefore, the plenipotentiary dictated the terms of peace to the Chinese commissioners, he named, to their great surprise, Hong-Kong (which they knew not even by name) as the only territory we required; and the word Chusan was struck out of the instructions sent from England, because, if this fine island had been retained, the advantageous position occupied by interested persons at Hong-Kong, would soon have been neutralised when Chusan became a flourishing colony. Yet the latter, as compared with the former, is like the Isle of Wight contrasted with one of the Scilly Isles; and its insignificant position and area are but portions of its numerous drawbacks.* With these preliminary remarks, I proceed to a brief description of this settlement.

Locality.—Hong-Kong, which in the Chinese language signifies "Red Harbour," or "Flowing Streams," is in 22° 16′ 27″ N. lat., 114° 14′ 48″ E. long.; and lies about forty miles east of Macao. It forms one of a numerous but scattered group of lofty islands termed the "Ladrones," which vary in size and height, but agree in their arid and rugged features. The length of Hong-Kong is about eight miles east and west, with a breadth of two to four miles: it is separated from the mainland of China by a strait or inlet of the sea, varying in breadth from half a mile to three miles; one entrance, the Lymoon Pass, is less than a mile wide.

Physical Aspect.—The island consists of a broken ridge of mountainous hills running from W.N.W. to E.S.E., at an average height of about 1,000 feet; but from this ridge and its spurs various conical mountains rise to the height of 1,500 to 2,000 feet above the sea, and are very precipitous. The greater part of the coast shelves abruptly from the ocean, particularly on the north face; there are a few narrow valleys and deep ravines through which the sea occasionally bursts, or which serve as conduits for the mountain torrents; but on the north side of the island, especially where the town of Victoria is built, the rocky ridge approaches close to the harbour; and it was only by hewing through this ridge that a street or road could be made to connect the straggling series of buildings which extend along the water's-edge for nearly four miles, although comprising only about fifty European houses and some Chinese huts and bazaars. Here and there on the tops of some isolated hills, or along the precipitous slopes of the mountains, scattered houses have been constructed; but rugged, broken, and abrupt precipices, with deep rocky ravines, must effectually prevent any concentrated population from being able to provide efficiently for its own protection, cleanliness, and comfort. Hong-Kong cannot be said to possess any vegetation: a few goats with difficulty find pasturage. After the heavy rains of May, June, July, August, and September, the hills assume somewhat of a greenish hue; but the whity-brown or red-streaked ridges, with the scattered masses of black rocks, give a most uninviting and desolate aspect to the island, which is unrelieved by the adjacent mainland, whose physical features are precisely similar to those of Hong-Kong, the mountain-tops and sides presenting in many places a singularly heavy configuration and gloomy prospect.

Geology.—There is no igneous formation.

* In my official report on Chusan and on Hong-Kong, and in a minute on the British relations with China, transmitted to her Majesty's secretary of state, the circumstances connected with this discreditable transaction, and the fallacies put forth in its defence, were amply exposed to public view. The report on Hong-Kong is on the records of the House of Commons.

The island partakes of the same geological character as the coast of China group, south of the Quesan group of islands. The structure may be briefly described as consisting of decomposed coarse granite, intermixed with strata of a red, disintegrating sandstone, crumbling into a ferruginous-looking clay. Huge boulder-stones, which gunpowder will not blast, are imbedded in a stiff earth, or are else strewn over the tops and sides of the mountains. Gneiss and felspar are found in fragments, and there are indications of ironstone. That the granite is rotten, and passing, like a dead animal or vegetable substance, into a putrescent state, is evidenced from the crumbling of the apparently solid mass beneath the touch, and from the noxious vapour (perhaps hydrogen) which it yields when a fierce sun succeeds to heavy rains. On examining the sites of houses in Victoria, whose foundations were being excavated in the sides of the hills, the strata appeared like a richly-prepared compost, emitting a fetid odour of the most sickening nature, which inhaled, at night especially, proved poisonous. This strata quickly absorbs any quantity of rain, which then returns to the surface in the character of a pestiferous mineral gas.* The position of the town of Victoria,

* *Rotten Granite.*—Lyell, in his *Principles of Geology*, vol. i., p. 317, says—"The disintegration of granite is a striking feature of large districts in Auvergne, especially in the neighbourhood of Clermont. This decay was called by Dolomieu '*la maladie du granit*,' and the rock may with propriety be said to have the rot, for it crumbles to pieces in the hand. The phenomenon may, without doubt, be ascribed to the continual disengagement of carbonic acid gas from numerous fissures." It is this gas which is evolved at the Grotto del Cane near Naples, and which is so pernicious to animal life. It is disengaged at Limagna d'Auvergne in France, in large quantities; a lighted candle or other burning substance being extinguished by the gas. Water materially aids, by its solvent power, the operation of carbonic acid gas in the decomposition of rocks. This gas is invisible, destitute of smell, much heavier than common air; owing to its specific gravity it may be poured from one vessel to another; may be collected over water, which largely absorbs it, and is highly deleterious to animals. It is discharged from the surface of the water of some natural springs, and from narrow and deep valleys. Other gases are evolved from the earth. Dolomieu states that he ascertained the presence of sulphurous acid, muriatic acid, hepatic gas or sulphuretted hydrogen, and inflammable air or hydrogen, as well as carbonic acid. The most abundant of the gases extricated from the bowels of the earth, next to carbonic acid gas, is probably carburetted hydrogen, which is so rapidly destructive of life in coal mines. It is also sometimes emitted from the surface of the soil, or of springs and wells. M. de la Beche describes the manner in which the disintegration of rocks takes place, owing to the protracted action of atmospheric moisture. The felspar contained in granite is often easily decomposed. Some trap rocks, from the presence of felspar, are liable to decomposition, as in parts of Jamaica. The main composition of granite is quartz, felspar, and mica. Some qualities contain only felspar and mica. This is generally the case in Hong-Kong, where felspar is found in large crystals looking like quartzose gravel. The sound granite of Hong-Kong is in isolated blocks. No drainage can ever render the place salubrious; and it is exceedingly desirable that the fallacious attempt should be renounced, as its only effect is to drain money from the British treasury. If further proof be wanting, it is to be found in the following facts adduced by Dr. Heyne, of the Madras artillery, and which I did not see until after the text on the cause of sickness at Hong-Kong was written. The subject ought to be carefully attended to in the selection of sites for colonies, of towns, garrison stations, encampments, &c. Dr. Heyne observes that the ordinarily received opinions as to the vegetable or marshy origin of fevers will not hold good in Southern India, for "the hills are here not more woody than in other healthy places; some, indeed, where the epidemic of 1808 and 1810, as well as the endemic, were most destructive, are quite naked of trees, as Dindegul, Madura, and the rocks west of Seringapatam. Now, if it should be found, that this fever exists constantly and invariably among certain description of hills, when others of a different composition are as constantly free from the same, would it not become reasonable to suppose that the nature or composition of the rock itself must furnish the cause of the calamity? The hills where it is found to prevail, appear, at first view, to be quite harmless, as they are granite, which is the most common rock-kind on this globe. They contain, however, besides quartz, felspar, and mica, a great proportion of ferruginous hornblende, which, by its disintegration or separation from the rock, becomes highly magnetic, and in which, I suppose, the cause resides which produces this fever, besides a great train of other disorders. This iron hornblende occurs in such quantity that all rivulets, public roads, indeed, all hollows along these hills are filled with its sand; from which, also, all the iron in this part of the country is manufactured. This granite is remarkable for its disintegration, as it not only separates during the hot season in large masses of many tons, but crumbles as easily into its composing particles, and is found as sand in great abundance, not only near every rock, but near every stone, from whence it is carried by the torrents during the rains to the lower parts of the country, and thus forms the particular mark by which these hills may be distinguished from all others. It is generally not attracted by the magnet when united to the mass, even when it occurs as in hornblende slate, or greenstone, in the greatest abundance; but after it has been separated it is attracted as much as iron-filing. This may be owing to the incipient state of oxydation, or, more likely, to the development of magnetism by the high temperature to which it has been exposed in the hot season, which also may have weakened the cohesion of the rock, and caused its disintegration in the mass. Hills of this description form the principal ranges of the Ghauts, as far at least as the Godavery; they pre-

which may be likened to the bottom of a crater with a lake, prevents the dissipation of this gas, while the geological formation favours the retention of a morbific poison on the surface, which is occasionally called into fatal activity. There is no extent of marsh on the island capable of generating miasm; but the heavy rains are annually washing large portions of the mountain through deep ravines into the bay, and thus continually exposing a fresh rotten surface to the sun's rays, and preserving a focus of disease which will finally become endemic. Vast quantities of silt from the hills are being deposited along the shores of the harbour. Owing to this circumstance, and to the rapid receding of the tides from this coast, shoals are fast accumulating in the bay. The average depth is only four to five fathoms, except in the stream, where there are six to seven fathoms. In no great interval of time, the harbour of Hong-Kong will be, in many places, too occupied with shoals to admit large vessels.

Climate.—It is difficult to convey by thermometrical registry an accurate idea of the climate of any place. The range of the thermometer will not indicate the pressure of the atmosphere; the barometer, in or near the tropics, is of little utility as an index; the hygrometer imperfectly shows the quantity of rain in the air; while the height of the surrounding land, its configuration, the nature of the soil, the extent and quantity of the vegetation, the exposure to the sea and the prevailing winds, and the unseen but powerful effects of electro-magnetism,—all influence what is comprised under the word "climate." In some respects the whole coast of China partakes of the climactic characteristics of the opposite coast of the American continent, particularly as regards the extremes of temperature, and its depressing influence on mental and physical power.

For six months in the year (April to September), the heat varies from 80° to 90° Fah.; but during the other six months the heat is also occasionally excessive, the thermometer having been known to stand at 80° Fah. on Christmas-day. The island, being on the verge of the tropics, is subject to the extremes of the torrid and temperate zones. Even in the same day, the range of mercury in the thermometer is very great, and the vicissitudes are exceedingly trying to the European constitution.

But neither the range from heat to cold, nor the quantity of moisture in the atmosphere, will adequately convey an idea of the effects that this climate is capable of producing on the human frame. During April,

dominate also among the smaller, and in single hills and rocks in the low country, so that they might be taken as the exclusive rock formation of this country. However, fortunately, this is not quite the case. They are easily recognised at a distance by their very rugged and abruptly pointed appearance, and the great steepness at their tops. The ranges of this formation are also very interrupted, and generally consist of rows of single hills, although to the southward, I have found them also connected at bases, and in triple and quadruple ranges." This description answers for Hong-Kong. Dr. Heyne then gives an excellent topographic description of the hills "which have rendered themselves known to Europeans for the malignity of the fever," and after that of such as are as "constantly free of the hill fever." This is the right kind of topography. The hills where the fever is "totally unknown," are "primitive trap, which consists of quartz, felspar, and real hornblende." The epidemic fever of 1808 stopped short at a range of hills of this latter composition, in the Coimbatore district. "At the Pulicat hills, among which, as far as they extend to the southward (Chittoor), the hill fever is totally unknown. They consist entirely of flinty slate, and are bare in some places as they are woody in others, and as lofty and as low as the granite hills. The Cuddapah district is divided from Gurrumcondah on the south, and from iron granite and the hill fever, by a range of flinty slate. The seam bends there to the northward, where the ranges thicken as they advance, and leave narrow valleys as far as Cummuur, and further up the river Kishna. The whole or most of these hills belong to the clay-slate formation; some are calcareous; all, however, are free of the hill fever. Other fevers may occasionally be seen, such as simple intermittents and bilious remittents; but they do not, like the hill fever, run into a typhus, and the cautious may easily guard against and get rid of them. This is the largest extent of inland country free of the hill fever, viz., from Cuddapah to Kishna near Chintapilly, a place that has been at all times dreaded for its fevers. There the iron granite hills prevail again. To the westward of Cuddapah, the healthiness of the country extends to the Ganjecottah hills, which belong to the flætz trap formation, consisting of sandstone, limestone, jasper, and hornstone pebbles cemented together, and which are perfectly free of magnetic ironstone. Bababudden is another range of hills which is remarkably free of hill fevers, although it lies between places of notoriety for such, as Seringapatam to the south-west, Chittledroog to the north-west, and Naggury to the west, an unwholesome country amongst the Ghauts. It belongs to the clay-slate formation, and active magnets are found in large depositions on them. It rains on them for six months in the year continually, when plants keep fresh and alive in the open air for many days after they have been taken out of the ground, or broken off the stem." In fact, according to the observation of Dr. Heyne, the hill fever on this coast exists exclusively among the hills of the granite formation, or where ironstone is found in large quantities.

and part of May, when the sun is approaching rapidly from the equator, there is a dry burning heat, with a cloudless sky; but towards the end of May, and throughout June, July, August, and part of September, the rain descends in torrents, with a force and continuance such as I have never seen in India, Africa, Australia, or any other part of the world. The clouds pour down one vast sheet of water, washing away hills and rocks, furrowing the island with deep ravines, and saturating the soft, porous, putrescent strata, to the extent of many feet, with daily renewed moisture.

In the intervals of rain a nearly vertical sun acts with an intense evaporating power, and a noxious steam or vapour rises from the fetid soil, yielding a gas of a most sickly and deleterious nature. This morbific gas does not arise from vegetable or from animal decomposition: there is none on the island to any extent; but decomposed mineral substances, as before stated, yield an aeriform poison, under some circumstances, of a more deadly description than the products of the other natural kingdoms. This gas does not rise more than a few feet from the earth; it mingles slowly with the surrounding atmosphere, and, when not causing immediate illness, produces a depressing effect on mind and body, which undermines and destroys the strongest constitutions.

Military and naval men who have served in Africa and in India, feel the effects of the sun in Hong-Kong in a manner never before experienced. Even at Macao, only forty miles west of Hong-Kong, Europeans may walk about the whole day in the month of July, when to do so at Hong-Kong would be attended with almost certain death. Neither the Indian sepoys, Malays, or Chinese can endure the climate so well as Europeans, whose stamina they do not possess. The Chinese deem it exceedingly dangerous to prolong their abode in the island beyond a certain time. They consider Hong-Kong injurious to health, and even fatal to life. The Europeans who survive a brief residence in this climate generally have a lassitude of frame, and an irritability of fibre, which saps the spring of existence. A malign influence operates on the system in a most distressing manner, which is not removed by a return to Europe; on the contrary, the sufferers not unfrequently die soon after their arrival in England.

Diseases and Mortality.—The prevailing disease is a fever, combining the character of the African and West Indian fevers. It was first supposed to be epidemic, but it has now become endemic, and may be assumed to be the fixed malady of the island. Diarrhœa and dysentery form the next most immediately fatal class of diseases; but intermittent fever or ague destroys health gradually. In 1844, the strength, for the year, of the European and native troops was 1,526, and the number of soldiers who passed through hospital amounted to 7,893: thus, on an average, each man went through the hospital more than *five times in the year!* The sacrifice of life since our occupation of Hong-Kong has been enormous. Lieutenant-general d'Aguilar, when commanding the forces in China, wrote in 1845 to the Horse-guards, stating that a regiment of 1,000 men was *entirely destroyed in three years.** In 1849, the governor reported the mortality of the European troops, for the year 1848, as 20·43: in several preceding, and in subsequent years, this ratio was exceeded. It must be remembered that the invalidings and deaths on the passage to Europe are in an equal proportion. Recently the lives of many European soldiers have been saved by embarking them in transports moored in the centre of the harbour at the most sickly season.

Nor is it during only one period of the year that the island is unhealthy: in the cold season there are agues, low continued fever, diarrhœa, pulmonary complaints, dropsy, rheumatism, and various other dis-

* It was supposed that Saiwan, on the south-east side of Hong-Kong, would afford a healthy station for the troops: government expended a considerable sum of money in preparing and building a set of barracks, of two stories, with every view to comfort and health. The officer of the royal engineers having reported the cantonments to be habitable, the general in command sent a medical board to examine the building and station. The board reported that the station at Saiwan appeared healthy, that there was no apparent cause for disease, and that it was eligible for troops. The general resolved to begin with a small detachment, and twenty Europeans were sent to Saiwan. No sentry was to be mounted during the day, and but one at night. In five weeks five of the soldiers were dead, three more were in a dangerous state, and four were convalescent; one European woman and child were also dangerously ill. The remaining men were withdrawn, and a small detachment of native troops sent thither, in order to ascertain whether the climate would suit them. On the 17th July, 1844, only four men out of the twenty Europeans who had been to Saiwan, were reported fit for duty. The native soldiers died nearly as fast as the Europeans, and the post was ultimately abandoned.

eases arising from general debility of the system, and from the poisoned atmosphere.*

The mortality and sickness of Hong-Kong is not the result of the newness of the colony. New colonies, even in the tropics, have not been originally unhealthy. When the West India Islands were first colonised they were perfectly salubrious, as is proved by the large European population who resorted thither, and remained there many years. Calcutta and Bombay are reported to have been formerly much healthier than they are at present. The Australian colonies were perfectly healthy when founded; so also the Mauritius and St. Helena. I cannot name a single colony that was originally unhealthy, and that subsequently became salubrious. Soldiers, sailors, and civilians, Europeans and natives, women as well as men, residing in every part of Hong-Kong, have fallen victims to the climate, and at all seasons of the year.

An extensive study of the subject, and no inconsiderable experience in different climates, induces me to concur in the opinion of Dr. Thompson,† expressed when head of the medical department in China during the war—that the evil cannot be permanently ameliorated. The geological character, the immense quantity of rain, and the circumvallation of hills surrounding the town and island, render them hotbeds of disease, which may be less destructive one year than another, but which will ever and anon recur with varied violence. No drainage can remove this destructive miasm; independent of new roads or buildings, the yearly rains keep the surface continually saturated with moisture, and further uncover large portions of the hills, washing the putrefying substance down the deep ravines towards the sea; thus generating fresh cause for disease.

Population and Social Progress.—In January, 1841, natives of China were invited to settle in the island, under British protection, with a promise that they should be "governed according to the laws and customs of China, every description of torture excepted." A form of administration was organised; a chief magistrate and a harbour-master appointed, and fifty lots of land sold in June, 1841, the annual rental of which amounted to £3,224. Each lot was required to have a building erected within six months, of the appraised value of 1,000 dollars; and a deposit of 500 dollars was required to be lodged with the treasurer, as a security for the performance of this engagement. Building commenced with great spirit; the government spent very large sums of money upon the island, and the harbour was filled with ships of war and transports. Hong-Kong has had a fair trial for fourteen years. It will be asked, what progress has been made in population?

On taking possession, it was found to contain about 7,500 inhabitants, scattered over twenty fishing villages and hamlets. The requirements of the fleet and troops, the demand for labourers to make roads and houses, and for servants for the Europeans, increased the number of inhabitants; and in March, 1842, they had augmented to 12,361. In April, 1844, the Chinese population on the island was computed at 19,000, of whom not more than 1,000 were women and children; in which number were included ninety-seven women slaves, and female attendants on thirty-one brothels, eight gambling-houses, and twenty opium shops. In 1849, the total was rated at 29,507. In December, 1852, the resident population of Victoria was 15,962, and that of the villages, 4,820 = 20,782. To this amount is to be added, 2,055 Chinese in the service of Europeans, 459 Portuguese from Macao and Goa, and 476 Europeans and Americans. There is a considerable floating population in boats, and many vagrants. Altogether, there are under 25,000 in the settlement: and not one respectable or wealthy Chinaman has ever fixed his permanent residence in Hong-Kong.‡ An individual of reputed wealth, named Chinam, who had been engaged in the opium trade, came to Hong-Kong, built a good house, and freighted a

* In 1843, the surveyor-general of the colony reported to the government that "the number of interments had been so great (in the European graveyard) that the enclosure was almost full, and the hill behind so rocky, that it was impossible to dig into it; therefore, ere long, it would be necessary to provide another place." The surveyor further stated that it would be a difficult thing to select another appropriate tract, on account of the rocky and uneven nature of the island.

† Dr. Thompson, in his report to the governor-general of India, stated that regiments should be removed every three, if not every two years.

‡ The merchants and British residents in Hong-Kong, in a memorial to her Majesty's secretary of state, verify this observation: they say there is scarcely one foreign resident, except government officers, and those British merchants and traders who commenced building before the enforcement of the leases; there are no Chinese merchants, or even shopkeepers, with any pretensions to property! Few persons reside above a year or two.

ship. He soon returned to Canton, and died there of a fever and cold, contracted at Hong-Kong. It was understood, however, that had he lived he would have been prohibited returning to the island, as the policy of the mandarins on the adjacent coast is to prevent all respectable Chinese from settling at Hong-Kong; and in consequence of the hold they possess on their families and relatives, this can be done most effectually. At the same time, I believe that they encouraged the deportation of every thief, pirate, and idle or worthless vagabond from the mainland to Hong-Kong. The late distinguished Chinese scholar, Dr. Gutzlaff, who was engaged in making a census, says — "The most numerous class who have, since our arrival, fixed themselves on the island, are from Whampoa; many of them are of the worst character, and ready to commit any atrocity. The capital of the shopkeepers is very small; most of them live from hand to mouth, and lead a life of expedients, without principle or self-control. It is very natural that depraved, idle, and bad characters from the adjacent mainland and islands should flock to the colony, where some money can be made."*

Dr. Gutzlaff, whose prepossessions were strongly in favour of the Chinese, concludes this portion of the memorandum with which he favoured me, as follows:—"The moral standard of the people congregated in this place (Hong-Kong) is of the lowest description."

This observation is fully borne out by the numerous murders, piracies, burglaries, and robberies of every description which have taken place during the last fourteen years, almost with impunity; for the Chinese villains are formed into secret societies for mutual protection, and no man, innocent or guilty, dares inform against another. The European inhabitants are generally obliged to sleep with loaded pistols under their pillows,—not unfrequently to turn out of their beds at midnight to protect their lives and property from gangs of armed robbers, who are ready to sacrifice a few of their number in return for ample plunder. In 1854, Hong-Kong was publicly asserted to be "the most filthy, disgusting colony of the British empire:"† the only one certainly to which such epithets can be justly applied.

An hallucination seems to have seized those who built houses here. They were told that Hong-Kong would rapidly "outrival Singapore," and become "the Tyre or Carthage of the eastern hemisphere."‡ Unfortunately, the local government fostered the delusion respecting the colony. The leading officials bought land, built houses or bazaars, which they rented out at high rates, and the public money was lavished in the most extraordinary manner, building up and pulling down temporary structures, making zigzag bridle-paths over hills and mountains, and forming the "Queen's-road," of from three to four miles long, on which about 180,000 dollars have been expended, but which is not passable for half the year. The straggling settlement called "Victoria,"§ built along the aforesaid highway, was dignified with the name of "City;" and a high authority, Sir Henry Pottinger, prophesied that "Hong-Kong would contain a population equal to that of ancient Rome." The

* A writer in the London *Times*, speaking of his experience at Hong-Kong, says—"The community is migratory, property most insecure, and life often in danger, from the bands of piratical robbers that infest this and the neighbouring islands. The place has nothing to recommend it, if we except its excellent harbour. The site of the new town of Victoria is most objectionable, there being scarcely level ground enough for the requisite buildings; and the high hills which overhang the locality shut out the southerly winds, and render the place exceedingly hot, close, and unhealthy. Many of the worst description of Chinese resort there; and I have seen, during one evening at Victoria, more open scenes of vice and debauchery than I had observed during my three years' stay in the north of China."

† *Friend of China* periodical, dated Victoria, 10th July, 1854.

‡ It is erroneously supposed that Singapore has prospered mainly through Chinese trade. Such is not the fact. The total import tonnage of Singapore in 1838–'39, in square-rigged vessels, was 178,796 tons, of which that from China was 32,860. The native tonnage for the same year was 48,000, of which the Chinese vessels constituted 8,000 tons. The Straits produce which the Chinese require are brought to Singapore by Malay or other coasting craft, who would not proceed to the northward; and the proprietors of Chinese junks, with whom time is no object, and who go down the coast to the Eastern Archipelago with one monsoon, and return with the other, prefer the speculation with their varied cargoes, and the visiting of their countrymen at the different islands. There is no analogy whatever between Hong-Kong and Singapore; the geographical, territorial, and commercial advantages, which have contributed to the prosperity of Singapore, are totally and entirely wanting, and can never be created, at Hong-Kong.

§ Two miserable villages on the coast of Hong-Kong, with a few migratory inhabitants, half pirates and half fishermen, were honoured with the designations of Aberdeen and Stanley, the local government being desirous to propitiate the statesmen who then bore sway. Indeed, no means were spared to create a strong impression in favour of a worthless place.

surveyor-general, in an official report to his relative Sir Henry Pottinger, of twenty-two pages, dated 6th July, 1843, proposed building an entirely new town or "city" in the Woongnichung Valley (which may be aptly called the "Valley of Death"), with a grand canal, and many branch canals, &c.: two ranges of terraces of houses, &c.; courts of law, and various other offices; "acclimatising" barracks; additions to the present government house, for the secretaries and personal staff of the governor, isolated from all other buildings; a space of land to be reclaimed from the sea for a public landing-place, with an esplanade or public walk; a magnificent promenade of four miles, to be made on ground now covered by the sea, which was to be excluded by a sea-wall, at a cost of thirty-five dollars per lineal yard, exclusive of filling in, &c.; a circular road over hills and ravines round the entire island, &c., &c., adapted for carriages, and for moving troops with speed and facility to any part of the island, where they may happen to be required for the protection of the different villages! (these villages, be it remembered, containing nothing but a few hundreds of a thieving piratical population.) I refer to the government archives for full details of these and other most ridiculous projects, involving a heavy expenditure of public money, which none but the wildest theorists, or self-interested persons, could have projected or entertained. On the 17th of December, 1843, the surveyor-general laid before Sir Henry Pottinger the elevation of a building for a government office, &c., with a front of 360 feet in length, by 50 feet in depth, and which would probably cost £30,000 sterling. There was the greatest possible desire to spend a large part of the Chinese indemnity money on this wretched, barren, unhealthy, and useless rock, which the wealth, talent, and energy of all England could never render habitable, or creditable, as a colony, to the British name. In illustration of the mode in which the public money was proposed to be spent, I give the following abstract of a portion of the estimate of public works in Hong-Kong for 1844, and which Sir Henry Pottinger transmitted to England for approval:—

Completion of Queen's-road from West Point to the east side of Woongnichung Valley—dollars, 28,000; ditto to godowns of Jardine and Co., 15,000; new street formation in Victoria, 35,000; sewers in Victoria, 100,000; value of houses to be removed from Upper Bazaar and other places, 25,000; drainage of Woongnichung Valley, 7,000; bridle-path to Saiwan, 3,000; new church, 35,000; government-house, with suitable offices, &c., 70,000; house for judge, 24,000; house for advocate-general, 20,000; house for queen's solicitor-general, 20,000; house for colonial secretary, 20,000; house for chief magistrate, 20,000; house for treasurer, 18,000; house for land officer, 18,000; house for clerk of colonial council, 16,000; house for colonial surgeon, 16,000; house for chaplain, 16,000; range of buildings for advocate-general, queen's solicitor, &c., 100,000; prison, with house for gaoler, Hong-Kong, 45,000; debtor's gaol, Hong-Kong, 20,000; house of correction, Hong-Kong, 15,000; two police stations, north side of the island, 10,000; two smaller stations, 4,000; police station at Chuc Choo, 8,000; police station at Saiwan, 3,000; police station at Pok-fulum, 3,000; keeping in repair Chuc Choo road, 1,500; contingencies of five per cent., 35,775; consulate at Canton, 45,000: total dollars, 796,275. This is but a small portion of the contemplated expenditure; it does not include the formation of streets and roads in Hong-Kong, which, on account of the mountainous nature of the island, would cost about £100,000 sterling. It does not include barracks, stores, forts, arsenals, dockyards, wharfs, &c.—all projected, and which would cost several millions sterling before they could be completed.

Financial View. — There is no prospect that Hong-Kong can ever yield revenue adequate to more than a very small civil government. The limited size and rocky nature of the island, the absence of agriculture, manufactures, or commerce, and the fluctuating and predatory character of the population, forbid the hope of an income being raised adequate to the maintenance of the establishment that was at first organised. It is impossible to state precisely the amount of public money which has been spent on this miserable rock; from first to last, civil and military, I cannot estimate it at less than two million sterling: while the annual revenue, from every possible source, including some that are discreditable to a Christian government, was, in 1852, only £21,331. To this sum £12,000 had to be added from the parliamentary grant in aid of the civil disbursements for that year.

It is fallaciously asserted that the island expenditure ought to be defrayed from the tea duties levied in the United Kingdom. It might as well be said that the West India local governments should be paid from the revenue derived from the coffee and sugar imported into the United Kingdom. In both cases, the monies thus obtained are raised from the people of England, who are the buyers and consumers; for the incidence of taxation falls ever heaviest on the last purchaser of the taxed article. The

London merchant adds to the invoice cost of the tea bought at Canton, the freight to England, the insurance, interest of money, warehousing, customs' duty levied in England, and the fair profits of trade on every chest of tea he may sell to the grocer, who then regulates the price at which he can afford to retail the article to his customer, on whom finally falls the whole charges, taxes, and profits to the several parties before he drinks his tea. The revenue derived from the China trade is paid by the people of England; the merchant who carries on the trade does not pay a shilling of it.

As a general principle, colonies that cannot bear the expense at least of their civil government, are not worth maintaining. There does not appear any reason why Hong-Kong should be an exception to this rule. There is not, as has been fancifully supposed, any analogy whatever between Hong-Kong and Gibraltar. Hong-Kong *commands nothing:* a glance at the chart will show that the navigation of the China seas is perfectly independent of this island, by which even the entrance of the Canton river is not controlled. It is not possible by any outlay of money to make it a fortress, being itself commanded by the shore of the neighbouring mainland. But supposing several millions sterling were spent in fortifying Hong-Kong, and half a million annually expended for its garrison, the *cui bono* would constantly recur: no European or American state would think of capturing Hong-Kong, for it would be valueless to them; and if mere glory were sought by the acquisition, they must be aware the fame would be of short continuance, as troops and ships from India, from Australia, and from all our stations eastward of the Cape of Good Hope, would soon recapture the place or starve out the garrison. But Gibraltar is differently circumstanced; it effectually commands the narrow entrance to the Mediterranean, and, together with the fortresses and havens of Malta and Corfu, gives England a preponderating power in that great European sea, which is becoming daily of more and more value in her intercourse with the Anglo-Eastern empire. Moreover, "the Rock" is a valuable commercial entrepôt; at one period £1,000,000 sterling of cotton goods were imported through Gibraltar into Spain.

As a fortress Gibraltar is perfect; it is impregnable. It can boast a revenue fully adequate to its civil government, and averaging upwards of £30,000 per annum. The military expenses incurred by its powerful garrison saves the constant maintenance of a large fleet in the Mediterranean, preserves the balance of power, and materially conduces to the peace of Europe. The remarks applicable to Gibraltar may be repeated regarding Malta and the Ionian Islands, both of which stations not only pay their whole civil expenditure without one shilling charge on the British exchequer, but also contribute a considerable sum annually towards military defences and protection. Moreover, these places are valuable as trading entrepôts.

Every colony of the British empire provides for its own civil government, with the exception of certain small aids voted annually for the Bahamas, Bermuda, the Falkland Islands, St. Helena, and Heligoland, but these settlements are all intrinsically valuable: the Bahamas, for the geographical position of their harbours; Bermuda, as a strong fortress and dockyard in the Western Atlantic; the Falkland Islands, for their important position and fisheries in the great Southern Ocean near Cape Horn; St. Helena, as a strong fortress and recruiting station for ships doubling the Cape of Good Hope in their voyages to and from India, China, and Australasia, in time of peace; while in the event of war, its possession would be of incalculable value to British merchants, serving in the stead of a large fleet in the Atlantic. Even Heligoland, during the late European war, proved an important trading depôt for the Elbe and the northern parts of Europe; and the expense is only about £500 a-year. Numerous as are the colonies of the British empire, they are each of specific utility to England;—for their territorial extent as emigration fields to provide employment for a surplus population; for the production of sugar, coffee, corn, cotton, silk, indigo, timber, oil, wool, &c.; as maritime positions or military posts; as trading emporiums or fishing stations. I have in vain sought for one valuable quality in Hong-Kong. There are other good harbours around; and for 200 years we have not found the want of such. I can see no justification for the government expenditure of another shilling on Hong-Kong.

Religious and Social Influence.—The benefits derivable from our laws, institutions, and religion, can never be conferred on the Chinese through the colonisation of Hong-Kong. We are there, in fact, almost as

much isolated from China, its people, and supreme government, as if we were located in the Eastern Archipelago. By the adroit policy adopted by the Chinese authorities, a "*cordon sanitaire*," if I may so express it, has been drawn around Hong-Kong; no individual is permitted to proceed there except he be a thief, a pirate, or a spy; no respectable heads of families will venture to fix their residence in Hong-Kong; if they did, their relations still remaining on the mainland, would probably be "squeezed," imprisoned, tortured, or denounced as traitors to the Celestial Empire. Hong-Kong is viewed by the Chinese as a spot where adventurers and reckless characters may make something out of the English; and to which burglars and robbers may resort and live with impunity upon the profits of their villany. I am strongly of opinion, from circumstances that have come to my knowledge, that the mandarins view with indulgence all vagabonds who propose to quit their own country and proceed to the British settlement; that, in fact, direct encouragement is afforded them to do so.

Commerce.—The only item of trade noticed in the local returns as constituting the traffic of the settlement in 1853, was 36,499 chests of opium, which is distributed by smugglers along the coast. A large number of vessels annually arrive, call for orders, and proceed to their destination, northwards or otherwise, as they pass through the strait or arm of the sea which separates the island from the mainland. No matter how often these vessels may anchor, even for a few hours, they are entered as arrivals; and hence their numbers were swollen, in 1853, to 1,103, with an aggregate tonnage of 447,000 tons; but up to the present moment no governor has been able to note any sum as indicative of value in regard to the commerce of Hong-Kong. During disturbances at Canton, small quantities of goods were warehoused here, but they would not bear the charges, and those of transhipment, agency, &c. In fact, our trade is fast leaving Canton and being concentrated near the tea and silk districts to the northward—at Shanghae and Foochoofow—for whose protection Hong-Kong is almost as useless as Vancouver's Island on the opposite coast of America.

Were our colonial establishment to be fixed at some island or position to the northward, near the central regions of China, we should most probably obtain considerable moral influence over an intelligent and respectable class of people, who would communicate their favourable ideas to other and more distant parts of the empire; and by extending a knowledge of our language, pave the way for the introduction of Christianity. An English city at Chusan, for example, surrounded by an extensive agricultural population (the best-disposed and most orderly in China as well as elsewhere), evincing the practical results of the science and skill of Europe, would have a remarkable effect on the Chinese, whose inquisitiveness and imitative powers would soon induce them to copy many things primarily conducive to their physical, and ultimately to their moral and religious improvement.

*Political point of View.*—Hong-Kong was occupied by the troops and merchants of England in 1840–'41, when her trade was driven from Canton; when the Chinese government was avowedly hostile; and when the Portuguese authorities at Macao had expressed their inability to continue to permit British residence and resort to that port. At this period, the views of Captain Elliott were solely directed towards Canton. Hong-Kong was then deemed the most eligible spot for British occupation, on political and military grounds. And so it proved as long as operations were thus directed to a single point, and we were excluded from China. But after the expedition to the northward, the occupation of Chusan, and ultimately the establishment of peace, and the opening of five ports (including Canton) for free commerce and English residence, protected by a ship of war at each, the political and mercantile value of Hong-Kong entirely ceased. The late war has shown us the vulnerable point of China—namely, the Yang-tze-kiang river, which is aptly denominated by the Chinese, the "Girdle of the Empire." In the event of any future hostilities, our force would be directed at once towards Nankin and other places on the Yang-tze-kiang river, and not against Canton. It would be by interrupting the supplies of grain, and cutting off the trade of the great artery or canal, that war might be, with the least expenditure of blood and treasure, successfully carried through with China. In all points of view, Hong-Kong is worthless. Chusan may yet be ours, and would be valuable from its commanding position, from its comparative salubrity, safe haven, and capability of sup-

plying provisions, both from the resources of the island itself, and from the contiguous coast. A fleet of ships of war and transports might rendezvous at Chusan, and select, at will, the most fitting period of the year for offensive operations. No attack need be apprehended from the Chinese. Ships from Singapore and the southward, can now, by reason of a greater knowledge of the winds and currents, make Chusan, even against the monsoon, in nearly the same time they would occupy in reaching Hong-Kong. And, finally, the Chinese government, aware of the strength of such a position, would be the less disposed to break the peace, and would rely less implicitly on the strength of the forts in the Canton river.* The Tartar policy is to keep foreigners at the extremity of the empire; but this wary design ought to render Great Britain anxious to establish the depôt of her trade in the Chinese seas near the centre, instead of at its extreme verge.† An English settlement at Chusan would be within three days' sail of Pekin.

## SECTION VI.—EASTERN ARCHIPELAGO.

Labuan was ceded to England by the Sultan of Borneo, under the provisions of a treaty dated May 27th, 1847 ;‡ and the governmental establishment was formed thereon in 1848.

The island is situated six miles from Borneo, in 50° 19′ N. lat., 115° 10′ E. lon. Its form is triangular ; the length about eleven miles ; the breadth at the south end seven and a-half, and at the northern

* The possession of Hong-Kong has not induced the government of China to maintain their other engagements unbroken. Lord Palmerston, during a debate in the House of Commons, on 3rd July, 1854, stated, that "ever since the conclusion of the treaty of Nankin, the conduct of the Chinese authorities had been such as would have justified a rupture with that government. They had violated the engagements into which they had entered; and if any desire existed on the part of the British government to proceed against them, abundant cause had existed almost since the termination of the last war. They had refused, on divers pretences, to admit us to parts of Canton to which we ought to have access, avoided their engagements with respect to the Hongs, and nullified their stipulations in regard to the tariff. In point of fact, there was hardly a single engagement they had not broken." Mr. Gregson, M.P., an eminent merchant, connected with the China trade, said—"He quite agreed with what had fallen from the noble lord with respect to the conduct of the Chinese authorities, and he believed before long it would be necessary to take more determined measures to compel them to adhere to their treaties."—(*Times*, 4th July, 1854.)

† In my official report on *British relations with China*, printed by permission of her Majesty's government, in two vols. 8vo, the whole of the circumstances connected with the cession of Hong-Kong, the relinquishment of Chusan, and the state of our commerce, position, and prospects in the China seas, are fully set forth.

‡ The preamble of this treaty states that it was entered into with a view "to put an end to piracies which have hitherto obstructed the commerce between her Majesty's subjects and those of the independent princes of the eastern seas." Art. II. grants British subjects the right of trade and transit through all parts of the sultan's territories. Art. III. authorises them to purchase, rent, occupy, or in any legal way acquire all kinds of property in the said territories, and enjoy full and complete security for themselves and for their property. By Art V. and VI., internal duties, or any regulations injurious to trade, are prohibited; and the only sea-custom duties levied on British goods or ships, limited to one dollar per registered ton on vessels bearing the British flag; while all export duties are forbidden. By Art. IX., the sultan agrees to co-operate with her Britannic Majesty, by the use of every means in his power, for the suppression of piracy, and for more effectually enabling England to effect this object, and for the carrying on of trade with the dominions of Borneo. The sultan, by Art. X., "confirms the cession already spontaneously made by him, in 1845, of the island of Labuan, with the adjacent islets, and likewise the distance of ten geographical miles to the north and west of Labuan;" adding, "in order to avoid occasions of difference, which might otherwise arise," a distinct and unconditional pledge of not making any similar cession, either of an island, or of any settlement on the mainland, or in any part of his dominions, to any other nation, or to the subjects or citizens thereof, without the consent of her Britannic Majesty." By Art. XI., the sultan "engages to suppress all traffic in slaves, and to prohibit all persons residing within his dominions, or subject to him, from countenancing or taking any share in such trade:" persons or vessels so employed to be treated as if "engaged in a piratical undertaking." By a supplementary article, all British subjects residing within the limits of Borneo, and accused of any crime committed therein, to be tried and sentenced exclusively by the English

extremity not more than a mile: the superficial area is computed to be about thirty square miles. On the first formation of the settlement, the island was an unbroken mass of forest, only a small portion of which has, as yet, been cleared away. The surface of the land is broken into numerous hills, of no great elevation; the highest summit measured not exceeding 500 feet in altitude. The soil is, however, for the most part well adapted for cultivation, and the natural vegetation very luxuriant. Well-grown trees of valuable timber are observable in various places. There are several small streams, and the island is otherwise abundantly supplied with excellent fresh water by digging wells. The harbour is commodious; has a depth of water sufficient for vessels of large burthen, good anchorage, and is completely sheltered from the prevailing monsoons.

During the two first years of the settlement, the inhabitants suffered much from remittent fever, but at present Labuan is pronounced to be as salubrious as most tropical regions. Fever, ague, and rheumatism are the prominent maladies; but these do not prevail to any unusual extent. The island has never been visited by cholera, and is also free from dysentery, so common and dangerous in hot climates. The thermometer ranges from 76° to 96° in the shade, but as a gentle breeze is almost always perceptible, the temperature is not found to be very oppressive. Severe squalls of wind not unfrequently occur, especially during the change of the monsoons; but they are seldom of long duration. The oft-recurring thunder-claps are generally attributed to the influence of the lofty mountain ranges on the mainland of Borneo and in the vicinity of Labuan: the lightning is at times very vivid and dangerous; but these storms, as in other parts of the tropics, purify the atmosphere and reduce the temperature. There is no distinctive wet and dry season, as in India: the greatest quantity of rain falls during the uncertain weather attendant on the changing of the monsoons; October and November may be considered the wettest months. The north-east monsoon blows, with slight annual variations, from December to May, and the south-west during the remaining months; the former period being comparatively dry and healthy. The rain nearly always falls at night—a wet day being the exception; the annual quantity is frequently very heavy, often falling four inches in depth during the course of twelve hours.

The geological formation is probably similar to that of most coal basins. The island is formed of strata of friable sandstone, red and indurated blue clay and coal: the latter exists in abundance, and is found outcropping in several localities. The seam leased to the Eastern Archipelago Company, and on which they have established their works, is situated at Janjong-Kobong, at the northern extremity of Labuan: this section (in common with the other carboniferous strata) has a dip to the north-east of thirty or thirty-five degrees, and an average thickness of ten to twelve feet. The coal is considered of excellent quality: hitherto it has been very little used; but preparations are, it is alleged, in progress for working it on a more extended scale. The government receives from the company a royalty of 2*s.* 6*d.* per ton.

The Population consists of Europeans, Chinese, natives of India, and Malays, and numbered, in 1854, about 1,800, including a military detachment of about 120 sepoys. The classification was: whites—males, 28; females, 2 = 30: coloured—males, 1,173; females, 120 = 1,293: aliens and resident strangers, 240. Births for the year, 37; deaths (recorded), 2: the population is fluctuating. The town, situated on the north shore of the harbour, is small, and the dwellings mostly of native construction. The government-house, barracks, and European residences are detached, and situated inland on the neighbouring heights. The Eastern Archipelago Company have a settlement at their works at Janjong-Kobong.

The Government consists of a lieutenant-governor, secretary, and registrar; police magistrate and treasurer; surveyor, harbour and postmaster, and colonial surgeon.

Laws are enacted by a Legislative Council, composed of the lieutenant-governor and

consul-general, or some officer appointed for the purpose; and disputes or differences between British subjects, or which may arise between them and subjects of the sultan, or of any other foreign power, are to be heard and decided by an officer named by her Britannic Majesty, "without any interference, molestation, or hinderance on the part of any authority of Borneo, either before, during, or after litigation." This explicit treaty (which puts to shame the treaty of Nankin, made by Sir Henry Pottinger) bears the seal of the sultan and the signature of Sir James Brooke; is dated Bruné, 27th May, 1847, and signed in the English and in the Malay languages.

two other members. There is no Executive Council. There are two courts for the administration of justice—a general court and a police court: this latter acts as a court of requests in cases where the debts are small. The general court is presided over by the lieutenant-governor. The garrison consists of a detachment of about one hundred sepoys, and a party of some twenty artillerymen.

THE REVENUE is chiefly derived from opium and spirit "farms," and the royalty on coals. The first of these denotes the monopoly of preparing and retailing the noxious drug for smoking. The second item is a duty charged upon the consumption in the island of all wine, spirits, and beer. Both these monopolies are annually sold by auction for the highest monthly rents. The actual revenue for each year, since the formation of the settlement, has been as follows:—

| Year. | Local Revenue. | Parl. Grant. |
|---|---|---|

Nothing can be said under the head of religion and education: no Christian minister has been sent to the island—no chapel or erection of any kind dedicated to public worship by the British government; and for aught the Malays or Chinese know, the English have neither a creed nor a God.

*The trade* of Labuan is very small: it is chiefly carried on by native boats called "prahus"; and recently, owing to the increase of piracy, has been decreasing. The *Eastern Archipelago Company* are said to have two vessels engaged in carrying their coal to Singapore or China. Small vessels ply occasionally betwixt Singapore, Bruné, and Labuan.*

Bruné, the capital of the Sultan of Borneo (a wretched native town, with perhaps 30,000 inhabitants), distant about fifteen miles from the mouth of the river of the same name, and thirty from Labuan, has some traffic; the value thereof (together with that of the British settlement) is thus stated:—1852—Imports, £30,970; exports, £16,564: 1853—imports, £31,820; exports, £22,333: 1854—imports, £23,742; exports, £15,382. By far the largest portion of this traffic is carried on with Bruné. Tonnage inwards, in 1854—3,682 tons.

The leading articles of import for 1854, were—cottons, value £6,604; specie, £6,022; provisions and rice, £2,431; of export—coals, £7,169; sago, £2,182; specie, £2,041; gutta-percha, £957.

It is yet to be proved whether Labuan can ever become a commercial emporium: like Hong-Kong, no person will avow being responsible for the formation of a settlement there. No report appears to have been made to government, advising the acquisition of the island: it is out of the track of vessels passing up or down the China sea, except when beating against the monsoon; and, as regards coal, that is now found to exist near the mouth of the Bruné river, and in various other parts of Borneo. Excepting the expense incurred for a small military detachment, stationed to protect the town from the murderous forays of the pirates of the adjacent mainland,† the

* To the kindness of the present lieutenant-governor of Labuan (Mr. Scott), I am indebted for most of the facts relating to this settlement.

† Lieutenant-governor Scott, of Labuan, in his report to her Majesty's secretary of state, dated April 7th, 1852, says—"Acts of piracy on the northern coasts of Borneo have been somewhat more frequent than in 1850. This no doubt arises from the impression made by the active measures of Admiral Sir Thomas Cochrane having by lapse of time worn away, and the inherent propensity a Malay has to return to this lawless traffic when unrestrained by personal fear of immediate punishment. Betwixt this and Malludu Bay, the pirates have not proceeded beyond the kidnapping of natives to be sold as slaves, and the plundering of small defenceless prahus. The north-east coast is still a focus of piracy, and remains unsafe for trading boats. In the month of October, the steamer *Pluto* proceeded thither with a view of opening friendly relations with the settlement, and the inhabitants of various rivers known to be rich in articles of trade; but from the limited time at her disposal, and the want of good pilots, little was effected. In the month of September, a small vessel belonging to Singapore was taken by Illanun pirates, at the entrance of Malludu Bay, and the captain and supercargo (both Englishmen), with three of the crew, murdered. The remainder of the crew were compelled to navigate the vessel under the direction of the pirates. Having entered Bengaya, in Labuk Bay, on the north-east coast of Borneo, Serriff Yassim, the chief of the river, having ascertained that the vessel was English, retook her from the pirates, and dispatched a messenger to report the occurrence to this government. I mention this meritorious action of Serriff Yassim, as it seems to offer a proof that a more extended intercourse and cultivation of friendly and commercial relations with the

local revenue defrays the total cost of the civil establishment. A well-armed steamboat, adapted for ascending rivers, is indispensable for the protection of the colony: If, after a few years more trial, the failure of the experiment should be clearly proved,* the transfer of the British flag to the mainland, will be highly advisable.†

north-east coast would effect much in the suppression of that piracy which now ravages those shores, and totally prevents all peaceable traffic. The subsequent destruction of the well-known piratical haunt of Tungku by Captain Massie, of her Majesty's ship *Cleopatra*, who proceeded thither in search of some of the pirates engaged in the taking of the British vessel, and known to be inhabitants of that place, will, it is sincerely to be hoped, have a salutary effect."

* The settlement suffered by the ill success of the trading association before named. The facts of the case are thus set forth by Sir James Brooke, in the *Vindication* of his character and proceedings, published by him in London, in 1853:—"The Eastern Archipelago Company was incorporated by the government of Lord John Russell, in 1847, for the avowed purpose of rapidly developing the resources of Labuan, and of taking advantage of the relations which existed between myself and the government of Sarawak, for the establishment of new branches of British commerce with the island of Borneo. * * * Her Majesty's government entrusted the formation of this company to Mr. Henry Wise, who, besides the royal charter, had obtained a lease of coal in Labuan, and a grant for working coal on the mainland of Borneo. * * * A legal instrument was executed previously to the formation of the company, and was subsequently incorporated into the deed of settlement, and contained the following clauses:—1st. 'Mr. Wise to be one of the managing directors of the company, irremovable except by a general meeting of the shareholders, for misconduct or incapacity.' 2ndly. 'Mr. Wise to be paid £6,000 within four calendar months after the complete formation of the company.' 3rdly. 'And also, the annual sum of £3,000 every year, during the first ten years of the existence of the said company.' 4thly. 'Mr. Wise to receive one hundred shares (*i.e.*, shares of £100 each) in the company, to be paid up out of the capital of the company.' 5thly. 'Mr. Wise also to receive £2 10*s*. per cent. on the amount of all dividends, and every bonus to be made by the company, provided that no such per centage should be payable in any case, or at any time, where and when the amount of such dividends and bonus should be less than £7 10*s*. per cent. of the company's capital. The above monies, shares, and per centage to be considered as in payment of the purchase of Mr. Wise's interests in the charter, and for the grant to Mr. Wise for the said term of twenty years (out of thirty years' lease), as before mentioned, of his interest in the said agreement with the Crown, and of the said right of working coals on the mainland of Borneo.' And further, 'as a remuneration for his services, and the premises already rendered, as before stated, Mr. Wise to receive (over and above the before-mentioned monies, shares, and per centage), as his salary as one of the managing directors, £800 per annum, and £2 10*s*. per cent. on the amount of all dividends, and of every bonus to be made by the company, such per centage not exceeding in any one year £1,000; so that Mr. Wise's salary in the whole, over and above the first-mentioned monies, shares, and per centage, shall not in any one year exceed £1,800.' The fate of the company was decided by this bond, entered into before its commencement; and the gentlemen who had signed it having become directors, obtained no support from the public, and possessed no means to carry out the important objects for the accomplishment of which the charter had been granted. By a cursory inspection of the registered list of shareholders in August, 1851, it will be seen that the undertaking had little reality, excepting upon paper. Out of the 2,000 shares into which the company's capital was to be distributed, Mr. Wise, the irremovable director, held 728 shares; Mr. Lindsay, the chairman (with two relatives), possessed 713 shares; and the remaining directors 274 shares: thus making a total of 1,715 shares in the hands of the direction. I thus, for the first time, became aware of the true cause which had defeated an object I had been striving to advance; and I had long before perceived and represented the danger of coal from other places superseding the coal of Labuan, and thus sealing the ruin of a settlement which deserved a better fate. I was resolved to remedy this state of affairs; I reported the circumstances officially; and with the knowledge of ministers, I took proceedings in the Queen's Bench to vacate the letters patent. One of the conditions of the charter was, that the company should not commence business until three of its directors had given a certificate to the Board of Trade, which certificate they were to endorse on the royal charter, that £100,000 had been subscribed for, and £50,000 at the least paid up of the capital of the company. Whether this condition had been complied with was the main issue in the Queen's Bench; and in June last, the verdict given by the special jury was to the effect that five of the directors had given a false certificate to the Board of Trade, knowing it to be false." The charter of the company was annulled, and Sir James Brooke incurred the bitter and personal hostility of those whose cupidity and malversations he justly exposed. Endeavours are being made to carry out the trading scheme by the company re-formed into a joint-stock association; and under honest and efficient management, there is every reason to desire and anticipate success. The formation of small factories in eligible positions, with a central station under the British flag at Labuan, would probably exercise a most beneficial influence in encouraging the collection of natural products, and leading the people to seek a livelihood by barter, instead of the dangerous and reckless trade of piracy. Free merchants, as in India, would be enabled to obtain a secure footing under the protection of the company, and finally take its place when the obstacles which it was created to encounter had been overcome.

† The failures of Hong-Kong, of Labuan, and of Port Essington in Australia, ought to prevent the British government again sanctioning the formation of distant settlements, unless satisfactory and trustworthy reports be made as to the eligibility of the site in every respect—sanitary, commercial, and political.

# SECTION VII.—BORNEO.

Borneo (excepting Australia), the largest insulated tract of our earth (700 m. long by 300 broad), was brought under the notice of Spanish geographers by Magellan, in 1521. The Portuguese, under Menezes, touched at Borneo in 1526, on their way to the Moluccas. In 1600, Van Noort, the Dutch navigator, anchored in the large bay, near which Bruné, the capital, is situated. In 1685, the first intercourse appears to have taken place with the English, who, in 1702, established themselves at Banjarmassing: and the E. I. Company subsequently formed factories at Borneo Proper and Sukadana. In 1763, the Sultan of Sooloo ceded to the E. I. Company his possessions in the north of Borneo, extending from the Kimanis river to Cape Kaniongan, embracing the districts of Pappal, Maludu, Mangidora, and Tirun. In 1773, a small settlement was formed on Balambangan Island. In 1774, a British Resident was sent to Bruné, who concluded a treaty with the Malay sovereign or sultan, by which the English engaged to defend the capital against the expeditions of the Sooloo and Mindanao pirates; and the sultan, in return, agreed to cede Balambangan and the exclusive trade in the pepper of Bruné. On 24th April, 1775, a band of Sooloo pirates captured the fort of Balambangan, and carried away booty to the value of half a million Spanish dollars; the English fled to Bruné, and maintained their factory there for some years, but ultimately abandoned the place. In 1803, the E. I. Company reoccupied Balambangan; but deriving no advantage therefrom (commerce being impeded by the pirates, who murdered the Europeans of several ships), the settlement was abandoned in 1804. Piracy at length became so general, that Horsburg emphatically warned all navigators of the danger of intercourse with these coasts. Borneo was consequently shunned by Europeans. The Malays established themselves at Bruné about 1460, and at other places, where they founded sultanries, and subdued the aboriginal Dyaks, who became hewers of wood and drawers of water to their Moslem conquerors.

Sarawak.—Before describing the Bornean settlement thus named, reference must be made to the gentleman who was until recently governor of Labuan and royal commissioner for the coast of Borneo, to whom England is indebted for the position she now occupies in this important part of the Eastern Archipelago. For many years it had seemed desirable to all who understood the value of transmarine possessions, and appreciated the situation, resources, and fertility of Borneo, to acquire a position in, or a connection with, this vast and populous island. The rights acquired by the E. I. Company, though long dormant, might it is true have been revived; but the indifference of the home authorities, together with the artifice and doggedly maintained pretensions of Holland, long frustrated any attempt to extend British operations south of Singapore,—a geographical limit which the Dutch erroneously contended the English were bound by treaty not to pass; the astute policy of the Netherlanders being the extension of their flag throughout the immense and valuable regions of which Borneo is the centre, and the complete exclusion of every European nation, but especially England, from all participation in the lucrative traffic in the rich and varied products of these tropical islands, which they anticipated carrying on with the temperate regions of the earth.

Few objects had stronger claims on national consideration; and probably none could be better calculated to rouse and sustain the energy of a great mind, than the prospect of opening up Borneo and its adjacent territories, and thereby affording a field of high promise to British skill and capital, and at the same time of enabling the Christian missionary, whether priest or layman, to introduce the blessings of a civilisation founded on the precepts of the Gospel of peace, among tribes whose whole lives were spent in trying to destroy each other,—into regions which were ravaged by incessant piracy, pillage, and murder,—where the head of a white man was a prize of great value, and the acquisition of a human skull the required proof of manhood,—where, in fine, Satan reigned in unmolested supremacy. It is surprising that so many years should have

elapsed after England became a colonising nation, without any effectual attempt being made for the establishment of a settlement in, or at least of regular communication with, the richly productive Eastern Archipelago. Had the life of Sir Stamford Raffles been longer spared, his patriotic mind would probably have been turned to the subject; or had Java not been restored to Holland by the culpable neglect of Lord Castlereagh, the position of Britain in these regions would probably have been long since potent for good. At length, by an apparently fortuitous, but doubtless divinely ordained series of events, a private gentleman of chivalrous character and innate love of enterprise, achieved the exploit of directing the attention of the British government to these fair isles, and procuring the termination of the Dutch monopoly at a time when it was exercised with peculiar tenacity. Leaving behind a record of his objects and desires, Mr. James Brooke* set forth, in the winter of 1838-'39, in his yacht the *Royalist*, to seek in the far-famed South-Asian isles, that continuous excitement derived from the pursuit of noble objects, which, to some men, is as necessary to existence as the air they breathe. Imbued with the spirit of Raleigh, but with a prudence which that gallant adventurer lacked, Mr. Brooke had patiently waited his time,—had fought with and overcome, by quiet steadfastness of purpose, many obstacles before he reached the country of his hopes and aspirations (August, 1839.) The government of Borneo was at this time almost wholly disorganised, and Mr. Brooke, after mature deliberation, resolved to accept the responsible and arduous office of ruling as rajah a tract of territory in an advantageous position on the coast of Borneo, now familiarly known as Sarawak. Into the particulars of this acquisition it is not necessary here to enter; suffice it to say, that the people who then occupied Sarawak (the independent possession of which had been offered to him by its lawful sovereign), as well as all who have since resorted thither, voluntarily tendered Mr. Brooke a homage as frank and loyal as that given to any European monarch; thus confirming the previous cession by the strongest test which a rightful ruler can desire—the free voice of his subjects. But the Englishman did not forget the interests of his country: he obtained the ratification of an advantageous treaty with Borneo, providing for the abolition of slavery, the suppression of piracy, privilege of safe residence under British laws, freedom of commerce (devoid of custom or transit duties), the cession of the island of Labuan (contiguous to Bruné, the capital of Borneo Proper), and the still more important privilege that, without the consent of England, no territory should be granted to any nation or individual.†

The British government was, despite its inert character, moved by the voice of public opinion in favour of these proceedings; Mr. Brooke was invested with the order of the knighthood of the Bath, appointed her Majesty's consul-general and commissioner in Borneo, and governor of Labuan. Power was given him to call for the assistance of her Majesty's vessels of war in the eastern seas for the suppression of piracy; and the friends of humanity, as well as of commerce, looked hopefully for great results.

The Sarawak territory was offered by Sir James, with the assent of the native authorities, to Great Britain on very advantageous terms, but refused. In its acquisition, and

* Mr. Brooke is the son of the late Thomas Brooke, a well-known civilian in the service of the Hon. E. I. Company. He was born in Bengal, on the 29th April, 1803, and soon after sent to England for education. At an early age he sailed for India as a cadet in the Bengal army, where he held advantageous positions. On the breaking out of the Burmese war, he went, with a staff appointment in the commissariat, to Assam; and, in an action with the enemy, received thé thanks of the government for the gallantry which he there displayed. But having been shot through the lungs, he was obliged to return to England for the recovery of his health. After attaining proficiency in several modern languages, he made a tour through France, Switzerland, Italy, and Spain; and, upon the expiry of his furlough, again embarked for India. The ship was wrecked on the Isle of Wight. Owing to this delay, Mr. Brooke's leave of absence had expired when he reached Calcutta or Madras; he therefore relinquished the service, and proceeded to China. In 1838, on the death of his father, he succeeded to a handsome fortune, and then published a prospectus in the *Geographical Journal* for 1838, of his intended exploring expedition to the Asiatic Archipelago. He left the Thames 27th October, in his well fitted-up yacht, with nine officers, nine seamen, and two boys. Most of the crew had been with Mr. Brooke three years. "I go," said he, "to awaken the slumbering spirit of philanthropy with regard to these islands. Fortune and life I give freely; and, if I fail in the attempt, I shall not have lived wholly in vain." Quitting England on the 16th December, he made a good passage to Rio Janeiro in two months; reached Singapore the last day of May; left Singapore, 27th July; and anchored on the coast of Borneo 1st August. On the 24th September, 1841, he was declared rajah and governor of Sarawak.

† *See* Abstract of Treaty at the commencement of "Labuan," Section VI., p. 72.

during his connexion with Borneo, he had expended a large portion (amounting to twenty thousand pounds sterling) of his private property, and he now of necessity looked to the resources of the country of which he had become the acknowledged head, for the means of raising a revenue to carry on its government, and of providing funds for public improvements. A mine of antimony yielded some profit; but he cautiously avoided impeding commerce by high duties, and held forth encouragement to traders to settle at Sarawak; while Christian missionaries, especially those who practised medicine and surgery, and had the character of being devoid of zealotry and sectarianism, were earnestly entreated to aid in the civilisation of the Bornean population. The most painful portion of the duty which devolved on Sir James, in his double character of royal commissioner and rajah, was the adoption of decisive measures for the suppression of the systematic piracy which, from time immemorial, had ravaged the coasts of the Eastern Archipelago, and by which successive generations were trained to shed human blood,* to carry away the defenceless into slavery, plunder the wealthy, and massacre all who in any way obstructed their murderous career.† So complete was the reign of terror and of crime established in the vicinity of Borneo, that its shores were, as I can bear witness from personal experience, dreaded by the passing mariner, even in large ships with cannon ready primed and loaded at all hours, and boarding-nets on the rigging to prevent a midnight surprise.

It would be superfluous here to narrate in detail the efficient measures taken by Sir James Brooke, in conjunction with Admiral Cochrane and other officers of the royal navy, for the eradication of piracy and its concomitant crimes:‡ for these reference may be made to the interesting works of Captains

* The Malays, as well as the Dyaks, have no respect for human life, but shed blood as if it were water. Omar Ali, the Sultan of Bruné, who claims jurisdiction over a large part of Borneo, and with whom we entered into a treaty (see p. 72), committed a horrible deed in the early part of the year 1846; the heir-apparent, and the hereditary chief minister (*Muda Hassim*), with all his family, thirteen in number, who were favourable to the English alliance, being murdered in one night.

† Admiral Austin said (16th March, 1852)—"I believe that the whole of that part of the coast which is nominally the territory of the Sultan of Sooloo, is inhabited by a people who are more or less addicted to piracy:" and whenever the sultan "sent people of his own to collect tribute or taxes there, they have been generally murdered."—(Parl. Papers, No. 35, p. 7: 6th Dec., 1852.) When Captain Massie, H.M. ship *Cleopatra*, attempted to enter the river at the pirate settlement of Toonkoo, to inquire respecting the murder of Mr. Burns, the supercargo of the schooner *Dolphin*, the flag of truce which the English boats carried was fired on; one man was killed, and two others were dangerously wounded.—(Parl. Papers, No. 35: p. 8.) Commissioner Devereux, referring to about forty recorded instances of piratical assaults by the Serebas and Sakarrans, says—"These attacks are various in their character. When assembled in large parties or fleets of boats, it appears that they attacked solitary prows, surprised towns or villages at the dawn of day, or rowed swiftly along a river or the coast, and attacked the cultivators on the shore, or picked up any fishermen they fell in with. In smaller parties they lay in wait in the creeks of the rivers for passers-by, or came over by land through the jungle to the coasts nearest to them in bodies of ten or twenty, and took the heads of any cultivators whom they could surprise in the fields. It is impossible to glance over the list of attacks here recorded, without perceiving that a great loss of life has taken place for many years. Besides the great success mentioned by M. Bondriot in the capture of 400 heads on one expedition, 120, 60, 40, and 30 heads rewarded their exertions on other occasions within the knowledge of the witnesses examined. In some cases villages or towns have been deserted on account of their ravages; and one witness, Nakoda Mohammed, mentioned a curious fact—that previous to the desertion of the town of Kalukka by its inhabitants, more people died there by the hands of the Serebas and Sakarrans than by any other cause. From the evidence that has been taken, there can be no doubt whatever that these attacks have been frequent and destructive to human life through a long course of years."—(Report of Commissioners of Inquiry, laid before Parliament by command of her Majesty in 1855; p. 23.)

‡ The *Singapore Free Press*, of July, 1843, contains the following notice of the marauding system carried on in the Eastern Archipelago:—"Piratical habits are so interwoven with the Malay character, that the mere capture of a few prahus will have but a small effect in curing the evil; and whilst a harassing duty is encountered, the result is only to drive the pirates frrom one cruising-ground to another. On the contrary, a system which, joining conciliation with severity, aims at the correction of the native character, as well as the suppression of piracy, and carries punishment to the doors of the offenders, is the only one which can effectually eradicate an evil almost as disgraceful to the European nations who permit, as to the native states engaged in it. In order to enable the reader to understand this subject, it will be necessary to mention the different descriptions of pirates, their various localities, and the principal scenes of their depredations. First are the Illanums of Magindaro, and numerous settlements of the same people to the north and north-east of Borneo Proper. These pirates often assemble in fleets of fifteen to twenty prahus, and cruise for two years, or even longer, shifting their ground when food or plunder become scarce. Nearly similar to the Illanums are the Malukees or Jillolo, and the Balaninis from the vicinity of Sooloo, excepting that the latter are worse provided with fire-arms, and distinguished by using long barbed spears, with which they hook their captives. The cruising-

Keppell and Mundy, R.N., officers whose acknowledged humanity, courage, and intelligence the writer had opportunities of observing in the China seas; to the records of Marryat, Forbes, and others; to the government reports made by naval commanders; and to the decisions of the Court of Admiralty at Singapore. All these authorities concur in attesting the extent and danger of the evil, and the necessity which existed for combating Bornean piracy by the destruction of those found actually engaged therein, by the annihilation of their strongholds, and by striking such terror into all directly or indirectly engaged in the prosecution of this devastating crime, that perceiving its continued perpetration impossible, they might be compelled to turn for subsistence to lawful pursuits. Yet notwithstanding this testimony, while in the energetic prosecution of his mission,*—while engaged in the formation of an ecclesiastical establishment for Borneo,—while augmenting the population beneath his equitable and paternal sway from 1,500 (the number on his arrival) to 15,000, now in the town, with 200,000 surrounding and dwelling beneath the protection of the government of Sarawak,—while creating an import and export trade valued for the year 1854 at half a million sterling, and in rapid process of further development,—and while inspiring the hearts of thousands with gratitude, respect, and even devotion to the English name and character, Sir James Brooke found himself suddenly assailed in parliament, the chief weapon employed being a petition framed at Singapore, alleging that his position as an independent territorial chief, with revenues and commerce under his control, was incompatible with the character of royal commissioner and consul-general. It was stated that the persons destroyed by the naval forces of England were really peaceful people, and not the marauders described. Minor allegations were made, and defamatory letters addressed to her Majesty's secretary of state. Some of these were written by the late Mr. Hume, who moved for their being laid before parliament, and published; thus adding another to the numerous instances in which party politicians have suffered prejudice to obscure their judgment, while general integrity of character has lent weight to unfounded assertions.

It is truly lamentable to find how easily the character of a good man may be traduced and destroyed by the ready credence of those who are too careless to investigate truth. The voluminous papers before me painfully illustrate this fact, as also that of the indisposition which exists on the part of the British government openly to uphold their servants, however privately valued, against the outbreaks of popular clamour.

Instead of supporting Sir James Brooke as a faithful steward of the Crown, whose proceedings had been warmly commended by Lord Palmerston as secretary of state for foreign affairs, and who had been actually urged to persevere in the course pursued, the government having first relieved him—to use official phraseology—of the

grounds of these pirates are chiefly the coasts of Borneo and Celebes, and towards the eastward as far as Papua, whence they obtain some of their slaves. The Dyaks of Borneo are a different class of pirates from the foregoing; and if less formidable to the direct trade, are far more destructive of human life. The most powerful of these tribes are the Dyaks of Serebas and Sakarran, inhabiting continuous rivers, situated in the deep bight to the southward and westward of Tanjong-Sirik (or Tanjong-Sisor of charts), on the north-west, east of Borneo. In each of these rivers, mixed with a numerous Dyak population, are from eight to ten hundred Malays, who encourage and accompany the more ignorant natives on predatory and head-hunting excursions. Once or twice each year, from sixty to a hundred war-prahus, containing a body of from three to four thousand men, sally forth and carry desolation along the coast, whilst at all seasons small parties steal into the river, and destroy all they meet. From their speed they defy the pursuit of European boats, and from their crafty and sudden mode of attack, they are always dangerous. Numerous examples might be given of their temerity; but it will suffice to mention generally, that 300 Chinese and Malays were cut off in one night, some years ago; and that, within the last eighteen months, a small Malay village was surprised, and about sixty of the inhabitants massacred. In short, these Dyak tribes have long been the terror of the coasts of Borneo, and for many years beyond the control of any government, having three times defeated the attempts of the Sultan of Borneo to reduce them. Besides these different classes of direct pirates, it must be borne in mind that most Malay communities will commit acts of occasional piracy when tempted by the chance of impunity, and that piracy in general is mainly fostered and encouraged by Malay chiefs, who receive the Illanums and others on friendly terms, and drive a profitable trade with them."

* The feelings which actuated Sir James Brooke in all his proceedings,—from the moment of leaving the shores of England on his expedition to the East,—are fully set forth in his *Private Letters*, edited by J. Templer, Esq., Barrister-at-law, one of the Masters in the Court of Exchequer of Pleas: Bentley, London. Probably no public man ever had his personal affairs more fearlessly unfolded; and few would willingly encounter the scrutiny from which he has come forth triumphant.

governorship of Labuan, directed the governor-general of India to send legal commissioners from India to Singapore, to inquire into the allegations above stated; thus virtually putting Sir James Brooke on his trial as a delinquent accused of misleading her Majesty's ministers by interested misrepresentations.

Lord Dalhousie was unable to spare two judges for the proposed inquiry, and the ungracious task was imposed upon Messrs. Prinsep* and Devereux, members of the

* Mr. Prinsep, the senior commissioner, in his report to the governor-general of India, dated 6th January, 1855, expresses the "surprise felt by himself and his colleague on finding that at the first and second meetings of the 11th and 14th September, no one appeared to support the charges." The editor of a Singapore newspaper, who was very hostile to Sir James Brooke for having publicly denounced him, in 1851, to the governor of Singapore as a person notoriously unfit to hold the judicial office of deputy-sheriff of Singapore, subsequently attempted to sustain the petition; "but," says the commissioner, "of sixteen several witnesses produced in support of the statements therein urged, *not one* of them deposed to any facts, within his own knowledge, which negatived the practice of piracy by the tribes of Serebas and Sakarran on the coast of Borneo; while three of the witnesses called by Woods deposed to specific piratical acts of those tribes; and another, who deposed only to the result of inquiries and research, rather established than controverted their piratical character. On the other hand, twenty-four of the witnesses subpœnaed by ourselves, together with Mr. J. Bonduat, late Resident and superintendent of the Dutch settlement of Sambas, in Borneo (who happened to pass through Singapore on his way to Europe, and volunteered his evidence), deposed expressly to acts of violence at sea, or on the coasts of Borneo, at various periods within the last twenty years; to which acts I can ascribe no other character than that of piracy, though committed by a race ill-provided with sailing vessels, or such weapons of offence as are employed by Europeans. It was urged that their attacks were nothing more than acts of intertribal hostility, of the existence of which there was indubitable evidence. But this character could scarcely be given to inroads and wholesale slaughter in the Dutch settlements of Sambas and Pontianak, of which, at different periods, there was distinct evidence; nor to the attacks by sea on the Malayan settlements of Oya, Egan, &c., on the north-west coast of Borneo, between Sarawak and Sambas, which had nothing of the character of intertribal warfare: and although the acts of piracy in evidence principally concerned the native inhabitants or traders of the coast of Borneo, yet there was distinct evidence of threats or attempts of piratical attacks on vessels of the subjects of European settlements and their property, which justified the suppression, by European powers, of these tribes as piratical hordes. I think, therefore, that the charges of wrongful and causeless attack and massacre, suggested as matter of inquiry, as the parties to the address would now have it understood, has wholly failed of proof on their part, and has been sufficiently negatived by the evidence to the contrary. We had no evidence, nor do I see any ground of inference, that any acts of savage warfare were perpetrated, either under the orders or with the previous sanction of Sir James Brooke. On the contrary, it appeared by the evidence of the witnesses, that he had not only done his utmost to put down the commission of such atrocities by the subjects of his own raj, but that, on the expedition of Captain Farquhar, he exerted his influence to check them, by the offer of a reward per head for captives brought in alive."—(Report of Commissioners of Inquiry, 1855: p. 3.)

The decision of the Hon. H. B. Devereux (the second commissioner) is fuller, and sustained by more detailed evidence than that of Mr. Prinsep. The following is an abstract of his report to the governor-general on the instruction "to inquire into the relations of Sir James Brooke with and towards the native tribes on the north-west coast of Borneo, with a view to ascertain whether it is necessary that he should be entrusted with a discretion to determine which of those tribes are piratical, or, taking into view the recent operations on the coast, of calling for the aid of her Majesty's naval forces for the punishment of such tribes:"—"In connection with this head of inquiry, it appeared necessary to investigate the character of the Serebas and Sakarran Dyaks. The result of this investigation is shown in detail, in a memorandum which I submit herewith. The attention which this question has excited, has induced me to examine the evidence given before us in detail, and to place the result in a separate paper. It is there shown that those tribes were in the habit of attacking the Sambas and Pontianak coasts, and the Natunas Islands,—territories under the control or influence of the Dutch government, and with which those tribes had no relations of neighbourhood or commerce; that in like manner they used to make attacks on the coasts with whose people Sir James Brooke is more or less connected; that the attacks were made without distinction, on all classes; that they took both the heads of their victims and plunder; that no cause of offence was alleged for their attack; that no other Dyak tribe makes similar attacks; and that, since the punishment inflicted in 1849, the coast has been comparatively secure, and commerce has received a remarkable extension. The other inhabitants of the north-west coast of Borneo do not appear to share in that piratical character, and desire to live at peace. The obstacle to that coast being at peace, and to the full development of its trade, had been, till 1849, the conduct of the Serebas and Sakarran Dyaks. That obstacle was in a great degree removed by the result of the expedition under Captain Farquhar, in 1849, and a considerable increase of trade has since taken place. In pursuance of the object of bridling those tribes, Sir James Brooke has established three forts in their rivers, which prevent the exit of large piratical expeditions. He has also received from the sultan a grant of the five rivers of Samarahan, Sadong, Linga, Kalukka, and Rejang, as a dependency of Borneo, on payment of 1,500 dollars a-year to the sultan. The Serebas and Sakarran rivers, which are included in this grant, had not been under the sultan's authority for a hundred years, and his claim to them might be reckoned of the weakest description. It appears, however, that there is a very general sentiment on that coast that those rivers rightfully belong to the sultan, and the grant by the sultan has given a sort of legitimacy to the supremacy now claimed over them. The practical

Bengal civil service. The commission was opened in due form at Singapore, but no witnesses appeared to substantiate the allegations of needless bloodshedding brought against Sir James; on the contrary, the fullest testimony of their falsity offered itself spontaneously at every turn of the case; and unexceptionable evidence of the recklessly piratical character of the Serebas and Sakarran tribes (the main point in dispute), was voluntarily supplied by a Dutch official of rank, who had long served on the coast

object of this supremacy is to wean the Serebas and Sakarran tribes from their piratical habits, and to induce them to adopt peaceful and commercial pursuits. This has been to some degree successful. It does not, however, appear that her Majesty's naval forces are in any way bound to support that supremacy. Whether it is necessary that Sir James Brooke should be entrusted with a discretion to determine which tribes are piratical, and to call for the aid of her Majesty's naval forces for their punishment, must depend on the position, if any, which Sir James Brooke may hold in her Majesty's service. From the whole course of the evidence which has been taken in connection with this subject, whether as regards the atrocities formerly committed by the Serebas and Sakarran Dyaks, or the injury to native trade caused by Illanum and Bolanine pirates, it appears most desirable that there should be an authority empowered to call for the aid of her Majesty's naval forces for the suppression of piracy. The treaty of Borneo engages Great Britain to suppress piracy on the north-west coast of Borneo; and unless the charge of doing so is committed to some naval officer or some civil authority, whether her Majesty's commissioner or some other British officer, who is empowered to call for the aid of the requisite naval forces in the usual manner, that object, so important to the trade which is now springing up, and to the comparative tranquillity which has been recently introduced, can scarcely be attained. I have thus completed my report on the four heads of inquiry which are stated in the commission, and I should now conclude it, had it not seemed advisable that I should make some remarks concerning the expedition of Captain Farquhar, in 1849, against the Serebas and Sakarran Dyaks. I am led to do this from perceiving that my colleague, Mr. Prinsep, has reported his opinion on the subject, and from thinking it, therefore, desirable to place on record the degree in which my opinion coincides with his. I have already declared my opinion that the Serebas and Sakarran Dyaks were piratical tribes; it was therefore both just and expedient, and in conformity with the obligations of treaty, that punishment should be inflicted on them, with a view to the repression of their atrocious outrages. The exact measure of punishment which should have been inflicted, is a question which it does not belong to me to decide; but I may say that it was essential that the thing should be done, and done effectually. So far as regards the loss of life inflicted on them, there does not appear any reasonable ground for sympathy with a race of indiscriminate murderers. The actual loss of life on their part, caused by the night action off the Kalukka, in July, 1849, is thus described by Mr. St. John, who has had considerable facilities for forming a correct opinion on a subject which confessedly admits of no exact calculation :—'By native report there were 300 killed, and the rest, to the number of about 500 more, died in the woods, or after reaching home. The reason why so many died was, that some of the Dyaks came from Sakarran, and they had to walk a very great distance back with only what food they could pick up in the jungle. I know of two villages, of one long house each, to which only three or four returned out of a very great many (Banga) that went.' Subsequently to this night action the expedition proceeded up the river to the Serebas country, for the purpose, principally, as I understand, of making more permanent the effects of the night action, by showing that even their hitherto inaccessible country could be penetrated by British forces. I do not trace that any very great loss of life was inflicted on this expedition. The Serebas 'made no stand' (Captain Farquhar's Report to Sir F. Collejer, dated 25th August, 1849), and there was no opportunity for inflicting it. A large body of Malays and Dyaks accompanied the expedition up the river. Sir James Brooke stated (Answer 33), that 'without the Dyak allies the English could not have got through the country.' Whether it was expedient to enter the country, is a question which, like that of the amount of punishment to be inflicted, it does not belong to me to judge; but having decided to go, I presume, from Sir James Brooke's statement, that it was necessary to take the Dyak allies in company. It has been asserted that those Dyak allies committed atrocities on that expedition. As, unfortunately, even in a large European force, there is usually a proportion of men who will commit atrocities when out of sight of their officers, it is by no means improbable that, when out of sight of their English leaders, the allied Dyaks acted in the manner which may be expected of barbarians. This opinion is, however, purely conjectural. The inquiry was not directed towards this subject, and no evidence was laid before the commissioners concerning it, except that contained in the latter part of the statements of the Datoo Patingi, and of Messrs. St. John and C. Grant, regarding a conflict between a Sarawak spy-boat and a small Serebas boat, and the slaughter of the crew of the latter—a proceeding which appears to be the obvious result of making war, and rendered, as it were, indispensable by the Serebas habit of not surrendering as prisoners. It was stated by Mr. St. John, that 'no Serebas Dyak fighting man can be taken alive. They never give quarter, and never expect it.' In confirmation of Mr. St. John's statement I may mention that, in the whole course of the inquiry, I heard of but four instances of Serebas and Sakarran Dyaks being taken alive. One was the case of a war-boat full of them which stranded on one of the Natuna islands, as mentioned by the witness Orang Kayan Dana Makota The three others were—one man stunned by blows of oars; a second surprised in a house belonging to another tribe; and a third picked up from a wreck or deserted boat at sea. In conflicts with such men, atrocities, in the ordinary sense of the term, are not easily committed, except in the possible case of women and children being slaughtered. I have, &c.,

(Signed) "H. B. DEVEREUX."

"*Note.*—Captain Farquhar says, in his report, that a considerable number of the enemy were killed; but it appears to have been stated as considerable only in comparison with the very trifling loss of the invaders. No numbers are mentioned, as in the case of the night action."

of Borneo, and, as may be supposed, had no favourable leaning towards the British consul-general, by whose efforts the monopoly long enjoyed by the Hague had been subverted.

The commissioners, after a protracted inquiry, made separate reports, both concurring in the complete and honourable acquittal of Sir James from all the charges by which his character had been impugned; but there they stopped, apparently deeming it no part of their duty to take a comprehensive view of British relations with the Eastern Archipelago, and show the manner in which these had been established by the calumniated object of the investigation. Viewing the commission in its fairest light, it is satisfactory as evidence of what the students of colonial history will too often find reason to doubt—namely, that the British government is disposed to consider the destruction of human life for any cause as always to be deplored, and where it occurs, regards the fullest investigation as to its necessity, an imperative duty. But this reasoning affords no excuse for the conduct of those who, being well acquainted with the whole circumstances of the case, strove to procure the downfall of a man whose fearless truth made foes, and who disdained to use the shield of worldly prudence against their unworthy weapons. To compass the destruction of the founder of Christian civilisation in Borneo,* was an end to be sought by any and every means;—to sap the foundations of his government, which rested so much on opinion, was an object to be attained at the cost of reviving piracy, and the risk of causing the massacre of every Englishman and Englishwoman in or near the island. What else could be expected than that the robber hordes, believing in the disgrace and loss of power of their great foe, should reissue from their haunts again to try their hands at the old pursuit? When the appointment of the commission of inquiry became known, the pirates declared that the dreaded "fire-ships" were no longer to be suffered to prevent or punish their atrocities; the Lanoons and Balinini tribes came out of their strongholds, destroyed the incipient but increasing native trade, murdered the traders, and at length slew six of the peaceable inhabitants of Sarawak, while quietly pursuing their avocations near the mouth of the river. Happily the government of Sir James Brooke at Sarawak had struck deep root in the hearts of the people, who clung to the rajah all the more fervently because of the indignities to which he was to be subjected for their sake. So

* The following extract of a letter from the venerated Bishop of Calcutta (Wilson), dated 10th July, 1851, testifies to the extraordinary efforts made by Rajah Brooke for the extension of Christian civilisation in Borneo:—"I have spent some days at Sarawak; I have consecrated the church according to the request of the diocesan, the Lord Bishop of London. I have inspected the state of the infant mission, and conferred fully with the indefatigable and zealous chaplain and missionary [now Bishop M'Dougal]; I have conversed also with the gentry (natives), and have read the several works published on the events which have occurred in the last few years. It is my full persuasion that there is no mission on the face of the earth to be compared with that of Borneo; it has been thrown open to Christian enterprise almost by miracle. One of the darkest recesses of heathen ignorance, and desolation, and cruelty,—where piracy and murder, and conflagration and head-hunting stalked abroad in open day, and the aboriginal inhabitants were in the sure way of being exterminated utterly;—that recess is now, so to speak, like the paradise of God. Deliverance has been proclaimed, security of person and property, equal rights, an enlightened and paternal distribution of justice, the arts of life, an extending commerce, are already established at Sarawak, and spreading along the whole western coast of Borneo. The Chinese sea is free from marauders, and all Europe and America will pursue their maritime occupations from Singapore to Labuan (700 miles): the Christian mission has began to sanctify and adorn all these secular blessings. Two things quite unexampled favour the design—1st. Englishmen have become first known to the oppressed Dyaks by a single English gentleman of benevolence, talent, and singular wisdom and tact of government, who has received as a token of gratitude from the native princes a tract of land (about 70 miles by 50) as his own territory. To the benefit of the inhabitants of it, this gentleman, who is now recognised as the Rajah of Sarawak, is devoting his time, his fortune, his zeal, his health, his body and soul. * * * In truth, when I stood on the hill on which the church is erected, and viewed the subjacent town stretched on the river's bank, and the mission-house and school on the college hill which commands the opposite shore, I could not but break out into thanksgiving to the God of all grace for His wonderful works. * * * Will England, then, fail to support the work thus prosperously begun? Impossible! It is not in the manners of our Christian Britain to forget that she was herself, 1,400 years ago, in as low a state of barbarism as the Dyaks—infested with European pirates, as they with Asiatic now. No,—she is well aware that what the gospel has done for England, it *can do* for Borneo!" This is the highest testimony Sir J. Brooke could receive. Another well-known authority (Colonel Jacob, of the Bombay artillery) recently visited Sarawak, to form a judgment on the spot; and, in a lecture delivered before a public society in India, declared in the most emphatic manner his admiration of the conduct of Rajah Brooke, and surprise at the amount of good already achieved in the teeth of obstacles and discouragements.

far from his moral power having abated, it daily increased; and when he summoned them to rally round the flag under which they had found, for the first time, security for life and property, between seven and eight thousand men instantly responded to the call. Never did highland clan more eagerly devote themselves to the will of their chief than these poor Dyaks, who, left to their own resources, would have crouched like beaten hounds while miscreant bands seized their young women for the gratification of brutal lust, massacred the aged in cold blood, and carried the young and able-bodied into hopeless slavery. It was resolved to strike terror into the pirates by assaulting them in their strongholds, 150 miles from the coast, whither they were wont to retire with their booty and captives; and, if possible, effect inland, an expulsion similar to that which Captain Farquhar, R.N., had so well done on the coast in 1849. By masterly strategy, and the simultaneous action of several assailing bodies, and by inducing the Malays at Serebas and other places to remain neutral, the object was accomplished, after twenty-five days of great hardship and danger. The particulars of this gallant proceeding, which immediately preceded the opening of the commission of inquiry, are thus narrated by an eye-witness:—

"The mountain of Sadok stands in the midst of the track between Sakarran, Serebas Limanok, and Kajoulo, and on a spur of this mountain, called Bukit Lang, or Kites-hill, the great malcontent Rentab had taken his stand. Sir James Brooke assembled his force on the Sakarran river, and dispatched the Datu Tumangong of Sarawak, with six large prahus, to Boling (the Malay town), to keep steadfast the Malays of Serebas and the Dyaks of Paddy and Baku in that river, who had promised neutrality; at the same time he dispatched Mr. Steel up the Kajoulo with a force of 1,500 men to make such a diversion as would prevent the Kajoulos reinforcing Rentab; and then, with the main body of 6,000 men, he moved up the Sakarran river to a place called Entabban. This movement was not effected without difficulty, owing to the size of the prahus and the rapids and shoals of the river. Here he threw up a stockade, 400 yards in length, to protect the large boats, of which, with 1,000 men as a reserve, he took the charge in person, and directed his nephew, Mr. Brooke, to assume the conduct of the further advance and the assault of Bukit Lang. Mr. Brooke started on the morning of the 13th of August with 5,000 men under his command, embarked in smaller boats, the different detachments headed by four other Englishmen,—Mr. Charles Grant, Mr. Brereton, Mr. Charles Johnson, and Mr. Cruickshank. For seven days they struggled against the difficulties of the ascent. They had to move up the river for fifty miles with the hostile Serebas Dyaks on their flank, the water shoal, with occasional rapids, obstructed by trees felled across—the banks often high, the country hilly and abrupt, and in many places densely wooded; they had to drag the boats over the shingly bed of the river, making only about eight miles a-day; the crews in the water from seven A.M. to three P.M., under a broiling tropical sun, and at night kept on the alert by small detachments of the enemy. On the eighth morning, having first formed an intrenchment to defend the boats, Mr. Brooke advanced to the attack of Bukit Lang, which, strong by nature, had been rendered still stronger by art. At the top of a steep hill 500 feet high were three strong enclosures of fourteen feet in height, proof against grape or musketry, surrounding the village on the summit; the houses were likewise stockaded; and, so well were the details arranged, that every preparation had been made, by ladders placed over the roofs, to extinguish fire. The 'Kite's-nest' was only to be approached by two narrow pathways, four feet broad, falling away steep on either side. These paths were stuck full of ranjows and spikes, each defended by a fort, and with a gun and muskets pointed along it, and at fifteen yards from the gun's muzzle a ditch had been cut ten feet broad and five feet in depth, filled with all sorts of obstructive and destructive devices. Mr. Brooke moved up his party from their intrenched camp at daylight, and, after surmounting numerous difficulties, he succeeded in getting a single gun in position at eleven o'clock A.M., and opened fire at 400 yards; a smaller party likewise, with another gun, acted as a diversion on the right-hand path. The garrison, which consisted of 800 men, received the besiegers with shouts; the surrounding hills were covered with numerous parties of the enemy, awaiting any failure, and one of the taunts they used was that they would get at the boats and cut off the retreat. The enemy was in the highest spirits; the attacking party not less so, though placed in a

critical position; and thus the action commenced.

"From hill to hill the 4-pounder brass gun was hauled or lifted, and the last position was only fifty yards from the fort. For four hours a brisk fire was kept up from the fort; at four P.M. it gradually began to slacken. The musketry of the besiegers had told upon every corner and crevice, and, the breach being made, Mr. Brooke ordered the final charge as the sun sunk beneath the horizon, at six o'clock. The first man over the ditch was the Panghina (chief warrior); others followed, and in five minutes the fort was taken. About twenty of the pirates fell dead in the assault, and the remainder of the garrison escaped by a ladder-like path to the river below, carrying off their chief, Rentab, severely wounded. Mr. Brooke's force occupied the fort that night. For two days they scoured the surrounding country, and completed their victory. The pirates lost in killed and wounded at least a hundred men. The loss on Mr. Brooke's side consisted of three men killed; ten seriously, and from twenty to thirty slightly wounded.

"On the 24th of August, after destroying the fortress and razing the works, they returned to Sir James Brooke, at Entabban, in triumph. At the other points, also, the expedition had been entirely successful. The Serebas Malays were held firm to their neutrality by the Datu, and, on hearing of the fall of Bukit Lang, joined at once with the successful party; and Mr. Steel's detachment, finding, as had been anticipated, the Kajoulo people had moved up to support Rentab, ravaged their country, and taught them the sharp lesson of feeling what they had so often inflicted on others. On the 25th of August Sir James Brooke returned to Sarawak. Its effect is scarcely to be calculated, as it has demonstrated that the refractory and evil-disposed are not safe in the interior of their own fastnesses, and that their strongest position, fortified with great care and toil, availed them nothing. It will be sure to create an immense sensation along the coast. The Lanoons and Baliuini will soon hear of it, and will know that, unless they leave off their piratical habits, their turn will come next. It is another sledge-hammer blow at the system of piracy, and will be repeated without fail until the peaceful and well-disposed inhabitants may pursue their avocations without danger.

"It remains only to notice what has occurred subsequently. Sir James Brooke had scarcely returned to Sarawak when her Majesty's ship *Lily* came in with the intelligence that the commissioners had arrived at Singapore, and her commander, Captain Saunderson, was directed to offer him a passage across. Before, however, Sir James Brooke left Sarawak, he called all the chief people together, and stated publicly that the commission had arrived, that he was accused of great crimes, and of oppression and misgovernment, that he would endeavour to induce the commission to visit Sarawak, when any person who had aught to urge against him might speak for themselves. He told them publicly that then was the time, if he had wronged any man, to seek redress, and that, whatever might become of him, they should maintain their independence and support the government of their choice."

It is to be hoped that reparation may speedily be made, and that Sir James may be reinstated in the position for which, above all other men, he has shown himself adapted. But if, unhappily, this should not be the case, and Sarawak and its rajah remain not only unrecognised, but treated with contumelious neglect,—if not even a gun-boat bearing the flag of England be left on the coast for the protection of Labuan, and for carrying out the treaty contracted by the Queen with the Sultan of Borneo (by the neglect of which we are forfeiting the rights thereby guaranteed),—then, indeed, not only "a great discouragement," but positive injury is offered to British commerce,* and to the extension of Christian civilisation.

Such treatment would contrast strangely

* In the commissioners' report, pp. 26, 27, the growing commerce with Borneo is thus stated by the Hon. H. B. Devereux:—"The Sarawak trade is now about eight times as great as it was in 1849, the year of Captain Farquhar's attack. In 1847, the exports from Sarawak were, in round numbers, worth 50,000 dollars. He calculated them himself last year, from the trade returns, at 400,000 dollars, exclusive of the gold exported. The imports were about equal with the exports, and increase in the same period in a like proportion. The trade of the whole coast, he adds, has increased, and the difference is strongly marked; and a very great increase in all the rivers. In the Serebas river there was no trade in 1849, and there is now a large trade. Sir James Brooke said that in 1839, 1840, and 1841, trade had totally ceased in Sarawak (a consequence, no doubt, of the rebellion then going on); not a single prow or trading vessel of any sort left the place for Singapore. Sarawak, when he took charge of the government, had a Malay population of about 2,000 souls; it has now 15,000. Samarahan had about 200 Malay inhabitants; it has now 10,000—an increase stated to arise from the security derived

with the sympathising appreciation which has been spontaneously tendered both from France and the United States. I have a document before me from the former state, which, with characteristic vivacity and courtesy, testifies the admiration of the French people for Sir James Brooke, and assures him that he may reckon on their support to carry out his glorious enterprise; while the latter nation has officially expressed its readiness not only to recognise the flag of Sarawak, but to admit that raj to all the advantages of the most favoured government, on the basis of reciprocal advantage—a concession which has been heretofore withheld on behalf of England.

An earnest spirit, influenced not by generous impulse only, but acting habitually from a deep-rooted sense of duty, is little likely to be turned aside from its self-chosen path by internal obstacles or external opposition. Therefore there is reason to trust that Sir James Brooke will persevere in the great work so well begun; that he will bide his time (being still in the prime of life), and await that justice which sooner or later will be awarded by his sovereign, who (whatever be the feelings and opinions of the royal mind) acts solely through the advice of responsible ministers, who, practically, are named by only one house of parliament. Under any circumstances the rajah is sure of the favourable opinion, cordial support, and anxious sympathy of a large body of the good and the wise, scattered throughout the length and breadth of his native land. Should he want funds, they will aid him, as they are actually doing, by founding a bishopric, sending out missionaries, and building churches wherever he may advise; and those who are thus co-operating, will doubtless be ready, when the time or emergency arises, to urge effectually (should he, on public grounds, be willing to accept it) his official reinstatement as a servant of the Crown—an act of justice highly desirable as such, and equally advisable as regards the national interests, which Sir James, if supported, can, under Providence, materially forward.*

from the neighbourhood of Sarawak. The advance of trade which has been thus indicated, is also shown in the returns of the Borneo trade with Singapore. In this, it is true, the traffic with the Dutch possessions also is included, and it is probable that they have shared in the advantages, whatever they may be, which have given rise to this improved state of things. I annex a statement, which was made out at my request in the government office at Singapore, by which it will be seen that the import trade of Singapore with Borneo has increased from 5,86,445 rupees in 1842-'43, to 12,70,346 rupees in 1852-'53; while the export trade has risen from 6,66,049 to 12,04,231 rupees. I subsequently ascertained, that in 1841 the imports were 2,51,909 rupees, and the exports 3,18,948 rupees. The conclusions I have arrived at are, that the Serebas and Sakarran Dyaks, by their frequent piratical and murderous expeditions, kept the coast within their range in alarm, and prevented the development of a prosperous commerce; that the punishment inflicted by the *Nemesis* expedition in July, 1849, was followed by a nearly total cessation of their attacks by sea—a result materially aided by the establishment, by Sir James Brooke, of three forts in commanding positions in their rivers, which guard the principal passages by which it was formerly usual for the great fleets of their boats to leave their country. The result of these measures has been the discontinuance of large expeditions, and in fact of all expeditions by sea, except those of a few of the bolder and more venturous spirits, who get to sea with a few war-boats through channels formerly not much in use. The earlier period after July, 1849, was marked by the resort of the Serebas and Sakarran Dyaks themselves to Sarawak, with their war-boats converted to the use of trading vessels. This appears to have now been discontinued, and their trade with Sarawak is carried on by other and probably more convenient means, but there is a large trade. Their once united society is now divided. The Malays, who live nearer the sea, and formerly accompanied them on their expeditions, have taken fully to peaceful and commercial pursuits, for which their situation gives them advantages. The Dyaks nearest to the sea have done the same. Those farthest from the sea, and most inaccessible to a hostile force, and to the emotions its presence would cause, still desire to keep up the old practice of head-hunting and piracy. It is still uncertain to which side the victory will ultimately belong. The authority of the Sultan of Borneo and Sir James Brooke is now acknowledged within their rivers, and it seems probable that eventually the more peaceful party will prevail." The commerce in the seas around Borneo is at the present moment largely increasing, and may be almost indefinitely augmented. The value of the traffic may be appreciated from the fact, that Holland has been enabled to maintain her position among European nations chiefly by her Eastern Archipelago trade.

* Since the text was written, a letter from the Earl of Clarendon (her Majesty's secretary of state for foreign affairs) to the Right Hon. A. Vernon Smith, president of the India Board, has been made public (see *Times*, London, 14th December, 1855.) This despatch contains a complete confirmation of the opinions above expressed. The following passages refer to the main points at issue:—"Her Majesty's government learn with much satisfaction from these reports (of the Commissioners of Inquiry) that, as there can be no doubt of the piratical habits of the Serebas and Sakarran tribes, the charge which has been made against Sir James Brooke, of having wantonly and without cause attacked these tribes, has fallen completely to the ground. They also learn with satisfaction that the commissioners were of opinion that Sir James Brooke had not traded in the produce of the territory under his control in any manner incompatible with his duties as consul-general and commissioner. * * * The inquiry, which

The following statement regarding the present condition of Sarawak, the chief facts of which are furnished by an eye-witness, forms a satisfactory conclusion to the preceding notice:—Tranquillity reigns throughout. Crime is infrequent; and a population (including Samarahan) of not less than 60,000 individuals, is ruled by a dozen European and twenty-five native policemen. The laws are mild, but promptly and impartially administered; and the hitherto lawless Malay,—the wild untutored Dyak, and the crafty Chinese trader, now meet in the court of justice, and appeal with confidence to its tribunal.

Kuchin, the capital, or rather that portion of it inhabited by the Chinese, who number about 1,500, has been within the last two years entirely rebuilt; handsome tiled houses have taken the place of the leaf huts, and long streets of well-furnished shops attest the prosperity of the place. In the evening may be seen crowding the thoroughfares the most motley and picturesque population in the world;—the stately Arab merchant, with his long robes of scarlet or white; the wild Dyak from Serebas or Sakarran, bringing his pigs and rice to market; the Chinaman, and the noisy cunning "Kling" pedlars of India. It is remarkable that this same Kuchin, which but fifteen years ago was a small village, now takes rank as by far the finest town in the island of Borneo. It possesses a church, two mosques, a court-house, an excellent market, and several manufactories. The principal exports of Sarawak are antimony ore, sago, gutta-percha, rattans, edible birds'-nests, wax, &c., &c. The exports and imports may be roughly stated at about one million of Spanish dollars in amount. Valuable seams of coal have been recently discovered at Si Munjan, on the Sadong river, and cannot fail to become useful for the promotion of trade. Specimens of iron ore are also on their way home. In fact, everything tends to show that the resources of Sarawak, rightly developed, must render the place of considerable importance.

Bishop M'Dougal resides at Kuchin, as also an assistant chaplain and schoolmaster: attached to the mission is a training school of Chinese and Malay boys, whose progress in education has been most satisfactory. The system pursued is to separate them as much as possible from the evil influence of their own countrymen,—to give them a good practical Christian education, in which it is hoped they will be so guarded as to withstand the temptation to return to the habits of their fathers when emancipated from school. The convents at Kuchin are chiefly Chinese; and little doubt is entertained of large numbers joining the congregations. These Chinese emigrants, having nothing worthy the name of a religion of their own, attend the lectures of the missionaries in great numbers: they listen with attention, curiosity, and respect; and these are hopeful signs. Two branch missions have been established,—one at Linga, among the Balow tribe of Dyaks, under Mr. Chambers, whose judicious kindness has endeared him to the Dyaks, who are being baptized in considerable numbers, and promise soon to fill the little mission church recently erected; the other under Mr. Gomes, in the Lundee river. This gentleman, a native of Ceylon, and educated in Calcutta, has succeeded in inducing the Dyak children to attend his school, and he pronounces them the quickest learners of all the races he has met with. Altogether, the existing state of things proves that the Bishop of Calcutta, in the letter already largely quoted from,* was justified in pronouncing the Borneo mission the most promising on the face of the earth; and, with the Divine blessing, the present generation may yet hope to prove practically the truth of the venerable prelate's emphatic declaration—"That what the gospel has done for England, it can do for Borneo."

has ended in the complete exculpation of Sir James Brooke from the charges made against him, has, at the same time, brought to light abundant evidence of the beneficial results of his administration of the affairs of Sarawak, which are exhibited by the establishment of confidence and the increase of trade, and are such as to deserve the approbation of her Majesty's government. As it may be presumed that the fact of the long-pending inquiry which has taken place can hardly have failed to produce among native communities an impression unfavourable to Sir James Brooke, it is desirable that in order to remove such impression all fit means should be taken to cause the result of the inquiry to be fully and extensively known."—(Foreign Office, 6th Aug., 1855.)

# BRITISH POSSESSIONS IN THE MEDITERRANEAN.

# MEDITERRANEAN POSSESSIONS.

## SECTION VIII.—GIBRALTAR.

The promontory or peninsula of Gibraltar, three miles long and seven in circumference, forms the south-west angle of the continent of Europe,* and is situated in the Spanish province of Andalusia. The southern extremity lies in 36° 2′ N. lat., and 5° 15′ W. long.

The earliest accounts of this singular rock are lost in obscurity, or veiled in the fictions of mythology. The Greeks gave, it is thought, the term Calpe, Καλπη (Urna) to the mountain, by reason of its projecting into the sea from the mainland, like a bucket; and Calpe, together with the neighbouring Mons Abyla, on the opposite African coast, received the appellation of the "Pillars" of Hercules,—either in memory of certain pillars supposed to have been erected somewhere in the neighbourhood of the Straits, or because, according to popular tradition, Calpe and Abyla owed their formation to an exertion of the supernatural strength of the Sampson of fable.

Whether Phœnician navigators, Carthaginian merchants, or Roman conquerors ever settled on "the Rock," is not on record; but it seems probable that the natural strength of the position was first noticed in the beginning of the eighth century, when the Saracens or Moors invaded and made themselves masters of Spain. The particulars of this extraordinary subjugation would be out of place in a work of this nature; suffice it to say, that Tarif ebn Zarca, a general under the Moorish sovereign or Caliph Al Walid, landed A.D. 712, on the sandy isthmus between Mons Calpe and the continent, with an army of 12,000 men, for the conquest of Spain, and gave orders for the erection of a strong castle on the face of the mountain, for the purpose of keeping up his communication with Africa: the remains of this work yet exist, though its completion bears the date A.D. 725. From this period Mons Calpe took the name of *Gibel Tarif* (hence Gibraltar), or Mountain of Tarif, in compliment to the victorious Saracen general, who, leaving a garrison there, marched into the country, surprised Heraclea and other towns, and by a decisive victory over the raw levies of the profligate Roderic, king of the Goths (gained near Xeres, in Andalusia), subverted a monarchy which had then existed 300 years.

During the Moorish occupation of the Spanish territory, Gibraltar increased in importance, but probably did not attain any considerable strength, as it was captured from the Moors by a small detachment of troops under Ferdinand, King of Castile, in the beginning of the fourteenth century. The fortress remained in the possession of the Spaniards until A.D. 1333, when Abomelique, son to the Emperor of Fez, who had been dispatched to the assistance of the Moorish king of Granada, laid siege to Gibraltar, which after five months' attack surrendered to the Africans.

Alonzo XI., an ambitious and warlike prince, then on the throne of Castile, attempted the recapture of this important station five days after its reoccupation by the Moors; but Mahomet, King of Granada, joining Abomelique's forces, hemmed in the assailants and compelled them to raise the siege. In the beginning of 1349, Alonzo again attempted the conquest of Gibraltar, but his army was forced to retire on the death of the Castilian monarch, 24th March 1350. Until A.D. 1410, the descendants of Abomelique continued in quiet possession of Gibraltar, when Jusaf III., King of Granada, availing himself of intestine feuds in the garrison, took possession thereof; but the Granadian Alcaide (or governor) was driven out by a revolt of the people in the ensuing year, and the Emperor of Morocco being solicited by the inhabitants to take the fortress under his protection, sent his brother Sayd to their relief, with 1,000 horse and 2,000 foot. The King of Granada resolved, however, to repossess himself of Gibraltar, and appeared before it in 1411, with a large fleet and army, and the Morocco troops, after suffering great hardships, were obliged to submit to the overwhelming strength of their enemy.

In 1435, Henry de Guzman, Count de Niebla, lost his life in an attack on Gibraltar. The son of this unfortunate nobleman (John de Guzman, Duke of Medina Sidonia) was,

* Europa Point, the extremity of Gibraltar, is sometimes erroneously termed the southernmost part of Europe; but Cabrita is two, and Tarifa five miles further to the southward.

however, more successful in 1462, being instrumental in the final capture of Gibraltar from the Moors, who had held it, with few interruptions, for 748 years. Henry IV. of Castile and Leon was so rejoiced at the conquest, that he added Gibraltar to his royal titles,* and gave it for arms *Gules*—a castle with a key pendent to the gate, *or*, (alluding to its being the key to the Mediterranean); which heraldic distinction has been continued down to the present day.

In 1502, during the reign of Ferdinand and Isabella, Gibraltar was annexed to the Crown of Spain, instead of remaining under the control of the Duke of Medina Sidonia; but its strength could not have been very great, as we find that, in 1540, it was surprised and pillaged by Piali Hamet, one of Barbarossa's captains. During the reign, however, of Charles V., the fortifications were modernised; and the additions made by Daniel Speekel, the imperial engineer, were thought to render it impregnable.

While under the government of Spain, Gibraltar was a place upon which several kings had bestowed special privileges, on account of its presenting the first point of attack to the Moors of Barbary. Among other concessions granted by Ferdinand IV. and Alonzo XI., it was declared a place of refuge for all malefactors, its protective influence extending over them not only while there, but a residence of a year conferring the same immunity elsewhere. The sanctuary was not, however, available to traitors, to breakers of a treaty made by the king, nor to ravishers of a man's wife; nor to persons committing the above-mentioned crimes within the territory.

Little further is known of Gibraltar until the year 1704, when Sir George Rooke, who had been sent into the Mediterranean with a large fleet to assist Charles, Archduke of Austria, in recovering the Crown of Spain, finding nothing of importance to be done, called a council of war on the 17th of July, 1704, near Tetuan. After several schemes had been proposed (such as a second attack on Cadiz) and rejected, it was resolved to attempt the conquest of Gibraltar. On the 21st of July, the fleet arrived in the bay; 1,800 English and Dutch were landed on the isthmus, under the command of the Prince of Hesse d'Armstadt; the governor was summoned to surrender, and on his refusal, a cannonade was opened on the town by the ships, under the orders of Admirals Byng and Vanderdussen. In five or six hours the enemy were driven from their guns, especially from the New Molehead, which the admiral wishing to possess himself of, ordered Captain Whitaker, with the armed boats, ashore; Captains Hicks and Jumper, however, first pushed to land in their pinnaces, upon which the Spaniards blew up the fortifications, killing two lieutenants and forty men, and wounding sixty others. Notwithstanding this slaughter, the British resolutely held their ground, and on being joined by Captain Whitaker, advanced and took possession of a small bastion, half-way between the Mole and the town. The governor (the Marquis de Salines) being again summoned, thought it prudent to capitulate; for although the works were strong, mounting a hundred pieces of cannon, well appointed with ammunition and stores, the garrison consisted of only 150 men, exclusive of the inhabitants: hostages were therefore exchanged; and on the 24th of July, 1704, the Prince of Hesse took possession of the gates of Gibraltar, after a loss on the side of the British,—*killed*, two lieutenants, one master, and fifty-seven sailors; *wounded*, one captain, seven lieutenants, one boatswain, and 207 sailors.

Gibraltar has ever since continued in the hands of the English; not, however, without frequent attempts to wrest from them the envied prize. The courts of Madrid and Paris resolved on immediately attempting its recapture, and the Marquis de Villadarias, a Spanish grandee, assisted by six battalions of French troops, opened his trenches against the fortress on the 11th of October, 1704, and soon effected several breaches in the outworks. Sir John Leake, who had been left at Lisbon with a fleet for the succour of the garrison in case of need, threw into Gibraltar six months' provisions and ammunition, detaching on shore at the same time a body of 500 sailors, to assist in repairing the breaches caused by the enemy's fire. The energy of the besiegers amounted to desperation. Though the British squadron lay before the town, a scheme was formed for surprising the garrison; and, on the 31st of October, 500 volunteers took the sacrament, and departed with a determination never to return until they had retaken Gibraltar. A goatherd conducted this forlorn hope to the side of the rock near Cave Guard, and on the first night they lodged themselves unperceived in St. Michael's Cave; on the succeeding evening they scaled Charles V.'s wall, surprised and

* Gibraltar had previously been the chief city in the kingdom of Abomelique.

massacred the guard at Middle Hill, and several hundred of the party who had been ordered to sustain them, mounted from below. A strong detachment of British grenadiers marched immediately from the town, and attacked the invaders with such overwhelming vehemence, that 150 of the gallant Spaniards were killed on the rocks or driven over the precipices, and a colonel, with thirty officers, together with the remainder of the party, were taken prisoners; the French auxiliaries, who were to have supported them from below, having left them to their fate.

The combined forces continued the siege with great vigour, and Sir John Leake threw 2,000 additional men, with a proportionate quantity of ammunition and provisions, into the garrison; the Spanish general was also strengthened with a considerable body of infantry; and on the 11th and 12th of January, 1705, two attacks were made in the endeavour to carry the fortress, by storming a breach which had been effected in a round tower: they were, however, after some difficulty, both repulsed, with heavy loss in killed and wounded on either side.

With the new year the French and Spaniards renewed their preparations for attack; and the English ministry, aware of the importance of Gibraltar, ordered out reinforcements under Sir Thomas Dilkes and Sir John Hardy, to join Admiral Sir John Leake at Lisbon. The fleet, consisting of twenty-eight English, four Dutch, and eight Portuguese men-of-war, having on board two battalions, sailed on the 6th of March,—captured three French ships of the line, drove ashore and burnt the admiral's and another ship, and so strengthened the garrison, that Marshal Tesse, a Frenchman, who had succeeded the Spanish marquis, withdrew his troops from the trenches, and contented himself with forming a blockade to prevent the English from ravaging the country.

The siege was now considered at an end. During its continuance, the combined forces of France and Spain were diminished, by casualties and sickness, by at least 10,000; while the British loss did not exceed 400 men. By a separate treaty concluded with Spain on the 13th of July, 1713, the following terms were agreed on:—

"The Catholic King does hereby, for himself, his heirs and successors, yield to the Crown of Great Britain the full and entire property of the town and castles of Gibraltar, together with the port, fortification, and forts thereunto belonging; and he gives up the said property to be held and enjoyed absolutely with all manner of right for ever, without any exception or impediment whatsoever; but that abuses and frauds may be avoided by importing any kind of goods, the Catholic King wills, and means it to be understood, that the above-named property be yielded to Great Britain without any territorial jurisdiction, and without any open communications by land with the country round about: yet whereas the communication by sea with the coast of Spain may not at all times be safe or open, and thereby it may happen that the garrison and other inhabitants of Gibraltar may be brought to great straits; and as it is the intention of the Catholic King only that fraudulent importations of goods should, as is above said, be hindered by any inland communication, it is therefore provided, that in such cases it may be lawful to purchase for ready money in the neighbouring territories of Spain, provisions and other things necessary for the use of the garrison and inhabitants, and the ships lying in the harbour; and her Britannic Majesty, at the request of the Catholic King, does consent and agree that no leave shall be given, under any pretence, either for Jews or Moors to reside or have any dwellings in the said town of Gibraltar; and that no refuge shall be allowed to any Moorish ships of war in the harbour of the town, whereby the communications between Spain and Ceuta may be obstructed, or the coasts of Spain be infested by the incursions of the Moors: her Majesty, the Queen of Great Britain, does further promise, that the free exercise of their religion shall be indulged to the Roman catholic inhabitants of the town; and in case it shall seem meet to the Crown of Great Britain to alienate therefrom the property of the said town of Gibraltar, that the preference of having the same shall always be given to the Crown of Spain."

Notwithstanding this formal cession, the Spaniards did not abandon their hopes of repossessing themselves of the "Rock." In 1720, the Marquis of Leda collected a formidable force, under pretence of relieving Ceuta, a Spanish fortress in Barbary, but in reality with the intention of surprising Gibraltar, then in a weak and almost defenceless state. The British ministry had timely notice of the enemy's intention. Colonel Kane, governor of Minorca, was immediately ordered to embark with part of his garrison (500 men) for Gibraltar; and such auxiliaries, together with the spirited conduct of the British commodore, induced the Spanish marquis to sail for Ceuta. Gibraltar remained unmolested until 1727, when the Count de las Torres, commander of the Spanish forces, collected 20,000 men, and advanced against the citadel. From February to June, the Spaniards prosecuted the siege with great vigour and bravery; but the garrison being reinforced from England, and the sea-way kept open, supplies were abundantly poured in, until, on the 12th of June, the news of preliminaries being signed for a general peace reached the belligerents, who thereupon concluded an armistice. During the siege

the garrison lost about 300 killed and wounded, and 70 cannon and 30 mortars burst: the Spanish casualties were estimated at 3,000 men. On the close of the contest the Spaniards erected lines and forts across the isthmus, about a mile from the garrison, thus effectually preventing any communication with the country, and by means of the western fort, called St. Philip's, took command of the best anchorage on the side of the bay next the garrison.

What the Spaniards could not obtain by force of arms, they endeavoured to gain by negotiation. The accession of Philip V. of Spain to the quadruple alliance of 1718, being an object which the courts of Great Britain and France had much at heart, the regent of France undertook, with the view of propitiating Philip, to prevail upon George I. to listen to a proposition for restoring Gibraltar to Spain,—which proposition the king did not reject, but only declined to entertain without the concurrence of the British parliament. Upon this point, private assurances of a more explicit nature were, it is said, made; it is even asserted that the regent of France pledged his word to Philip that that important fortress should be surrendered. After the Spanish monarch had publicly acceded to the quadruple alliance, he insisted that he had done so upon condition that Gibraltar should be restored to him, and that he had formally declared to the regent that such was the consideration (the *sine qua non*) upon which he had entered into the views of the allies. His remonstrances, just or unjust, being unheeded, he refused to fulfil various obligations which he had contracted towards Great Britain, and especially declined to issue a license authorising the trade of the South Sea Company with South America.

For the purpose of overcoming these difficulties, King George addressed a letter to Philip on the 21st of June, 1721, in which it was stated—"Puisque parl a confiance que votre Majesté me temoigne je puis regarder les traités qui ont été en question entre nous comme rétablis et qu'en conformité les pièces necessaires au commerce de mes sujets auront été extradées, je ne balance plus à assurer votre Majesté de ma promptitude à la satisfaire par rapport à sa demande touchant la restitution de Gibraltar, lui promettant de me servir des premières occasions pour regler cet article, du consentement de mon parlement."

That letter of King George led to a series of earnest representations from Philip, which lasted until the year 1725, when the British minister at Madrid was cautioned "not to go on any further in proposals, or discourse of equivalents or expedients for the delivery of Gibraltar. No minister would have the boldness to advise such a kind of equivalent. The king had always told his Catholic Majesty that he could do nothing as to Gibraltar, without the concurrence of parliament. It would not be alienated without the consent of parliament. The behaviour of the Spanish court has been such that it is impossible they themselves can think his Majesty any longer under the least obligation of laying this demand before parliament." The fact probably is, that George I. would have given up Gibraltar to the Spaniards, but for the strong expression of public feeling in opposition to the measure.

Nothing deserving of note occurred for several years, until, in 1760, a mutiny was projected by two British regiments, who being a long time stationed on the "Rock," and seeing little prospect of being relieved, formed a plot to surprise and massacre their officers; the conspirators, however, in number 730, had their schemes discovered by means of a quarrel in a wine-house: one man was executed, ten condemned, and tranquillity restored. When hostilities commenced in 1762, the Spaniards made no effort for the conquest of Gibraltar; but the contest between Great Britain and her North American colonies, in 1777, and the subsequent hostilities between England and France, seemed to afford a favourable opportunity to Spain, who, on the 16th June, 1779, presented a hostile manifesto to the court of London, espousing the part of France. The main object of the court of Madrid was evidently the seizure of Gibraltar; and Spain, in common with the other continental powers, thought the loss of the North American colonies must strike such a blow at the maritime strength of England, as would completely overwhelm her—forgetting that she still possessed the Canadas and the West Indies, and that her eastern possessions were rapidly augmenting. On the 21st June, 1779, the communication between Spain and Gibraltar was closed by orders from Madrid; and even before any reply was given by the British ministry to proposals for a pacification (which, however, it was well known would be rejected), overtures had been privately made to the Emperor of Morocco to farm

his ports of Tetuan, Tangier, and Laroche, in order to cut off Gibraltar from its domestic market and principal source of supply.

The strength of the garrison, when this memorable siege commenced, was as follows:*—General G. A. Elliott, governor; Lieutenant-general R. Boyd, lieutenant-governor; Major-general de la Motte, commanding the Hanoverian brigade.

| Regiments. | Officers. | Staff. | Sergeants | Drummers. | Rank & File. |

Making an army of 5,382 men.

The details of this protracted but most interesting warfare are given in small type to economise space.

The Spaniards, after cutting off the communication between the fortress and the mainland, blockaded the port with a superior naval force; not, however, with such strictness as to prevent several foreign flags, laden with provisions, from evading the vigilance of the enemy's cruisers. During the remainder of the year, viz., from June to December, 1779, nothing further was done by the Spaniards than strengthening their lines, and pushing forward with unceasing vigilance the extensive works with which they were preparing to bombard the fortress; indeed, famine began to erect its gaunt and horrid form: one woman died of want, many were so enfeebled that it was not without great care they recovered; and thistles, dandelions, wild leeks, &c., were for some time the daily nourishment of numbers.†

On the 12th January, 1780, the Spaniards fired ten shots at the fortress from Fort St. Philip, several of which came into the town: the first person struck during the siege happened to be a woman. On the 17th January, Admiral Sir George Bridges Rodney arrived from England, with a fleet of twenty-one sail of the line, and a large convoy of merchantmen, for the relief of the garrison—a circumstance which, of course, diffused general joy, which was not a little increased from the fact of a complete victory having been gained by the British over the Spanish admiral, whose vessel, together with three others of his squadron, were taken, one driven ashore, another blown up during the engagement, and the rest dispersed.

It was in this fleet that Prince William Henry visited Gibraltar, and in contributing towards its relief, made his first appearance as a defender of that throne which it pleased Providence to permit him to adorn. His royal highness served as a midshipman under Admiral Digby, in the *Prince George;* and on one occasion in particular a circumstance occurred which Englishmen may be proud of. The Spanish admiral, Don Juan Langara (then a prisoner aboard the British fleet), visiting Admiral Digby one morning, was, of course, introduced to his royal highness. During the conference between the admirals, Prince William Henry quitted the cabin; and when it was intimated that Don Juan wished to retire, his royal highness appeared as the midshipman on duty, and respectfully informed the admiral that the boat was manned. The Spaniard could not contemplate the son of England's monarch acting as a petty officer unmoved, and, turning to Admiral Digby and his suite, he exclaimed—"*Well does Great Britain merit the empire of the sea, when the humblest stations in her navy are occupied by princes of the blood!*" Sir George Rodney having recruited the garrison with supplies, added to its strength the second battalion of the 73rd regiment (1,000 strong), removed all useless mouths, and left Gibraltar to make its own defence. Nothing of moment occurred from January to June, excepting that the scurvy broke out in the garrison, disabling many hands; and the enemy attempted to destroy the few ships we had in the New Mole, by means of fireships, which was frustrated by the coolness and intrepidity of our seamen, who grappled with the floating masses of fire, and towed them clear of the anchorage under the walls, where, when broken up, they proved valuable to the besieged. The enemy continued, to the close of the year 1780, extending the different branches of their approaches, maintaining a rigorous blockade rather than using any active annoyances; and through the neglect, in England, of the ministry, in refusing a trifling aid to the Emperor of Morocco, the Spaniards succeeded in getting temporary possession of the Barbary ports, and by the removal of our consul, entirely cut off the garrison from those supplies which had heretofore proved of the utmost value.

In April, 1781, the distress of the garrison became very great, and starvation again appeared, a point which it was the grand object of the Spaniards to attain: but on the 12th, one hundred merchant vessels entered the bay, under convoy of Admiral Darby and several line-of-battle ships. The enemy, on perceiving this relief to the besieged, made instant preparations for bombarding the fortress, and as the van of the convoy came to anchor off the New Mole and Rosia Bay, the Spaniards opened a tremendous cannonade upon Gibraltar from 114 pieces of artillery, including fifty 13-inch mortars. The bombardment was continued on the 13th; several soldiers were killed and wounded in their quarters, and Ensign

* I am indebted to the late Colonel Drinkwater for the particulars given in the text. The gallant officer's *History of the late Siege* has helped to render it an imperishable monument of British endurance and valour.

† During the extreme scarcity, an ingenious mode of hatching chickens was practised by the Hanoverians. The eggs were placed with some cotton, wool, or other warm substance, in a tin case of such construction as to be heated either by a lamp or hot water; and, by proper attention to the needful temperature, chickens were commonly hatched in the usual time of a hen's sitting. A *capon* was then taught to rear them: the feathers were plucked from the breast, which was then scoured with a bunch of nettles, and the bird placed upon the young hatch, whose downy warmth afforded such comfort to the bare and smarting parts, that this strange nurse, from that period, is said to have reared them up with a degree of care equalling that bestowed by a hen.

Martin wounded with splinters of stones. On the 14th, the effects of the continued bombardment were felt in the destruction of some wine-houses, which was the signal for a license to the soldiery, who were betrayed into most lamentable irregularities; some died of immediate intoxication, and several were with difficulty recovered by oils and tobacco-water; great quantities of liquor and goods were wantonly destroyed in revenge for the high prices which the Jews and other hucksters had been charging for provisions, which they had privately concealed in abundance; and among other instances of caprice and extravagance, there was one of roasting a pig at a fire made entirely of *cinnamon:* the timely adoption, however, of rigorous measures put an end to such scenes.

On the 15th April, the bombardment was continued with great vivacity. Not content with discharging their ordnance regularly, the Spaniards saluted the fortress almost every instant with a volley of eight or ten cannon, besides mortars; and their gun-boats kept up a smart attack on the shipping. The British batteries remained silent, and the guns against which the attacks of the enemy were principally directed were drawn behind the merlons to secure them against the effects of the enemy's shot. In a few days Gibraltar began to exhibit the results of this desperate bombardment, but every possible effort was made for the immediate reparation of the damage caused thereby.

So brisk was the Spanish fire on the 21st April, that forty-two rounds were numbered in two minutes; the only cessation was at mid-day, when the troops retired to enjoy the siesta, so common and so useful in a warm climate. In the beginning of May, the enemy's fire seldom exceeded a thousand rounds in the twenty-four hours, and their batteries were much shaken by the firing; but the mortar and gun-boats gathering fresh courage, advanced so near as to throw several shells into the garrison with disastrous effect. Towards the close of the month the cannonade considerably abated, and in the beginning of June decreased to about 500 rounds in the twenty-four hours. The bombardment during June scarcely exceeded 450 rounds in the twenty-four hours; yet the shot, though fired at so great a distance, frequently pierced seven solid feet of sand-bag work; and the British batteries were again greatly damaged. Throughout July the Spanish fire slackened, but much injury was done by their gun-boats. In August the bombardment diminished to three shells in the twenty-four hours; but the blockade was rigorously enforced, and advances pushed forward, with casks covered by fascines and sand, in front. In September, the firing from the garrison was increased, exceeding sometimes 700 rounds in the twenty-four hours, to which the enemy frequently returned 800 or upwards; and the British became so inured to danger as to incautiously expose themselves, scarcely deigning even to notice an unexploded shell at their feet: the result of this foolhardiness being the loss of several soldiers. The fire slackened during October, excepting on the 20th, when a brisk attack was kept up on a new battery erected about 1,200 yards from the grand battery. Our artillery fired 1,596 shot, 530 shells, ten carcasses, and two light balls; and the enemy returned 1,012 shot, and 302 shells. The British loss was somewhat considerable; that of the foe was supposed to have been very great. In November the Spaniards added to their parallels on the west, exhibiting a perfect and formidable appearance, which General Elliott saw, if allowed to go on, would prove most destructive to the garrison: he therefore formed the daring project of making a sortie for the destruction of these works; and his design, happily, was unsuspected by the enemy. At midnight, on the 26th November, 1781, nearly 2,000 men assembled on the Red Sands in three columns, and when the moon had nearly finished her nightly course, began their desperate march on the Spanish lines: these were speedily reached, the enemy's fire received, the parapets gallantly mounted, and the ardour of the assailants being irresistible, the enemy gave way on every side, abandoning in an instant, and with the utmost precipitation, those works which had cost them so much expense, and so many months labour to perfect. A party of sailors aided the artillery in the work of destruction; the flames spread with astonishing rapidity; a column of fire and smoke rolled from the works, illuminating the surrounding country; and the Spaniards, whether from astonishment or fear, made no effort to save the lines, although only within a few hundred yards of their batteries, mounting 135 pieces of heavy artillery, which, however, kept up a useless fire on the fortress. In one hour the object of the sally was completed, trains were laid to the magazines, and, as the rear of the British re-entered the garrison, the principal Spanish store blew up with a tremendous explosion, throwing up vast masses of timber, which added to the general conflagration. The loss incurred in performing this feat was only four privates killed, a lieutenant and twenty-four men wounded, and one missing. The history of the British army, pregnant as it is with gallant deeds, presents none more daring or better planned than the one just detailed, in which not even a musket, working tool, or any needful implement was left behind. For several days the Spaniards seemed unable to rally from their late disgrace: their batteries continued in flames, which they made no attempt to extinguish. In the beginning of December they roused from their apathy, and upwards of a thousand men set to work, endeavouring to reconstruct the parallels.

The bombardment had now continued from April 12th to the close of the year 1781. The British loss, during this period, was as follows:—

| | Officers. | Sergts. | Drumrs. | Rank & File. | Total. |
|---|---|---|---|---|---|
| Killed and died of wounds . . . | 3 | 10 | 1 | 108 | 122 |
| Disabled . . . | 2 | 7 | 1 | 36 | 46 |
| Wounded . . . | 13 | 22 | 6 | 359 | 400 |

So well were the enemy's guns directed, that *one* shot coming through the capped embrasures on the Princess Amelia's battery (Willis's), took *seven* legs off *four* men of the 72nd and 73rd regiments, and wounded a fifth. When brisk firing was going on, two boys, gifted with remarkably sharp eyes, were usually stationed with any large party, to inform the men when the Spaniards' fire was directed towards them: their sight was so keen as to see the enemy's shot almost the instant it quitted the gun; and in the instance above-mentioned, one of these boys had been reproving the men for not attending to his warnings, and had just turned his head when he observed the fatal shot coming, and instantly called out to his companions to take care; but unhappily without avail. From January to May, 1782, little occurred to diversify the monotonous course of the siege; and in the early part of May, twenty-four hours elapsed, in which, for the first time during thirteen months, there had been

a cessation of firing. During this period the enemy were making preparations for a grand *floating* battery of fire-proof ships, with which they resolved to aid a powerful bombardment from the land side: meanwhile the firing continued at intervals, and often produced destructive effects. In July, the Duke de Crillon assumed the command of the siege, and the combined army was understood to amount to forty-five battalions of infantry: the floating battery, which was intended to annihilate Gibraltar, was said to consist of ten ships constructed for the occasion, fortified six or seven feet thick on the larboard side with green timber, bolted with iron, cork, junk, and raw hides—gun-proof on the top, with a descent for the shells to glide off: they were to be moored within half a gun-shot of the walls with iron chains; and large boats with mantlets, to let down with hinges, were to be ready for the disembarkation of 40,000 disciplined troops, headed by the Count d'Artois, brother to the King of France, and covered by a squadron of men-of-war, bombs, ketches, and gun-boats. In August, 10,000 men were at work on the Spanish lines, within 800 yards of Gibraltar: the parallel included each shore of the isthmus, with a stupendous communication or outwork in front, the epaulment entirely raised with sand-bags, from ten to twelve feet high, with a proportionate thickness. The *Spanish Gazette* described the parallel as of 230 toises (a toise = 1 fathom = 6 feet) in length, and composed of 1,600,000 sand-bags.

The British troops witnessed unappalled these determined efforts for their destruction: the strength of the garrison, with the marine brigade (including officers), was but 7,500 men, of whom 400 were in the hospital; yet with this comparative handful, the assaults of the enemy were quietly provided against. As an indication of the chivalrous spirit in which the desperate contest was carried on, both by the Spaniards and the British, the following correspondence between the Duke de Crillon and General Elliott, two months after the former took the command of the Spanish and French forces, may be cited:—

"*Camp of Buena-Vista*, 19*th August*, 1782.

"Sir,—His royal highness Count d'Artois, who has received permission from the king, his brother, to assist at the siege as a volunteer in the combined army, of which their most Christian and Catholic Majesties have honoured me with the command, arrived in this camp the 15th inst. This young prince has been pleased, in passing through Madrid, to take charge of some letters which had been sent to that capital from this place, and which are addressed to persons belonging to your garrison: his royal highness has desired me to transmit them to you, and that to this mark of his goodness and attention I should add the strongest expressions of esteem for your person and character. I feel the greatest pleasure in conveying this mark of condescension from this august prince, as it furnishes me with a pretext, which I have been anxiously looking for these two months that I have been in camp, to assure you of the high esteem I have conceived for your excellency, of the sincere desire I feel of deserving yours, and of the pleasure with which I look forward to becoming your friend, after I shall have learned to render myself worthy of the honour, by facing you as an enemy. His highness the Duke de Bourbon, who arrived here twenty-four hours after the Count d'Artois, desires also that I should assure you of his particular esteem. Permit me, sir, to offer a few trifles for your table, of which I am sure you must stand in need, as I know you live entirely on vegetables: I should be glad to know what kind you like best. I shall add some game for the gentlemen of your household, and also ice, which I presume will not be disagreeable in the excessive heat of this climate at this season of the year. I hope you will be obliging enough to accept the small portion which I send with this letter.

"I have the honour to be, &c.,

"B. B. Duc de Crillon.

"To his Excellency General Elliott."

"*Gibraltar, August* 20*th*, 1782.

"Sir,—I find myself highly honoured by your obliging letter of yesterday, in which your excellency was so kind as to inform me of the arrival in your camp of his royal highness the Count d'Artois, and the Duke de Bourbon, to serve as volunteers at the siege. These princes have shown their judgment in making choice of a master in the art of war, whose abilities cannot fail to form great warriors. I am overpowered with the condescension of his royal highness in suffering some letters for persons in this town to be conveyed from Madrid in his carriages. I flatter myself that your excellency will give my most profound respect to his royal highness and to the Duke de Bourbon, for the expressions of esteem with which they have been pleased to honour so insignificant a person as I am. I return a thousand thanks to your excellency for your handsome present of fruits, vegetables, and game. You will excuse me, however, I trust, when I assure you, that in accepting your present I have broken through a resolution to which I had faithfully adhered since the beginning of the war; and that was, never to receive or procure, by any means whatever, any provisions or other commodity for my own private use: so that, without any preference, everything is sold publicly here; and the private soldier, if he has money, can become a purchaser as well as the governor. I confess, I make it a point of honour to partake both of plenty and scarcity in common with the lowest of my brave fellow-soldiers. This furnishes me with an excuse for the liberty I now take of entreating your excellency not to heap any more favours on me of this kind, as in future I cannot convert your presents to my own private use. Indeed, to be plain with your excellency, though vegetables at this season are scarce with us, every man has got a quantity proportioned to the labour which he has bestowed in raising them. The English are naturally fond of gardening and cultivation; and here we find our amusement in it during the intervals of rest from public duty. The promise which the Duke de Crillon makes, of honouring me in proper time and place with his friendship, lays me under infinite obligations. The interest of our sovereigns being once solidly settled, I shall with eagerness embrace the first opportunity to avail myself of so precious a treasure.

"I have the honour to be, &c.,

"G. A. Elliott.

"To his Excellency the Duc de Crillon, &c., &c."

The firing was very brisk in the beginning of September: that of the British batteries set fire repeatedly to the hostile lines; while so well were their guns served, that Major Martin, of the artillery, had the cock of his hat shot off close to the crown by a 26-pounder; the major, however, experienced no other injury than being stunned by the wind of the shot. On the morning of the 8th September, an almost simultaneous attack was made on all sides; *nine* line-of-battle ships passed along the garrison, discharging several broadsides at the works; fifteen gun and mortar-boats approached the town, and 170 pieces of ordnance, all of large calibre, opened in one tremendous fire from the Spanish lines. The enemy kept up the cannonade throughout the following day, resumed it at gun-fire on the 10th, and by seven A.M. had discharged (including the expenditure on the 8th) 5,527 shots, and 2,302 shells, exclusive of the number fired by the men-of-war and mortar-boats.

The bombardment continued at the rate of 4,000 shots in the twenty-four hours, when, on the morning of the 12th September, the combined fleets of France and Spain, amounting to seven three-deckers, thirty-one ships of two decks, three frigates, and a number of xebecks, bomb-ketches, and hospital ships, entered the bay, and in the afternoon were all at anchor between the Orange Grove and Algesiras. It needed stout hearts to remain undaunted before this formidable armament; forty-seven sail of the line, ten battering ships (perfect in design, and deemed invincible, carrying 212 guns), many frigates, xebecks, bomb-ketches, cutters, gun and mortar-boats, and disembarking craft, were then assembled in Gibraltar Bay; on the land side there were stupendous batteries and works, mounting 200 pieces of heavy ordnance, protected by an army of 40,000 men, commanded by a victorious and active general, in the immediate presence of two princes of the blood-royal of France, and many of the highest nobility of both countries; the *coup d'œil* affording a military spectacle such as the annals of war had perhaps never before, and (excepting the siege of Sebastopol) never since, presented. The Spaniards and French deemed success certain; the little band of British hoped for the best; and as danger and death became more imminent, their courage and presence of mind grew firmer also.

The batteries from the Spanish lines, which had continued the formidable fire, opened on the morning of the 13th September, 1782, and were soon supported by the battering ships, which moved to the attack in admirable order, and moored within 900 yards of the King's bastion; in a few minutes *four hundred pieces* of the heaviest artillery were playing simultaneously from the garrison and from their assailants. After some hours, the battering ships were found to be as formidable as report had represented; the heaviest shells often rebounded off their sloped summits, whilst 32-pound shot seemed incapable of making an impression on their dense sides. Frequently the besieged viewed with delight these floating masses of destruction on fire, but by the application of fire-engines from within, the incipient conflagrations were speedily extinguished. About noon the enemy's cannon, which had been previously too much elevated, became very destructive, and the British then resorted to what had been long looked forward to with a prospect of success—the firing of *red-hot balls*. The spirit of the British troops was now roused to an almost unnatural pitch; the whole of their combined energies were directed towards the battering ships; they disregarded in a great measure the land batteries, and the guns sent forth an almost continuous stream in the shape of red-hot balls, carcasses, and shells of every description. For some hours the fierce conflict continued with doubtful success; but towards evening the scarcely credible efforts of the besieged began to overwhelm the foe; the admiral's ship was perceived in flames, the second in command was soon in the same awful condition, and by eight P.M. the assault had almost entirely ceased from the disabled squadron. The English continued firing throughout the livelong night, and the shrieks and moans of the dying told a piteous tale, which the dawning day painfully verified. About two o'clock on the morning of the 14th, one of the battering ships was a mass of fire from stem to stern; another to the southward was in a similar state; and the flames threw a vivid glare over the scene of desolation around, which was heightened by six other of the battering ships becoming enveloped in the same awful blaze. Yet, amidst all this misery and suffering, it is well to record the triumph of humanity, even over the brutalising passions of war;—Brigadier Curtis, with the sailors of the navy, repeatedly risked their own lives in saving their enemies from the devouring element, when they had been abandoned by their terrified fellow-combatants and countrymen. Of the six battering ships which were in flames, three blew up before eleven o'clock; the other three burnt to the water's edge, the magazines having been wetted by the officers previous to their departure; the remaining two large vessels the victors were in the hope of preserving as trophies, but were disappointed, for one of these took fire, and blew up with a terrible explosion, and the other was burnt by our sailors, when it was found impossible to prevent its gradual destruction. The Spanish loss was never satisfactorily ascertained; but from the numbers seen dead on board, it could not have been less than 2,000 men,* including the prisoners; the casualties of the garrison, on the contrary, were trifling, consisting in killed, of one officer, two sergeants, and thirteen rank and file; and in wounded, of five officers, and sixty-three rank and file; and it must be remembered that the enemy had in this action more than 300 pieces of heavy ordnance in play, whilst the garrison had only eighty cannon, seven mortars, and nine howitzers in opposition; with which, however, they expended upwards of 8,300 rounds (more than *half* of which were *hot shot*), and 716 barrels of gunpowder. The Spaniards were so much mortified by this defeat, that preparations were made for a desperate assault, with a view to carry, if possible, the garrison by storm; but the project was overruled by the Duke de Crillon, who thought an unsuccessful attack would expose the army and fleet to immediate destruction. The energies of the enemy were now directed towards the land batteries, and every effort made to extend their works and destroy the British, by firing from 600 to 1,000 shots every twenty-four hours, which system they continued with more or less vivacity throughout the months of September, October, and November. During this period, and in the face of powerful artillery, English engineers rebuilt the whole flank of the Prince Orange bastion (120 feet in length) with solid masonry—a fact scarcely paralleled in any siege. The besieging force now turned their attention chiefly towards blowing up the north part of the rock by means of a mine, a project which had been formed during the previous siege of 1727; but being contravened in this attempt, they began to relinquish the idea of recovering Gibraltar by arms, and towards the conclusion of December, and throughout the month of January, 1783, confined themselves to annoying the garrison by attacks of gun and mortar-boats in regular reliefs, which caused considerable mischief. February, 1783, was ushered in by an animated fire from the British, the effects of which were felt throughout the Spanish lines; but, to the relief of the besiegers rather than of the besieged, on the second day of the month, the Duke de Crillon announced by a flag of truce to General Elliott, that the preliminaries of a general peace had been signed between Great Britain, France, and Spain. When the boats of the here-

* The battering ships had, it was said, 142 guns in use, and seventy in reserve; the whole manned by 5,260 men.

tofore belligerents met, the Spaniards rose up with transports of joy, shouting, "*We are all friends!*" and delivered the letters of peace with the greatest satisfaction: in the evening all firing finally ceased; on the 5th the port of Gibraltar was declared *open*, and amicable intercourse straightway commenced between the Spanish and British lines, while the latter were waiting the official communication of the intelligence from London, which at length arrived on the 10th March, 1784.

Thus ended a siege which, as regards duration (three years, seven months, and twelve days), the power of the attacking force, the quantity of ammunition expended, and the magnanimous and triumphant defence, is unparalleled in the annals of ancient or modern warfare.* The nation justly gloried in the stand which a handful of Britons had made against the united efforts of Spain and France; the cordial thanks of both Houses of Parliament were given to the brave garrison of Gibraltar, and General Elliott (subsequently Lord Heathfield) was invested with the highest rank of the order of the Bath, as a mark of his Majesty's appreciation of the heroism and skill which the gallant veteran had manifested in maintaining one of England's most valuable maritime outposts.

Since this memorable siege, Gibraltar has remained unmolested in the possession of England: few events have occurred there requiring notice in the present work. It would be, however, unjust to pass on to the next section without adverting to one of its governors, whose character and efforts as a military commander are perhaps not adequately appreciated by his countrymen. This royal person (the late Duke of Kent), having chosen the profession of arms for his occupation, was sent to Germany by his Majesty's command, in May, 1785, being then in his eighteenth year. In the Hanoverian service his royal highness commenced his military duties, serving first as a sergeant, and successively rising in rank,—in order that, as the best qualification for command, he might learn to obey. In January, 1790, the duke returned to England, and after passing ten days at home, embarked at the short notice of forty-eight hours for Gibraltar. In May, 1791, the duke was ordered to Canada;† and in December, 1793, to the West Indies, to join the army under the late Lord Grey; and there his gallant behaviour, in leading attacks against the enemy, was such as to call forth the repeated warnings of the commander-in-chief regarding his too daring courage. At the close of the campaign in 1794, his royal highness, pursuant to his royal father's desire, returned to North America, where he was placed on the staff; and after having served at Halifax as major-general until 1796, and as lieutenant-general to 1798, was then compelled to return to England in consequence of an injury received by his horse falling, when riding home after a garrison field day. In May, 1799, the duke was promoted to the rank of general, and appointed commander-in-chief in North America; but, unfortunately, the transport in which his equipment was embarked, was totally lost on the coast of North America. In the autumn of 1800, the precarious state of the duke's health necessitated the obtainment of leave of absence: he returned to England, and in March, 1802, was appointed to the government of Gibraltar. Frequent changes of place, foreign service, losses incurred by shipwreck, &c.,‡

* The trifling loss of the besieged was not a little remarkable when the strength of the besiegers is considered: it was as follows:—

| Casualties. | Officers. | Sergeants. | Drummers. | Rank & File. | Total. | |
|---|---|---|---|---|---|---|
| Killed . . . | 5 | 19 | 2 | 197 | 223 | 869 died. |
| Died of wounds | 1 | 6 | 2 | 101 | 110 | |
| Died of sickness | 7 | 22 | 2 | 505 | 536 | |
| Disabled by wounds . . | 3 | 13 | 2 | 120 | 138 | 1,008 wounded |
| Wounded, but recovd. | 31 | 46 | 20 | 773 | 870 | |
| Deserted . . | — | — | — | 43 | 43[a] | |

[a] Strange to say, the desertions from the Spanish side to the English were far more numerous.

The ammunition expended, consisted, on our side—of shots, 57,163; shells, 129,151; grape, 12,681; carcasses, 926; light balls, 679: making a total of 200,000 rounds; and with the gun-boat addition of 4,728 shots, 205,328: the gunpowder expended was very near 8,000 barrels, and the number of ordnance damaged and destroyed during the siege, fifty-three. As regards similar details on the Spanish side, we have but scanty data. According to a laboratory account, the number of shots and shells from the lines was—shots, 175,741; shells, 68,363; and from the Spanish gun-boats, in shots and shells, 14,283; showing 258,387 rounds, all of a heavy character. Neither the number of barrels of powder expended in this immense discharge, nor the number of ordnance destroyed, have ever been ascertained; it must, however, have been very great.

† While in Hanover, the allowance to his royal highness was but a guinea and a-half a-week; and when proceeding to Gibraltar and to Canada, no outfit was granted.

‡ In proceeding from Canada to join the British army in the West Indies, the Duke of Kent, finding the St. Lawrence closed for the winter, crossed into the United States in the midst of most severe weather, and, in doing so, lost his whole equipage, valued at £2,000, in Lake Champlain, by the breaking in of the ice. In 1794, when again in North America, his royal highness ordered out from Eng-

tended to straiten the pecuniary means of the Duke of Kent; and on application being made at the Treasury for the customary outfit consequent on his appointment as commander-in-chief for North America, he was informed that such was not usual, as the government of Gibraltar was considered *so very good a thing*, that its emoluments would soon abundantly cover the expenses of equipment: indeed, the income from the wine-house licences alone was, under General O'Hara (the duke's predecessor), £7,000 per annum; but by reason of his royal highness's measures for the suppression of drunkenness, it was reduced to £2,000 per annum. Nothing, therefore, could more strongly illustrate the new governor's strictly moral and honourable character, than the fact that one of the earliest steps which he took on assuming the administration of Gibraltar, was the annihilation of the principal source of his income, which was derived from the import of wines and spirituous liquors, and the licences for the sale thereof. Educated as a strict disciplinarian, the Duke of Kent viewed with alarm and disgust the disorganised state of the troops forming the garrison of Gibraltar, a portion of whom had recently returned from the East, flushed with victory, disorganised by excess, and scattering their prize-money with a wastefulness of which the highest officers did not scruple to take advantage for the replenishment of their own coffers. No commander accustomed to regard discipline as essential to the efficiency of an army, could hesitate as to the need of speedy and decisive measures. His royal highness endeavoured to recall the officers and men to a sense of the duty they owed to themselves and their country: he himself never exacted from the meanest soldier that which he would have hesitated to perform himself, but set an example to the troops of method, punctuality, and sobriety of conduct. I have now before me a copy of the duke's garrison orders, printed at Gibraltar in 1803, every line of which affords proof of a zealous desire to restore the discipline of the troops, and a consistent endeavour, by rigid attention to what might otherwise be considered minutiæ, to remove that laziness of habit and carelessness of manner so detrimental to the happiness and efficiency of the men. In these laudable efforts his royal highness was far from being seconded by those whose imperative duty it was to have afforded prompt and cordial co-operation. An occasion was not long wanting for designing men to work on the minds of the garrison, who had before them the example of two former mutinies, in which the malcontents escaped with complete impunity; and the issuing of orders* decreeing the stricter regulation of the canteens and wine-shops (which of course

land an equipage to be sent to his station. It was embarked in his Majesty's packet *Antelope*, which sailed from Falmouth on 19th August, 1794, and was captured by a squadron of French privateers on the 19th September following; thus occasioning a second loss of £2,000. His royal highness was, of course, obliged to renew the order for another equipage, which being executed, was duly shipped. The packet *Tankerville*, with its ill-omened freight, sailed from Falmouth on the 14th December, 1794, and was captured on the passage to Halifax on the 10th of February following: thus raising this disastrous item to £6,000. Another attempt was made by his royal highness to procure an equipage when nominated as lieutenant-general at Halifax, in 1796, and £4,000 worth of stores, &c., were shipped on board the *Recovery* transport, at Deptford, under the direction of Captain Raines; but this transport also fell into the hands of the enemy, as certified by Sir Rupert George. Thus *four* times the ducal equipage was totally lost; but the *fifth* was the heaviest misfortune, which occurred in 1799, when the duke was appointed commander-in-chief of the British forces in North America. The transport ship *Francis*, wholly laden with his personal baggage and equipage, was foundered off Sable Island, by which catastrophe £11,000 were added to the previous obligations of the illustrious commander; amounting altogether to £21,000, for which the Treasury refused any compensation, excepting the loss on Lake Champlain; and even this was not reimbursed until thirteen years after the event.

* *Standing Regulations for Regimental Canteens at Gibraltar.*—(Order Book, 1803, printed at the garrison library.) "1. The canteen is invariably to be held by a sergeant of respectability, and one who will keep up and enforce his authority as such: he is to be allowed the assistance of one careful man. It is not to be open on any day until one hour after guard mounting; it is not to remain open later than the drummer's call beats for tattoo—viz., half-an-hour before second evening gun-fire; it is to be shut whenever the regiment is on parade, or out in the field, and not to open on Sundays until after divine service in the Convent chapel is over. 2. No spirituous liquor, whether mixed or unmixed, of any sort or kind, is to be sold upon any pretence whatsoever; the sale, therefore, of liquor is limited to wine, malt liquor, cider, and beer. 3. No cards, dice, or gambling of any description, are to be allowed in it. 4. No liquor whatsoever is to be sold for any other purpose than that of being drank in the canteen, as none is on any pretence to be carried out of it, except for the use of the families of outlyers, and then the quantity sold to any one person is not to exceed one pint, nor is any to be delivered to children under the age of fifteen years. 5. No liquor whatsoever is to be sold on trust; and therefore, if any non-commissioned officer or soldier be suffered to depart without paying for what he

immediately diminished the income of the commander-in-chief, who profited in proportion to the quantity consumed, and the number of canteens established), became the exciting cause of a real or pretended mutiny, on the suppression of which the duke returned to England, and there vainly sought redress from the existing authorities, who ought to have punished the *second in command* in Gibraltar.*

PHYSICAL ASPECT.—Gibraltar mountain or promontory (forming with that of Ceuta upon the opposite coast of Barbary, the narrow channel which connects the Atlantic Ocean with the Mediterranean) is of an oblong form, with a length, north and south, of two miles and three-quarters, a breadth nowhere exceeding three-quarters of a mile, and a circumference of about seven miles. The greatest extent of the peninsula, from Forbes' barrier to the flagstaff of Europa, is 4,700 yards; the breadth, from the New Mole to the sea, at the back of the "Rock," 1,600 yards; from Europa Point, in the south of Gibraltar, to Cabrita Point on the Spanish side (which two points form the mouth of the bay), 10,945 yards. The area of Gibraltar and the adjacent territory is thus stated:—Neutral ground (including gardens, meadow and arable land), 106 acres; North Glacis, three-and-a-half acres; Convent grounds, two-and-a-quarter; South Glacis, seven; Alamida and grounds to South Barracks, thirty-three and three-quarters; back of South Barracks to upper boundary of commissioners' garden, eight; gardens behind the naval officers' quarters, as high as cultivation extends, twelve and three-quarters; North Ditch, about one-quarter; South ditto, one-quarter; farms up the hill, ten; government grounds below Europa Flats, three-and-a-quarter; parterres and gardens attached to houses within the town of Gibraltar, ten—total, 197 acres. The summit is a sharp craggy ridge, running from north to south, the greatest elevation being to the southward, where Sugar-Loaf Point rises to 1,439 feet above the sea-level; Rock Mortar, the highest point to the northward, is 1,350 feet, and Signal House, the central point between the two, has an elevation of 1,276 feet.

has been supplied with before he leaves the canteen, he is cleared of all obligation to pay afterwards. 6. No non-commissioned officer or soldier is to be permitted to leave in pledge any part of his dress, necessaries, or appointments, for liquor, nor is anything to be received but money; therefore, if any one calls for more than he can pay for on the spot, he is immediately to be sent prisoner to the regimental guard-house, charged with the crime of disobedience of orders, for the purpose of being brought to a court-martial and punished for the same. 7. No non-commissioned officers or soldiers of any other corps but that to which the canteen belongs, nor any stranger of any description, except being passed in by a commissioned officer, the sergeant-major, or quartermaster-sergeant, is to be admitted into the canteen without producing permission in writing from the commanding officer of the corps; nor are any persons to be supplied with liquor from it, but the non-commissioned officers, &c., belonging to the regiment. 8. No non-commissioned officer or soldier who has the least appearance of intoxication, is to be permitted to enter the canteen; such as show a disposition to drunkenness or rioting are immediately to be sent to their barracks, and if disobedient to the orders of the non-commissioned officer holding the canteen, when directed to go there, are to be sent prisoners to the guard-house, with a crime against them, for refusing to obey his orders. 9. The non-commissioned officer having charge of the canteen is to be obeyed by the other non-commissioned officers and soldiers, as next in rank to the quartermaster-sergeant, in everything relating to the carrying on the business of the canteen. He and his assistant have authority to call upon the barrack guard for assistance, whenever good order and regularity are in danger of being disturbed; but on no other occasion, except when called upon for this purpose, are non-commissioned officers or soldiers, on duty, to enter the canteen. 10. The captain of the day and orderly officer are each of them frequently to visit the canteen, and if they discover any irregularity or breach of these regulations during the time they are on duty, they are to report the same to the commanding officer in writing. 11. The established price of wine and malt liquor is to be at the following rate, and never to be altered without an order from the commanding officer—viz., Malaga, two reals per quart; black wine, one real and a-half per quart; porter, one real and a-half per bottle; and beer, one real per quart. The wine to be sold in the same state as it is purchased from the merchant, and any attempt to adulterate it is, on detection, to be punished in the most exemplary manner."

* Captain Conran, referring subsequently to this affair, says, in a letter to the Duke of Kent—"It is a subject I never can reflect on but with the most heartfelt concern, as even at this distant period it appears to make such impressions on your royal highness's mind. Every loyal and well-affected man of that garrison must think and feel as I do, and must regret that the state of the garrison prior to your royal highness's coming to the command of it, and indeed the weak, I may add, worse than no support that your royal highness received from the *second in command*, never was laid before the public." In the 10th volume of the *Colonial Library*, published in 1839, I have given entire, the correspondence of his royal highness with the Duke of York, Lord Castlereagh, &c. The duke, after persevering for several years in demanding investigation, retired into private life, and devoted himself to relieving the distressed, and promoting zealously and efficiently the interests of the metropolitan charities.

The promontory is unequally divided by the above-mentioned ridge, the side facing the Mediterranean being narrower and much steeper than that next the bay, on which stands the town and fortifications. The west side of the mountain is a series of rugged slopes, interspersed with abrupt declivities; the east consists mostly of a range of precipices; but a bank of sand, rising from the Mediterranean with a rapid ascent, covers one-third of its perpendicular height. The southern extremity of the promontory has a steep descent from the Sugar-Loaf summit to a rocky flat called Windmill-hill, thus forming half an oval, bounded by a chain of precipices, at the southern base of which a second rocky flat occurs similar in form and extent to Windmill-hill, and also, like it, surrounded by a rocky wall, the extreme southern termination of which, called Europa Point, is washed by the sea. The northern point of Gibraltar is connected with the mainland and is perfectly perpendicular, except towards the north-west, where the "Lines" are formed; thence a narrow passage of flat land leads to the low sandy isthmus, or neutral ground, the greatest height of which does not exceed ten feet above the level of the sea; its breadth near Gibraltar is 950 yards; midway to the garrison, 1,200 yards; and towards the Spanish lines (which are 1,650 yards from the outworks of Gibraltar), 1,750 yards. The isthmus has Gibraltar Bay on the west, and the Mediterranean Sea on the east: it is of an irregular shape, the sand extending considerably beyond the Spanish lines, both on the Mediterranean and Bay sides; so that its circumference may be estimated at eight to ten miles.*

Gibraltar Bay, situate on the west side of the mountain, is nearly eight miles and a-half long, and in breadth upwards of five; the circumference being between thirty and forty miles. At some points the beach is rocky, especially in front of the town; at others it is sandy, as at Rosia in the south, and Catalan Bay at the back of the Rock, towards its northern extremity; in spring-tides the water rises in the bay about four feet, washing the base of the fortifications.

The bay is bordered on the Spanish side by ranges of high land, which sweep around it, in a semicircular form, at the distance of three or four miles: hills of moderate height are clearly perceptible above the sandy isthmus, and extend into the interior in groups of various elevations, till, at the distance of twelve leagues to the eastward, the ancient city of Ronda presents itself, and forms the centre of an extensive sierra or chain of mountains, which bears its name: a part of this sierra extends towards Malaga, and another towards Seville. The Straits of Gibraltar stretch for about twelve leagues from Cape Spartel to Ceuta Point on the African coast, and from Cape Trafalgar to Europa Point on the coast of Spain. At the western or Atlantic entrance they are some eight leagues broad; they diminish considerably towards the middle, and again expand between Gibraltar and Ceuta, where they are about five leagues wide. In the narrowest part of the "Gut," between Tarifa and Alcanzar Point, which is about nine miles broad, the depth varies from 160 to 500 fathoms: but between Gibraltar and Ceuta, Captain Smith sounded to the depth of 950 fathoms (5,700 feet), and there found a gravelly bottom, with fragments of broken shells. Through these Straits the current on the surface of the ocean sets constantly from the Atlantic into the Mediterranean; beneath the surface there is doubtless an under-current from the Mediterranean into the Atlantic.†

* Colonel James gives the following measurements and bearings of several points:—Length of the peninsula from Forbes' battery to the flagstaff at Europa, 4,700 yards; breadth from the New Mole to the sea at the back of the Rock, 1,600; distance from Forbes' battery to the Spanish lines, 1,650; the fort west of the lines, 1,800; the head of the causeway to the demolished tower, 570; round tower, 870; the Spanish battery, intended to demolish the Old Mole, to the said work, 900; the mortar battery near the Levant shore to Queen's battery at Willis's, 535; the nearest battery of the Spaniards to the grand battery, 700; the head of the Spanish approaches to the head of the foundation, 150; the Sergeant's Guard, bay side, to the first garden, 140; breadth of the isthmus near the Spanish lines, 1,750; at the Spanish advanced huts, 1,200; near Gibraltar-hill, 950; the Old Mole-head to Europa flagstaff, south 05° 57′ west, 4,649; the New Mole-head to Europa flagstaff, south 09° 31′ east, 2,231; the Old Mole-head to New Mole-head, south 09° 23′ west, 2,561 yds. *Distances of places across the Bay.*—Cabrita batteries and flagstaff—Old Mole-head, west, 10,949 yards; Europa flagstaff, 8,802: tower on Cabrita Point—Old Mole-head, west, and Europa flagstaff, 3,785: tower south of Old Gibraltar, and north of Sandy Bay—Old Mole-head, 9,246; Europa flagstaff, west, 8,725: middle of the island of Algesiraz—Old Mole-head, west, 8,275; Europa flagstaff, west, 8,854: the tower in the country—Old Mole-head, west, 10,531; Europa flagstaff, west, 12,284 yards.

† This idea is confirmed by the circumstance of a Dutch merchant ship being sunk by the broadside of a French privateer in the middle of the Gut (as the Straits are termed) between Tarifa and Tangier; a few days after which, the sunken ship, with her

Gibraltar Town is built on the north-west face of the promontory, extending from the Landport to the Southport gate; the main street, which leads directly between the two gates, is about three-fourths of a mile in length. An idea of the leading thoroughfares may be formed from the following diagram:

| | | |
|---|---|---|
| | | Eastern parallel Street, or Town Range. |
| *North.* | Main Street. | *South.* |
| Western parallel Street, or Irish Town. | | |

These streets, and those which communicate with them, are as level as the generality of those in English towns, though the town would appear to be built on the precipitous slope of a hill. The better class of houses are generally three to four stories high, built after the English model; in some parts the Spanish, or probably Moorish, construction prevails, there being a central courtyard, into which the rooms of the dwelling open; the roofs, however, are not flat or terraced as in Malta. The communication between the town and the isthmus is by a long narrow causeway, defended by a curtain with two bastions, a dry ditch, covered-way, and glacis well mined. These, together with the causeway, are completely flanked by the King's, Queen's, and Prince's lines,—works cut in the Rock with immense labour, and scarped so as to be almost inaccessible. Above these lines are the Willis batteries; still higher than which, other works stand at different heights: even the very summit is crowned with mortars and cannon, entirely commanding the isthmus below. The Old Mole, to the west of the grand battery, forms also a formidable flank, and, with the lines, pour a cross-fire on the causeway and neutral ground. Indeed, the grand battery and the Old Mole exhibit such a formidable appearance from the causeway, as to be termed by the Spaniards *"the mouth of fire."*

Along the sea line Gibraltar town is equally well protected, and nature has lent her aid by means of a shoal of sharp rocks, extending along the front of the fortifications far into the bay, which prevents vessels of very large burthen from approaching close to the walls. At the New Mole there is depth of water sufficient for a ship of the line to lie alongside of the wharf and heave down: the anchorage is strongly protected. From New Mole Fort to Rosia Bay the works are strong, and act as flanks to each other; they rise close along the low beach, and are protected by a battery in the rear. To particularise the other defences down to Europa Point and around it, is neither necessary nor politic.

With regard to the town of Gibraltar, though much improved of late years, it is still confined, ill-ventilated, and overcrowded with inhabitants; the number of whom have, however, been diminished by the erection of villages at Catalan Bay and on the neutral ground.* As may be expected in a

cargo of brandy and oil, was cast ashore near Tangier, twelve miles to the westward of the place where she went down. Those who deny the existence of a counter-current, and yet find a difficulty in understanding what can become of the vast body of water flowing constantly through the Straits at a rate of from three to six miles an hour, which no solar evaporation can suffice to carry off, suppose subterranean communication may exist between the Mediterranean and Black Sea, though the latter has a current through the Dardanelles into the former.

* Previous to the year 1814, Gibraltar was notorious for filth; deficient even in common sewers, without effective scavenging arrangements, without pavements on proper principles; in short, it had obtained the bad pre-eminence of being the dirtiest garrison belonging to the Crown. On landing at the New Mole, the first objects, says Dr. Hennen, that struck the eye, were certain enclosures marked "Depôt," in which all the filth of the neighbourhood was stored up to be removed at leisure. The fœtor from these collections was offensive in the extreme; the effluvia which arose from them were diffused all around; and they were placed so close to each other, as to keep up a chain of putrescent exhalations, which tainted the whole atmosphere. When the work of reformation commenced, the depôts were emptied into the sea, and the necessary measures were taken for constructing common sewers through the principal streets. From the rocky nature of the ground, in most situations, this was a work of considerable labour and expense; but by judicious plans and patient perseverance, it has been accomplished in an effectual manner; many thousand running feet of new drains having been constructed, and minor ones in communication with the main trunks. The town-major is director of police, with a suitable proportion of town-sergeants, &c., &c., and there are two sub-directors outside the garrison—officers in military charge of Catalan Bay, and the villages and buildings on the neutral ground and north front, whose duty it is, as much as possible, to regulate the sanitary arrangements of the mixed class which forms the mass of the inhabitants of these places. There is a scavenging department, which not only regulates the town, but every part of the garrison and neutral ground, whence the animal matter is conveyed, divided from the other rubbish, and buried on the eastern extremity of the beach. This branch is under the superintendence of the garrison quartermaster. By the police regulations, the householders, principal inhabitants, and occupants of separate buildings, stores, or warehouses, are to be provided at all times at their several premises, with a strong tub or cask, for receiving the dirt and filth which may accumulate in the course of the twenty-four hours, to be in readiness for the carts of the scavenging department to remove the contents

town subject to bombardment, the public edifices are neither numerous nor beautiful. The governor resides in a building which was formerly a Franciscan convent, and has also a delightful cottage at Europa Point. There is an English and Spanish church, and an exchange, session-house, library, &c. The barracks are on an extensive and substantial scale, consisting of casements and detached buildings, the latter principally occupied by married people. The casements have mostly two stories, built of stone, and are generally bomb-proof. The hospitals are on a superior scale, particularly the naval one, which is unsurpassed in any part of the globe: it is situate in an open level space below Buena-Vista, 130 feet above the level of the sea, and is capable of accommodating 500 patients within the walls, and 500 more might tenant marquees on the area or terrace in front. The remains of an old Moorish castle still exist, situate on the north-west side of the hill; forming an extensive enclosure of about eleven acres, within which are several houses occupied by officers and soldiers. The walls and relics still extant evidence the energy and magnificence of the Saracenic invaders of Spain. The whole surface of Gibraltar abounds in caves, fissures, and pot-like holes. The most celebrated cave is that called St. George's by the Spaniards, and St. Michael's by the English: it lies to the

daily. Dirty water, dust, dead animal and vegetable matter, or filth of any description, is forbidden to be thrown out of the windows or doors, or to be placed in the streets, passages, or gutters, under a penalty. The butcheries and markets are equally well regulated. Cattle are not permitted to be slaughtered in any other place than the *zoca* or butchery on the neutral ground (with the exception of calves, under particular restrictions.) The hours of slaughtering are limited to between three o'clock P.M. and sunset; and the meat is not allowed to be brought into the garrison before the next morning; so that abundant time is given it for cooling and thorough cleansing; the time for conveying it into the garrison is limited to two hours after sunrise. The cleansed offal—as head, heart, suet, and tallow—is permitted to be brought in during the same evening that the animal has been killed, for the purpose of immediate sale, but no garbage of any description is admitted at any time. In the neighbourhood of the *zoca*, sheds for several hundred head of cattle are erected. Their food consists of about ten pounds of chopped straw, four of beans bruised, and a proportion of barley per diem, with water once a day *ad libitum*. The cattle for the troops are chiefly procured from Barbary, under a treaty by which 2,000 head are annually permitted to be exported from that country for the use of the garrison; whatever surplus remains after supply of the troops, is sold by the contractor for his own benefit. The breed is very small, but they fatten rapidly. The meat is conveyed in covered carts, crates, or baskets; and the filthy practice of blowing by the mouth is forbidden. With regard to the place of sale, the regulations are equally judicious;—no unwholesome or tainted meat is permitted to be sold; no live cattle of any description are permitted to enter the market; nor are hides, wool, or lumber allowed to remain in the stalls. No beds are permitted within the market-place. All the stalls are washed every evening throughout the year, and no individuals are allowed to remain in them at night. They are whitewashed twice a month. The cleanliness and regularity of the slaughter-houses, cattle-stalls, &c., is a branch of the police under the town-adjutant. The stalls are let out, and the product forms part of an orphan fund. The practice of erecting stalls and benches in the public streets, for the sale of goods, is entirely prohibited. Temporary benches are permitted to be placed in certain situations during the early part of the day, for general convenience. Taverns, wine-houses, and eating-houses are placed under strict regulations. The admission and lodging of strangers is attended to in the most rigid manner, and the whole arrangements are placed under the immediate surveillance of the police. The burial-places were suspected of being very efficient agents in the production of the epidemic of 1813. The smell issuing from the principal one is described by Dr. Robertson as having been extremely offensive; and he expresses his astonishment that with such a source of fever existing within it, the garrison had ever been free from disease. The burial-ground in South Port Ditch was accused of exercising similar influence Whether these suspicions were well-founded or not, the main causes of complaint have been removed, and the principal burying-place is now on the neutral ground. Charnel-house effluvia occasionally arise from it, and in some instances water has flowed into the graves, which might have afforded similar exhalations on evaporation; but a perpetual current of air—that grand neutraliser of all insalubrious miasmata—renders them innocuous to the inhabitants of the town. The Red Sands, between the Grand Parade and the South Pavilion, were formerly the principal receptacle for the dead. The greater part of these sands are now converted into gardens, and only a very small spot is occasionally used for the graves of officers. The Jews have a burial-ground on Windmill-hill, in a very airy and elevated situation. An old graveyard, now no longer used, is situated on the side of the hill, above the Red Sands; and another of a similar description lies within South Port. Upon the whole, the places of sepulture for Gibraltar afford little cause for anxiety at present. The depositing of bodies within the Spanish church,—which was so common a practice fifty years ago, that Colonel James says, "all the Roman catholics were buried there,"—is now discontinued. Nothing but the quantity of lime thrown over the bodies could have prevented the most dangerous consequences resulting from this practice. It has become so rare to deposit a body in the church, that a thousand dollars were lately paid by the family of a Spanish gentleman for permission to do so. The streets, which were formerly in a most deplorable state, are now well paved, lighted, and cleansed, and extensive improvements are daily going on. Many of the narrow streets have been widened, several alleys entirely removed, and free ventilation promoted by all possible means.

south of Charles V.'s wall, at a point nearly overhanging the old burial-ground in the Red Sands, and about 1,100 feet above the level of the sea. According to tradition, it formerly extended 400 to 500 yards in a southerly direction; and at present it can be explored, without difficulty, 100 to 150 yards. The roof is covered with various kinds of stalactites. In the interior is a large collection of water, which, although continually receiving supplies by distillation from the roof, never overflows.

The promontory is well supplied with water. The aqueduct originally planned by the Moors is a very important work. The present structure was commenced in 1571, after the plan of a Spanish Jesuit, and finished in 1694; the channel begins in the south, and terminates in the centre of the town; the water with which it is supplied filters through the red sand, running through "weep-holes," made of brick, into a reservoir, from whence, after rising to a height of eighteen inches, it is conveyed in earthen pipes to various parts of the town. The aqueduct is chiefly fed by the autumn and winter rains, and also supplied by infiltration from the body of the mountain.

There are numerous tanks and wells for the supply of the garrison; those for the use of the navy, four in number, in the immediate neighbourhood of Rosia Bay (the most extensive), will hold 1,317,120 gallons of water; there are seven other public tanks, capable of containing 235,580 gallons; thus, *one million and a-half* gallons may be always kept in supply. The water flows into the tanks from the roofs of houses, &c., without any purifying process being attempted, except throwing in a few live eels: these devour the animalculæ, and are themselves eaten in turn when they get fat. Among the public tanks, one at Europa Flats, called the Nun's Well, is adapted for 100,000 gallons. There are upwards of a hundred private tanks in the garrison, and from twenty to thirty wells, with a depth of from three to twenty-six feet. In fact, the internal parts of the promontory abound with water; and on the neutral ground are numerous wells, which furnish some thousand additional gallons daily to the gardens; 24,000 gallons being drawn in twenty-four hours from a sand apparently as arid as the deserts of Arabia. The wells are formed by sinking a cask in the sand, and letting in one or two more, as may be thought necessary. The supply continues throughout the driest summer, and the close vicinity of the sea does not seem to exercise any unfavourable influence on the quality of the water.

There are several caverns: one explored by Colonel Drinkwater, in 1789, is thus described by him in the valuable work before referred to:—

"The opening of this cave lies in the face of the perpendicular rock, about 150 or 160 feet above its footing on the eastern side, almost under the Signal House. In enlarging the works of the garrison, chasms and caves of considerable size were constantly thrown open in various parts of the Rock, proving, with our knowledge of St. George's Cave, another at Poca Roca, above the town, and others in many parts of the mountain, that the promontory of Gibraltar must abound with hollows of this description. One had been discovered a short time before on the lines above Landport, in which some very curious petrified bones were found; but none of the late discoveries appeared to be of the same extent as the cavern above-mentioned. A party of officers having provided themselves with the necessary ropes, and being attended by guides, each bearing a candle, and having tinder-boxes distributed among them, proceeded by the Devil's Tower, Catalan Bay, and up the sloping bank of sand behind the Rock to the foot of the precipice, which they were required to ascend before they could enter the mouth of the cavern. This was soon found to be an enterprise of no small danger to persons unaccustomed to such undertakings. With great difficulty, the party, assisted by their attendants, clambered up the face of the Rock to the height of from 150 to 160 feet. The cavern consisted of several chambers or divisions, connected by narrow crevices or funnels, some of which were so small and tortuous as to make the passage rather difficult, obliging the party frequently to creep on all-fours for a considerable distance. In the different chambers, which appeared to be of various dimensions, were numerous stalactite columns, in all degrees of formation; the lower parts of many of them, particularly in the interior, consisted of masses of petrifaction in pinnacles of various heights, the outsides of which were covered with a most beautiful frothy substance (the first stage of petrifaction), which, on being rudely touched, dissolved instantly into water. The extreme cavern consisted of two divisions of an oblong form, on the floor of which lay a deep layer of dark vegetable mould, upon which, in various places, were seen the incipient formation of stalactite columns, a small one of which was easily removed by the writer, and with the assistance of one of the attendants, conveyed out of the cavern, but its beauty soon faded on approaching the atmosphere; and before it was lodged in his quarters it had lost much of its original snowy appearance, and was reduced to the size of the petrifaction of each nuclei of the different pinnacles that rose up from the base of the incipient columns. Without the rope the party would neither have reached the extremity of the cavern, nor found their way back. The advance of the party into the bowels of the mountain (chiefly on a descent) was found to be about forty-four fathoms, measured on the rope; but as this was the direct distance by the nearest angles, their line of march must have extended more than 300 feet. A great number of bats were flying about, and one or two were caught in a torpid state."

Geology and Soil.*—Gibraltar is composed chiefly of a rock of gray, dense, primary marble, the beds or strata of which are of various thickness, from twenty to upwards of forty feet, dipping from east to west at an angle of nearly thirty-five degrees. Although now so far above the level of the sea, the promontory has evidently been at one time submerged beneath the ocean. Pot-like holes are frequent in the solid rock, apparently caused by the attrition of pebbles in a strong current; one of these, 940 feet above the sea, was found to be five feet deep and three in diameter, the brim rounded off as if by art, and the sides and mouth displaying a considerable degree of polish. For three-and-a-half feet downwards, the cavity was filled with an argillaceous earth, thinly mixed with minute particles of transparent quartz crystals; the remaining foot and a-half contained an aggregate of water-worn stones, from the size of a goose-egg to a walnut, comprising the red jasper, yellowish-white flint, white quartz, and blueish-white agates firmly combined with a yellowish-brown stalactitical calcareous spar: in this breccia there was no fragment of mountain rock discoverable, or any other calcareous matter, except the cement which formed the connection. The earth obtained from these cavities is sought by gardeners with great avidity. Testaceous bodies have occasionally been found imbedded in the body of the rock, but they do not form regular strata. Stalactites and stalagmites are to be found in great abundance in the numerous caves, especially in St. Michael's. The further removed from the external air, the brighter they become in colour: near the surface they are of a brownish yellow, and by degrees shade off to a whitish yellow. Upon the western face of the hill strata occur, composed of a number of thin beds of a blackish brown, or ferruginous-coloured earth. The lowermost stratum is about a foot and a-half thick, and rests upon a rock of an argillaceous nature. This stratum consists of quartz of a blackish-blue colour, in the septa or cracks of which are found fine quartz crystals, colourless and perfectly transparent, which are dignified with the name of "Gibraltar diamonds." Not far from the "diamond-bed," but nearer the level of the sea, is a stratum of argillaceous matter, the clefts of which are covered with dendritical figures of a yellowish-brown colour, resembling landscape painting. In some parts of the western face, towards the south, are found flints of a dirty, sap-green colour, embedded in a dark-red, shining clay.

Around Rosia Bay and the New Mole is found a beautiful breccia, composed of almost every fossil already enumerated, with the addition of two species of marble, the native beds of which have not been discovered in the mountain—the one black, the other olive-green. The breccia is combined by a calcareous cement of a yellowish colour, nearly approaching to orange: it takes a high polish, and the principal houses in the garrison are adorned with beautiful chimney ornaments composed of it.

But the most curious of all the fossil productions of Gibraltar are the bones, which are found in the perpendicular fissures and cavities of the rock, embedded in a calcareous concretion of a reddish-brown ferruginous colour, with an earthy fracture, and considerably indurated. They consist of the remains of various animals, quadrupeds, and birds of different sizes, thrown together without order, and intermixed with the shells of snails, fragments of rock, and bits of spar, which may yet be observed in an uncombined state on the surface. Major Imrie's opinion is, that these substances have been swept off the surface by heavy rains, and carried into the fissures and cavities, which formerly opened to the surface, and have there undergone the permeating action of water, from which, in the course of a long series of years, calcareous matters have been deposited. In some fissures below the King's lines, the concretions have been found to consist of the pebbles of the prevailing calcareous rock, and, in one instance, the bottom of a glass bottle, of singular shape and great thickness, was embedded in it. From a consideration of all the facts, it is denied that petrifaction has had any share in the production of the osseous breccia. It was supposed that many of the bones were human, as skulls or parts of bones like those of man have been found; and the miners, in forming the excavations to the northward, conceived that they had fallen in with a petrified human skeleton; but the probability is, that the relic in question was that of a monkey. Cuvier, who denies the existence of human bones among these fossil remains, enumerates those of the ox, deer, sheep, rabbit, water-rat, mouse, horse, ass, snakes,

* Dr. Hennen and Major Imrie have paid considerable attention to this subject; and to their observations I am chiefly indebted for the facts enumerated in this section.

and various birds. He found the bones of a ruminating animal of the order Glires, which he conjectures may belong to the genus Lagomys.* The chemical analysis of them, instituted by Mr. Hatchett, shows that they consist principally of the phosphate of lime, and that their cavities have been partly filled by the carbonate of lime, the agglutinising properties of which keep them together.

No mineral waters have been discovered in Gibraltar. Near the base of the mountain, on which stands the tower called the "Queen of Spain's Chair," about two miles from the garrison, there are two springs of a chalybeate nature.†

Earthquake shocks have been felt at Gibraltar, and many places bear the indications of volcanic agency. The great earthquake of Lisbon was first observed at the "Rock" on the forenoon of the 1st of November, 1755; it began with a trembling of half a minute, then a violent shock, and went off in trembling: the sea rose every fifteen minutes six feet eight inches, and fell so low that boats and fish were left dry. Similar indications have been since observed at different periods.

The *soil* is of several kinds; that on which the town is built is red sand, forming the largest bank of arenaceous matter on the west side of the mountain: it consists of small particles of crystallised quartz, colourless, and perfectly transparent *paste*, but of an ochreous colour in the mass, on account of the red argillaceous earth adhering thereto. On the east side, the sandbank is composed of particles of calcareous rock, the whole being of a whitish-grey colour. To the south of the Red Sands the soil is variegated; in some places a light, loose, fine, and extremely fertile mould exists, becoming, in the rainy season, of a saponaceous sliminess; in others, a stiff marl soil and species of fullers'-earth predominate.

Climate and Diseases.—The Andalusian atmosphere is celebrated for its salubrity; and, with some exceptions, the climate of Gibraltar, of late years, has been decidedly healthy, except for hard drinkers and phlegmatic constitutions. The temperature is warm, the hottest months being June, July, August, and September; and the coldest, December, January, and February. Snow rarely falls, and ice is seen no thicker than a dollar; the mercury ranges from 85° in July, to 50° in January: but the winds and the rain affect the animal frame more acutely than the solar heat. From 1816 to 1827 the greatest height of the barometer was $30\frac{90}{100}$°; the lowest, $28\frac{62}{100}$°. Hail occasionally falls with much violence, and is generally accompanied by a thunder-storm, not unfrequently preceded by brilliant lightning, coruscations, and falling stars; and other meteoric phenomena are observable. In 1753, a fire-ball shot over the Rock. In a period of ten years, from 1816 to 1825, the number of rainy days in each month was—January, 91; February, 71; March, 62; April, 101; May, 61; June, 18; July, 4; August, 9; September, 29; October, 57; November, 95; December, 88: total, 686.

The greatest number of rainy days is in April, but the *quantity* which falls is greatest in January. The heaviest rains are accompanied with south-west winds; those from the south-east are raw, black, and bleak; they are termed "genuine Levanters," and dislodge numerous masses of rock, which roll down the hill with prodigious violence, realising the Portuguese proverb—

"Quando com Levante chove
As Pedras move."

Or, in English doggrel,—

"A rainy Levanter
Makes e'en the stones canter."

The Levanters are generally accompanied with fogs of extreme density, which roll over the Rock and down its sides, depositing considerable quantities of moisture wherever they touch.

The easterly winds are most prevalent in July, August, and September; and the westerly in December, January, and May.‡ It is pro-

* *See* Cuvier's *Essay on the Theory of the Earth*, translated by Jameson, 8vo; Hatchett, in *Philosophical Transactions*, 1799; and Buckland's *Reliquiæ Diluvianæ*, 4to; London, 1824: p. 148.

† About seven hours' journey eastward from Gibraltar are the baths of Hedionda, situated in the district of Casares, which are much resorted to by the natives for cutaneous complaints, chronic rheumatism, obstinate ulcers, affections of the kidneys and bladder, and the diseases of females. These waters abound in sulphuretted hydrogen gas: their temperature is $18\frac{1}{2}$° Reaumur. From an analysis made by Dr. Colorado of Casares, these waters are found to contain, in fifty pounds weight, six grains of muriate of lime, fifty-six sulphate of magnesia, thirty-five sulphate of lime, ten of magnesia, and four of siliceous earth, independent of a large quantity of sulphur, with which they so much abound, that the peasants make matches by simply dipping slips of linen in the stream. Baths and habitations have been erected at this place.

‡ In 6 years,—222 days more easterly than westerly.

bable, from the observations of Ayala, Mr. Carter, and others, that the easterly winds prevailed formerly more extensively than at present, and that Gibraltar, like other places, has experienced a great change of climate;* how far the temperature and the rains affect the health of the troops in this important garrison, is a point of the utmost importance.

Vegetable Kingdom.—Gibraltar is not the barren rock that has been supposed; Colonel James mentions the names of 310 different trees and plants growing on the promontory. Several fruits are cultivated there, and the vine and fig flourish in exuberance; after rains vegetation is luxuriant. The olive, almond, orange, and lemon thrive; in the naval garden in the south are some noble date trees; the prickly pear runs wild, the aloe abounds, and the palmetto was formerly plentiful. Geraniums of almost every species grow in the utmost profusion, and a great variety of wild and cultivated plants and herbs are found in every part of the mountain. Among the *native* fruits brought to market are seven or eight kinds of grapes, figs, oranges, lemons, pomegranates, almonds, apples, peaches, plums, apricots (called "*Kill Johns*"), cherries, and strawberries; potatoes, cabbages, onions, cucumbers, artichokes, tomatas, peas, kidney beans, spinage, lettuces, radishes, &c., are produced in abundance.

Ichthyology.—Different kinds of fish may be observed at the market at Gibraltar: in former times the bay was so celebrated for its fisheries of tunny and salmonettas, that coin were struck, in which representations of them were given.

Considerable quantities of the tunny are caught at the present day, both for immediate food, and for exportation, dried, salted, or preserved in oil. The bonito, mackerel, and anchovy are taken in great numbers; the latter, in particular, forming a valuable export to the Genoa market. The *Murœna Helena*, so prized by the ancient Romans, that we are told Crassus went into mourning for the death of a favourite one, is here within reach of the poorest individual, and being considered a coarse fish, is not much esteemed. The sepia, or cuttle fish, which is very abundant, forms a delicious article of diet when well washed, deprived of the bone, and properly cooked. The sword-fish is frequently brought to market, and the Gibraltar eels are much prized.

Entomology.—As in other warm climates, the insect tribes are numerous, and the mosquitoes in summer are particularly annoying to new comers. The *lepidoptera*, or caterpillar tribe, are prolific; and grasshoppers overrun the neutral ground. A southerly wind, in 1753, brought from Africa an immense swarm of huge locusts, with brown-spotted wings, red legs, and bright yellow bodies, which, fortunately for the garrison, a sudden change of wind to the east beat into the sea, where they were washed ashore in heaps. On another occasion a swarm of butterflies made their appearance in a similar manner. The moths are large and very beautiful. The domestic annoyances are plentiful.

*Animals* do not differ from those of the Andalusian provinces, with the exception of monkeys, several families of which have located themselves on the "Rock;" they are probably an importation from Barbary; but they are so extremely wary that it is quite impossible to get near them; even their skeletons are very rarely found.

* For many interesting points relative to the yellow fever of Gibraltar, see an article under that head by Dr. Gilkrest (to whom I am indebted for the preceding facts), in the *Cyclopædia of Practical Medicine*. Among other facts, he cites the opinions of two members of a commission appointed to inquire into the origin of the epidemic of 1828, demonstrating that it was not an *imported* disease. *Mr. Judge Howell.*—"Upon a careful review of all the proceedings before this Board, I am of opinion that the evidence brought forward has totally failed to prove that the late epidemic disease was introduced from any foreign source, either by the Swedish ship *Dygden*, or by any other means; and I am further of opinion that the late epidemic had its origin at Gibraltar." *Colonel Chapman* (now Major-general Sir Stephen Chapman, governor of Bermuda.)—"Judging from the evidence produced before the Board, the manner in which it has been given, together with the description of persons who have been brought forward as witnesses, I am decidedly of opinion that the attempts to prove the introduction of the disease, after months of previous inquiry by those who wished to prove it, have totally failed." The epidemics of Gibraltar have not prevailed in the very hottest years, and a cool wind from the north or north-east is so unfavourable to the yellow fever as to shorten its continuance; Humboldt also makes a similar remark respecting cases of the same description at Vera Cruz. Severe visitations have overwhelmed Gibraltar in years remarkable for the fall of much rain, as well as in others in which comparatively little has fallen. The quantity of rain which fell in different years at Gibraltar, was in inches as follows:—In 1791, 25; 1792, 44; 1793, 19; 1794, 22; 1795, 21; 1796, 25; 1797, 64; 1798, 30; 1799, 31; 1800, 42; 1801, 15; 1802, 29; 1803, 42; 1804, 50; 1805, 30; 1806, 39; 1807, 29; 1808, 33; 1809, 31; 1810, 37; 1811, 27; 1812, 40; 1813, 33; 1814, 37; 1815, 28; 1816, 28; 1817, 26; 1818, 24; 1819, 31; 1820, 36; 1821, 35; 1822, 17; 1823, 26; 1824, 20; 1825, 20; 1826, 31; 1827, 23; 1828, 25 inches.

*Birds* are similar to those on the peninsula; eagles, hawks, and kites build their airy nests in the rocky summits, and are at all times seen hovering about in quest of prey; bats (*vespertilio marinus*) and owls swarm in the caves; and pigeons, poultry, geese, ducks, and red-legged partridges, larks, starlings, thrushes, blackbirds, finches, &c., abound.

Population.—Being considered solely as a garrison, little encouragement has been given to immigrants, or fixed residents. In March, 1753, the inhabitants under permit numbered 1,793; in September, 1854, 1,810, of whom 414 were British, 604 native and Barbary Jews; the remainder Spaniards, Portuguese, Genoese, and various other nations. The succeeding enumerations were —1791, 2,885; 1801, 5,339; 1807, 7,501; 1811, 11,173; 1813, 12,423; 1814, 10,137; 1816, 11,401; 1817, 10,737; 1825, 15,480; 1830, 17,024; 1835, 15,008; 1844 (latest census), *whites* —males, 5,857; females, 6,312: *coloured*—males, 10; females, 3. Total males, 5,867; females, 6,315 = 12,182. The aliens number 3,641. In 1854, the recorded births were 469; deaths, 491.

Ecclesiastical.—A civil chaplain of the church of England, and a vicar apostolic of the church of Rome: each receive £300 per annum.

Education.—Military schools, 5: scholars —males, 117; females, 134 = 255; civilians attending ditto—males, 14; females, 5 = 19. Church of England schools, 2: scholars—males, 149; females, 51 = 200. Roman catholic schools, 5: scholars—males, 431; females, 356 = 787. Wesleyan schools, 3: scholars—males, 179; females, 55 = 234.

Government.—A general, commanding the garrison, with military control over the inhabitants; his salary of £5,000 per annum is paid from the civil revenue.

Revenue.—Nearly £30,000 a year, of which £10,000 is derived from a duty on wines and spirits imported; £3,500 from wine and spirit licences; £5,000 from ground and house-rents; remainder from fines, fees, port dues, &c. A local revenue of £3,500 is employed in paving, lighting, and cleansing. Expenditure by Great Britain, in 1854, for military purposes, £155,000.

The shipping, inwards, in 1854, was—number, 3,673; tonnage, 589,560,—manned by 42,121: of these, under the British flag, English—number, 571; tons, 161,465; Colonial—number, 117; tons, 26,063: total—number, 688; tons, 187,528. There are no custom duties but those levied on wine, spirits, and tobacco. The port dues are—on a ship, £2 3*s.* 4*d.*; on a barque, £1 14*s.* 8*d.*; on a brig, £1 1*s.* 8*d.*

*Moneys.*—Spanish currency is still much used. The effective hard dollar = 4*s.* 4*d.*; the current dollar being estimated at 2*s.* 3*d.*; hard dollars = 2*s.* 10⅔*d.*; reals and quartos of both hard and current dollars are the same, the former being = 4⅓*d.*, and the latter = 1½*d.* Accounts are kept in current dollars (pesos), divided into eight reals of sixteen quartos each; 12 reals currency = 1 cob, or hard dollar, by which goods are bought and sold; and three reals are considered equal to five Spanish reals vellon.

*Gold Coins.*—A doubloon is sixteen dollars = £3 9*s.* 4*d.*; half ditto = £1 14*s.* 8*d.*; sixteenth ditto = 4*s.* 4*d.* *Silver Coins.*—Dollar piece, 4*s.* 4*d.*; half ditto, 2*s.* 2*d.*; quarter ditto, 1*s.* 1*d.*; peseta, 9¾*d.*; eighth of a dollar = 6½*d.*; half peseta = 5*d.*; sixteenth of a dollar = 3¼*d.*; quarter peseta = 2½*d.* There is also a small quantity of British silver coin. *Copper Coin.*—Two-quarter piece = ½*d.*; one ditto, ¼*d.*; chovy = ⅛*d.* (Also a quantity of British copper coin.) No paper currency. Rate of exchange on London, at ninety days' sight, varies from 48*d.* to 49*d.*

*Weights and Measures.*—Arrobe, 26 lbs. English = 3⅓ gallons. Five fanegas (strake measure of wheat) or eight Winchester bushels, or two heaped fanegas of Indian corn = 4½ bushels. Pipe, 117 gallons = 126 gallons English wine measure. The Spanish quintal of 100 lbs. = 101¾ lbs. English.

Position.—By the possession of Gibraltar, England holds a commanding attitude at the Atlantic entrance of the Mediterranean, and is enabled to dispense with the continued presence of a large maritime force, which she would otherwise be compelled to maintain in the Mediterranean, not only with reference to European relations and antagonisms, but also as regards her Asiatic territories. The "Rock" is also an excellent warehouse and shop for the sale of cottons, woollens, and other commodities: by the establishment of a British depôt here, neighbouring traders are enabled to supply themselves at all times with the manufactures or other articles of which they may stand in need, devoid of custom duties, or prohibitory tariffs in contiguous states: a double purpose (military protection and mercantile intercourse) is thus served, at a comparatively trifling expense to the British exchequer.

# SECTION IX.—MALTA AND GOZO.

Locality, Area, History, &c.—Malta, and the adjacent island of Gozo, are situated between Sicily and the African coast, near the entrance of the great bay formed by Cape Bon and Cape Razat; Valetta, the capital, is in 35° 54′ N. lat., and 14° 34′ E. long. Malta was known for more than eighteen hundred years by the name of Melite or Melita: Pliny and Strabo both mention it under this denomination; and there are reasonable grounds for thinking that Melita, and not an islet on the Illyrian shore of the Adriatic, was the site of St. Paul's shipwreck. Whether it was the island mentioned under the appellation of Hyperia (by Homer in the *Odyssey*) and Ogygia, is doubtful. The Phœnicians landed,* it is said, on Malta, about 1519 years B.C., and the navigation of the Mediterranean belonging at this period to that commercial people, they formed a colony there which soon increased in trade and wealth. After being in possession of the island for upwards of seven centuries, the Greeks, B.C. 736, drove out the Phœnicians settled on the island, and called it *Melitas*. Both Phœnicians and Greeks erected extensive buildings, and struck various coins, some of which are still extant. About B.C. 528, the Carthaginians disputed the dominion of Melita with the Greeks, and it was for some time divided between them. The latter were, however, finally compelled to abandon the island to the Carthaginians, under whose sway it attained such opulence as to excite the cupidity and enterprise of the Romans in the first Punic war, when it was plundered by Attilus Regulus, and subsequently seized by Cornelius. The Romans, however, were soon expelled from the island, and only recovered it after the naval victory gained by C. Lutatius, B.C. 242, when a peace was granted to the Carthaginians on the hard condition of surrendering to the conqueror all the islands in their possession between Africa and Italy. The Romans, proud of their acquisition of Melita, took every precaution to gain the attachment of the resident Greek and mixed population, permitted the continuation of their ancient customs, made the colony a *municipium*, and allowed the inhabitants to be governed by their own laws, under a proprætor dependant on the prætorship of Sicily.

The commerce and manufactures of the island were sedulously encouraged: its cotton and linen cloths were then so famed for their fineness and the skill with which they were prepared, as to be regarded at Rome as an article of luxury. Great attention was paid to improving and beautifying the settlement. The merchants and sailors were at this period accustomed to repair to the temples to offer incense to the protecting gods of the island and its trade. On the division of the Roman empire, Malta was ceded to Constantine; but religious dissensions weakened the Romans, in their colonies as well as at home, and left them a prey to the desolating inroads of barbarians. The Vandals seized upon Sicily, A.D. 454, and next took possession of Malta, from whence they were driven, ten years after, by the Goths. Under the Goths and Vandals the commerce of Malta was nearly extinguished, but partially revived under the reign of Justinian, who sent Belisarius to wrest Africa from the Vandals. This celebrated general landed in Malta A.D. 553, and reunited it to the remnant of the empire; but the immunities granted by its former masters were denied: the island became a prey to feuds and dissensions; and for three centuries from the reign of Justinian we are ignorant of the events which mark its history. About A.D. 870, the inhabitants called in the Arabs, but these were driven out in the same year by the Greeks, who remained undisturbed masters for thirty-four years; at the expiration of which period the Arabs again descended in great force, exterminated the Greeks, sold their wives and children for slaves, and established a government dependant upon the Emir of Sicily. To supply the deficiency of taxes, which could not be obtained from the Maltese, the Arabs fitted out piratical cruisers, fortified the city of Notabile, built a fortress on the site of the present castle of St. Angelo, and enriched Malta with plunder acquired on the sea. The Arabs were driven out of Malta, A.D. 1090, by Count Roger the Norman, who

* Whether Malta was inhabited previous to the landing of the Phœnicians, is doubtful: according to tradition, it was originally tenanted by the Phæacians, a race of giants.

established the popular council, which was composed of clergy, nobles, and people freely elected. The island was afterwards given up to the Germans, on account of the marriage between Constance, heiress of Sicily, and Henry VI., son of the Emperor Frederick Barbarossa. Malta was erected into a county and marquisate; but its trade had been totally ruined, and for a considerable period it remained merely a fortified garrison. For seventy-two years the people were subject to the emperors of Germany; until Charles of Anjou, brother of Louis IX., King of France, on becoming King of Sicily, made himself master of the island. After the horrible massacre, known as the Sicilian Vespers, and its consequent political changes, Malta continued faithful to the French, but was soon conquered by the King of Arragon, who, like the kings of Castile, by whom he was succeeded in 1414, ceded the settlement in fief to some personal favourite or distinguished servant of the Crown. The Maltese at this time beheld themselves twice mortgaged for sums lent to their princes; but, always jealous of their liberty, they made a noble effort to retrieve themselves from this thraldom, by twice paying 30,000 florins of gold (a large sum in those days), for which the island was pawned. King Alphonzo, A.D. 1428, declared that Malta and Gozo should never again be separated from the kingdom of Sicily. Alphonzo further declared the inhabitants warranted in opposing a breach of promise by force of arms.

Charles V., with a view to commanding influence in the Mediterranean, and to the security of the coast of Sicily, took possession of Malta. Willing to save the expense of a garrison, and yet at the same time prevent his European enemies from making a descent on the island, the emperor located there the knights of the order of St. John of Jerusalem, who, newly driven from their principal place of residence, Rhodes, were glad to accept the aid of the powerful prince; and Charles, A.D. 1530, granted them, in perpetual sovereignty, the islands of Malta, Gozo, and the city of Tripoli, under favourable conditions for the Maltese.

The order of the Knights of St. John originated with the hospital of St. John, which existed in Jerusalem from the reign of the Emperor Justinian, and was intended for the accommodation of the crowds of strangers and pilgrims who arrived from all parts to visit the Holy Sepulchre. Its founder, Peter Gerard, a native of Provence, in 1099 A.D., formed an association of a few charitable persons to relieve the sick: these took up their abode in a house distinguished by the name of the Hospital of St. John; they were termed the "*Hospital Brothers*,"—were invested with the regular habit of the St. Augustine order, and took the three vows of chastity, obedience, and poverty, before the patriarch of Jerusalem, under whose immediate authority they remained for some time, until Pope Paschal II., by a bull dated February 15th, 1113, appointed Gerard their "provost and guardian," and enfranchised from tithes all lands and donations bequeathed to the Order. By the same bull it was provided that the successor of Gerard was to be freely elected by the Brothers. The second provost, Raymond du Puis, extended the original design from that of nursing and feeding the sick and poor, to that of affording pilgrims and strangers a safe escort from the Holy City to their own homes; the country between Jerusalem and the nearest port of embarkation for Europe, being inhabited by the opponents of Christianity, who used every means to destroy all who bore the name of Christian. The petition of the Hospitallers that they might become a military order, without relinquishing their religious habits, was granted; the patriarch of Jerusalem armed them himself, and received their vows to defend the Holy Sepulchre with the last drop of their blood, and to combat the "infidels" wherever they should meet them. On the conclusion of the ceremony, the Knights of St. John offered their services to the King of Jerusalem, and afterwards, with the Knights Templars, became the principal support of that ruler, always, however, considering themselves as auxiliaries and not as subjects. The Order was now reorganised, the master's assistants formed into a chapter or council, and rules and statutes instituted and sanctioned by the pope. The crusading spirit of the age lent strength, wealth, and lustre to the new Order; donations were bestowed on it from all quarters; and in consequence of the numerous individuals from different countries who joined the association, the knights agreed to divide themselves into seven *languages*. The French having founded the Order, were the most numerous; the three first *languages* being those of Provence, Auvergne, and France; the next four those of Italy, Arragon, England, and Germany. Castile was subsequently added to the original seven languages, and the Anglo-Bavarian was substituted for that of England.

The principal nobility in Christendom joined the association, which was divided into three sections, according to birth, rank, and functions. The first class, the Knights of Justice, was only open to men of ancient and noble descent; the second comprised Religious Chaplains and Priests of Obedience; and the third was composed of Serving Brothers: and so popular did the Order become, that from the highest ranks of society in Europe children were sent to Jerusalem, to be brought up under the tuition of the knights, previous to enlisting under their banners.

The Hospitallers of St. John remained in the Holy Land until 1289 A.D., when they were compelled to follow the fortunes of the Latin Christians, and retreat from Palestine. The knights remained some time at Cyprus; but having captured Rhodes, in 1307, from some Greek rebels and Mohammedan corsairs, the Hospitallers removed thither, and soon began to recover from the depressed state into which they had fallen, and which was as much owing to their fierce contests with the Knights Templars as with the infidels. At Rhodes the

Hospitallers had still to contend with powerful enemies. Bashaw Mischa Palæologus, a renegade Christian, besieged Rhodes in 1480, with a fleet of 160 ships, and an army of 100,000 men; and after a siege of eighty-nine days, retired with a loss of 9,000 slain and 15,000 wounded. The Turks determined on the expulsion of the knights from Rhodes, and landed on the island, 26th June, 1522, with an army of 150,000 men, which was presently followed by the Emperor Solyman with additional forces. L'Isle Adam, the grand-master, placing himself at the head of 600 knights, supported by 4,500 regular troops, together with some citizen soldiers, resolved to die in defence of his order. Aid from the European sovereigns was sought in vain; the pope and other potentates contented themselves with assurances of good-will and formal prayers on their behalf; nevertheless, the knights stanchly withstood a six months' siege from the overwhelming Turkish army, until, owing to the treachery of one of their own body, their gunpowder was exhausted; and after 80,000 Turks (according to the confession of the Ottomans) had fallen before the besieged, and an equal number had died from sickness, the Janissaries entered the city, and the few knights who had survived this terrible assault, together with 4,000 inhabitants, quitted Rhodes to seek another asylum. A home, after some wandering, was given to these gallant men by Charles V. (October 26th, 1530); and that refuge, as previously remarked, was Malta, then in a state of wretched dilapidation. The new-comers soon changed the face of things; churches, hospitals, and infirmaries were speedily erected; a regular, and indeed handsome city, was built upon a rude and barren rock, and formidable batteries constructed, so as to render their adopted island the strongest place in Christendom.

The income of the Hospitallers at this period, classified according to the national distinction of languages, is shown in the annexed table, which was transmitted to me, with other valuable documents, by Sir Frederick Ponsonby, the late esteemed governor of Malta. The sums stated can, however, only be regarded as approximative.*

| Languages. | Number of Commanderies. | Estimated Value. | Paid into the Public Treasury. |
|---|---|---|---|
| France had three:— | | £ | £ |
| Provence . . . / Auvergne . . . / France . . . . | 249 | 160,340 | 58,040 |
| Spain two:— | | | |
| Arragon . . . . / Castile . . . . | 75 | 61,517 | 27,145 |
| Portugal . . . . . | 78 | 55,598 | 9,187 |
| Italy . . . . . | 192 | 60,208 | 23,533 |
| Anglo-Bavaria, including Germany . | 54 | 31,319 | 6,651 |
| Total . . . | 648 | 368,982 | 124,556 |

The grand-master was elected by the resident members of the Order, who had the right of voting on the third day after the death of the chief. The eight divisions (according to language) assembled in their respective chapels in the church of St. John, in Valetta, and each named three knights who were to vote for the whole. These twenty-four electors retired into the chamber of the conclave, and named a triumvirate consisting of a knight, a chaplain, and a serving brother of arms, whom they invested with the power of election.† The grand-master had not only a military and regular authority over all the members of the Order, but exercised sovereign power in all its force over his subjects. The legislative authority rested in the council and chapter of the Order, in which the grand-master had only two votes; but he alone could convoke the

* Sir Richard Broun makes the following statement regarding the Order in England:—"On the division of the Order in 1118, the Knights Hospitallers of England, Scotland, and Ireland constituted the sixth language, or nation. This branch of the fraternity, which attained to great power and wealth in these islands, was under the administration of a chapter, composed of the following principal officers:—viz., the turcopolier, or general of the horse and marine guards; the lord grand-prior, the acting chief of the British branch, and capitular bailiff, or lieutenant of England; the lord prior of Torphichen, or bailiff of Scotland; the lord prior of Kilmainham, or bailiff of Ireland; the conservator; the procurator; the grand-crosses; the commanders; the grand-chaplains; the grand-secretary, &c., &c. The grand priory of the sixth language—a magnificent edifice founded by Lord Jordan Briset a little subsequently to 1101—contained a church, an hospital, and inns for the knights, &c. It was situated in the parish of Clerkenwell, London, which is still rich in monuments of the grandeur of the Hospitallers. When the Knights Templars were suppressed in 1307, the whole of their extensive possessions in the British isles were bestowed on the knights of the sixth language. The Order in England possessed fifty-three commanderies, and in Scotland and Ireland there was scarcely a county in which they did not hold estates. The grand-prior sat in the parliament of England as the premier baron of the realm; and the prior of Torphichen, commonly called Lord Saint John, took his seat as a peer in the meeting of the Scottish estates. The house of Saint John, Clerkenwell, or the grand priory of the sixth language, was dedicated by Heraclius, patriarch of Jerusalem, in the year of our Lord 1185. It was set on fire in 1381, by the rebels under Wat Tyler, and burnt for seven days; and it was not finally repaired till 123 years afterwards, when the Lord Prior Docwra, in 1504, put the finishing hand to all the various re-erections which the calamitous event had made necessary. This building, in its widely-varied decorations, both internally and externally, is said to have contained specimens of the arts, both of Europe and Asia, together with collections of books and rarities, the loss of which, in a less turbulent age, would have been a subject of national regret."—(*Knights Hospitallers of St. John of Jerusalem.* London, 1837; pp. 40—43.) Previous to the Reformation in England, the Order enjoyed a considerable income in Great Britain and in Ireland; and there still exists in the British Museum a court-roll of their possessions: Tanner's *Notitia Monastica* also gives information on the subject. Besides the receipts arising from the commanderies, trifling taxes were levied in Malta, chiefly of customs and excise, which, together with the rent of landed property, amounted to about £30,000 a-year. The revenue of the grand-master was about £35,000 a-year, arising from one commandery in each of the priories, and certain monopolies in Malta. The average annual income and expenditure of the treasury of Malta, between the years 1779 and 1788, is stated to have been as follows:—Total income, about £136,141; total expenditure, £126,186.

† The Maltese, a few of whom were members of the Order, were excluded from voting at the election of the grand-master. Besides the three classes, there were persons who were called Brothers de Stage or Donats, and wore the demi-cross, a special distinction given to those who had merited reward by having served faithfully in subaltern situations.

former, and no subject could be discussed in the latter unless first proposed by himself.

The title given him by the King of France was "*Tres cher et tres aimé cousin;*" by other princes, "*Eminentissime Princeps.*" The following was the style of all public acts:—"*Dei Gratia Sacræ Domus Hospitalis Sancti Joannis Hierosolymitani et Militaris Ordinis Sancti Sepulcri Dominici, et Ordinis Sancti Antonii Viennensis Magister Humilis Pauperumque Jesu Christi Custos.*"*

The Knights of St. John were not long settled in Malta before they rendered good service to Charles V., and indeed to all Europe, by the frequent chastisement and repulsion of the African corsairs. The Turks, in revenge, attacked Malta, but were compelled to retire, not however before they had carried off 6,000 natives from Gozo. Subsequent to this attack, great efforts were made to strengthen the fortifications; Fort St. Elmo was named in commemoration of one of the towers that guarded the entrance to Rhodes, and Fort St. Michael was built upon Mount St. Julien; knights, burgesses, and peasants, relieved each other, by turns, in completing the stupendous works which still exist for the defence of Malta; the prizes taken by the far-famed galleys of the Order contributed to enrich the island, and the grand-master, La Sangle, expended his wealth in adding to its strength and beauty, in gratitude for which, the appellation of Fort St. Michael was then changed for that of Isle La Sangle.

During the administration of grand-master La Valette, who was elected in 1557, Solyman attacked Malta with a Turkish fleet of 159 vessels with oars, containing 30,000 land troops, Janissaries, and Spahis, while a considerable number of store-ships conveyed artillery, horses, &c. The Turks landed at St. Thomas's Creek (Ladderport); La Valette had but 700 knights, and 8,500 regular and militia Maltese soldiers; nevertheless the Turks lost 1,500 men on their first landing. Solyman commenced a vigorous land attack on St. Elmo castle (24th May, 1565), with ten 80-pounders, two culverins (60-pounders), and an enormous basilise carrying stone balls of 160 lbs. weight, to which was added a furious cannonade poured forth from the Turkish ships with long culverins. The castle had but 300 men for its defence. The Turks attempted to storm the ravelins, which cost them a loss of 3,000 men, and the Order lost twenty knights and 100 soldiers: the siege still continued; La Valette cheered the spirits and stimulated the drooping courage of the small band in St. Elmo; at night he sent boats to convey away the wounded, and throw in reinforcements: the Turks persisted in their desperate efforts, and suffered much in their attacks from hoops covered with wool and cotton steeped in brandy and oil, saltpetre, &c., and then thrown lighted on them from the battlements. The bashaws who had charge of the siege, ashamed at the resistance offered by a single castle, determined on a general assault on the 16th June; the night previous to which was spent in one continued and tremendous cannonade, which razed the wall even to the rock on which the castle was built. The Turkish army entered the ditch (now nearly filled up) to the sound of martial music, and the attack commenced with terrific fury on either side, the Turks being determined to revenge their past defeats, and the knights intent only on the defence of their honour, which was dearer to them than life: the batteries at Fort St. Angelo, La Sangle, and the Burgh (Borgo), poured forth an incessant fire upon the besiegers, and the fiery hoops and combustibles thrown from the walls spread death and terror around. After a contest of six hours' duration, the Turks gave way, with a loss of 2,000 men, while seventeen knights were killed in the breach, and 300 Maltese perished or were disabled. La Valette instantly threw a reinforcement of 150 volunteers into the castle, to prevent which, in future, the Turks cut off all communication between the Burgh and the castle, by means of extensive intrenchments, working for that purpose night and day. On the 21st June another desperate attempt was made against St. Elmo by the whole Turkish army, who were three times repulsed, and as often with sanguinary imprecations returned to the charge; numbers of the knights perished, and the fall of night alone suspended the unequal contest. The heroic defenders, as soon as night closed, sent an expert swimmer across the port, to inform the grand-master of their deplorable situation; five large boats were instantly filled with auxiliaries, anxious to join their wounded and exhausted companions; but all their efforts to reach the castle were fruitless. The beleaguered knights, seeing all relief hopeless, determined to perish in defending St. Elmo: they took the sacrament during the night, and having tenderly embraced one another, returned to their posts to meet the fate which was now inevitable; those whose wounds prevented their walking were carried in chairs to the breaches, and with swords grasped in their feeble hands, felt a death-like and spasmodic energy revive their expiring strength. At day-break the Turks returned to the assault, shouting with the assurance of victory: they were met as before with invincible courage; the Maltese vied with the knights in heroism, and those who were scarcely able to stand continued still to fight. After four hours' assault, there remained but sixty men to defend the breach; L'Amrande, the commanding knight, finding the Turks on the point of forcing it, called to his aid some soldiers, who, till that moment, had been placed on the cavalier before the fort; the bashaw, finding the breach thus reinforced, pretended to retreat, but it was only to gain possession of the cavalier; the besieged took advantage of this respite to bind up their wounds, in order to continue the combat yet a little longer, which the Turks recommenced at eleven o'clock with redoubled fury. The Janissaries having gained the top of the cavalier, made choice of those they wished to destroy; most of the knights were thus slain, and the few remaining soldiers and survivors perished in the breach; the terrible contest ceasing only when not a single knight or Maltese remained alive. The bashaw entered the castle, but found none on whom to wreak his fury; all its noble defenders, namely, 300 knights and 1,300 Maltese, were slain; while he himself had lost 8,000 of the flower of his Janissaries. "What resistance," exclaimed the Turkish commander, looking towards the Burgh and St. Angelo, "may we expect from the parent, when the child, small as it is, has cost us our bravest soldiers!" The barbarous conqueror then caused the breasts of the knights to be cut open, and their hearts torn out, while as a further insult to the Christians, their bodies were placed in the shape of a cross, fastened

* In a military calendar of the Order for the year 1742, it is stated that there were 2,132 knights of justice attached to the Order, and 283 chaplains and brothers of arms. The knights ignored the cardinal principle of Christianity, for they possessed at this time 2,500 *slaves*.

to planks, and thrown into the sea, that the tide might carry them to the Burgh. La Valette imitated the ferocity of the bashaw, by directing the Turkish prisoners to be put to death; then loading the cannon with the still bleeding heads, he fired them into the enemy's camp.

Throughout the siege of Fort St. Elmo the grand-master never ceased importuning the viceroy of Sicily for his promised supplies, but in vain; yet, though thus apparently abandoned, the knights determined on resistance to the death, and neither gave nor received quarter. The bashaw sent to the Burgh overtures for surrender, but La Valette threatened to hang the envoy should he dare to renew the proposal; and, when the returning Turkish emissary was conducted through the Maltese forces, the different fortifications were pointed out, with the comment—"On these ramparts we mean to surrender to the bashaw, and we reserve the deep trenches to bury therein him and his Janissaries."

The Turks immediately raised nine batteries against La Sangle, St. Michael, and the Burgh; seventy large cannon began to batter in breach, and where the rock was too hard to open trenches, walls of stone and sand were raised; the main effort being directed to block up the castle, so that there should be no external communication either by sea or land. Before, however, the passage by land was entirely closed, forty knights, and some other gentlemen of different nations, favoured by a thick fog, landed in the Black Stone Creek, and safely reached the Burgh. The Turks had from the commencement endeavoured to reduce La Sangle and its castle, which were constantly fired upon from a battery erected on Coradin heights, that commanded both. The besieged in La Sangle being cut off from all communication, except by the sea, the Turks proposed to transport boats by land from Port Marsa-Musceit to the Grand Port, it being impossible for them to pass any other way except under the batteries of Fort St. Angelo, which would have immediately sunk them. A deserter from the Turks revealed this daring plot, and the besieged took new precautions to defend the coast-line of their works. Above all things it was necessary to guard the walls of Fort St. Michael; a stockade was therefore constructed from the Coradin rock to the end of the island, by fixing stakes in the sea, fastened together by iron rings, and a long chain.

Where the water was too deep, or the bottom of the rock too hard to drive in the stakes, the object was attained by nailing together long sail-yards and masts of ships. Other stockades were made to prevent the enemy coming near the coast: the whole of the works being carried on by night, when the Turkish artillery had ceased to play upon the batteries. At the end of nine nights the bashaw was astonished to see such efficient defences raised to the passage of his boats and the landing of the troops: he sent, therefore, during the darkness, some good swimmers, with hatchets in their girdles, to cut down the palisades. The noise thus made warned the garrison, but finding the shot from above did not reach the Turks, some Maltese seamen threw themselves into the water, with swords between their teeth,—swam to the stockades, and repulsed their assailants with considerable loss. The Turks next day returned to the charge, and fastened cables and ropes to the palisades, which were almost instantly cut across by the Maltese swimmers. These singular contests were then laid aside, and the whole power of the Turkish batteries directed towards effecting a breach in the advanced works of the Burgh and Fort St. Michael: however, when this had been accomplished, the bashaw was unwilling to attempt to storm until reinforced by the arrival of Haseen, the viceroy of Algiers, who landed with a strong body of well-trained soldiers.

The Algerines were commanded by the young son of Barbarossa, who, despising the castles, entreated to be suffered to carry them at once sword in hand: the permission was given,—a destructive fire was opened from the Turkish batteries; their slaves, &c., conveyed a number of galleys across Mount Sceberras and Marsa-Musceit post, and these when afloat, were manned by the Algerines, and commanded by an able Greek renegade named Candelissa. Two thousand picked Turkish soldiers joined the Algerine storming party, which advanced, preceded by Mohammedan priests with the Koran in their hands, imprecating the curses of heaven on the Christians, and promising eternal rewards to all who should fall in the praiseworthy occupation of accomplishing their destruction. The object of the Algerines was to make a bridge of the stockades: for this purpose they brought planks, which, however, proved too short to reach the shore. The Maltese batteries poured destruction on the boats of their antagonists, one volley alone killing 400 Turks. Again and again the Moslems, urged by religious fanaticism, returned to the attack; the Algerines at length reached the shore, where they met death in various forms, until Candelissa, their general, seeing them stagger and inclined to retreat, ordered the boats to a distance, that flight might be impossible. Despair came to the aid of fanaticism; the intrenchments were approached with escalading ladders, and after a sanguinary contest of five hours, the Algerines reached the top of the intrenchment, and planted thereon seven standards. The knights, though reduced to a very small number, no sooner perceived the banners of Islam floating on their batteries, than they returned to the contest with renewed energy, and being aided by a body of resolute pikemen, which the grand-master had sent to their assistance, charged the Algerines and Turks with a fury which nothing could withstand: the standards were soon gained and uprooted; their defenders driven sword in hand from the tops of the rampart over the parapets, those who escaped from the pike and sabre perishing in the fall. Candelissa, who had hitherto fought bravely, gave up all for lost, and left his gallant followers to maintain a running fight, which they did until a party of the garrison, incensed at their resistance, rushed out of a casement, and put to death all who were unable to reach the boats, where, indeed, death awaited them from the batteries above.

In vain the discomfited besiegers threw themselves at the feet of their conquerors; they received no other answer than "*St. Elmo!*" and out of 4,000 chosen troops, scarcely 500 remained, the greater part of whom were desperately wounded. During this attack the Order lost 100 knights and secular gentlemen; among the former was the son of the viceroy of Sicily. Carnage no less dreadful than that above narrated took place at another assault made on the breaches caused by the Turkish artillery on the side next Burmola and the castle of St. Michael; and there also the assailants were repulsed. The bashaw, regardless of what amount of life he sacrificed, so that Malta were reduced, resolved to

harass the knights by constantly renewed attacks. When the contest had lasted five hours, the Algerines were replaced by some Janissaries, recently sent by the Grand Seignior for the express purpose of destroying the "Hospitallers of St. John." With these fresh troops the jaded and almost exhausted knights were compelled to renew the fearful struggle; but the chosen Janissaries were repelled, though at the cost of forty knights and 200 soldiers. Such repeated losses must, it was considered, eventually extirpate the knights. A sort of raised bridge was constructed for the besiegers to renew the assault; twice during the night the besieged vainly attempted to burn it, and a similar effort by day cost the lives of La Valette's nephew, and several other brave men; however, a well-directed cannonade at last accomplished the destruction of this singular piece of mechanism. The bashaw, fearing the Grand Seignior might attribute these continued failures to some fault in his proceedings, called an extraordinary council of war, in which it was resolved that he (Mustapha), in conjunction with the viceroy of Algiers, should continue to storm La Sangle—that Admiral Pilai should besiege the Grand Burgh and the castle of St. Angelo, and that Candelissa should remain at sea with eighty galleys to prevent any relief from without. In pursuance of this resolution, the Turkish artillery kept up a constant fire according to the posts allotted them; and on the 2nd August the bashaw attempted to storm Fort St. Michael: the contest lasted six hours, but after five different attacks, the Turks were repulsed. After an interval of five days, another assault took place, which lasted four hours. On this memorable occasion, by way of deceiving the besiegers, a feint was made to attack the Castile bastion: the Janissaries then advanced to the real assault, mounting the intrenchments over the dead and dying bodies of their comrades; the Christian women, and even their children joined in the defence: some were employed in conveying refreshments to their husbands, fathers, and relatives; others carried stones and earth to repair the breaches; and many boldly mixed among the combatants, throwing fireworks, melted pitch, and boiling water and oil into the middle of the Turks, who destroyed many of these heroic females.

The bashaw, sabre in hand, headed his troops: he even slew, with his own hand, two Janissaries, who, pressed by the knights, had thrown themselves from the top to the bottom of the breach; but at the very moment when the grand-master trembled for the safety of the fort, Mustapha sounded a retreat, in consequence of the governor of the old city having made a sally, and obtained possession of the Turkish hospital, which he pillaged and burnt. Those who were fortunate enough to escape fled to Mustapha, declaring that their enemies were the advanced guard of a body of Sicilian troops, who they alleged had just landed; the bashaw, therefore, fearing the effect of a panic among his men, drew off from the attack to meet the imaginary enemy.

Throughout the month of August the Turks continued almost daily these terrific attacks; and nothing but the testimony of contemporary historians could persuade posterity that such a handful as the Christians were now reduced to, could have withstood the furious assaults of thousands. Simultaneous attacks were made by the bashaw and admiral; and on one of these occasions (20th August), Mustapha advanced at the head of 80,000 men, the greater number armed with ball-proof morions, which reached as low as the shoulders; these, however, were thrown aside by the wearers, and the usual repulse followed. Extensive mining operations were undertaken with the intention of blowing up the whole of the fortress; but while making preparations for a final storm, the viceroy of Sicily arrived on the island with reinforcements, and the Turks after one battle, precipitately raised the siege and fled to their ships, leaving 25,000 of their bravest troops among the dead. Thus ended the siege of Malta, in which 260 knights, with more than 7,000 soldiers, sealed with their blood the independence of the Knights of St. John.

The intelligence of the raising of the siege spread joy throughout every Christian community. Festivities took place in Sicily, Italy, Spain, &c., and numerous presents and congratulations were showered on La Valette and his brave band. It became, however, a serious question whether the knights should abandon Malta: they and their followers were now reduced to scarce 600 men, the greater part of whom were wounded; yet La Valette declared, sooner than seek safety in flight, he would bury himself in the ruin which Solyman, with a new and formidable fleet, was threatening to accomplish. By a daring plan, however, which has never been fully explained, the arsenal at Constantinople was burned, together with a great number of vessels, destined for Malta; and thus the knights received a respite which enabled them to commence the reconstruction of their fortifications.*

It was at this period that the city of La Valetta was built, with the aid of the princes of Europe: the Pope promised 15,000 crowns; the King of France, 140,000 French livres; Philip II. granted 90,000 French livres; the King of Portugal, 30,000 crusadoes; and most of the distant knight commanders contributed property, and stripped themselves of their valuables, which they generously forwarded to La Valette, who founded a well-planned capital, 28th March, 1566.

At the battle of Lepanto, in 1571, the Turks lost 30,000 men; 5,000 officers and soldiers were taken prisoners, with 140 galleys, independent of those sunk or burnt: the Maltese, as usual, behaved with distinguished gallantry.

Under the sway of Vignacourt, in 1601, the Order took part with the defendants, during the attacks upon Patras, Lepanto, Mahometa (on the coast of Africa), the island of Largo, Fort de Laiazzo, Corinth, &c. Repeated successes in these quarters induced the Turks again to menace Malta, but after landing 5,000 men, they were compelled to make a precipitate retreat.

In 1603 the Hospitallers resolutely withstood an infringement of their rules. Charles de Brie, an illegitimate son of Henry Duke

* For details of this celebrated siege, and other circumstances connected with its gallant defenders, *see* Boisegelin's *History of the Knights of St. John.*

of Lorraine, desired to become a knight of the German order; but though the emperor himself endeavoured to compel his admittance, it was successfully resisted. In 1616, Vignacourt, among other useful works—such as the fortifying of St. Paul's Cove, the ports of Marsa-Sirocco, Marsa-Scala, and the island of Comino,—caused the aqueduct to be erected which supplies La Valetta with water.*

In 1630, a grand chapter was held, and new ordinances framed: not the least remarkable or praiseworthy of these, was that which decreed the severest punishment against any of the knights who should engage in duelling. In 1669 the Maltese, apprehending that peace being now concluded between the Venetians and Turks, the latter would essay to revenge on Malta the injury inflicted during the late war, caused the Cotoner fortifications to be erected, new works added to La Floriana, Fort Ricasoli to be erected, St. Elmo almost entirely rebuilt, and St. Angelo improved. A more terrible and irresistible foe, the plague, visited Malta, and committed great ravages. A lazaretto was built at Port Marsa-Muscett.

Charles II. of England, being at this period at war with Tripoli, the knights, despite the sequestration of their property in England and Ireland by Henry VII., opened their ports and arsenals to the English navy, and furnished supplies of provisions and ammunition for the crew and ordnance. Charles courteously acknowledged this generous conduct by the following letter to the grand-master:—

"Carolus II. Dei Gratia Magnæ Britanniæ, Franciæ, et Iberniæ, Rex, Fidei Defensor, Eminentissimo Principi Domino Nicolao Cotoner, Magno Ordinis Melitensis Magistro, Consanguineo et Amico nostro Charissimo, salutem.

"Eminentissime Princeps, Consanguinee et Amice noster Charissime,

"Non solum per litteras Joannis Narbrourgh Equitis aurati, quem classibus nostris in mari Mediterraneo admirabili jure ac potestate præfecimus, sed aliunde quoque intelleximus, quam benigne Eminentia Vestra, vestroque jussu et exemplo totus Sacer Ordo Melitensis illum, aliosque navium nostrarum bellicarum rectores tractaverit, ita ut domi et in armamentariis nostris melius quam in portu vestro Melitensi haberi non possent. Magnæ quidem hoc est amicitiæ indicium, eoque majoris, quod regna et maria nostra ab usitata Sacri Ordinis Melitensis navigatione tam longe distent, ut Eminentiæ Vestræ humanitati in hac parte respondendi, rarissimæ nobis occasiones expectandæ sint. Alius igitur modus exquirendus est, quo gratitudinem nostram et affectum erga Eminentiam vestram suæque sacræ Militiæ socios pro merito notificemus. Quod ut faciamus, omnes opportunitates quandocumque obvenerint, libentissime amplectemur, studiosissime prosequemur. Eminentiam interim vestram totumque Ordinem Melitensem Dei optimi maximi tutelæ ex animo commendamus. Dabantur in Palatio nostro Whitehalli, die 26 Januarii, 1676."

In May, 1698, Peter I. of Russia, in pursuance of his sagacious policy, sent a grand embassy to Malta, under Keremetz, ostensibly to pay his respects to the famous heroes of the church militant, but in reality to obtain their aid against the Turks.

During the early part of the 18th century, Malta made great efforts against the Barbary and Algerine corsairs, &c., and the safety of the commerce of the Mediterranean was mainly owing to the bravery and skill of the seamen of the knights' galleys. The inherent evils of slavery were manifested in the island during the grand-mastership of Emanuel Pinto de Fonseca, when 4,000 African slaves conspired to murder and poison the knights; but the plot was happily arrested on the eve of execution, being discovered by means of a drunken brawl between a negro, a Persian, and a Jew.

An insurrection occurred in 1775, with the motive, as some say, to obtain sovereign power for the pope: according to others, Catherine II. of Russia was intriguing for the possession of the island. Fort St. Elmo was surprised by three or four hundred persons; but in consequence of a convention between the Maltese and the Order, it was soon recaptured, and tranquillity restored. To guard against the recurrence of such an event, a regiment, consisting of natives and foreigners, officered by the knights, was raised for duty in the city of Valetta and the different ports, while a corps of 1,200 men, entirely Maltese, was organised for the defence of the country and coasts. On the occasion of the earthquake in Calabria and Sicily, in 1783, the "Hospitallers" displayed the energetic charity of their valiant ancestors,—fitted out their galleys at midnight, and afforded effectual succour to the perishing inhabitants around Messina and Reggio.

The French revolution inflicted a fatal blow on Malta. The republicans looked with wistful eyes on the neat and well-kept farms and estates of the Order, situated in various parts of France, which several centuries of good management had greatly improved; and measures were taken for the sequestration

* According to Maltese measurement, the aqueduct was 7,478 cannes in length: a canne = 8 palmes; a palme = 9 inches.

of their property. In the first National Assembly the order of St. John of Jerusalem was treated as a foreign power, possessing property in France, and as such, liable to the taxes imposed throughout the country: the appearance of justice was thus preserved. The next blow was a decree of the Legislative Assembly in reference to equality, declaring that every Frenchman who was a member of the order of knighthood, which required proofs of nobility, could no longer be regarded as a French citizen. The third act was the mandate of the 19th September, 1792, which determined that the Order of Malta should be entirely annulled, and all its property annexed to the demesnes of France!* This decree had no sooner passed than the estates were seized, the houses of the commanders ransacked and plundered, the knights hunted down like wild beasts, and many of them thrown into loathsome dungeons, in cruel mockery termed places of "*public safety*," where the axe of the executioner remained suspended over their heads. Nevertheless, the knights remained neutral during the revolutionary wars in which the French nation was engaged. A temporary aid was afforded by the restoration of their property in Poland by the Emperor of Russia, who became protector of the Order; but the sequestration of their property in Spain and Italy, was a final blow to their strength and independence.

At the congress of Rastadt, the French professed the most pacific intentions towards Malta, but secretly essayed its forcible occupation: intriguing emissaries proceeded to the island; and efforts were made to sow dissension among the different classes of the inhabitants. Buonaparte, knowing the strength of the place, sent Admiral Brueys with a fleet of eighteen sail of men-of-war thither, preceded by a 60-gun ship and a xebeck, which approached Fort St. Elmo, pretending a leak, and requested permission to enter and repair in a neutral port at amity with the republic. The request was unsuspectingly granted, and the ship remained eight days, apparently refitting, but really reconnoitring and sounding in boats the harbour and coasts around. The admiral having ascertained that the forts were well manned and provided with artillery, thought it prudent to depart; previously, however, thanking the grand-master for his friendly conduct, and assuring him of the pacific intentions of the French government: the minister of marine at Paris also returned official thanks on the occasion; but within a very few months the Directory shamelessly declared that Malta had been regarded as the enemy of France ever since the year 1792. On the evening of the 6th of June, the first division of the French fleet appeared off Malta: the knights prepared for defence; the French expressed their surprise that any alarm should be felt; while at the same time secret emissaries† were spreading the elements of disaffection and distrust throughout the island. On the 9th the remainder of the grand army and fleet destined for Egypt, appeared under Buonaparte, who immediately sent to the grand-master (Hompesch) to demand the free entry of all the ports for the whole of the fleet and convoy! This of course would have been a virtual surrender of the island, and was at once refused. The designs of Buonaparte were now evident, and preparations were made for defence, but the treachery of several of the knights, the consequent tumults and dissension among the people, together with the indecision and incapacity of the grand-master, rendered resistance hopeless; and while the defenders of an impregnable fortress were fighting amongst themselves and slaying each other, Buonaparte, by a mere display of force, became master of the island. The following were the terms of the capitulation, every condition of which was almost immediately violated by the French.

Article 1. The knights of the order of St. John of Jerusalem shall give up the city and forts of Malta to the French army: at the same time renouncing in favour of the French republic, all right of property and sovereignty over that island, together with those of Gozo and Comino.

2. The French republic shall employ all its credit at the congress of Rastadt, to procure a principality for the grand-master for life, equivalent to the one he gives up; and the said republic engages to pay him in the meantime an annual pension of 300,000 French livres, besides two annats of the pension, by way of indemnification for his personals. He shall also be treated with the usual military honours during the whole of his stay in Malta.

3. The French knights of the order of St. John

* Probably this confiscation was accelerated from the Order having listened to the application of Louis XVI. for pecuniary aid, and having sent that monarch, previous to his flight to Varennes, bills for 500,000 French livres.

† Pretended Greek galleys, with experienced French soldiers on board, disguised as sailors, were sent into the harbour as if laden with grain, but having beneath arms and ammunition for the supply of the disaffected, who it was hoped would join the French. The Maltese, however, though dissatisfied with the knights, declined alliance with their enemies.

of Jerusalem, actually resident in Malta, if acknowledged as such by the commander-in-chief, shall be permitted to return to their own country, and their residence in Malta shall be considered in the same light as if they inhabited France. The French republic will likewise use its influence with the Cisalpine, Ligurian, Roman, and Helvetian republics, that this third article may remain in force for the knights of those several nations.

4. The French republic shall make over an annual pension of 700 French livres to each knight now resident in Malta for life, and 1,000 livres to those whose ages exceed sixty years. It shall also endeavour to induce the Cisalpine, Ligurian, Roman, and Helvetian republics to grant the same pension to the knights of their respective countries.

5. The French republic shall employ its credit with the different powers, that the knights of each nation may be allowed to exercise their right over the property of the Order of Malta, situated in their dominions.

6. The knights shall not be deprived of their private property either in Malta or in Gozo.

7. The inhabitants of the islands of Malta and Gozo shall be allowed, the same as before, the free exercise of the catholic, apostolical, and Roman religion: their privileges and property shall likewise remain inviolate, and they shall not be subject to any extraordinary taxes.

8. All civil acts passed during the government of the Order, shall still remain valid.

The forces belonging to the Order before the capitulation, consisted of 200 French knights, ninety Italian, twenty-five Spanish, eight Portuguese, four German, and five Anglo-Bavarian: total, 332,—of whom fifty were disabled by age and infirmities. The Maltese regiment, 700 men; the grand-master's guards, 200; battalion belonging to the men-of-war, 400; ditto of galleys, 300; old gunners, 100; militia embodied as chasseurs, 1,200; sailors belonging to the men-of-war who acted as gunners, 1,200; militia, 3,000: total, 7,100. The militia might be increased to 10,000—all Maltese capable of bearing arms. Against this force Buonaparte might well have been astonished that his triumph had been so bloodless, the greatest quantity shed being that of the knights who perished during a massacre by the Maltese, which I am informed* was caused by the discovery of the treachery practised by certain of the knights in delivering over the place to the French,—by causing the cartridges distributed to the soldiery to be filled with charcoal, slightly topped with gunpowder; in support of which, it is added that they openly used tricoloured cockades, flags, &c. It seems certain that the bravery of the knights had become at this period nearly extinct; that they had grown sensual and indolent, and that they retained little of their original character beyond the name and certain ceremonials—the husk, not the kernel, of a time-honoured institution.

The disciples of liberty and equality were no sooner in possession of Malta, than they commenced destroying everything which bore any stamp of nobility; beautiful statues and paintings, which had escaped the ravaging hand of centuries, were mercilessly broken and burnt, because they recorded the chivalrous deeds of an "*ancienne noblesse.*" One of the first acts of the conquerors of Malta, and in violation of the treaty of capitulation, was an order for all the knights to quit the island in three days. On the second day, Buonaparte sent a general press-gang into every port of the island, and all the sailors, the grand-master's guards, and the enrolled soldiery, &c., were compelled to go on board the French fleet, leaving their families in a state of utter destitution. The third step was the seizure of such private property belonging to the grand-master and knights, as might be made to contribute towards defraying the expenses of the municipal government, or enrich the new authorities.

Buonaparte quitted Malta on the 19th June, 1798, leaving a garrison of 4,000 men in the island, under General Vaubois, and carrying away with him whatever ornaments in gold or silver could readily be obtained from the public edifices and churches.

When the Maltese learned the intelligence of the total destruction of the French fleet at Aboukir, a hope of destroying the invaders (now strengthened to 6,000 by the remnant that escaped from Egypt) arose, and five days after an insurrection broke out. On the 2nd September, 1798, some French officers were dispatched to Città Vecchia (the old capital of the island before Valetta was built, and distant from it about seven miles), and while they were employed in removing certain articles from one of the churches, the people assembled, fell upon them, put to death the commander, and the whole detachment afterwards met the same fate. This was the signal for a general rising; and such was the resolution and enthusiasm of the people, that almost unaided by arms or ammunition, they obliged the French troops to shut themselves up in Valetta. The principal leaders of the Maltese were the Canon Caruana (subsequently Bishop of Malta), Signor Vincenzo Borg, of Bircarcara, and Signor Vitale.

* By N. Mitrovitch, a Maltese gentleman.

The garrison of Valetta consisted of between four and five thousand regular troops, besides the crews of two frigates and a line-of-battle ship; in all amounting to above six thousand men. The French made several sorties, but were repulsed by the Maltese, who kept them closely blockaded. On the 18th September the Portuguese fleet, under the Marquis di Rizza, appeared off the island, and the Maltese chiefs having immediately concerted with the admiral, he supplied them with a few muskets and some ammunition. On the 24th September, a part of the English fleet, returning from Egypt under Sir James Saumarez, appeared off Malta; as did also Lord Nelson, on the 24th of October. The English furnished the Maltese inhabitants with 1,500 muskets and some ammunition, and left with them Sir Alexander Ball, who was chosen by the people as president of the National Council, to which they then gave the name of Congress. For the long period of sixteen months, the Maltese continued to blockade Valetta, without any support from foreign auxiliaries, inflicting loss and disgrace whenever the French troops attempted to make a sortie from the walls; and General Vaubois truly remarked, that "no trace of the former docile character of the islanders remained; they combated like enraged lions." In December, 1799, a small body of British troops (1,300), under General Graham, afterwards Lord Lynedoch, and two Neapolitan battalions (900), arrived to the rescue.

The blockade continued until the 4th September, 1800, when the French being quite exhausted,* surrendered to General Pigot, who had taken the command of the troops of the siege.†

On the departure of the French, the British provisionally occupied Valetta, and Sir A. Ball administered the government of Malta as civil commissioner.

By the treaty of Amiens it was proposed to restore Malta to the knights of St. John of Jerusalem, but only on condition that the Maltese should be allowed to form a language of the Order without proofs of nobility being required, together with other privileges not before enjoyed.

The re-establishment of the order of St. John of Jerusalem was strongly opposed by the Maltese, who sought the blessing of free institutions, and the revival of their ancient commercial opulence, under the protection of Great Britain: indeed, the advisability of perpetuating the ancient institution, under the altered circumstances of the age, was more than doubtful.

The proposed restoration was not effected, though Russia was very desirous, as well as France, that such should have been the case: indeed, St. Petersburg had been the headquarters of the knights since their expulsion from Malta. Napoleon made the non-restitution of Malta one of the chief causes for breaking the treaty of Amiens; but no stipulation of the kind had been included in the terms of surrender. The island became a portion of the British empire, not merely by conquest, but by the voice of the Maltese themselves, who, by their bravery, showed themselves fully entitled to vest the sovereignty of their country in those who possessed their confidence, and were capable of affording them efficient aid.

Physical Aspect.—Malta, the most southerly island in Europe,‡ is in the parallel (Valetta observatory) of 35° 53′ N., and in the meridian of 14° 30′ 35″ E. of Greenwich. The shape is an irregular oval, and has been compared by some to a fish—its southern surface resembling the back, the Bay of Marsa-Sirocco the mouth, the various indentations on the north aspect

* The garrison was reduced to such extremity during a strict blockade, exceeding two years, that the horses and mules were killed for the use of the sick in the hospitals. Those of the inhabitants who had interest enough in the medical department to obtain for invalid members of their families a small portion of liver, or other viscus, thought themselves fortunate. A flight of quails passing over Valetta, enabled General Vaubois, with the aid of a good cook, to furnish the commissioners who were sent in to treat for the surrender, with an excellent dinner of two courses, of what they supposed to be every variety of meat. After the capitulation was completed, some surprise was expressed at the French general's table being supplied with such a variety of excellent dishes, at a time when it was believed the resources of the garrison were reduced to a moderate allowance of bread only. The general then confessed that they were chiefly indebted for such good fare to the fortuitous accident of some quails being taken on the terraces that day, which, with some tame rabbits, formed the only animal food on the table.

† Lord Carysfort, in a letter to Lord Elgin, dated Berlin, 29th November, 1800, states, that the French offered Malta to Russia a short time previous to its capitulation. The refusal of England to give up Malta to Russia, was the main cause of the latter laying an embargo on English vessels in 1800. The Muscovites have long coveted a position in the Mediterranean.

‡ The island was formerly placed by all geographers in Africa, but was declared to be in Europe by a British act of parliament.

the ventral fins, and the deep indentation of the Bay of Melleha, with a corresponding configuration at the back of the island, the tail; the land stretches east and west, and is much broken by bays and inlets of the sea on the side which lies parallel with the coast of Sicily, while that which faces the African coast is nearly a continuous curve.

The extreme length of Malta is stated by Dr. Hennen at eighteen to twenty miles, and its greatest breadth from north to south, ten to twelve miles; circumference, sixty to seventy; but a chart of the islands under the British Crown, furnished me from the Colonial Office, makes the extreme length sixteen and three-quarter miles, extreme breadth nine, and the area ninety-five square miles. The same document gives Gozo (the island adjacent to and dependent on Malta) nine and three-quarter miles in extreme length, five and one-third in breadth, with an area of twenty-seven square miles. Malta is distant from Cape Passaro, the nearest point of Sicily,* fifty-six miles, and from Cape Bon, the nearest point of the African continent, nearly two hundred miles. It is bounded on the east by the island of Candia; on the west by the islets of Pantelleria, Linosa, and Lampedusa; on the north by Sicily, and on the south by Tripoli. The sea dividing Malta from Sicily is only eighty fathoms deep in the middle or deepest part; very shallow in other places, with a sandy bottom: it is called the Canal of Malta, and is generally rough, with strong currents setting through it on the N.W. side towards the E.S.E., and on the E.S.E. side towards the E. Gozo Isle, originally known under the name of "*Gaulos*" by the Greeks, "*Gaulum*" by the Romans, and by corruption in the Arabic language, "*Gaudese*," which in process of time was Italianised into Gozo (pronounced Godso), is situate about three miles to the westward of Malta. In the channel lies the small islet of Comino, formerly called "Hephostia," of an oblong shape, and about five miles in circumference, with a still smaller islet or rock called *Cominetto*, off its north-west extremity. Malta, comparatively speaking, is low, the highest land being but 1,200 feet above the level of the sea, and undiscernible by the mariner until within twenty to thirty miles of the shore. The surface is much diversified with hill and dale; and the natural industry of the Maltese has converted an apparently barren rock into a picturesque country. As a general feature, it may be observed that the island is furrowed with valleys running from south-west to north-east, parallel to each other, and becoming longer and deeper as they extend from the eastern and western extremity. One, termed Melleha, nearly divides Malta into two parts; the most fertile, however, is the vale, which forms at its lowest extremity the port of Valetta.

A small range of hills and craggy rocks, called the Ben Jemma Hills, bearing a north-west direction from Valetta, stretch across the entire breadth of the island, and from these different spurs branch off, giving variety to the landscape. The southern shore consists of high or shelving rocks, destitute of any creeks or ports where a landing could be effected. To the east there is the port of Marsa (which Arabic word signifies port or harbour) Scala, and towards the south-west that of Marsa-Sirocco, capable of containing a great number of vessels. On the west there are two bays, called Antifaga and Magiarro.

The port of St. Paul is on the coast opposite Sicily, and is so called from a tradition that the vessel in which the great apostle was sent prisoner to Rome was driven in thither by a storm. St. George's Port, towards the north, is not far distant from that of St. Paul: St. Julian's Bay is on the same shore.

Directly facing Cape Passaro are the two largest havens; that to the left termed Marsa-Musceit, in the midst of which is a small island where quarantine is performed; the other, situate to the east, is called the Great Harbour.† These two are separated by a tongue of land, on which the city of

* The following, according to Captain Smyth, are the bearings and distances between several points on the south coast of Sicily and Malta:—From Cape Passaro to Valetta, south 33° 14′ west, 56 miles; Alicata to ditto, 21° 55′ east, 75½ miles; Terra Nova to ditto, 10° 40′, 70 miles; Girgenti to ditto, 30° 03′, 90 miles; Sciacca to ditto, 35° 51′, 118 miles; Cape Granitola to ditto, 42° 32′, 136 miles; Maretimo to ditto, 42° 45′, 173 miles.

† The following are the measurements of some of the principal points between Valetta and the Grand and Quarantine harbours. The mouth of the great harbour between Ricasoli and St. Elmo, from shore to shore, 435 yards; between Fort St. Angelo and the Marina of Valetta, from St. Angelo Point to the shore below tho statue of Neptune, 350 yards; between Isola Point and the custom-house, 360 yards; between Corradino Point and the Marina, from the ordnance store to the guard-house, 442 yards; between the church of the Capuchin convent

Valetta is built, the extreme point having on it the castle of St. Elmo, which defends the entrance of both ports. Projecting into the Great Harbour are two parallel points of land, shaped somewhat like two fingers: on one is built the castle of St. Angelo, nearest the entrance of the port, with the Burgh (*Il Borgo*) to the eastward; on the other equally small peninsula is the fortress of La Sangle, which divides the Galley Port from the French Port. Fort St. Michael is on the land side, and defends the two havens of La Sangle. Città Vittoriosa, or Borgo, is built on the same point of land as the castle of St. Angelo, but separated from it by a wet ditch. It has a line of works on its land front, extending from the Galley Port to Calcara Bay. La Sangle, or Isola, on the other point or finger, has its land front covered in a similar manner to that of Vittoriosa, by a line of works extending from the Galley Port to the French Port. More in the rear of La Sangle than St. Angelo is Cospicua, or Burmola, commanded by St. Margaret's-hill, on which is a fort of the same name, and covered to the eastward by a continued line of works, called Fiorenzola. Still further in the rear, and forming a crescent, joined at either end to La Sangle and St. Angelo fortifications, are the strong Cotoner lines, consisting of a succession of bastions without any advanced works, the erection of which was contemplated, but not effected. By sweeping round the French Port to Calcara Bay, towards the interior of the country, a considerable space is left in front of the St. Margarita lines, which would afford shelter to the inhabitants in the event of attempted invasion. The two points of land which jut out to meet the promontory on which St. Elmo castle is built, are also strongly fortified. One, Fort Ricasoli, which is very large, in conjunction with Fort St. Elmo, completely defends the entrance of the Great Harbour; the other, Fort Tigné, protects Marsa-Musceit harbour, which is further guarded by Fort Manoel, built on the quarantine island above adverted to. Fort Manoel is well and regularly built, has five bastions, a half-moon, and a covert-way: it is mined.

In addition to these powerful works, Valetta is effectually protected on the southward or land side, where the neck of the peninsula joins the main, by the fortifications before mentioned as *La Floriana*—a line of works extending from the Great Port to that of Marsa-Musceit, and in advance of which, on the side near the Great Port, there is a crowned hornwork, with a covered way. The Floriana includes five successive lines, any one of which, well manned, would suffice for all ordinary purposes of defence. The ditches in some instances are ninety feet deep, and excavated in the solid rock; the greater part of the ramparts having been in like manner formed by hewing the rocks into the required shapes. Thus Valetta is protected on three sides by the waters of the harbour, which no hostile fleet can enter, as the batteries of St. Angelo rise in four tiers of very heavy metal, a single discharge from which would sink the largest vessel.* The entrance to the port is still further secured by an enormous series of chains, capable of resisting the shock of any force that can be brought to bear upon them.

These extraordinary works were the fruits of continued and unremitting exertions during upwards of two centuries, as shown by the following dates:—

1551. Vittoriosa fortified. Fort St. Elmo built.
1554. Isola fortified. New works added to Vittoriosa. New works added to Fort St. Elmo.
1556. La Valetta commenced.
1571. La Valetta finished.
1636. Floriana works commenced.
1657. Towns built along the coast.
1670. New works added to Floriana. Cotoner lines commenced. Fort Ricasoli commenced.
1686. Fort St. Elmo rebuilt. The castle of St. Angelo considerably strengthened.
1722. Fort Manoel commenced.
1749. Fort Chambray (in Gozo) commenced.
1796. Fort Tigné commenced.

The old city stands upon a height which overlooks the whole country as far as La Valetta; it has a front, with a ditch and covered way. Above the top of the hills which cross the island and separate the inhabited and cultivated parts of Malta from the remainder, a wall five feet thick was erected by the knights as a retreat for the troops to fall back on if unable to prevent the landing of an enemy. Forts and batteries were also constructed at ports St. Paul

and the causeway, which bounds the Marsa, 1,064 yards. The mouth of the Quarantine harbour, between Fort Tigné and Fort St. Elmo, from shore to shore, 404 yards; from the Lazaretto island to Valetta, from shore to shore, 265 yards. The harbour is so deep, that the largest ships of war can anchor in almost every part of it between the mouth and Corradino Point; from that part it gets shallow, until at the causeway at the Marsa the depth does not exceed two feet from the surface to the soft mud.

* The entrance to the smooth but strongly defended harbour of Valetta is very picturesque.

and Marsa-Sirocco, which would place a vessel attempting to anchor under a cross-fire; and towers and redoubts built along the whole coast in such a manner as to communicate almost immediately with each other.

The lines themselves are of immense strength, enclosing the various quarters of the capital for the space of a square mile and a-half, and forming works of such extent and intricacy, that it is said 25,000 troops would be required to man them to their full extent. The French defenders numbered but 6,000, yet could only be reduced by famine. Upwards of a thousand pieces of cannon were mounted on the works, and Buonaparte entertained so confirmed an opinion of the strength of the place, that when asked, on his departure for Egypt, for instructions relative to the defence of the garrison and fortifications, he told the officer in command (Vaubois) *to lock the gates and put the key in his pocket.*

In fine, it may be said that Malta is as defensible as nature and art combined can render it. To sit down regularly before Valetta and its surrounding fortifications would require a well-appointed army of many thousand men; and the fortress, if efficiently manned and stored, might be deemed almost impregnable, since the besiegers, in addition to their land forces, ought to be able to blockade the port and command the Mediterranean.

La Valetta, the modern capital, founded by the celebrated grand-master of that name in 1566, and completed in 1571, may be considered one of the most remarkable towns in Europe; the kings of France, Spain, and Portugal, the Pope, and all the knights who resided out of Malta, having contributed munificently towards its erection. The neck of land or promontory on which it stands (originally called *Mount Sceberras*) divides the main harbour (Great Port) from Marsa-Musceit haven, where the shipping undergo quarantine. The neck is estimated at 3,200 yards long by 1,200 broad, descending by a gradual slope, its whole length, from the land barrier at the southern extremity to the point of St. Elmo, which terminates in the Mediterranean in a narrow point of about 300 yards, bearing north-east by north, on which point the citadel and lighthouse of St. Elmo are built. The centre of this strip of land is its highest point, whence it gradually slopes to the water's edge at either side. The chief streets, eight in number, run in parallel lines along this ridge or "hog's back" from south to north, or, more strictly speaking, from S.S.W. to N.N.E., and are intersected by shorter ones, eleven in number, which cross from one harbour to another up the sides of the ridge. Besides these regular streets, rows of houses front the works all round, a carriage space being left between them. The thoroughfares afford an excellent means of ventilation, while the gradual descent towards the sea on all sides facilitates the removal of nuisances. The public buildings and private dwellings are of a very superior order. The houses are of solid stone, with flat or terraced roofs, composed of stone slabs, covered over with a thick bed of "terras," or "puzzolana," so as to be impenetrable to rain, and, as in Calcutta and other parts of the East, afford a cool and agreeable morning and evening promenade. Very little wood is employed, the staircases, floors, &c., being of stone. The lower portions are used as shops, stores, or habitations for the poorer classes. Between the ground and first-floor is a "mezzanino," or middle floor, rarely exceeding seven or eight feet in height, and frequently used for bedrooms or eating apartments; the principal suite of apartments being on the first floor. Each house has generally a tank or large well, constructed in a court into which the windows of the principal chambers look. A dwelling, suitable for a moderate-sized family, containing twelve or fourteen apartments, may be rented at £20 per annum, and an equally commodious house and garden in the country for half that sum. The paving and lighting of Valetta are excellent: the principal streets are formed of flags cut out of the hardest pieces of native stone, or with blocks of lava from Mount Etna, and a regularly raised footway runs on either side. Water is supplied by means of the aqueduct before mentioned, at the rate of fifty-eight gallons per minute. In order to insure a supply of this indispensable aliment, every house is furnished with a tank, into which baked earthen pipes convey the rain-water from the flat roofs, and wells and cisterns are sunk in every possible situation. The buildings appropriated for government are admirable, and the palace of the governor is suited for the residence of a crowned head.

Amongst the numerous edifices which ornament the capital, the first to be named is the church, or, as it is called, the Con-cathedral of St. John. This magnificent building

was erected by the grand-master La Cassière, and enriched by the unwearying efforts of successive generations. The knights of the different nations, or, as they were termed, of different *languages,* had in this vast structure their respective chapels. Every compartment of the roof, between the pillars of the chapels, is ornamented with a picture representing the principal events in the life of St. John; the greater part of them are remarkable as paintings. The pavement is composed of sepulchral stones of inlaid marble; several monuments have also been erected between the pillars and in various places of the church, and for richness and grandeur have few rivals; some of them are encrusted with jaspar, agate, and other costly stones. The principal altar is placed in the middle of the choir, beyond which stands a group in marble representing the baptism of our Saviour. Before the deplorable French invasion, the cathedral treasury was stored with articles extremely valuable, not only on account of the precious material of which many of them were composed, but still more on the ground of antiquity and exquisite workmanship. Unfortunately, none of them escaped the rapacity of the conquerors.*

The church of San Pubblio, at Floriana, just out of Valetta, takes its name from the Pubblius mentioned in the "Acts of the Apostles;" this early convert to Christianity having been, according to tradition, the first bishop of Malta.

The church is much visited by strangers, who find within its precincts extraordinary means of gratification for that morbid curiosity which deems the unburied dead of the hospital of St. Bernard its chief attraction, and finds amid the dreary scenes of La Morgue a strange charm, surpassing in interest the varied fascinations of the gayest capital in the world. As a curious vestige of the "Middle Ages," the Sotteraneo of San Pubblio is perhaps unequalled. Beneath the building, and of almost equal extent, is a subterranean hall, around which, like statues in niches, stand the embalmed bodies of successive priors (about fifty in number), dressed in the well-known Capuchin habit. The walls of this strange catacomb are covered with the bones of friars of meaner degree, arranged in the form of swords, shields, and trees; while, as if in unison with the unseemly blending of the horrible and the grotesque (illustrated in Hogarth's "Dance of Death"), entire skeletons stand in the attitude of fencing, with leg or arm bones for weapons; and all around, devices equally coarse in taste and mistaken in principle, are scattered, with the intention of affording to the living, not a *memento mori,* but a *memento purgatori.*

Once every year—on "All-Saints' Day,"—this famed Sotteraneo is open to the public, when representations of a melo-dramatic and awfully profane character are enacted, in which Satan and the fallen angels, torturing the souls, or rather bodies, of unsaved believers amidst the dazzling glare of red and blue fire, are made to do the priests good service, by extorting from the terrified or amused bystanders, golden rewards for the contrivers of these impious theatricals, ostensibly in return for a certain quantity of "vain repetitions," to be offered up for the supposed sufferers, in accordance with the legends engraved around the collected bones of ancient saints—such as, "Weep before the relics;" "Rise and liberate us."

The other most remarkable buildings, are the palace of the grand-masters, the lodges of the different languages or nations, the conservatory, university, treasury, palace of justice, hospital, public bank (Monte di Pietà), barracks, theatre, and the exchange. The architecture of all these structures is distinguished by two qualities, which characterise most Maltese constructions; the one a refined taste in the composition of the general subjects,—the other a noble simplicity in the arrangement of individual portions. The front of the Provençal lodge, that of Castille, and of the conservatory, are the most notable in style. One section of the latter edifice serves for the public library, which contains about 100,000 volumes. Next to the library is an extensive museum, divided into several rooms, containing a variety of interesting objects, such as a large collection of medals, several vases, specimens of the antiquities of the island, ancient marbles, &c.

The hospital consists of several large airy apartments, capable of accommodating a number of patients. During the government of the grand-masters, the utensils employed in the service of the sick were all of silver, but of such plain workmanship, as indicated the measure to have proceeded rather from a refinement of cleanliness, than ostentation.

* When visiting this cathedral in 1844, I was shown several places where the ornaments had been of pure silver.

The grand-master's palace, now the residence of the governor, is an immense square pile of building, externally unornamented, but of an imposing appearance. The apartments are large and convenient, and enriched with beautiful pictures, hangings, damasks, and a great collection of arms of all kinds, arranged with precision and taste. The arsenal was formerly of considerable importance under the grand-mastership of the Order; it has been further enlarged by the British government.

The barracks and hospitals are numerous; and an idea of their substantial structure may be obtained from the fact, that the lower floors of the barracks are formed frequently on the surface of the quarries, whence the stone has been mined for the construction of the fortifications; while the lower parts of the walls are merely the rock perpendicularly scarped. The barracks or casements are all bomb-proof, ventilated by long galleries and large doors; the heat of summer is little felt; the supply of water is admirable, as also the facilities for sea-bathing and exercise. Several monuments stand within the ramparts, of much interest to Englishmen: namely, those of Sir Ralph Abercrombie, Sir Alexander Ball, Sir Thomas Maitland, the Marquis of Hastings, Admiral Otham, Sir Robert Spencer, and others.

The casals, or towns, and the villages scattered throughout the island, are neatly and well built; the old capital of Città Vecchia, or *Notabile*, preserves among the natives its ancient name of *Medina*, and is still the seat of the bishopric; it contains the palace of the first grand-masters, and also the cathedral of Malta, adjoining which is an excellent college. The catacombs, the chief curiosity of the place, form an extensive labyrinth of subterranean passages, crossing each other in every direction; they are cut in the rock, at a depth of about fifteen feet below the surface; and the number of corridors is very considerable.

The famed grotto of St. Paul, not far distant, consists of a large cave, divided into three separate parts by iron grates: in the furthest part from the entrance is a statue of the apostle, of white marble. A part of the cave resembles the nave of a church, and is constantly covered with vegetation.

The roads are generally good, and extend to all parts of the island, so as to admit of easy access by horses, carts, and caleches; communications by water are also safe and cheap, hundreds of commodious boats keeping up a constant intercourse between the towns on each side of the harbour; boats of a larger class ply regularly to Gozo and Sicily.

---

Gozo Island,* although fertile and thickly inhabited, contains no town, the inhabitants being scattered in six villages, protected by a strong fort, *Rabato*, in the centre of the island. The surface is very agreeably diversified with hill and dale, some of the more elevated parts in the north-west being nearly 2,000 feet above the sea. A chain of these elevations encircle the island, forming fertile valleys, separated by gently rising grounds; the summits of some of the mountains are flattened; others are rounded or mammillary; and there are four or five remarkable detached hills, perfectly conical in shape, and presenting the appearance of old volcanic formations. The interior of Gozo and its shores abound in caves and rocks, being of the same calcareous nature as those of Malta, but the country is more rural and agreeable.

Fort Chambray affords the principal accommodation for troops; it is built on the south-east side of the island, upon an elevated promontory, forming one side of a little bay in which the Malta boats anchor; the coast-line is very bold, especially to the south, where it rises in rugged and inaccessible cliffs, with huge masses of rock broken off from them and projecting into the sea; the road gradually winds inland to the fort (which is 500 feet above the shore), after a circuit of about 700 yards; the area on which the fortification is built is about 2,500 feet in circumference. The barracks can receive 250 men, are admirably arranged, and there is a small but excellent hospital attached. The lieutenant-governor resides near Migiarro, a small and insecure port, but the only one which the island possesses. A constant intercourse is kept up with Valetta; the distance to be traversed by sea is eighteen miles, although Malta and Gozo are not four miles apart. The intermediate islet of Comino, oblong in shape, and two miles in length, has a few inhabitants, employed in cultivating about thirty acres of land, and in preserving the numerous rabbits with which the place abounds.

Besides Cominetto, which lies off the north-west end of Comino, there are four or five other islets, or rather rocks, belonging

* The name was supposed to be given from its imaginary resemblance to a cup; the actual shape is an irregular oval.

to Malta and Gozo. On the south coast of Malta is Filfola, or Filfla, which contains, it is said, an ancient parish church: nearer the shore, and more to the eastward, is a rock called the Pietra Nera; and at the north-west end of the island, towards Gozo, is another rock, called the Scoglio Marfo. At the north end of St. Paul's Bay is the island of Salmonetta; but the best known of these appendages is the fungus rock of Gozo, or "*Hagira tal general*," celebrated for its production of *Corallina Officinalis* (Linnæus), or fungus melitensis, which was formerly esteemed a sovereign panacea for all the ills that flesh is heir to.

Geology and Soil.—The commissioners sent by the grand-master, L'Isle Adam, in 1525, to examine Malta, when offered by Charles V. to the Order, described it as a rock six or seven leagues long, of sandstone, called *tufa:* the structure is now ascertained to be limestone of different species and of unequal density, though generally speaking remarkably soft, and crumbling away even under the action of the weather with great facility. Calcareous freestone is more or less abundant, limestone generally lying on the freestone, and the latter incumbent on a bed of marl. Geologically considered, Malta and Gozo belong to the tertiary aqueous formations, either to the older or the newer pliocene of Lyall.

The stone of Malta, adapted for architectural purposes, is principally of two kinds, viz., the hard and soft, of each of which there are many varieties; indeed, the one passes into the other by an almost insensible gradation. The hard stone is a species of coarse marble of crystalline structure; specific gravity, 2.5,—not absorbent of moisture, and not liable to decompose or disintegrate on exposure to the atmosphere. It consists almost entirely of carbonate of lime, is adapted for all works requiring strength, and particularly well fitted for pavements and floors. It is found in many parts of the island, generally near the surface. The soft stone is a kind of freestone, composed chiefly of carbonate of lime, with a variable though small proportion of alumina, and a trace of peroxyde of iron, which imparts a peculiar light fawn colour. It is absorbent of water: a specimen tried by Dr. Davy, immersed in water, gained eleven per cent., yet was itself very light, having a specific gravity of only 1.9. It cuts almost as readily as chalk, and is far more abundant than the hard kind. It is the common building stone, and is very durable if protected from the atmosphere; the purest kinds are those which contain least clay, and are not liable to disintegrate on exposure; when used for flooring, oiling or painting is requisite.

It may be remarked that to the absorbent quality of the soft freestone the lands of Malta owe their fertility; and so sensible are the natives of this fact, that it is a common practice to occasionally remove the soil from the subjacent rock, and break up its surface to the depth of an inch or thereabouts, either generally or at intervals, in stripes; such a measure being found necessary in consequence of the deposition of carbonate of lime, which is apt to take place on the surface from the percolating water, by which the minute pores are filled, and the superficial rock is rendered more or less impervious, thus preventing the admission of rain-water in the winter, and its escape in the dry season. The Maltese soft stone is said to be highly useful in the manufacture of fine china; the sediment of the deposition in water being collected and formed into a mould like bricks.

Dr. Hennen describes a species of stone, of the nature of the "Oolite" or "Roestone of Bath," which is principally employed in building: it is very general throughout the island, and so easily worked that it can be cut with a hatchet or turned into various architectural ornaments in an appropriate apparatus, like an ordinary cutler's wheel; but if not judiciously used, it chips and exfoliates very rapidly. The masses are naturally laminated, and in buildings it is necessary to take care that the extremities of the laminæ and not their flat surface be presented to the action of the air. The sea air and the contact of sea-water is peculiarly injurious to some of these stones: repeated exfoliations of a reticulated texture are thrown off from them until they are completely corroded—a process daily perceptible in the works about the harbour. This species, like the ordinary soft stone of Malta, is of a yellowish-white colour, and so very impure, that, although itself carbonate of lime, it will not burn into quicklime, while the purer and harder carbonates afford a copious supply of this material, when subjected to the action of fire. By an analysis made some years since by Dr. Naudi, professor of chemistry in the university, and a scientific English resident, alumina and magnesia were found to exist in some quantity in this

building-stone; in the softer sort *magnesia* was prevalent,—and *alum* in the harder: hence the old palace of Boschetto, which was built in the end of the 15th century, of the latter stone, is much less impaired than erections of a very modern date, in which the former stone has been employed.

Other specimens, chiefly from the western side of the island, proved to be pure carbonates of lime, so hard as to serve for pavements; some bear a high polish, and are employed for tables or chimney-pieces, forming a pretty species of marble: these are chiefly found at St. Julian's, on the western coast. Alabaster is also procurable in some parts of both Malta and Gozo, but especially in the latter. At Marsa-Sirocco, to the southward of the island, are found blocks in detached pieces, of a blackish and reddish calcareous stone-like lava; if rubbed they exhale, by Dolomieu's account, a strong smell, and if dissolved in sulphuric acid, a black oily scum, with a similar smell, floats on the surface. Gypsum, both spicular and cuneiform, is frequent. Iron pyrites are seen in various clayey hills, especially in Gozo.

The *soil*, like the rock of Malta, is almost entirely calcareous: a specimen collected by Dr. Davy in a barley-field near Città Vecchia, consisted of—91.0 carbonate of lime; 7.0 alumina, with a little siliceous sand and red oxyde of iron; 1.5 vegetable matter; 0.5 hygrometric matter. Considering the very small proportion of vegetable matter, and the little humidity the ground contains, or is capable of retaining, it is extremely fertile, —a circumstance which is attributed to the great proportion of carbonate of lime in the best state of mechanical division in the soil, and the porous nature of the rocky substratum, which absorbs the rain like a sponge, and permits, during the dry season, the slow exhalation of moisture.

In a communication received by me from Dr. Davy, while that gentleman was inspector of hospitals at Malta, he says that it is not commonly the practice to form soil by breaking up rock; soil ready formed, lying in the hollows and crevices of rocks, is collected; the crevices are filled up with fragments, the projecting rocks are removed, the surface is made as level as is easily practicable, and the soil collected deposited thereon: and thus, according to Carlo Giacinto, who has written an interesting little work on the agriculture of Malta, "*campi artificiali*" are formed. The soil is generally good as regards its quality, though in too many instances it is of little depth. Forty different specimens, collected in the neighbourhood of the different casals, on being examined, were found to be all composed principally of carbonate of lime: they varied chiefly in the proportion of clay, and likewise in that of peroxyde of iron, to which they owe their colour. The dark red soils contained most of this oxyde, and the largest proportion generally of alumina. The very light fawn-coloured abounded most in carbonate of lime, and contained only a just perceptible trace of the peroxyde of iron. All the soils belonging to Malta, and also to Gozo, may be considered as coming under the denomination of calcareous marls, and, with very few exceptions, fall to powder under the influence of water. In no instance did Dr. Davy meet with any siliceous soil, or any pure clay soil. The proportion of vegetable matter in the best soils is exceedingly minute, under one per cent.; much manuring is therefore required.

Nowhere in the island are there any traces of volcanic eruption, any hot springs (excepting two or three weak saline spas), or any trap rocks; portions of pumice are said to have been found in the freestone of Gozo. Whether Malta and Gozo were at one time joined together, and at a more distant period in connection with Sicily, or otherwise, it is impossible to say positively; though the rocks and marls of both islands are considered very similar to the adjoining parts of Sicily, which are of the newer phocene; but as yet, organic remains have not been collected in sufficient number to assist in the formation of a decided opinion.

In the craggy rocks round Malta and Gozo are many spacious caves or grottoes, some of which being on a level with the sea, the waves dash in when in an agitated state, and resound tremendously. The mouths of others are at different heights, and the access is more or less difficult and dangerous, according to their situation; there are some, indeed, in order to enter which, it is necessary to be suspended by ropes. One of the most considerable of those usually visited, is situated towards the point of land called Benghisa, near the Marsa-Sirocco creek. This, from its length and breadth, is distinguished by the name of the *Great*, and it extends more than 200 paces underground. All these grottoes are full of stalactites and stalagmites, produced by the water filtering through the calcareous rock. The falling in of one of these caverns must have caused the

singular excavation called Makluba, near Casal Zurrico. At the distance of a hundred paces to the south of the shore, and not far from the rocks on the coast, there is a circular, or rather an oval cavity, more than a hundred feet in depth, and formed like an imperfect cone. The larger diameter of the lower plain is about ninety-five paces, and that of the smaller one eighty; but the opening is less than twenty paces in extent. The excavation lies in the shelving cliffs which incline a little from south to north, and have hitherto suffered no change, but have remained exactly as if this, in part, circular space, had been the work of art.

Climate and Diseases.—The climate of Malta is decidedly warm; indeed, almost tropical. The maximum temperature for the year may be taken at 90° Fahr., and the minimum at 46°; mean at 63° Fahr. The barometer may be similarly quoted at 38° 8′, 30° 2′, and 30° 5′. The hygrometer 87°, 30°, and 58½°. The heat of the summer is doubtless increased by radiation of the solar rays from the rocks surrounding Valetta; but in the country around, and in Gozo in particular, the atmosphere is from 2° to 4° cooler.

The prevailing winds are from the south-east and north-west; the former are characterised by humidity and exhausting heat, and produce a damp and suffocating smell: these siroccos are most common in August, September, and October. The north-east wind ("*gregale*") is brief and violent in its duration, frequently occasioning serious mischief in the harbour during the winter months.

Sudden and partial gusts of intensely heated air are occasionally felt in Malta, which are blown from the coast of Africa. Fortunately they seldom exceed half a minute in duration, for, if prolonged, life would be extinguished, owing to the fierceness of the heat, which is remarkable for blowing in tracts, affecting the inhabitants of one house and not their neighbours. It is probably a portion of the "samiel" or "simoom" of Africa. When dry wind blows over the island, especially in summer, impalpable dust floats about in volumes, and is precipitated in the shape of a shower of mud, on the recurrence of a damp wind, or when the fogs and dews are peculiarly heavy.

No regular sea or land breezes moderate the heat of Malta. Captain Smyth found the temperature of the sea, round the adjacent shores of Sicily, at a depth of ten to twenty fathoms, 73° to 76° Fahr., which was ten or twelve degrees warmer than the water outside of the Straits of Gibraltar. Snow only appears at Malta as a luxury imported from Etna; but in the winter months there are frequent hail showers. Rain falls with tropical violence in December, January, and part of February. About March the sky gets settled; an occasional shower may occur in April and May; but during June, July, and August, not a cloud is to be seen. September and October are cooled by showers; the air is placid and invigorating; and this cheering period is termed the "St. Martin's," or "little summer." The effects of thunder and lightning are not severely experienced, though the electric discharge is loud and frequent, and during the summer and autumn nights the sky is brilliantly illuminated with bright corruscations, resembling the *aurora borealis* of northern climes.

Animal Kingdom.—All the domesticated animals thrive in Malta; mules and asses are remarkable for their strength and beauty. The Maltese dog—a breed once highly valued—is now, I believe, extinct. The goats are of good breed; but the horned cattle are small, and principally imported from Sicily, Barbary, and the adjacent coasts. Snakes are to be found, but they are not poisonous. Birds of various kinds migrate to the island at different periods, and the hawks of Malta were formerly much celebrated; the bees were also renowned, and still yield such excellent aromatic honey, that the island is conjectured to have been therefore named "*Melita*" by the Greeks. Mosquitoes and other insects abound. Among the different species of caterpillar is one of a very singular conformation, having no feet.

*Fish* of various kinds are plentiful. The dory, rock-cod, and a species of whiting, popularly called the "lupo" are excellent. The cray-fish, found on the rocks around the island of Gozo, is enormous in size, and of fine flavour. One of the most remarkable of Maltese fish is the "*pholis dactylus*," which abounds in the harbour, forming for itself a complete "habitat" in the soft rock, which it perforates as regularly as if with an augur, giving to the several portions of the rock the appearance of the wood-work of a cartridge-box.

Population.—When or by whom Malta was first peopled is unknown; but, as in Ceylon and other places, a race of giants were, according to tradition, the earliest

occupants. While in possession of the Phœnicians and Carthaginians it was probably thickly inhabited, owing to the extensive commerce then carried on; but the earliest data obtainable are those given by Boisgelin, who says that, in 1559, after the raising of the famous siege of Malta by the Turks, the island contained only 10,000 inhabitants. The official records of 1590 state the population of the two islands of Malta and Gozo at 28,864; in 1617, at 43,798; in 1670, 60,000; in 1780, at 100,000. In 1775 there were computed to be in Malta and Gozo, 121,507 native inhabitants; including 16,000 regular militia (effective men.) The loss during the siege of the French, in Valetta, from 1798 to 1800, amounted to 20,000, including women and children, independent of the levies Buonaparte forcibly carried off to Egypt. A detailed census for 1807, gives the number of inhabitants in Malta at 80,225; in Gozo, 12,829 = 93,054: other inhabitants and domesticated strangers, estimated at 22,100; absent, estimated by register, 7,650: grand total, 122,804.

The number of foreigners residing in Malta during the six or seven years preceding the plague of 1813, was estimated at from 30,000 to 40,000. Many houses were fitted up like ships, with tiers of berths, and several large vessels were converted into floating hotels.

In 1824, the population of Malta alone was estimated by the deputy inspector of police at 96,404.

The following return for Malta alone, from 1824 to 1828, was transmitted to me by the late governor of the island, Sir Frederick Ponsonby, together with the census for the year 1834:—

| Years. | No. of Population. | No. of Deaths. | Under what Age died. | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Infants under 8 years. | Children from 8 to 14. | Youths from 15 to 28. | Men from 29 to 50. | Old from 51 to 70. | Decrepit from 71 upwards. |
| 1824 | 96,404 | 2,345 | 1,125 | 80 | 158 | 231 | 372 | 379 |
| 1825 | 97,627 | 2,612 | 1,276 | 82 | 179 | 293 | 398 | 384 |
| 1826 | 98,739 | 2,277 | 1,090 | 62 | 152 | 330 | 370 | 373 |
| 1827 | 99,549 | 2,434 | 1,180 | 60 | 160 | 260 | 385 | 389 |
| 1828 | 100,949 | 2,592 | 1,260 | 79 | 178 | 291 | 390 | 394 |

During this period of five years, there died each year of apoplexy, about 120; of dropsy, 200; of marasmus, 200; of dentition, 550; of dysentery, 130; of diarrhœa, 280; of miscarriage, 120; still-born, 30; of debility (infants who died soon after birth), 150; of phthisis pulmonalis, 100; of nervous and bilious fevers, 170. During this period, of those who died, no one had reached the age of 100; the oldest did not exceed 98 years: of this age about four or five in each year; about 30 individuals died annually of 90 and upwards.

The returns to the Colonial Office give the following as the number of inhabitants of Malta and Gozo, for a series of years:—

| Years. | White & Free Coloured People. | | Births. | Deaths. |
|---|---|---|---|---|
| | Males. | Females. | | |
| 1828 | 59,354 | 59,296 | 3,760 | 2,964 |
| 1829 | 59,239 | 60,537 | 3,722 | 2,592 |
| 1830 | 59.482 | 60,480 | 4,027 | 4,133 |
| 1831 | 59,762 | 61,077 | 4,115 | 2,938 |
| 1832 | 60,594 | 61,669 | 3,739 | 2,753 |
| 1833 | 60,493 | 61,563 | 3,824 | 3,604 |
| 1834 | 60,252 | 61,674 | 3,833 | 3,090 |
| 1851* | 63,508 | 65,933 | 4,695 | 3,981 |

* Exclusive of military, and their wives and families, viz.,—males, 1,730; females, 230; and political refugees—males, 289; females, 30; children, 31.

Taking the area of Malta and Gozo at 115 square miles, and the number of inhabitants thereon at about 131,000, there are 1,138 mouths to each square mile of surface.

The natives of Malta are said to be long lived, but only the later statistics of deaths include the ages of the deceased. Abela states instances of persons living to 80, 90, 100, 105, 107, and 110 years. He notices one man, a native of Zabbar, who lived nearly to the age of 120, and preserved his strength, his teeth, and, in part, the colour of his hair; and another, a resident in the civil hospital at Città Vecchia, completed the same number of years, retaining to the last his memory and judgment. It is asserted by the same authority, that some of the ancient inhabitants lived to 130 years of age, owing to the purity of the air, and their temperate mode of living.

The Maltese are generally of middle stature, with robust frames, and small hands and feet; the hair black, and sometimes inclined to frizzle; lips frequently thick, and skin swarthy among the common people where exposed to the atmosphere; the eye dark and bright; and the higher classes are remarkable for that full and languishing style of beauty which constitutes the most prized charm among oriental women. In some of the villages, such as the Casal of Zurrico, there are a considerable number of blue-eyed persons to be met with. In general, there is throughout the villages a good deal of the Spanish character dis-

played, but in the cities, and among the higher orders, French and Greek characteristics are combined. The men are industrious, active, frugal; attached to their country, passive, but yet nowise deficient in courage, as has been often proved, for they are considered the best seamen in the Mediterranean.* Those in easy circumstances dress like other Europeans, but the lower orders are clothed in a loose cotton shirt, over which is a wide vest, or jacket, ornamented with silver, or sometimes gold buttons, a long twisted scarf, wound several times round the body, with a sheathed knife attached thereto; loose short drawers, leaving the legs bare nearly from the knees downwards, and very peculiar shoes called *korch*, consisting of a leathern sole, fastened with strings, or thongs, to the foot and leg, not unlike the old Roman sandal. The winter head-dress consists of a woollen cap of different colours, with a hood falling down on the back; in summer, large straw hats are worn. The women, for the most part, retain their ancient and picturesque costume, consisting of a cotton under garment, a petticoat (generally of a blue colour), an upper robe opening at the side, and a corset with sleeves. The hair, covered with pomatum and powder, is arranged in a high cone in front of the head, and the face concealed by a large black silken veil called *faldetta*, which the wearer adroitly shifts when exposing her features to a side or full view. Many ladies have recently adopted the English fashions, except during the time of performing their religious duties, when they appear at church in their ancient costume.

The Maltese marry early: instances are not rare where girls have been mothers at thirteen years of age; they suffer little in childbirth; twins are a common occurrence, but no instance of triplets has ever been heard of in the island; and when told such occurrences are not unfrequent in England, they shake their heads in emphatic disbelief. Deformity is exceedingly rare, and monstrosity still more so: in early infancy the children are swathed from the shoulders down to the toes, including the arms, which are laid close along the sides, so as to present a striking resemblance to an Egyptian mummy. Notwithstanding this apparently unnatural restraint, the use of the limbs is early acquired: a crippled or an impotent child is a rare sight; and the activity of the Maltese, especially as swimmers and divers, is very great. In some cases, weakly or diseased children are taught to draw their nutriment from the goats; but in general there is no difference between the food of the infant and the adult, except in quantity; the newly weaned child swallowing oil, cheese, salt fish, vegetables, fruits, and salads, with the *gusto* of its parents—this food being sometimes varied by a little brown bread, maccaroni, oil, garlic, cheese, and a salt sardine or anchovy, eaten raw; a draught of Sicilian wine closes the meal. Coffee and iced water are the only luxuries common to all ages and sexes: even among the higher classes, little animal food is used. Fish is very abundant, and none allowed to be sold twenty-four hours after being caught. Tobacco, in the form of smoking, is regarded as a necessary article of diet, but is happily unaccompanied by any intoxicating draught.

Sea-bathing is general among both sexes, the time chosen being from sunset until near midnight. The siesta, or mid-day sleep, is a universal summer custom; from twelve to two is the hour of dinner and of the siesta, and during that period no respectable person that can avoid it, leaves home. Music is the favourite amusement of all classes: the lower ranks meet in groups at the corners of the streets, singing extempore verses to old national airs, the burden of the song being probably the praise of a mistress, or the disparagement of a rival. Dancing, horse and boat-racing, processions in honour of numerous saints, with an occasional village maypole festival, form the chief diversions; and it is an excellent feature in the Maltese character that these are unattended by drunkenness or quarrelling. The different promenades are much frequented; that of the botanic garden, in the suburbs, is enlivened by the military music of the various garrison regiments. Beyond the ramparts, the places called Pietà Sliema, and St. Giuliano, present an animated scene of beautiful walks. The surrounding country is covered with elegant villas, some of which have been lately built, after the native manner, by English gentlemen, who have chosen the environs of the capital as the scene of their residence.

Language. — The upper class speak Italian; the common people a patois com-

* The Quay or Marina of Valetta presents a very striking picture to the eye of the stranger; the commerce of the place contrasting strongly with the size of the small but deep and secure harbour.

pounded of Arabic, German, Italian, and other tongues. The Arabic, however, so far predominates, that the peasants of Malta and Barbary can without much difficulty understand each other. Captain Vella contends that the Maltese language, as it is generally spoken by the mass of the people, is still the original Punic, which has passed unaltered through the changes and revolutions of so many nations—successive masters and oppressors of the island of Malta. Differences may be perceived, chiefly in the pronunciation, in various parts of the island, but the substance of the language is in all the same.* There is no national alphabet; but, according to the fancy of the writer, those of other tongues are adopted. English is becoming generally understood throughout the island.

Religion.—A scrupulous attention to the rites of the Romish church is characteristic of the Maltese. The landed ecclesiastical property is considerable; and there are about one thousand secular and regular clergy in the two islands.†

Previous to the year 1827, many of the churches enjoyed sanctuary rights, and priests were not under the jurisdiction of the civil tribunals; but a law was passed in that year abolishing these privileges, and the bishop's court has now only ecclesiastical sway. The archbishop of the island has a seat in the Legislative Council.

The Roman catholic church is supported by its own revenues, under the immediate control of the Bishop of Malta, and is for the most part independent of the local government; it receives no assistance from the local revenues: its churches and chapels amount to upwards of 250; and its "secular" priesthood to nearly 900 persons. There are, however, a few benefices at the nomination of the local authorities, and a few churches are kept in repair out of the local revenues; besides which the government, in its capacity of landed proprietor, defrays the expenses of certain ecclesiastical establishments to the amount of about £1,300, the greater portion of which sum forms a permanent charge on the property so possessed. The tower and spire of the English collegiate church of St. Paul's, in Valetta, were completed in 1845; this building was erected, at an expense of £15,000, by Her Majesty the late Queen Adelaide. A small bible society was formed at Malta, through the exertions of Henry Drummond, M.P. The whole ecclesiastical establishment stood thus in 1854:—Church of England, 3: church of Rome, 68 = Malta, 56; Gozo, 12. Church of Rome has 234 chapels and oratories in Malta, and 23 in Gozo. Church of Scotland, 1; Greek church, 1; Synagogue, 1; Roman catholic convents—Malta, 16; Gozo, 3 = 19. Nunneries, 5. Ecclesiastical establishments, altogether, 424.

Education is well attended to in Malta. There is a college in Valetta, instituted by the grand-master Pinto, in 1771, where degrees in divinity, law, and physic are conferred under certain regulations; and a preparatory school is attached thereto, in which boys are received indiscriminately on payment of a trifle. The support of the college devolves upon government, as on the expulsion of the Jesuits from Malta, their property, which now amounts to about £700 a-year, was allotted for the support of the university, and of a church which now costs the government £176 per annum, the remainder being devoted to the university, in which there are 490 scholars; those in higher schools (unless specially exempted by the council) pay 4*s.* 2*d.* each month, from which is defrayed the salary of the secretary (£1 15*s.* 4*d.* per month), and certain pensions to superannuated professors. To this fund the students in medicine, surgery, and anatomy, do not contribute, but pay 4*s.* 2*d.* each month to their respective teachers.

There are two normal free schools, at which more than one thousand boys and girls are educated. These seminaries, together with a small one at Gozo, are supported chiefly by government; private subscriptions are, however, received. There was, for a considerable time, much jealousy on the part of the Roman catholic clergy regarding education, as it was feared that it might be made use of as the means of conversion to the Protestant faith. This feeling has subsided; and in one of the normal schools lately established, a canon of the church is the principal director. The chil-

* According to Anderson, the Lord's Prayer in the Maltese language is as follows:—"Missierna li inti fis meuiet jitkaddes ismech, tigi saltnatech icun li trit int chif fis sema hegda flart. Hhobsna ta culium atina illum u Ahhfrilna dnubietna chif ahhna nahhfru lil min hhata ghalina u laddahhanna fittigrif ta tentazzioni isda ehhlisna middeni. Amen."

† By the calendar of 1742, it appears that there were then 2,000 priests and ecclesiastics in Malta and Gozo, exclusive of the members of the Order.

dren are taught reading, writing, arithmetic, the rudiments of Italian grammar, and in some instances, English and Latin; the females learn needlework, spinning, and weaving. The number of schools under the control of government, in 1854, was—for boys, 18; for girls, 18; for infants, 3; navigation, 1; superior school, Gozo, 1 = 41: pupils—males, 2,777; females, 2,192 = 4,969. Much good is expected from, and has indeed already attended, the *Protestant College*, an institution founded in 1846, which comprises not only a school for youth, but also a class of adult orientalists under training as native teachers.

*The Press* is represented by a government gazette.

*Libraries.*—In the year 1761, the Baile De Tencen founded the public library of Malta, which was enlarged by the gifts of many princes, kings, and distinguished individuals. The King of France contributed a select set of books; and the institution was entitled to copies of all works published at the royal press at Paris. The collection formed at the general hospital was transferred to it, and a regulation enacted, by which the books of all the deceased knights became its property; an annuity of 300 crowns was allotted for its augmentation, and some additional income was derived from the sale of duplicates, insomuch that, in 1798, the number of books, if we are to credit Boisgelin, amounted to upwards of 60,000. This library is open to the public at certain hours of the day, but no books are lent out: it contains a number of excellent and some rare and very valuable works. A subscription library, attached to the garrison, was formed in 1806, for purposes of reference and lending out.

*Hospitals and Charitable Institutions.*—There are two large hospitals at Valetta, and one at Gozo, supported entirely by government. A good library is attached to the institution: all persons are received therein who require medical aid; and there is also a public dispensary, where medicines are furnished gratis to those who do not need in-door treatment.* At Floriana, a suburb of Valetta, there are two charitable institutions, one called *L'Ospizio*, the other the *House of Industry*: the first is for the reception of old men and women; and a part of the building is appropriated for the reception of the insane. About 700 persons are maintained in this establishment. The whole of the charitable institutions are under the management of a committee, chiefly composed of persons holding office under government. The prisons, which are admirably managed as regards the various ends of classification, cleanliness, and reformation, are under the same committee.

Government.—The administration of the island is usually confided to a military governor, who commands the troops: and is aided by a council.

The Revenue is derived from customs† and excise duties on corn imported, rent of Crown lands and houses, fees, fines, &c. In 1833-'34, and for some subsequent years, it averaged £100,000 per annum; in 1853, the average for several preceding years was £130,000. There is also a local revenue for municipal purposes, amounting to about £40,000 a-year. The established civil expenditure for 1853, was £56,000; pensions

* The medicines most in use belong to the pharmacopeia of past ages. Oil of sweet almonds is deemed a panacea for all diseases. Lemon-juice is also a frequent application in domestic practice, especially in disorders of the eyes; and it appears to be a tolerably active stimulant, and useful in certain stages of disease. The "*aqua distillata catellorum*," or puppy water, is still resorted to by some; it is not prepared like Ambrose Paré's celebrated emollient ointment, by stewing down the whelp with oil, but by a simple process of distillation; of course this is no more than distilled water, with a very minute admixture of such animal matter as would rise in the heat of 212°. It is held to be a sovereign remedy in frights and nervous affections of women, or "scanto," as they are called; and though an empirical trick, its employment is defended on a medical principle, viz., the violent reaction it produces when the patient is told of the remedy she has swallowed. An absorbent earth found in some caves is used in all cases attended with acrimonious humours, and as a specific in fevers. It is said to be perpetually reproduced by the exposure of the clay to the action of the atmosphere; which swells by the moisture, and when one layer of the surface is removed, another comes in contact with the atmosphere, and its texture loosens and becomes saturated like the preceding layer, after the manner of slaked lime. Another popular remedy is the sand-bath, and which is chiefly used for rachitis and pertussis. The patient is kept in the pit close covered up with sand for different periods from ten minutes to half-an-hour; and a copious perspiration being thus produced, is kept up by the use of diluents and artificial warmth, after which a cordial is administered.

† Custom duties on spirits, £1 2*s.* per Maltese barrel; on beer, 2*s.* per ditto; on wines (valued at £15 per pipe of eleven Maltese barrels), 11*s.* per Maltese barrel: all other wines, 2*s.* per ditto. Duties on grain—wheat, 10*s.* per salma; cattle, 10*s.* per head. Other descriptions of grain and cattle in like proportions. Tonnage dues, 20*s.* to 30*s.* for each vessel of 400 to 800 tons.

and retired allowances, £15,000; revenue service, £5,375; roads, streets, and bridges, £23,588; works and buildings, £18,275; contribution towards military expenditure, £6,200; charitable allowances, £3,630; education (exclusive of establishments), £1,115; hospitals, £12,115; police and gaols, £1,015; justice, £323; with various minor sums.

The military expenditure incurred by England amounts, ordinarily, to about £130,000 per annum; the inhabitants pay the salary of the governor (£5,000), and furnish from £18,000 to £20,000 per annum towards defraying military charges, including the support of the Malta Fencibles (a regular regiment, 639 strong) and a militia corps.

Public Debt—£78,446, bearing interest at 2½ per cent. per annum; created in 1805, in favour of those who lost capital in the ancient Malta frumentaria, or grain concern, on the arrival of the French in 1798:* £43,930, at 2 per cent., invested in Maltese bank; £11,439, a contribution or loan to the Monte di Pietà, existing from ancient times; £1,214, Gozo Savings' Bank.

*Moneys.*—The introduction of British money has not hitherto produced among the commercial† body of inhabitants generally any alteration in their mode of keeping their accounts, and of making sales, contracts, &c., which are continued as formerly in Maltese currency—namely, scudi, tari, and grains: 20 grains = 1 tari; 12 taris = 1 scudo = 1*s.* 8*d.* sterling. The current gold coins are the French louis-d'or, and a piece bearing the effigy of a grand-master, both worth about 10 scudi = 16*s.* 8*d.* Spanish doubloons, with an agis, from 40 to 40½ scudi; Venetian sequins from 4¾ to 5 scudi; and the Sicilian ounce = 6¼ scudi. *Silver.*—Sicilian dollar = 2½ scudi; Grand-master pieces of 2 and 1 scudi; pieces of 15, 10, 6, and 5 taris each; Spanish dollar = 2 scudi, 7 taris, and 4 grains.

There are two public banks in profitable operation. In the year 1854, the notes issued did not exceed £20,000 in amount.

* The Monte di Pietà was established at Malta in the year 1597, and, like all European institutions of the sort, with the object of affording pecuniary supplies to the distressed at reasonable interest, thereby preventing them from having recourse to usurers. Any sum of money, however small, is advanced to the applicants on the security of property given in pawn,—such as gold, silver, and other precious articles, or wearing apparel, whether worn or new. The period of the loan is for three years on pawns of the first description, and never more than two on those of the latter, renewable at the option of the borrowers, who are at liberty to redeem their pawned goods at any time within the stated period on payment of proportionate interest. The present rate is six per cent. per annum. The unclaimed property, at the expiration of the allotted period, is sold by public auction, and the residue of the proceeds, after deducting the sum due to the institution, is payable to the person producing the ticket. Of the accommodation thus afforded by the Monte, persons of high respectability occasionally avail themselves during temporary exigencies; and in this way considerable sums have been advanced. Till the year 1787, the operations of the institution were conducted by means of money borrowed at a moderate interest, and by funds acquired by donations, &c. But the then grand-master, Rohan, authorised the consolidation of the funds of the Monte di Pietà with those of the Monte di Redenzione, another national institution, founded in the year 1607 by private donations and bequests, for the philanthropic object of rescuing from slavery any of the natives who might fall into the hands of the Mohammedans, and not have the means of ransom. As this institution had larger funds (mostly in landed property) than it actually required to meet its proper demands, the act of consolidation proved of the greatest advantage to the Monte di Pietà. Thus united, the two institutions, with the new title of Monte di Pietà e Redenzione, conducted their separate duties under the superintendence of a Board, consisting of a president and eight commissioners, till the expulsion of the Order of St. John from Malta, which happened in the year 1798. The French republicans, by whom the island was then occupied, stripped the Monte of every article, whether in money or pawned goods, and inflicted a loss amounting to nearly £35,000, including the share of the proprietors of pawns, inasmuch as the advance they received on that security never exceeded one-half or two-thirds of the value of the articles pawned. Not a shilling of this sum was repaid by the French government after the restoration of monarchy; the rights of the Maltese being unrecognised in the capitulation of 1800. When the British forces took possession of La Valetta in September, 1800, this useful institution was enabled to resume operations. A new Board was elected, and about £4,000 advanced to them, without interest, from the local treasury. A loan was opened, to which individuals did not hesitate to contribute when they were assured that the institution considered itself bound to pay the old loan, though forming part of the amount carried away by the French, and that in the meantime interest would be allowed on it. The Monte possessing landed property to a much greater amount, could never refuse such an act of justice. Happily, the cessation of slavery put an end to the old charge for ransoms, and enabled the institution to devote its revenues to the payment of interest on the old loan, to the extinction of part of the capital, to the improvement of its property, and of late years to the assignment of £500 per annum in aid of the House of Industry.

† The Maltese are not merely a commercial but a manufacturing people: they excel in spinning and weaving cotton into coverlets, table-cloths, towelling, sails, blue-striped shirting, and dresses for the peasantry: the products of their looms have long been

Commerce.—The trade of Malta during the continental war, subsequent to the year 1804, was very great; but the plague, followed by the treaty of Paris, and the consequent throwing open of the Mediterranean ports, with other operating causes, materially lessened the importance of the place as a depôt.

The commerce is, however, still extensive: in 1853, the imports were valued at £1,137,344, and the exports at £721,765; a large part of the imports being British. The shipping inwards, in the same year, was, in number, 4,448; tonnage, 816,773: of this, 196,377 tons carried the English flag. The resources of the island are limited: about 45,000 acres are under crop for the production of food, the growth of cotton, of oleaginous seeds, &c. The importance of the position to England is unquestionable, not merely as a central shop for the sale of her goods along the shores of Sicily and Africa, but equally as a commanding maritime station, by which, in conjunction with Gibraltar, we are enabled to dispense with the large fleet otherwise indispensable to the maintenance of permanent supremacy in the Mediterranean.*

celebrated in the regions bordering the Mediterranean. Diodorus Siculus pronounced their cotton cloths superior to any others in softness and fineness; and Cicero, in his oration against Verres, enumerates, among the articles of his plunder, certain cotton dresses remarkable for the delicate fabric peculiar to Malta, and speaks also of Maltese wine as forming another considerable item of the spoiler's booty. Black silk stuffs, of various kinds, are woven in the island; and the lace veils, gloves, and mittens knit by the nuns and other industrious women of Malta, are highly esteemed by the ladies of the various European capitals. In ship-building, cabinet-work, and joinery, the native citizens have attained a high degree of excellence; their vessels are substantially built, and sail swiftly. Furniture (including sofas, chairs, and many ornamental articles) is exported to Greece and the Ionian Isles, to Constantinople, Egypt, the Black Sea, and other places. The timber employed is chiefly obtained from the shores of the Adriatic. As goldsmiths, the Maltese are famed for the filligree-work which characterises their neck-chains, bracelets, and jewellery of various descriptions. Maltese sculptors have manifested considerable skill in carving figures from the easily worked stone of the native quarries, and large quantities of this material are carried to Turkey, Egypt, and other countries for building and paving. There are manufactories for the construction of iron bedsteads, and for the preparation of leather, soap, maccaroni, and other articles. Many millions of cigars are made annually, and find a ready sale in every neighbouring port. Cumin, anise, and other seeds are successfully cultivated for the European and American markets, and are deemed superior in quality to those produced elsewhere. The squill, grown and dried here, produces the best oxamel obtainable from that bulb. The oranges and lemons of Malta are excellent. The silkworm thrives; and if capital were invested in this branch of trade, it would probably yield large returns.

* I visited Malta, and traversed the island; but am indebted to the works of Boisgelin, Hennen, Davy, Wilson, and Miege, for many of the facts in this section. Since the issue of my first *History of the Colonies*, twenty years ago, various improvements have been effected, under the sanction of the Crown, in the departmental administration; and many of the evils which then formed a just cause of complaint have been remedied. Taxes and duties that pressed unequally on industry have been abolished; natives are more freely admitted to public offices; and a more liberal view has been taken of the general value and capabilities of Malta.

# SECTION X.—IONIAN ISLANDS.

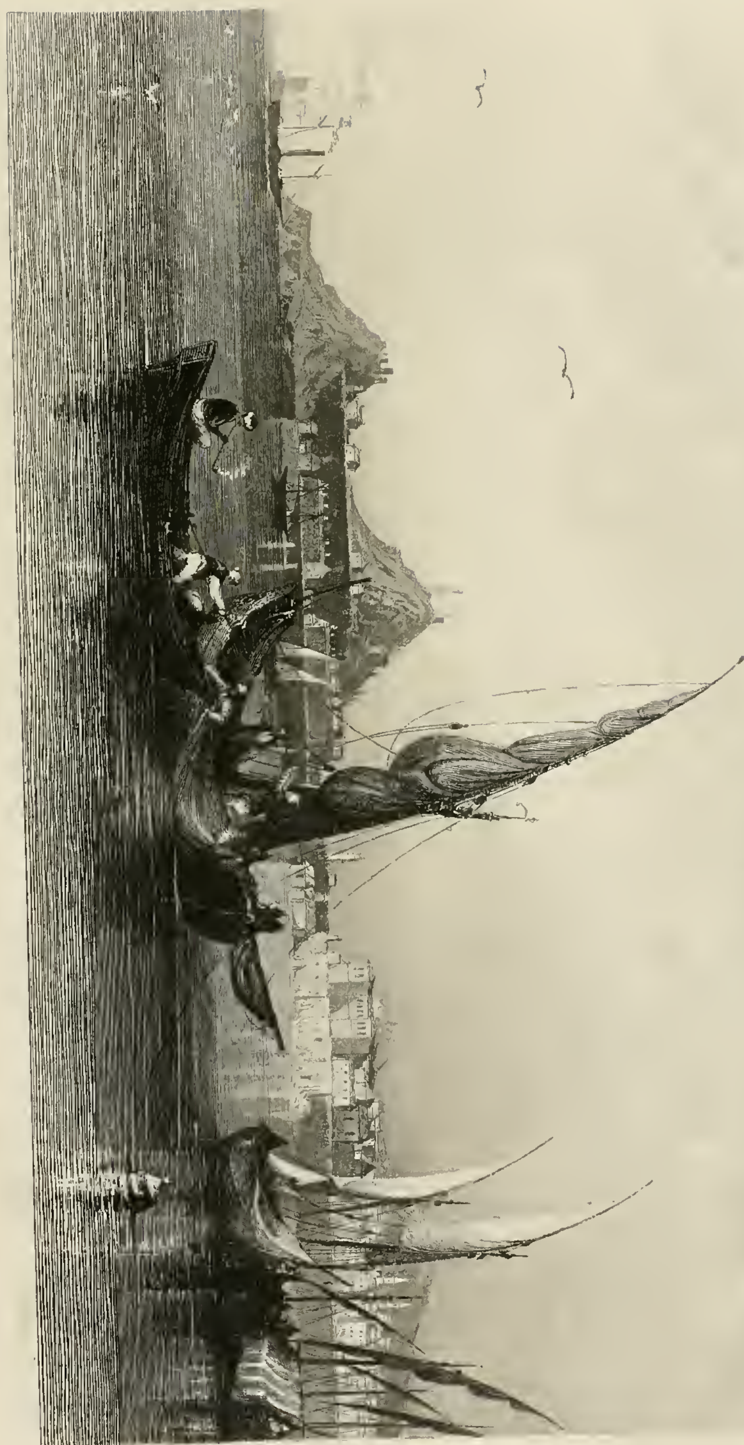
The septinsular group of the Ionian Isles is situated in the Ionian Sea, between 36° and 40° S. lat., and 20° and 23° E. long., and extends from the Albanian coast to the southern extremity of the Morean peninsula.

The ancient history of these famous islands, called by the Greeks "Frank Isles" (Φραγκονησια) is intertwined with the mythology of the Greeks and Romans, so that it is difficult for sober truth to find a starting point. The islands would appear to have been early colonised,—to have remained for many years as separate states, partially under the control of Corinth, and subsequently beneath that of Athens or of Sparta. During the invasion of Xerxes, the Ionians boasted of being second only in power to the Athenians; but at no period do they seem to have long maintained an independent position. When Pyrrhus, King of Epirus, invaded Italy, they co-operated with him: on the decline of the Grecian republics they became the prey of several successive conquerors, and were finally incorporated in the Roman empire, and included in the Achaia province. The Goths ravaged Ionia, and destroyed, it is said, many monuments of antiquity: the Vandals conquered the province, but it was recovered by Belisarius. For 250 years the islands were attached to the prefecture of Lombardy, and conjoined with that province or with Sicily; for the next 300 years they constituted a separate government, under the title of the Zema of Cephalonia.*

On the dissolution of the Greek empire, Ionia seems to have been ruled by chiefs of Norman extraction, and by princes of the house of Valois. About the middle of the 14th century, the islands (or at least Corfu) apparently belonged to Charles III., King of Hungary, Jerusalem, and Sicily. In 1386, Corfu, then in a wretched state, was placed by the Corcyreans under the protection of Venice, and remained steadily attached to the Venetian republic, subject to frequent assaults and spoliations by the Turks, from whom the islanders experienced a desperate assault in 1537-'38, when the Moslems commenced their efforts for the expulsion of the Venetians from the Morea, &c. On the downfall of the "Queen of the Adriatic," in 1797, the French took possession of Ionia, but evacuated the territory on the breaking out of the war in 1798-'99, when it was taken under the joint protection of Russia and Turkey; the former becoming, however, the dominant power.

The next phase was the transfer of the islands from Russia to France, in virtue of a secret agreement between Alexander and Napoleon, in 1807. In 1809, Zante was occupied by a British force, and subsequently Cephalonia, Ithaca, Cerigo, and Santa Maura: Corfu, protected by a strong French garrison, held out until 1814; and, on the abdication of Napoleon, was taken possession of by England. At the peace of 1815, the septinsular union was placed under the protection of the British Crown, and has so continued to the present day.

---



Corfu, in lat. 39° N., and long. 20° E., situate a little to the eastward of the mouth of the Adriatic, 150 miles north of Santa Maura, and the present seat of goverument of the septinsular union, was described by Homer under the names *Scheria*† (Σχερια) and (from Phæace the son of Neptune) *Phæacia*:—

> "Then swelled to sight *Phæacia's* dusky coast,
> And woody mountains, half in vapour lost;
> That lay before him, indistinct and vast,
> Like a broad shield amid the watery waste."

It was, however, previously known as *Drepanum* (Δρεπανη) Callinach, or *Drepanon* (Δρεπανον), and Apollon, an epithet bestowed in allusion to its semicircular or sickle shape, and connected with some mythological fable. To this designation succeeded that of *Macri*, by reason of its length from cape to cape (Sidero to Lefchimo), or, according

* *See* valuable *Notes and Observations on the Ionian Islands and Malta:* by Dr. John Davy; 2 vols. 8vo: London, 1842.

† *Scheria*, mythological records explain as a name given in consequence of the overflowing of the waves upon the banks of Epirus, covering a great space of territory. Ceres complained of the encroachment to Neptune, who arrested the waters; but not before they had separated a portion of land from the continent. Others assert that *Scheria* is derived from the Phœnician word *schara* (commerce), indicating thereby that the inhabitants of this isle were from early times pre-eminently skilled in maritime and commercial affairs.

to Apollonius, in honour of Marcris, the daughter of Aristee; but among the Greeks and Romans its usual designation was *Corcyra* (Κερκυρα), derived either from the grand-daughter of Neptune, or from the Arabic word *Cacara*, signifying a land of peace and abundance; or from *Kekuris*, a peculiarly constructed ship, which the inhabitants were famed for building. The present name of Corfu (given after the destruction of the Eastern empire) is said to owe its origin to Κορυφη, or Κορφοι, or Κορυφω, to overtop; alluding to the hilly or turret-like rocks on which the modern citadel is built.

According to mythology, Phæace, the son of Neptune, was the first who established himself in the isle; and Plutarch says that Jason, on returning from Colchis, bearing with him the golden fleece, touched at the island, and celebrated there his nuptials with Medea, when Phæace was king; but of the Phæacian city not a vestige remains: the Corfuite antiquarians aver that it occupied the site of Corcyra, the latter being built on the ruins of the former. Homer ascribes its colonisation to the Hyperians, who built a city and erected several temples to the gods. The successor to Phæace was said to be Alcinous, son of Nausithous; and then follows the story of Ulysses. According to Strabo, Archias, King of Corinth, in voyaging to Sicily, left Chersicrates, with a part of his army, at Corfu, then named *Scheria*. Chersicrates, it is said, made himself master of the place by conquering the inhabitants: this event took place in the 19th Olympiad, about 700 years before the siege of Troy. Certain it is that the Scherians or Corcyreans bore on their medals the winged horse, the well-known emblem of Corinth. Chersicrates made war upon and expelled the Liburnians, who inhabited the southern part of the island; and the new sovereign commenced his reign in Crisopolis, which Homer makes Ulysses gaze at in wonder, by reason of its magnificent buildings and temples. It is said to have continued subject to the mother country for upwards of a century; but in the wars between Corinth and Athens, the Corcyreans sided with the latter, and, in imitation of them, abolished monarchy, and founded a republic in its stead. It would appear that the Corcyreans maintained amicable but independent intercourse with the several Greek powers, and furnished an auxiliary force of vessels and men to aid in repelling the attack of Xerxes; but when the anger of the fickle Athenians was excited against Themistocles, the Corcyreans gave him shelter, and paid no heed to the insidious arguments or threats used to induce or compel the surrender of the brave commander.

The battle of Leucadia would appear to have been a vigorous attempt on the part of Corinth, aided by the Thebans, Leucadians, Cephalonians, &c., to crush the Corcyreans, who, however, with the assistance of the Lacedæmonians and Athenians, almost totally destroyed the Corinthian fleet of 150 sail, under the command of Xenoclides. The engagement was fought by the Corinthians advancing in line, and being received by their opponents with 106 vessels, formed into three columns placed in alternate squares.

During the war between the different republics of Greece, the Corcyreans generally sided with the Athenians, and strenuously resisted the Lacedæmonians, who attempted the conquest of their island, the nobility of which favoured the latter people, and were in consequence entrapped and stoned to death in the temple of Juno by the democracy.

A detailed history of the island would be out of place here; it is sufficient to state briefly the leading events. Pyrrhus, King of Epirus, after several unsuccessful attempts, conquered Corcyra, and made use of its fleet and marines in his attempts on Italy, which greatly weakened the Corcyreans, whose commerce was almost annihilated by Teuca, Queen of the Illyrians, to whom they were subject in the century before our era; and, to check whose cruelties, the Corcyreans were obliged to follow the example set them by the little Grecian republics, and place themselves under Roman protection.

The ambassadors sent by the Corcyreans to Rome were, it is said, favourably received by the senate; the offer of becoming a province of the empire accepted, and the necessary assistance promised. During the domination of Rome, the Corcyreans were converted to Christianity; and the weakness of the Eastern empire enabled them once more to enjoy a government of their own choice. Corfu, although desolated by Genseric and the Vandals in one century (A.D. 466), and by the Goths and Sclavonians in another (A.D. 550), was able to assist the Emperor Heraclius against the Lombards (A.D. 638), and Leo the Isaurian

against the Saracens, during the siege of Constantinople, A.D. 717-'18. At the close of the 11th century, the naval power of Corfu seems to have been extinguished; for the island was occupied by Robert Guiscard, A.D. 1081, without offering the slightest resistance; but in the middle of the 12th century, the Corfuites aided the forces of the Emperor Emanuel Commenus in driving out the Normans, to whom they had voluntarily yielded obedience a short time before; and, at the close of the century, Corfu was annexed to the principality of Epirus and Ætolia, formed by Michael Angelus Commenus upon the division of the empire.* In the latter part of the 13th century, Corfu was conquered by Charles of Anjou, King of Naples; but the reverses sustained by his successors encouraged the people to assert their independence: the Neapolitan garrison was expelled, and a republican form of government established.

The growing power of the Genoese had begun to alarm the other Italian states; and the Venetians, perceiving the advantage to be derived from the possession of Corcyra or Corfu, on the 28th of May, 1386, entered into an agreement with the inhabitants, who, it is asserted by some, sold their liberty for 30,000 ducats; but this unauthenticated statement is probably founded on the circumstance of Zadislas, King of Naples, having ceded his claims on Corfu in 1401, for the sum above named.

Nothing of moment occurred until the growing power of the Turks in the Morea induced them to turn their attention to Corfu as a valuable acquisition. The chief fortress was besieged in 1537-'38, by Janus Beg and Cheredan Barbarossa, with the arms and fleet of Soleyman. Pesaro, who commanded at Corfu, stripped the galleys of their guns, and placed them on the ramparts and outworks,—sent the useless mouths out of the fortress into the Interior, and enrolled 4,000 men under the orders of Venetian officers; the nobility forming a separate corps. Barbarossa and Janus landed their forces on the coast parallel to Potamos, encamping between that village and the town, and opened their batteries with such effect, that the Corfuites were driven from their commanding position on an eminence above the town. Their subsequent attempts were less successful; several sorties were made by the besieged; and the Moslems beheld winter approach without having gained much ground. Meanwhile famine and plague made dreadful havoc in their camp, to reinforce which Soleyman dispatched 20,000 men, and followed them in person; but finding all hopes of conquest futile, he soon drew off the remnant of his shattered army.

From this time the island remained unmolested, until Achmet III., having conquered the Morea, resolved on the capture of Corfu with a force of 80,000 men. The Venetians, although much weakened by the loss of all the provinces and islands belonging to European Turkey, took active measures to enable Corfu to offer a vigorous defence. Several citizens were allowed to purchase orders of nobility; and with the money thus obtained, a force of 12,000 men was fitted out under Count Schulemburgh, who strengthened the fortifications, and placed the garrison in an efficient state of defence. On the 15th of July, 1716, Cogia Pasha, admiral of the Ottoman fleet, approached Corfu with twenty-two ships; he was met by the Venetian admirals Pisani and Cornari, whose force consisted of a squadron of galleys and galliots, under Pisani, and of ships under Cornari. Cogia being attacked and defeated by Pisani, put into Butrinto to repair and embark the troops destined for the siege,—landed a division at Vido, and opened a battery on the town and citadel of Corfu; the remainder came on shore below Potamos, and formed their camp about two miles from the extreme outworks of Fort Salvador, which, together with Fort Abraham, was captured by the Ottoman after several hard-fought contests. The seraskier endeavoured to storm the citadel in a night attack; Schulemburgh made a counter-sally with 2,000 resolute men, and surprised the Turks in the rear, upon which they fled in dismay, leaving 4,000 dead in the trenches. Among the slain was Mouchtar Bey, the grandsire of the celebrated Ali Pasha of Yanina, who played such an important part in the subsequent history of Greece. Mouchtar fell just as he had scaled the ramparts, and his sword was preserved in the armoury at Corfu until its occupation by the French. After repeated contests the Turks raised the siege, having lost 15,000 men, fifty-six pieces of cannon, several mortars, all the camp equipage, provisions, and the greater part of their baggage. The loss of the Venetians and Corfuites amounted

* Gibbon, vol. xi., pp. 247—253.

to 3,000. Pisani and Cornari pursued the Turkish fleet, captured several vessels, took possession of Butrinto, stormed Santa Maura, and put the whole of the Ottoman garrison to the sword. The Sultan was so exasperated at the result, that Admiral Cogia and the seraskier commanding the land forces suffered instant decapitation, by order of the fierce despot, in the very audience hall of Constantinople. The Turks made several other attacks on the island, as did also the Genoese; but the Venetians, aided by troops and funds from Austria, maintained their position for nearly 400 years.

The fall of Venice was the prelude to the transfer of Corfu to the French republic, the representatives of which took possession of the island in 1797, but were expelled by the Russian forces on the breaking out of the war in 1798-'99, when Turkey and Russia became its joint protectors. In 1807, hostilities between Russia and Turkey gave Ali, the Pasha of Yanina, a pretext for seizing on the continental towns then belonging to the Ionian republic; and by cutting off the supplies, deprived Corfu of the means of resisting General Berthier, who, with a French force of 17,000 men, arrived there and took possession, with the connivance of Alexander. Berthier was shortly afterwards relieved by General Donzelot, who remained at Corfu until the arrival of the British in 1814, when the island made a conditional surrender.

On the evacuation of the French, Sir James Campbell assumed the civil and military command of the Ionian States. General Campbell resigned the command to Sir Thomas Maitland, the governor of Malta, who, in 1817, proclaimed the constitution, in virtue of which the Ionian Islands are now governed by a lord high commissioner (representing the protecting sovereign), a senate, consisting of ten members (styled "the most illustrious"), with a president ("his highness"), and a legislative assembly ("the most noble"), composed of deputies from the different islands;—Corfu sending seven; Cephalonia, eight; Zante, seven; Santa Maura, four; Cerigo, one; and Paxo, one.

Geography, Area, Physical Aspect, Mountains, &c.—Corfu stretches from north to south in the form of a semicircle. On the north and west it is bounded by the Mediterranean, and on the north and east by the channel which separates it from Albania, or the ancient Epirus. This channel, which runs nearly south-east and north-west, is about twenty-one geographical miles in length; the narrowest or northerly mouth, at Cape Karagol, is not two miles across; the southerly entrance, between Cape Bianco and Gomenizza, is about seven miles broad; and the widest part, in the neighbourhood of the town of Corfu, does not much exceed ten miles in breadth. The soundings, in the deepest water, vary from forty to fifty fathoms.

The length of the island is about thirty-five geographical miles; the breadth, at the north-eastern extremity, about twelve; from thence it gradually lessens to its southerly termination, Cape Bianco.*

Corfu is divided into four bailiwicks, or districts:—*Oros*, a mountainous district, on the north-west, comprises Cassopo (the ancient Cassiope), formerly famed for a temple of Jupiter. *Agiru*, a beautiful tract, of remarkable fertility, situated between the western and southern parts of the island. *Mezzo*, or the midland district, contains the city of Corfu. *Lefchimo*, to the south-east, is so called from the ancient Cape Leucimna, now Cape Bianco.

*The aspect* is decidedly mountainous, particularly towards the Mediterranean, the part opposite the Albanian coast being less elevated, and presenting hilly slopes. A chain of mountains runs throughout the whole length of the island from north to south, the highest point of which is Santa Dacca, estimated as rising 2,000 feet above the sea; another range extends in an east and west direction, appearing like a termination of the Albanian or Acroceraunian range, subterraneously continued from Corfu to the mainland. The chief summit of this cross-chain, now called St. Salvador, or Παντοκρατωρ, the *Phœacia*, according to some, or, as others think, the *Istone* of antiquity, is supposed to be from 2,800 to 3,000, or even 3,500 feet: the view from its summit is magnificent, and comprises the bold Acroceraunian mountains, and even those of Macedonia; the Adriatic sea to the northward, and the Mediterranean to the southward: in clear weather the continent of Italy itself is visible. The cross-chain is of a rugged character, with many minor collateral offsets in a north and north-west direction. Viewed from the shore, or from a

* These measurements are derived from those of the French engineers, as given by Baron Theotoki, and by Dr. Hennen, in the work to which I have referred when describing Malta.

vessel in mid-channel, the mountains appear to form a boundary, like an amphitheatre, round that part of the bay where Corfu city is built; while on the north-west the shore rises abruptly, here and there dotted with olive groves, and straggling, wild-looking villages. On the opposite side, the snow-capped mountains of Albania stand, with the ancient *Buthrotum* at their feet, in towering magnificence; the combination of forest, sea, lake, and mountain, presenting one of those splendid panoramas on which the eye loves to dwell, and reminding the spectator of the voyage of Æneas—

> "Protinus aërias Phæacum abscondimus arces,
> Litoraque Epiri legimus, portuque subimus
> Chaonio, et celsam Buthroti ascendimus urbem."
> *Æneid*, lib. iii., 291.

There are three islands in the harbour of Corfu, extending, in a horse-shoe shape, from the promontory of Cape Mandrachi to Cape Karagol: between these capes, by which an excellent roadstead for shipping is formed, lies Vido (the *Ptychia* of the ancients), the largest of these isles,—two-and-a-half miles in circumference, and one mile distant from the town; it is protected by five forts, and British troops. Candilonipos is a mere rock, within cannon-shot of Vido. St. Demetrius, or Quarantine Island, is about two miles east of Vido, and one-and-a-half from the mouth of the Govino harbour or bay, which has a narrow entrance, protected by a battery, and is defended on all sides from the wind by mountains and hills. Govino Bay is the chief naval station of the islands. To the north-east of Cape Sidero lies a small islet or rather rock, named Fano, the fabled residence of Calypso, the enchantress. After passing Cape Sidero, the coast-line winds for twenty miles until it forms St. Angelo. Beyond this cape are some fortified rocks called *Smadrachi*. The shore continues unmarked by any remarkable point as far as Gardiki, and thence on to Cape Bianco (the southernmost point of Corfu), a conical cliff rising from the sea, known by the name of Lefchimo, from λευχείμων, signifying whiteness.

The city of Corfu, which the inhabitants say was founded by Æneas as a rival to the ancient Phæacia, is built on an irregular promontory, sloping to the north-west, which juts out nearly from the central portion of the eastern shore; the promontory resembles a triangle, the base being united to the island, and the apex directed towards Albania, with a semicircular bay on either side.

The citadel, or old fort, is built at the very extremity of the triangle. It is remarkable for two rocky eminences (the "*aërias arces*" of Virgil), which add greatly to the natural beauty of the scene. The triangular promontory was by nature peninsular, but has been completely separated from the mainland by a military work or ditch, about 150 yards in length, eighty in breadth, and forty in depth. The sea enters freely at the northern mouth of this ditch; but at the southern end stands a wall of separation. The communication with the esplanade is by a drawbridge. Within the citadel, whose circumference is 180 yards, are the old palace, an armoury (now used as an English chapel and school), barracks, artillery stores, an hospital, several houses (formerly private property, but now chiefly occupied by officers connected with the government or the army), and one or two churches of the Greek communion. No regular plan is observable in these buildings, except the barracks and the palace; all the others have been placed hap-hazard, or where a level surface presented itself for a site. The palace, immediately opposite the drawbridge, has some architectural pretensions. The barracks are on the northern face of the citadel.

The esplanade commences at the ditch which insulates the citadel, and extends about 450 yards in length from shore to shore, sloping very gradually from south to north: breadth, from east to west, about 180 yards. It is perfectly free from buildings on the southern side; on the northern are situated the new palace and the old hospital. One small Greek church projects somewhat beyond the line of the houses of the town, and is the only solid building that can be said at all to encroach on it. This open space forms the parade for the troops, and has been much improved by levelling and ornamental planting, and by the erection of an elegant fountain over a tank, towards the southern extremity. The position is singularly picturesque: looking from the town, the citadel stands in front; the mountains of Albania form a stately background; and the sea closes in on either hand. A carriage-drive has been formed, and the parade has become a place of common resort for the inhabitants and the garrison, for their walks and rides.

The circumference of the town, exclusive of the esplanade, is 2,800 yards; it is separated from the rest of the island by a strong

double circumvallation, which bounds it to the westward.

The "new fort," built at the latter end of the 16th century, is overlooked by Mount Abraham, a hill at a small distance from the walls. Towards the land side, chains of outworks and forts extend from the city to Lake Calachiopulo: in addition to, and beyond these, the French constructed strong lines, defended by bastions and redoubts, at intervals with a deep wet ditch stretching from the suburb of Castrades almost across the isthmus; in the erection of which the French lost 500 men from sickness. The works are very strong, are mined, and amply provided with the various munitions necessary for defence; but, from their great extent, 10,000 soldiers would be required to man them.

Corfu city, especially on its flanks, is quite a labyrinth. In the centre, or nearly opposite the entrance to the citadel, stands a range of tolerably good-looking houses, with piazzas, having an eastern aspect; from behind these, two or three principal streets, and as many of a secondary character, run from east to west, and are irregularly crossed by streets and lanes—narrow, straggling, and following no precise direction, being built, apparently, as the nature of the ground dictated. In these irregular passages, the gables of some of the houses and the fronts of others are intermixed; several are approached by steps, which are either of ordinary construction, or formed by ledges of the rock, converted into rude stairs. Anciently, outside staircases projected from almost all the houses; but these incumbrances have now been removed from the more frequented streets. Some superior dwellings are scattered through the town, and on the rampart facing the harbour; but the general habitations are of a very or-di nary character, consisting of two or three stories, each containing a large hall and a few apartments leading off from it.*

The number of religious edifices is very considerable; but the metropolitan church of the Greeks possesses (in their estimation) a great treasure, viz., the body of St. Spiridion, patron of the island, whose flesh, it is said, yields to the touch, though he has been dead many hundred years. The Corfiots aver that the Venetians made several attempts to carry off the body; and various strange legends are told respecting the supernatural manner in which this nefarious design was frustrated. The interior of the church is decorated with chandeliers, lamps, candelabras, &c., of pure gold and silver, chiefly the offerings of the worshippers. The senate-house is a plain, square building, in which the courts of law are held. The palace of St. Michael and St. George, occupying one side of the esplanade, along which its front extends, is built of Malta stone, and ornamented with a fluted Doric colonnade. On the west side a line of uniformly built houses, arched and pilastered, form with the palace nearly a parallelogram, two sides of which are closed and the other open, with grounds tastefully laid out in the centre. The theatre was originally intended for an exchange, and, with the other public buildings, requires no especial notice.

* Hennen, p. 173.

*Rivers.*—Strictly speaking, there are none; but throughout the whole island many streams run amid marshy valleys.

*Fountains.*—The two most classical and most copious, called the "Fountains of Cressida," are supposed to be close to the spot described by Homer as the scene of the famous interview between Nausicaa and Ulysses.

*Lakes and Marshes*, of fresh water, are found in all directions in the environs of the harbour, and amid the valleys of the more distant hills.

*Salt-water Lakes.*—The principal, at Govino, formed the old Venetian harbour, which is screened by surrounding hills from almost every wind, and situated about five miles to the north-west of the citadel; but sand and mud are rapidly accumulating within its basin, and a number of marshy spots are found along its banks: the entrance always narrow, is becoming yearly more circumscribed, and large ships are already excluded thence. In 1799, when the Ionian republic was under Russian and Ottoman protection, a squadron belonging to the two nations anchored there: yet in February, 1822, Dr. Hennen, while surveying in a small pleasure yacht of less than fifty tons burthen, frequently came in close contact with the mud. It is from three to four miles in circumference, exclusive of the marshy banks. The Venetians had their docks here, and the ditches, with other traces of these works, are still to be seen. Lake Calachiopulo, not more than a mile in a direct line from the works, estimated at from three to four miles in circuit, is celebrated by Homer as the harbour of the ancient Phæacians, and the little island at

its entrance represents the ship which, on its return from Ithaca, after having conveyed Ulysses thither, was turned into a rock. On its banks were situated the garden of Alcinous—according to the poet's tale.

*Canals* there are none: but a work which was cut by the French with the view of strengthening their position in the town of Corfu, by forming a fortified communication from the Lake of Calachiopulo to the Bay of Castrades, has been ranked under this head. This undertaking was commenced some time in 1810; but when the French evacuated the island, on the 14th of July, 1814, it was not half finished, although fatigue parties of 2,000 men daily, furnished by an army upwards of 10,000 in number, had been at work on it for a considerable time. This ditch is cut with salient and re-entering angles, &c., after the manner of a regular fortified line, along the bottom of the promontory of Monte Ascensione, the eastern boundary of Calachiopulo; it communicated with the lake, but not so efficiently as to allow of a free flow of the waters: at present the communication is nearly cut off, especially in summer. The French did not remain long enough to connect the channel with the sea at Castrades. The whole extent of the ditch, as it was left by them, beginning from Castrades, at the distance of 375 English yards from the sea-side, and following it along its whole line to the end behind Fort St. Salvador, was 996 French toises of nine feet each. Its breadth, at present, varies from twenty-eight to sixty English feet; in some of the intermediate points it is twenty-four feet broad; in others, 45½ feet. The depth of water varies from three to nine English feet. In consequence of the indisputable unhealthiness of these ditches, the government, in 1819, caused nearly the whole of that branch which extended from the back of St. Salvador to its communication with Calachiopulo (or 456 French toises) to be filled up—a work which lasted forty days, and employed 234 peasants.

Geology and Soil.—The mountains of Corfu are chiefly composed of a compact limestone, destitute of any organic remains, but with occasional strata of flint, precisely similar to the Albanian mountains. In some places carbonate of lime alternates with strata of vegetable earth; and is often found tinged with oxyde of iron, and presenting, when fractured, beautiful arborescences. Fibrous, crystallized, and granular gypsum abounds, principally disseminated in argillaceous deposits; breccia in immense masses, either purely calcareous, or with a mixture of silex, is frequently observable; in some spots carbonate of lime is mixed with nodules of sulphur, or with coarse jasper: and Dr. Benza, in one spot, found the rare mineral dolomite. There is a quarry of white marble under the western peak of St. Salvador, of a very fine grain, and well adapted for statuary; and variegated marble is found in small masses widely scattered. The substance known on the continent as Corfu alabaster, is a fine gypsum. The lesser hills have an argillaceous soil, mixed with lime: the substratum to all the low and cultivated lands in the island, is principally a stiff tenacious clay, very retentive of moisture, and extremely fertile.

The island is not apparently of volcanic production, but would appear to have been separated from the mainland by some violent convulsion of nature. Earthquakes, however, are not uncommon, and are supposed to originate in the island itself, and to bear no relation to shocks in neighbouring localities; they generally run from north-west to south-east, and are slight; but in 1745, one shock was so severe as to destroy the palace, bishop's house, and many other buildings. In May, 1819, a severe shock in the interior of the island stopped a copious spring. The great earthquake which, a few years since, made such dreadful havoc in Santa Maura and Zante, was not felt at Corfu.

Climate.—Nearly tropical; but the physical sensations are influenced more by the winds than by the alternations of the mercury in the thermometer. On an average of four years, the thermometer ranged from 44° to 91°; the general annual average of rainy days for the four years being 96¾. It appears that there is not a month in the year in which rain does not fall for a greater or less number of days; but November and December, February and March, are the most rainy. Snow is seldom seen, but sometimes the summit of St. Salvador is covered with scattered patches, which remain for ten or twelve days. On the Albanian mountains the snow falls generally about the end of November,* and continues till May.

Botta† asserts, that in his time the maxi-

* I saw them capped with snow at the close of October, 1845.

† *Storia Naturale e Medica dell' Isola di Corfu*; Milano Anno vii., 12mo.

mum of heat of different years did not vary more than 3° or 4°, but that the minimum of cold often varied 6°, 8°, or 10°. Mr. Starkie's tables contradict this. In four years the lowest degree of cold ranged from 45°, 46°, 46°, 44°,—only 2° difference; while the highest degrees of heat were, for the same four years, 89°, 90°, 91°, 85°,—or 5° of difference.

*Winds.*—It is difficult in Corfu to ascertain the quarter whence the wind blows; on inquiring of a sailor, the answer will be—"I cannot say what it is outside." When a cloud rises from St. Salvador summit, it is generally succeeded by a north-west wind, scattering the fogs and vapours, as described by Homer:—

> "The low-hung vapours, motionless and still,
> Rest on the summit of the shaded hill;
> Till the mass scatters as the winds arise,
> Dispersed and broken through the ruffled skies."
> *Iliad*, 5th Book.

Dr. Hennen thinks that the peculiar winds of Corfu depend upon the local situation of the island. The usual remark of the Corfiots is, that their country forms one side of a funnel, very narrow and winding at the mouth, dilated in the middle, and again contracted at the extremity. Two somewhat transverse funnels lie at the extremities of the longitudinal one, formed by the channel which divides Corfu from the mainland of Greece. The first and largest of these is that extremity of the Adriatic which extends from Durazzo to the Straits of Otranto, and lies to the northward; violent eddies and irregular blasts sweep along the coast of this great inland sea. The second is formed by the more distant gulfs of Arta and Prevesa,* which lie to the southward. An easterly breeze commences in them daily, soon after sunrise, and continues till near noon. At about three in the afternoon a westerly wind sets in, lasting until nightfall; and so regular is this alternation, that it requires a strong gale in the Mediterranean to interrupt it: the current also follows these successive changes; and the joint effects are sensibly felt even to the westward of Paxo, and far beyond the southern extremity of Corfu. The eastern boundary of the channel or canal of Corfu is formed of lofty and precipitous mountains, covered for more than half the year with snow; and the breaks and gullies give a direction to the winds corresponding to that particular point upon which they strike. This, of course, varies with the angle of incidence; and the effect is uniform only in one particular, viz., the cold communicated by the snow to the passing column of air.

The result of these diverse inflections of the wind is, that vessels may frequently be seen steering different courses in the channel, with the breeze "right aft" for each. Thus it often happens that a ship is coming through the north channel, and another through the south, both before the wind, while in mid-channel a perfect calm may prevail, or, what is more probable, the wind may be veering rapidly to all points of the compass. These currents do not appear to extend to any great height, for the shipping is often affected by the breeze, while the flag at the citadel, about 120 feet above the level of the sea, lies motionless on the flagstaff.

The most frequent winter and autumnal winds in the town of Corfu, are these from the E., E.S.E., S., and S.E. In spring and summer they come chiefly from the N., N.N.E., N.E, and E.N.E. They are rarely violent for more than three or four days; but often continue in the same point for a longer period: those from a northward direction, which come sweeping over the mountains of Epirus, are cold; but all from the southward are oppressively hot, accompanied with mist and rain. The hazy and humid south-east wind, called the Sirocco, as felt at Corfu, is not to be compared in intensity and injurious effect to that experienced in Sicily.

Fevers, especially of the remittent and intermittent types, are of frequent occurrence, and form nearly two-fifths of the total admissions into the hospitals. Dysentery and diarrhœa are also of frequent occurrence. Phthisis and pulmonic inflammations are alleged alike in Malta, Gibraltar, and Minorca, to bear a proportion of one to two-and-a-half to all the other fatal complaints. The plague has several times appeared; and of twenty-eight cases treated in 1816, only three recovered. The process of parturition is extremely easy; twins are common, and triplets not rare. In December, 1807, a Jewess brought forth five children at the seventh month, three of them alive. In point of longevity, the Corfiots are on a par with the other natives of

* The Gulf of Prevesa is the name given to that portion of the ocean which lies between Santa Maura and Paxo.

southern Europe, and many old people are to be seen among them. Within the last fifty years, thirty-five males and thirty-six females died upwards of ninety, and five males and three females at upwards of 100; one of them 116. Deformity is a rare occurrence among the Corfiots, and monstrosity still more so. In one or two families children have been born with six fingers, and this had continued for four generations. Goitrous persons and cretins are unknown.

Vegetable Kingdom.—The olive is the principal production of Corfu, yielding in favourable years nearly 10,000,000 gallons of oil. The small grape, from which the well-known dried currants are prepared, is next in importance; flax is raised in considerable quantities; but of corn, not more than suffices for four or five months' consumption is grown in the island. Various woods are found in the mountains, but none of them adapted for ship-building; yet the list includes several sorts of oak, in particular the Balania, or Valonia (*Quercus Ægilops*), the acorn of which affords a useful dye-stuff. Cyprus and palm-trees are common, and the plains are in many places covered with the *cactus indicus, agnus castus, salvia pomifera,* myrtle and other odoriferous plants; potatoes and various vegetables are excellent; as are also numerous fruits, including the fig, orange, citron, pomegranate, melon, apricot, peach, plum, pear, apple, &c. Several medicinal plants flourish, such as the *colchicum, hyosciamus, momordica, elaterium, scilla maritima, ricinus, smilax aspera,* &c.

Animal Kingdom.—There are no animals peculiar to the island, and, owing to the scarcity of pasture, few cattle are maintained. It is a curious fact that dogs are reared with difficulty: hares and rabbits are met with, but deer and other large game are unknown. Birds of prey (*accipitres*) are rare in Corfu. Vultures, hawks, and owls, are occasionally seen. Of the orders *pici, coraces,* and *passeres*, the variety to be met with (particularly of the latter) is very great; and they are almost indiscriminately used for food by the Corfiots. Among the *gallinæ*, the domestic fowls are good and plentiful; but the turkey is principally imported from Albania and the Morea. Pigeons, both tame and wild, of different species, are found in vast numbers. Partridges, both of the common and red-legged kind, are plentiful. The *tetrao coturnix* (or quail, a migratory bird) is, in the season, very abundant, as are also most of the migratory birds of Europe.

Among the *grallæ*, storks and herons are occasionally met with; but the *scolopax rusticola,* or woodcock, is found in the greatest profusion; many, also, are imported from Albania. Snipe, red-shank, plover, and other species of scolopax, are also abundant. Of the *anseres,* or water-fowl, the supply is immense, including many species of the anas or duck tribe, as wild duck, widgeon, teal, &c.

In the markets of Corfu may be observed a variety of fish, the principal of which are as follows:—Among the cartilaginous fishes, various species of the genus *raia,* especially skate, and varieties of the genus *squalus,* especially dog-fish. The beautiful *pegasus draconis* (or sea-horse) is often found. Of the *acipenseres,* the sturgeon is occasionally seen. Of the *apodes,* eels and sword-fish: of *jugulares,* the star-gazer (*uranoscopus*), the weever (*trachinus draco*), the blenny, the whiting, and the pollack, are the most common: of *thoracici,* the *echeneis remora,* or sucking-fish, is very common; and, though rejected even by the shark, is eaten by the lower orders of the Corfiots. The john dory, the plaice, the sole, various species of the sparus, or gilt-head, the perch, the pilot-fish, the mackerel, the bonito, the dolphin, miller's thumb, the little sea scorpion, and the mullet of the Romans (*mullus barbatus*), are found: and of the *abdominales,* the anchovy, the trout, pike, tench, and the roach. The river fish are imported from Albania. The most noted fish of Corfu is the *mugil cephalus,* or grey mullet. It is caught in great quantities in the Lake of Calachiopulo, and called *chefali,* probably from the great size of its head. It is a delicious fish, and from its roe, mixed with that of another species caught in Bucintro, the Corfiots prepare their *botargo:* they first salt the roes, then smoke, and preserve them in oil.

Of *mollusca,* the star-fish, cuttle-fish, and echinus, are very abundant. Many of this class are dried, and form a common article of food; they are glutinous if well dressed, but otherwise tough and leathery. Of *crustacea,* the crab, craw-fish, and shrimp, are plentiful; and the lobster is frequently met with. Of *testacea,* the razor-fish, pinna, oyster, mussel, and scalop, are abundant; and in Calachiopulo, the cockle is found in vast quantities, and of excellent

quality. Of the *cetaceous* tribe, the *delphinus phocæna*, or porpoise, and the *delphinus delphis*, or dolphin, of the ancients, are very common.

Many, if not most of the fish exposed for sale in Corfu, come from the coast of Albania. The Corfiots assert that, since the last siege, the fish have been frightened away from their shores.

The principal fisheries are Calachiopulo, Govino, and the neighbourhood of Gerovolio and Bucintro. The means employed are nets, the line, and occasionally an intoxicating substance called "Splono." The basis of this is *verbascum*, a plant which in England is commonly looked upon as merely mucilaginous, but viewed by Haller and Linnæus as an anodyne. Some species of *euphorbium* are used for a similar purpose. Dr. Hennen says that, when striving to catch *polypi*, *echinides*, and cuttle-fish, the fishermen throw a few drops of oil on the surface of the water, which having thus rendered calm, they drop the bait and speedily secure their prey. Mordo speaks of a fish caught in a valley near Corissia, which, though of a very delicate flavour, is unwholesome. Coral is found in small quantities near Cape Sidero and Cape Bianco: it was formerly an object of commerce. Corallina is also found upon the coast of Corfu; and sponge and many other zoophytes abound.

Venomous reptiles are either unknown or very scarce. Among the harmless kinds, are the land tortoise, the frog, common lizard, and the well-known *coluber beres*, or adder. Corfu is infested with insects; including the tick, by whose ravages so many museums have been destroyed; *chrysomela*, of various species; *lampyris*, or glow-worm; *blatta*, or cockroach; *mantis*; *meloe*; a great variety of *papiliones*; the *gryllus*, *cicada*, *tipula*, &c., &c. The beautiful moth *phalæna junonia*, is occasionally seen, as also the *lepisma*, the *scolopendra*, and the *scorpio europæus*, whose bite, however, is not poisonous.

POPULATION.—Corfu being the capital of the seven isles, I proceed to show in this place the entire population; reserving, however, details regarding each island.

*Population of the Ionian Islands from* 1824 *to* 1854.

| Years. | Population. | | Total. | Persons employed in | | | Births. | Marriages. | Deaths. |
|---|---|---|---|---|---|---|---|---|---|
| | Males. | Females. | | Agriculture. | Manufacture. | Commerce. | | | |
| 1824 | — | — | 175,902 | — | — | — | — | — | — |
| 1827 | — | — | 180,301 | — | — | — | — | — | — |
| 1828 | 104,625 | 90,698 | 195,323 | 40,783 | 9,508 | 4,804 | 6,159 | 1,196 | 5,332 |

| Paxo . . . . . . . | 26 | 2,729 | 2,396 | 45 | 200 | 126 | 120 |
| Total . . . | 1,041 | 123,436 | 105,727 | 12,330 | 220 | 5,843 | 5,363 |

In 1802, the population of Corfu was 42,926; in 1832, 59,839; in 1854, 70,532.

The Ionians retain the physical contour of their Grecian ancestors. The upper and front parts of the skull are well developed; the features pleasing and intelligent. The complexion, in healthy persons, inclines towards olive; that of the higher class of the females, who are not exposed to the sun, and lead a secluded life, is often clear and white. That of the peasantry is, of course, much affected by the sun. Those who reside in the Lefchimo district in particular, and in the neighbourhood of marshes, generally have a sickly leuco-phlegmatic cast. The eyes are brilliant

and full in both sexes, and mostly dark-coloured; the teeth good; the hair usually brown or black, and bushy in the men; the beard copious; the figure of the middle height, sometimes beyond it, and indicative of activity if not of strength. The constitution is often of a sanguine and choleric cast; the gestures vivacious; the gait erect and elastic, and the enunciation voluble and emphatic.* The females are, in general, well formed, many of them are handsome; but their beauty soon decays.

The Corfiots are abstemious in all matters relating to diet, with the one exception of the universally immoderate use of tobacco. Dancing is a favourite amusement, and their national figure is supposed to be the same with the ancient Pyrrhic dance: a circle is formed by men and women joining handkerchiefs; it opens, and the leading person goes through numerous evolutions in forming and re-forming the circle; sometimes completely; again only to half its extent; very often the leader passes through the middle of the waving line, under the uplifted hands of his associates, and is followed by the whole train: after a variety of movements which seem entirely arbitrary, the chief actor is succeeded by another, who in return alone directs the entire assemblage. There is another dance, principally executed by men, in which they form circular and other figures, and use considerable muscular exertion, leaping from the ground and stamping upon it with great energy.

The open air is the usual scene of these performances. Theatrical amusements, singing, music, and village *fêtes*, are all popular among the Corfiots. Their instruments are the fife, lute, guitar, violin, and drum. Amongst the most interesting diversion of the Corfiots, is the "*chiostra publica*." This is in imitation of the former knightly custom of tilting in the ring. The *chiostra* generally takes place in the summer. A long course of strong wood-work is erected on the esplanade; about two-thirds of the way a string is drawn across on the tops of two elevated posts, and from it is suspended the ring; the latter is divided into a certain number of circles, and the candidate who hits nearest and fairest in the inner one, wins the prize, which is sometimes a sword of considerable value. Seats are erected on each side the course for the accommodation of the spectators. The judges take their places in front of the ring. The principal people usually assemble, together with a vast concourse of the lower orders. The "*preux chevaliers*" who engage in the affair are gaily dressed, mounted on richly caparisoned steeds, attended by squires, and armed with lances above six feet long, terminating in a sharp steel point.†

The Ionians waste much time in a state of listless idleness, for which the numerous festivals of their church afford them ample opportunity; and Cicero's remark on the "*summum Græcorum otium*" of their ancestors, is applicable to these modern Greeks. Unfortunately, it is not only a too strong appreciation of the "*dolce far niente*" which travellers have accused the Ionians of inheriting. The proverbial *Græcæ mendax* is likewise laid to their charge, together with litigation, love of intrigue, revenge, inordinate vanity, and a long train of vices and defects.‡

That they are sunken and debased, is too true; but it should be remembered that so are every people who have been long subject to the demoralising influence of despotism, priestly and political, by which every noble faculty has been kept down, and a fearful impulse given to the host of evil passions which infest the unregenerate heart of man. From one of these crushing chains the Ionians are free; and, as education spreads, we may reasonably hope that the glorious liberty of the Gospel may banish the gross superstitions of the Greek church, and enable its members to regain the lofty posi-

* Hennen.

† Kendrick.

‡ Dr. Hennen gives a very melancholy picture of Ionia. The clergy, he says, are taken from the scum of the population, and are, with few exceptions, illiterate, superstitious, and immoral. The nobles are without honour, the merchants without integrity, and the peasantry ignorant and degraded to the most abject degree. This lamentable decadence is described as being peculiar to no class of society, but as pervading all ranks, from the palace (and every house of more than ordinary size is called a palace) to the cottage. That the Greek character, in general, has been greatly debased by their long endurance of Turkish and Venetian tyranny, as exerted on the continent and in the islands, is agreed on all sides, and is consonant with what the history of man has in every age presented to our view; but one of the principal causes is to be found in the depravity and ignorance of their clergy. Many of these persons can barely read their breviary: few, if any, acts of private atrocity, or rebellion, have occurred in the islands, which have not been planned and in part executed by the priests; and, according to Dr. Hennen, the very gangs of robbers or pirates have their regular chaplain.

tion they once held, and, by the blessing of God, may yet regain.

So long as the Ionians remained under the Neapolitan rule, little or no improvement could be expected; and the ascendancy of the lion of St. Mark wrought, of course, no great change in their moral condition. The criminal guilty of ten murders, was punished with ten years of the galleys; whilst the offence of having once spoken disrespectfully of one high in office, received a similar sentence; hence a powerful incentive was given to great crimes, and the national tendency to obsequious flattery fostered. The Venetian policy was to foment discord in the neighbouring states of the Osmanli, and stipendiary hordes of miscreants were retained for that purpose: the provisions requisite for the garrison of Corfu were purchased from these brigands, and paid for with munitions necessary for carrying on their systematic plunder. Criminals and outlaws of all descriptions found shelter with these marauders; and the fugitives remained in their haunts until they had amassed sufficient wherewith to purchase oblivion, bringing, on their return, the evil habits acquired during years of licentiousness; the worst crimes being consequently committed with impunity, so far as any active interference on the part of the state was concerned. Among the lower classes, education was utterly neglected, and the peasantry were in the most degraded state of ignorance. In the higher and more opulent families, it was customary to send children to the universities of Padua and Venice, where they learned to despise their native language, its practice being forbidden in the law or other courts, and its use held as degrading to any but menials. Commerce was diverted from its legitimate channels, or so trammelled with restrictions as to become subservient to the aggrandisement of Venice alone; thus baffling every prospect of honourable occupation for the Ionians, and forcing those bred to the sea into a life of piracy. Under the dominion of neither France or Russia was the state of Ionia improved; the sway of either power was of so short duration, or they were so much engaged in weightier matters, as to pay little attention to the islands.

With the British a brighter period commenced;—improvements rapidly advanced; and it is only just to state that moral reform has kept pace with external progress. Nothing tended more to ameliorate the state of the islands than the disarming of the population. Prior to this act, a dagger and pistols formed part of the national costume; hence, on the slightest excitement, these were put in requisition, and assassination, with its train of attendant miseries, followed. On the promulgation of any edict inimical, or supposed to be inimical, to the inhabitants of a district, the people assembled, set the civil force at defiance, and frequently required large bodies of military to restore order; happily, their disarment put an end to scenes of the kind, and deeds of violence are not now more frequent than in other countries.

In many points of character, the Ionian differs materially from the continental Greek;—he is quick to devise, prompt in execution, and surprisingly intelligent. He has more enterprise, but is less scrupulous in the means he employs, than the Moreot; —in religious matters he has as much bigotry, and more bombast in relating his actions. That most efficient Grecian weapon, the tongue, is ever ready; but the refinement of the Asiatic or Fanariote Greek is wanting. No people are more patient under privation; hunger, thirst, heat, and cold, they endure with undaunted resolution. A morsel of black bread, a few olives, an onion, and his capote,—thus fed and sheltered, the Ionian, supported by climate and constitution, is contented and happy.

The Corfiot gentleman is stigmatised as "subtle and adroit, cloaking his evil qualities under the mask of courtesy."* At the period of these remarks there was doubtless much truth in them: the islanders had in a very short space been subjected to so many rulers, that on Great Britain assuming the supremacy, the better class of Greeks hardly knew what course to pursue; and even now, there is a strong inclination to inflated compliments, sometimes approaching to servility. Those vices at which human nature revolts, are at the present day held in just abhorrence and detestation; and examples are not wanting in the higher classes of individuals whose conduct would do honour to any age or country, by the practice of the virtues which grace society, and the self-denying promotion of measures calculated to increase the welfare of their countrymen.

From the long dominion of the Venetians, society altogether took its tone from

* Goodison's *Ionian Islands*.

that people; and many of their old customs are still retained. Formerly the females of rank were closely secluded, rarely or never mingling with the males. Their accomplishments seldom extended beyond an acquaintance with the mysteries of the tambour-frame. At times a soft dark eye might be seen peering from the corner of a jalousie, or verandah—and nothing more. At present the Ionian ladies participate freely in all public amusements, such as balls, *fêtes,* and entertainments, which at Corfu are very frequent during the winter months; English and Greeks mingling together in their enjoyments with all the refinement and ease common to the most polished assemblies, the variety of costume and language giving these meetings a charm rarely found in similar *réunions* in other countries. The reputation of the fair Ionians formerly stood on no very high ground as regarded chastity; and it is to be lamented that frequency of divorce still forms a strong feature in the social state of affairs.

With the Russians, although of the same religion, there was little reciprocity of feeling, and still less with the French; and on Great Britain becoming the protecting power, the islanders mixed little with them, their meetings being confined to visits of ceremony. The present good understanding which animates all parties, is mainly attributable to the hospitality of the several presidents of the senate, first commenced by Baron Theotoki, whose presidency gave a striking example of refined and elegant hospitality.

The dress of the Corfiots has greatly changed of late years, that is, as far as the higher orders are concerned, the English and French fashions being adopted by them; but the peasantry have made no alteration in their ancient dress. A wide capote of thick felt (the principal material of which is goats' hair) forms their chief winter garment; exchanged in summer for a coarse shaggy woollen cloth, with an additional article of the same material to ward off rain or unusual cold. The capote is very rarely taken off; the under dress is a woollen vest, large breeches of coarse cotton, called *thoraké,* with cloth leggings, and a coarse sandal of undressed hide, secured by thongs, or a shoe of half-dressed leather scarcely less rude. This is the national dress of the aboriginal peasantry; but the settlers, whether Albanians, Moreots, or others, retain traces of their native costume, as the red skull-cap, the turban, &c., &c. A girdle, or zone, of silk or cotton, is almost invariably worn round the waist by both sexes. The better classes wear very picturesque attire, composed of a double-breasted vest, usually made of blue or maroon-coloured velvet, with a double row of hanging gold or silver buttons, descending from the shoulder to the waist, generally bordered with broad gold lace, and fastened with a sash of coloured silk; Cossack trowsers, cut short at the knee, or the white Albanian kilt or petticoat; white stockings and buckled shoes complete the dress. The hair floats loosely on the shoulders of the men; the women wear it plaited, and hanging down to the heels, the head being covered with a gay kerchief.

The fair sex seem to delight in loading themselves with as much clothing of coarse cotton, silk, or brocade, as they can procure; and are passionately fond of every species of ornament, especially necklaces, ear-rings, and girdle buckles. The vests are made like those of the men, of rich velvet ornamented with gold lace, and flowing open; beneath is worn a beautiful cestus, or girdle, fastened in front by a clasp of gold or silver, and highly wrought. The petticoats are of pink or blue, richly bordered and spangled; the costume fitting closely to the waist all round: high-heeled shoes, with very large silver buckles, complete the attire. Many of them tinge the nails and tips of the fingers of a pink colour, and the practice of inserting powdered antimony along the edges of the eyelids is very common, especially among such as come from the islands of the Archipelago. This application gives a certain degree of brilliancy to the eyes; but the dark, lustrous, almond-shaped orbs of a Greek require but little aid from art, and fully justify the term of "ox-eyed," so frequently applied to them. Cosmetics and perfumes are much used.

Mats are spread on the floors of the poorest cottagers; but, generally speaking, in the towns, and in the better order of houses in the villages, there is to be found a good bed, stuffed with wool, hair, or straw, and placed either on a regular bedstead, or on boards and tressels. In lieu of blankets, a counterpane, thickly quilted and stuffed with wool, forms a common and comfortable substitute. The Greek females pride themselves on the elegance of their beds, which are covered with silk and embroidered counterpanes, and adorned with orna-

mental pillows, in proportion to the fortune and luxurious habits of the owner. The generality of the middle, and the whole of the lower order of people, sleep in their ordinary clothes, and rarely change their personal or bed linen oftener than once a month. A few chairs, tables, and chests of drawers, of an ordinary description, a copper cooking kettle, with some earthen pots and pans of a very coarse kind, complete their furniture.

Religion.—The Greek church is the predominant faith of the islanders, the followers of the Latin or Roman creed being few—probably not exceeding 3,000: of Jews there are about 5,000 in the island, who are, unfortunately, hated by all the Corfiots. The Roman church was introduced into the island by the Venetians, and at first was only a bishopric; but Pope Gregory, in 1600, elevated the see to an archbishopric; the chief being generally a noble Venetian, chosen by the senate, and installed by the pope. The cathedral has a chapter composed of six canons, who elect a grand vicar. The clergy of the Latin church were heretofore paid by government stipends, but excepting life interests, this system has, I believe, been discontinued.

The Latin and Greek communion at Corfu have had many quarrels on the score of superiority—the latter claiming the right of precedence, which, indeed, the Venetian government secretly favoured; but Paul III. enjoined his clergy to cease all further quarrels, since which the Greek church has never been subject to any persecutions; and during Passion week the Roman and Greek churches have alternate processions on the esplanade. Idolatrous and full of vain ceremonial as the Latin church appears to protestants, the Greek is tenfold worse; no pagan mythology so abounds in superstitious rites, festivals, and fasts. Each year includes four Lents, and 191 fast days; during some parts of which the use of even fish is proscribed, and bread and vegetables alone permitted.

The Greek church has for its head a protopapa (archpriest), elected by ballot in an assembly of the clergy and nobles, and confirmed by the patriarch at Constantinople. The new protopapa is decorated with his robes in the hall of assembly, and conducted home amidst the ringing of bells and the firing of petareroes. The Corfu functionary is distinguished by the title of grand protopapa, and his authority is equal to that of a bishop. The office lasts five years, at the expiration of which time he returns into the number of ordinary priests or papas. The cathedral has its canons like the Latin church, but no fixed prebend; the honour of being at the head of their church, and the distinction of a violet-coloured girdle, being the only advantage derived from the canonry. Marriages, baptisms, and funerals afford them some remuneration. The expenses of these ceremonies are, generally, eleven livres to the protopapa, and three to each canon, with a wax candle of a pound weight. Excommunications formerly constituted the most lucrative source of priestly revenue. Not long since a Greek purchased with a small sum the excommunication of his neighbour, who speedily retaliated by a similar measure, which rendered null that of his adversary. The same priest performed both acts with equal zeal. These thunderbolts of the Greek church, until neutralised, were very grievous inflictions. The ceremony was performed in the public street, and opposite the house of the unlucky victim, and the success was considered sure, provided the prosecutor had the means of feeing the protopapa himself, to come at the head of his clergy and pronounce the anathema, for the execution of which he proceeded to the spot in a mourning habit, a black wax candle in his hand, preceded by a large crucifix and a black banner; his suite in similarly lugubrious fashion. Imprecations, accompanied with violent gestures, constituted the dreaded anathema; and once pronounced, the luckless victim was excluded from visiting the church, and deprived of the prayers of the faithful—restoration being only procurable by a counter-excommunication. If the sinner had not the means of paying the expense, it often happened that he revenged himself by assassination. Since our government has been established, we have effected a modification of this shameless system, and excommunication can now only take place by the sanction of the archpriest or protopapa. The number of churches is very considerable: the officiating priest is chosen annually by the parishioners. In the country, most of the churches have been built by individuals, who, as proprietors, nominate the papas. The property of the church of St. Spiridion is vested in a private family, who exercise the right of inspecting the account of its revenues. Eight days previous to the festival of St. Spiridion, the doors, windows,

and steeple of the church are ornamented with festoons of laurel and myrtle. On the eve of the festival, the shrine which contains the body of the saint, marvellously well preserved (?), is exposed to the veneration of the people, dressed in pontifical robes, overshadowed by a costly canopy. Then follows a procession, the most offensive features of which have happily of late years been done away with.*

In all public calamities the relics of the saint are exposed with the most infatuated confidence. The church of St. Spiridion enjoys the revenues of some lands which various individuals have bestowed for its support. The superstition of the people still affords a considerable harvest to the island clergy. The mariner and the artisan still hope to further the success of their speculations by sacrificing a part to St. Spiridion; and few boats leave the port without the representatives of the saint having an interest in the profits of the voyage.

The ecclesiastical establishments, in 1854, throughout Ionia, were as follows:—

| Designation. | Churches & Chapels. | Number of Priests. | Amount of Salaries. |
|---|---|---|---|
| Greek:— | | | £ |
| Public | 80 | 860 | 520 |
| Corporate | 872 | | 3,835 |
| Bodies | 1,190 | | 687 |
| Latin | 11 | 27 | 1,000 |
| English | 2 | 3 | 215 |
| Scotch | 1 | 1 | — |
| Total | 2,156 | 891 | 6,257 |

Education and Schools.—At Corfu there is a public university, and an ecclesiastical seminary for the education of young men intended for the priesthood of the Greek church; in each of the islands of the state is a school entitled "secondary," maintained at the public expense, where instruction is imparted in the Greek and Latin classics, in the modern Greek, English, and Italian languages, in arithmetic, and the elements of mathematics. In the chief town of each island is a central school, likewise maintained by government on the mutual instruction plan, for teaching reading, writing, and arithmetic; and in these schools the village masters are trained. Besides these public seminaries, there are in each island district schools on the same plan, where similar instruction is given, the expense being defrayed by the parents of the children. The terms per scholar vary greatly, according to special agreement between the masters and parents, and are frequently paid in kind. Government also contributes to the maintenance of these schools, by furnishing books, slates, benches, &c., and, where no suitable building exists, by providing a school-house. The district and village seminaries are under the immediate superintendence of the head-master of the central school in each island, and there is an inspector-general of them all. The whole educational establishment is under the general direction of a commission for public instruction, revised and improved by Lord Nugent. The number of colleges and schools under government, in 1854, was, in all, twenty-four; with pupils—males, 6,024; females, 611 = 6,635.

*The Press.*—Nothing deserving this title exists in the islands; there is a government newspaper at Corfu, one-half of which is printed in Italian, and the other in the Romaic Greek.

*Libraries.*—A collection of books, originally founded at Messina, in 1810, by British officers, and transferred to Corfu by them, has, since that period, gradually increased into a very respectable library of several thousand volumes, containing many valuable and well-selected books, to which ready access is at all times afforded by means of a moderate entrance-fee, and a small annual or monthly subscription. The medical officers of the garrison have, moreover, a collection of English periodical publications, and standard works. A small collection was made by the Canon Carale, by means of voluntary subscriptions from the nobility, &c. The books were lodged in the Franciscan convent of St. Giustina: to this the Ionian academy added theirs; but on the arrival of the French, the most valuable

* The worship offered at the shrine of the tutelary saint of Corfu is peculiarly revolting to the feelings of all whose faith is grounded on the doctrine of one all-sufficient Atonement offered by one Divine Mediator. It is, however, alleged that English rulers have erred by countenancing proceedings which they should have barely tolerated. Thus the Rev. S. S. Wilson writes—"I have actually seen Sir Frederick Adam, our late governor in the Ionian Isles, walking in procession with some scores of monks, supporting (? honouring) by his presence the bag of bones called St. Spiridion; his entire suite of officers around him, each carrying in his hand an immense lighted taper, while the natives have laid their sick in the path of this singular representative of protestant royalty, to be healed by the passing of the shadow!"—(*Sixteen Years in Malta and Greece.*) Such discreditable scenes are not now thus sanctioned by British authority.

volumes were abstracted by them. Some few remain at the convent.

---

CEPHALONIA, although second in rank to Corfu, is the largest of the islands composing the Septinsular Union. It is situated in 38° 27′ N. lat., and 20° 32′ E. long., having Santa Maura six miles to the northward, Zante eight miles to the southward, and being twenty-four miles from the west coast of the Morea. Its area is 348 square miles; extreme length thirty-two; extreme breadth eighteen; and the circumference (following the coast-line), 150 miles.

HISTORY.—Cephalonia, like Corfu, has had many names: some assert its original denomination to have been *Teleboa;* but Strabo denies this, and states it to have been Cheffali (from, it is presumed, κεφαλη, a head), in allusion to its superiority in size, and at that time in political importance also, to the other islands in the Ionian Sea. Homer, in describing the various armies of the Greeks assembled at the siege of Troy, represents Ulysses as commanding the *Cephalonites,* and gives the title of *Samos* to the island, which was also known by the name of Tetrapolis, from its four towns, of Palis, Same, Cranii, and Pronesos, called after the four sons of Cephalus. Pliny speaks of the island both as *Melæna* and *Same;* Virgil, as *Dulichium.* Its early history is involved in fable or allegory, the leading features of which may be briefly stated.

The prevailing narrative is, that the Curetes, who occupied the island of Crete, spread over Ætolia, made themselves masters of Acarnania, passed into Ionia, and conquered the country of the Leleges, or Teleboans: after which they added to their dominion the islands in the Ionian Sea, and planted a colony in that of Cephalonia, to which they gave the name of Teleboa. Strabo, however, asserts that the Teleboans sought an asylum in this island, after being chased by Achilles from the continent, and places this event prior to the siege of Troy. The fierce warriors of Cephalonia (then called Teleboa), under the conduct of Ulysses, are therefore supposed to have shared with the Myrmidones the honour of avenging Menelaus.

Cephalus, an Athenian prince, being obliged to fly his country for the murder of Procris, his wife, took refuge in Bœotia, with Creon, King of Thebes. At this time the Teleboans had excited the wrath of the Thebans, by assassinating the brothers of Alcmena, the wife of Amphitryon, their general. The army, strengthened by the assistance of the Locrians and Phoceans, who lent their powerful succour for the occasion, prepared to punish the audacity of the islanders. Cephalus offered his services, and was permitted to share the dangers of the expedition. The Teleboans were defeated in battle, and, after losing their king, submitted to the yoke of the conqueror. Amphitryon returned triumphant to Thebes, where he found Alcmena pregnant by Jupiter. She gave birth to Hercules. Cephalus remained in peaceable possession of the isle of Teleboa, which from thence was called Cephalonia. His successors and descendants reigned for six generations, when they abandoned the kingdom, and retired into Attica, in consequence of a supposed communication from the oracle of Delphi; whereupon, the throne of Cephalonia, being thus voluntarily vacated, the inhabitants resolved to adopt the republican form of government. The four principal cities assumed independence irrespective of each other, but were obliged to unite for the common cause: they therefore formed a republic, of which Palis became the capital, the supreme authority being divided between the senate and the people.

The power of the islanders, their progress in navigation, and their advantageous ports, rendered them, previous to the siege of Troy, valuable allies or formidable enemies to the various neighbouring people. The Argonauts touched at the port of Cranii, and on landing, Jason found himself surrounded by a people inured to the hardships of a seafaring life, and well versed in maritime affairs. Cranii was constantly frequented by vessels from Argos, whence its name of Argostoli, from the Greek, signifying the "fleet of Argos." Some other authorities, however, trace its nomenclature to *Argo,* the vessel of the Argonauts.

In remote times the Cephalonites took part in the various revolutions of Greece, and their unfaltering courage often decided the victory in favour of the people whose cause they embraced. Before the Trojan war, Thucydides speaks in terms of commendation of the share borne by the Cephalonites in the contest occasioned by the inhabitants of Epidamnus, between the Corinthians and Corcyreans. The Cephalonites afterwards abandoned the cause of the Corinthians, on the Athenians declaring war against the latter people, who forthwith

dispatched forty vessels to punish the desertion of their late allies. This fleet arrived in Cranii, and the troops disembarked; but being a strongly fortified place, it resisted every attack, and the inhabitants surprised the Corinthians by night, and defeated them with great slaughter. The islanders remained faithful to the Athenians, supplying them with ships and men, whenever required, throughout a long series of wars.*

Cephalonia continued independent long after the downfall of Athens, Corinth, Sparta, and the other celebrated republics of Greece; but though it repulsed Titus Quintius Flaminius, the Roman consul, and long held out against the legions sent for its reduction, Fulvius finally stormed Same,† then containing 1,800 houses, and put the people to the sword. Cephalonia became a province of Rome, and remained such until A.D. 364, when it passed under the yoke of the emperors of the East, who continued masters thereof until 982, when the Lombards, a people of Pannonia, under the command of John Leone, conquered and took possession.

In 1125 A.D., Cephalonia again became subject to the eastern emperors, when they regained strength after the irruptions of the Ottomans, under Mahomet. The island is stated to have been given to Baudoin, for his services against the Saracens, when they besieged Constantinople. On the death of Baudoin, it was ruled by Galus, Prince of Tarento, to whom other islands in the Ionian Sea had been given by the eastern emperor, in return for money lent to aid the prosecution of the Saracenic war. Cephalonia, on the downfall of the eastern empire, became like Corfu a dependency of the Venetian republic, which retained possession until Napoleon occupied Venice; since that period the island, as stated in the previous section, has successively passed under the government or protection of the Russians, French, and English.

Physical Aspect. — Cephalonia is extremely broken and mountainous. The general direction of the mountains is from south to north. The southern extremity of the range, opposite the coast of Zante, is marked by the highest mountain in the Ionian Islands, the Ænos of antiquity—the Black Mountain, or Montagna Negra of moderns, 3,625 feet above the level of the sea. Mr. Muir, who has attentively examined the island, says, that "the general aspect of the mountains is arid and barren, some of them being without a trace of vegetation, and presenting, from the bottom to the top, nothing but a rugged variety of brown and gray rock, with, perhaps, here and there a solitary olive-tree growing from a fissure betwixt them." What little soil they may have formerly been covered with, has either been washed away by the rains, or, if found in the interstices and fissures, been carried down to cover the crusts of rock appearing through the scanty soil in the valleys below. On many of the heights are found large blocks, of various dimensions, of a hard calcareous stone, sometimes isolated, and sometimes in groups, lying often on the tops of the highest hills in great abundance. They are in general not angular, but rounded by the action of water, which

* The ruins of fortifications and ancient monuments of all kinds which have been found in the isle, leave no doubt of the riches of the people, or of the progress made by them in the fine arts. At about three miles' distance from Argostoli to the south-east, the walls of the ancient city of Cranii can easily be traced, occupying the top of a very rough and inaccessible ridge, which projects upon the east angle of the lake or gulf at its southern extremity. A considerable portion of the butt of the walls still remains, marking their circumference throughout, and partly consist of enormous masses of stone, hewn and laid together much after the same fashion as those existing at Santa Maura and Ithaca. All the different descriptions of cyclopic building are found here, the rougher and more massy specimens occupying the higher parts. The southern wall may be traced for about 1,508 paces, and another looking to the north-eastward extends for about 800 paces. The latter includes very large blocks of stone; at one part regularly squared, having probably formed the casement of a door. The juncture of the walls is formed by nearly square masses; one, a very large stone, rests on two others, and is of the following dimensions: length, eight feet ten inches; depth, five feet two inches; height, six feet seven inches. A second, nearly quadrangular, is eight feet in width, three feet ten inches high, and four inches and a-half in thickness. A third enormous block is thirteen feet five inches in length, three feet three inches in height, and about the same in its greatest depth, which is, however, irregular. Besides these powerful artificial defences, the situation of the place was at once difficult and dangerous for the assault of an enemy, particularly the ascent to the south wall, which runs along the edge of a precipice throughout its whole length.—(*Kendrick.*)

† Cranii is mentioned in history as the capital of one of the four kingdoms, or districts, into which the island was divided. Philip of Macedon, and the Roman consul Flaminius, were repulsed by its citizens; and according to Livy (Book. xxxviii., c. 29), the Samians held out against the Romans, under Marcus Fulvius, for four months.

must have been sea-water, from the number of marine fossil shells largely deposited in the rocks, at various elevations, all over the island. It is to be remarked, also, that these blocks appear much more compact than the rock of the mountain itself, which is likewise calcareous; in all probability, they are the *debris* of former elevations, perhaps of the continent of Greece itself, lodged there by currents before the island emerged above the level of the sea.

The top of Montagna Negra is usually covered with snow about the beginning or middle of December, which seldom wholly disappears before the commencement of May. The inhabitants say that disease was less frequent before the destruction of the wood on the Black Mountain, the north side of which was formerly covered nearly to the summit with forest trees, principally fir and cypress. About twenty-seven years ago the forest was completely destroyed by being set fire to by some evil-disposed person belonging to a political faction. The whole island, but especially the neighbouring valleys, are said to have ever since been subject to greater atmospherical vicissitudes, in consequence of the boisterous winds and storms having a gathering-point from whence to rush down on the plains below with unimpeded fury. At present, the north side of the mountain affords a very extraordinary sight; the whole slope, for miles, is thickly studded with the bleached trunks of trees entirely denuded of their bark, and without a leaf, many of them from thirty to forty feet high, presenting themselves, by their various forkings and withered branches, under the most grotesque and even hideous forms; a feature often observable along the mountain ridges of New Holland, after a dry summer, when forest conflagrations have been general.

The *harbour of Cephalonia* runs inland for eight miles; it is rather difficult of ingress and egress, owing to its serpentine form, but offers, nevertheless, a spacious and convenient shipping port. The entrance is extremely picturesque: on either side groves and plantations, relieved by a background of majestic mountains, greet the eye in varied succession. To the left, on the western side of the harbour, three miles from its entrance, stands the town of Lixuri (olim Palis), in front of which the haven opens into an inlet running to the southeast for three miles; and on the peninsula formed by this branch, and close to the sea, stands *Argostoli*, the capital of the island. The town is built on a slip of level ground upon the western shore of the haven, at the foot of the narrow promontory or tongue of land above mentioned, which is about three miles and a-half long, does not exceed two miles in length at its broadest part, and gradually becomes narrower till it terminates in the point which forms the northwest extremity of the harbour. Argostoli occupies the centre of this ridge, and consists of two main highways, which run north and south, and a number of cross streets and lanes, all very narrow, but tolerably well paved, and with several common sewers. The principal street, or that next the water, is about a mile and a quarter long, and twenty feet wide; the other is much shorter. The town is about three miles in circumference, open, and unwalled. The houses are generally two stories high, fronting the north-east, and are built of stone, cemented with lime and terra rosa, and covered with tiles.

The soil on which the majority of the houses are built is gravelly, but some stand on "made ground" recovered from the sea, in the neighbourhood of the wharfs and moles at the southern end of the town, which is decidedly more unhealthy than the northern extremity. The hills adjacent are thickly planted with the currant and the vine to the distance of about 120 or 130 feet up their sides, and interspersed with olive-trees, but above that level they are bleak and precipitous.*

*Lixuri* has nearly the same general characteristics as Argostoli; but cleanliness is much less attended to. It is situated on the northerly branch of the harbour, on an argillaceous schistous soil.

Catacombs have been found by the Venetians, French, and British to the southwest of Argostoli, and the remains of ancient warriors completely clad in their war dresses discovered, the bones crumbling into dust on the slightest pressure. Eight catacombs were opened in 1647, and the antiquities contained in them sent to Venice; the further investigations, made in 1810, produced little of antiquarian interest.

The citadel or castle of St. George, six miles' distance from Argostoli, is situated on the summit of a hill of considerable height, which constitutes the southern termination of a range, and forms the eastern side of the harbour of Argostoli.

* Hennen.

Cephalonia is at present divided into the cantons of Erizzo, Tinea, Samos, Anoi, Pilaro, Kaloi, Livadi, Potamiana, Ikongia, Skala, and Piric. It formerly comprised four regions, each named after an ancient city (viz., Samos, Palæa, Pronos, and Cranii,) and hence, as before stated, was called Tetrapolis. This division accorded with the natural configuration of the island, owing to the double aspect of the mountainous formation; one of the faces inclining east and the other west. The variety of mountain scenery presents many sweet and romantic views to the Cephalonian tourist, among which the valley and bay of Samos is of unsurpassed beauty.

Geology and Soil.—Limestone of secondary formation constitutes the chief characteristic. The ranges which project from the body of the island were originally a sand deposit, and their tops are incrusted with limestone. The strata of sandstone begin to appear one-third from the summit, and abound in shells and marine fossils. So rapid is the formation of carbonate of lime, that quarries where sandstone was hewn not many years since, are now in many places coated with thick sublimate. Crystals of sulphate of lime of a yellowish tint, and very brittle, are occasionally found; and stalactites of a greenish white, and remarkable for their hardness, abound in caves near the coast. A sulphurated mineral spring issues from a rock close to the sea, and is used externally and internally by the natives as a remedy for *psora*. The soil is generally of a light calcareous nature, thinly sprinkled on a rocky substratum; but in some of the deeper valleys and ravines there are beds of rich alluvium, mixed with a fine red mould termed "*terra rosa*," which is occasionally employed for covering the roofs and floors of houses, or, mixed with lime, as a substitute for mortar. In the Lixuri district there is a heavy gray argillaceous soil, approaching somewhat to the nature of schistus, useful in making tiles, bricks, and coarse earthenware.

Climate and Disease.—The general observations made respecting Corfu apply to the other islands: the thermometer maximum is 95°, the minimum, 44° Fahrenheit. Sharp frost prevails in January; heavy rains in February and March, succeeded by dry weather. In the middle of May heavy rain falls; June is sultry, with occasional showers; July, August, and September, clear, with occasional rain; October, fine; with much rain from November 12th to December 20th; the remainder of the year clear, with snow on the mountains, which continues visible until April or May. As a whole, the climate may be said to be more variable than that of any other island of the Septinsular Union, owing, probably, to its elevation.*

Vegetable Kingdom. — M. Sauveur speaks of several remarkable plants in Cephalonia; one of which, being eaten by goats, dyes their teeth of a bright golden yellow, and imparts a rich flavour to their milk; and a second turns gold to a whitish colour, similar to the effect of mercury.

The Cephalonites are more active, enterprising, and intelligent than the Corfiots: a number are educated as physicians; and when their studies are completed, they migrate to the Morea, Albania, and various parts of Turkey, there being scarcely a town on the continent without a Cephalonite doctor.

The Staple Products are currants, oil, wine, honey, linseed, cotton, lamb and hare skins, oats, and different kinds of fruit; the annual quantity of currants produced varies from five to six million pounds' weight; they are of a finer flavour than those of Patras or Corinth, or indeed of any of the other islands, except Zante.

The wine is next in importance. Owing to the variety of favourable soil, no less than eighteen different descriptions are produced: of the red vintages, that of Livadi enjoys the preference; and of white, that of Ribola and Cosanikio. There are three sorts of muscadel of excellent flavour. Of raisins, about 150,000 lbs. weight are annually prepared.

There are several small manufactories, viz., one of blue cotton cloths, and two or three for the preparation of maraschino, or rosolio, to which an exquisite flavour is given by the aromatic herbs and flowers of the island; the red, called "alkermes," has a delicious fragrance. Ship-building is carried on, and the deep water close to the shore at Lixuri is favourable for docks.

---

Zante.—This island, which Pliny states was once called Hyra, is supposed to have been named Zante, Zacynthos, or Zacynthus, from being the burial-place of one of the Bœotian followers of Hercules. It is situated in 37° 47′ N. lat., 20° 54′ E. long., ten miles distant from Cephalonia, and lies

* For population, see "Corfu," p. 139.

opposite the Gulf of Lepanto or Patras, distant about fifteen miles from Cape Klarenza. The area is 156 square miles; the greatest length twenty-four miles; breadth, twelve; circumference, about seventy miles.

The island was formerly dedicated to Diana Opis; in whose honour three or four temples were erected by the Zantiotes. It has been considered as the burial-place of Cicero, from an ancient sepulchre being found, surmounted by a stone bearing the inscription, "M. Tvl. Cicero Have tu tertia Antonio;" while beneath the urn containing the ashes, were the words, "Ave Mar. Tul."*

Physical Aspect.—The exquisite beauty of the island has obtained for it, by common consent, the palm among its compeers—"Zante, Zante, il fiore del Levante." The aspect is decidedly mountainous, three-fifths of the surface varying in elevation from 500 to 1,300 feet above the sea.

An extensive range lines the whole of the western coast. Occasional rising grounds skirt the shore. The most striking, as well as the loftiest of these detached eminences (1,300 feet high), is Monte Scopo, the "*Mons elatus nobilis*" of Pliny, which rises from the plain at the south-east end of the island, and is washed by the sea on its southern and eastern faces, sloping gradually on the land side. Towards the northern extremity of the plain, and the town of Zante, a chain of lofty cliffs extend for some distance: at the foot of these is a remarkable well called Crio Nero, which supplies the city and shipping with water. On a detached offset of these cliffs, which were formerly known under the appellation of Acroteria, is situated a castle of considerable antiquity. It crowns the top and one side of a hill formed of clay and calcareous stone, which rises immediately behind the town to a height of between three and four hundred feet. Several deep gullies indent its sides, and, to the southward, a very large mass is divided from the main body by a deep and impassable fissure, said to have been occasioned by an earthquake. The town stretches up the side of the hill to within about a hundred paces of the entrance of the fortress,—an enclosure of triangular shape, about fourteen acres in area. The entrance presents somewhat the appearance of modern military architecture, but the remaining portion is simply a strong old wall, occasionally loopholed, turreted, or battlemented, without any regularity of plan; and, consequently, without any military strength. The approach winds along the face of the hill, and the ascent from the town is easy.

* Sandys.

The city of Zante is very imposing in its external appearance, viewed from the sea. It is an open, unwalled town, and stretches along a gently curved bay for about a mile and three-quarters.

In breadth the town nowhere exceeds 300 yards, except towards the hill, upon which the castle is erected. Some of the houses are four or five stories high, built of stone, strongly clamped together with iron, and in the Venetian style of architecture, with triangular lattices to the windows; many have a good external appearance. The principal streets run parallel to the bay, and are intersected in various directions by lesser lanes and alleys. The Via Larga, or great street, would not disgrace any city in Europe. The houses are very handsome, and are furnished with piazzas in front, which afford a shady walk. Under these are shops, well stocked with the various products of England, the continent, and the Levant.

In the country there are about fifty villages, and many scattered dwellings of picturesque construction. Several of them are two stories high; and even the peasantry take pride in the adornment of their homes. As in all the other islands, there are no fireplaces in the houses, and the majority of them are deficient in drainage.

The water of the island is peculiar. There are, in the town of Zante, forty-four cisterns, 1,288 public and private wells, and three springs, and fountains, which are all so highly saturated with sulphate of lime, or sulphate of soda, as to be unfit for culinary purposes; besides which, from the porous nature of the soil, proper reservoirs cannot be constructed to retain the rain-water; and owing to this cause, as well as to the proximity of the town to the sea, and its very small elevation above it, the water in the cisterns becomes brackish. Luckily for the inhabitants, a never-failing and copious supply of water is obtainable from the fountain of Crio Nero, before mentioned. Monte Scopo abounds in excellent springs.

In many parts of the island, according to M. Sauveur, springs of an oily taste and smell are found; some of them on the shore, though covered with sea-water, still retain their sweetness to a certain extent when

drawn from a depth, after the removal of the sea-water from the surface. All these springs have been greatly neglected, and many have been destroyed by the earthquakes.

Geology and Soil.—The western mountains, as also Mount Scopo, are formed of calcareous rock, with an occasional mixture of gypsum, principally of the gray foliated kind, with a proportion of selinite. The Castle hill is composed of a loose, friable, calcareous matter, mixed with clay and sand. There is some tolerably hard marble in the island; and around the villages of Agrassi and Sarachira, immense masses of selinite and foliated gypsum are observable.

The *soil* is of three different kinds—a strong clay in the plain, calcareous on the rising ground, and sandy near the shore. Zante possesses petroleum and tar-springs, somewhat similar to those of Trinidad.

There are many instances of longevity among the Zantiotes, and several inhabitants are known to be above ninety years of age, in the full possession of all their faculties.*

Vegetable Kingdom.—Aromatic herbs, the odour of which is experienced some distance at sea, abound; the delicious flavour of the Zantiote honey is doubtless owing to the sweet and fragrant flowers. Currants, oil, wine, and flax are the principal vegetable products. Horticulture is a favourite pursuit. The state of agriculture is better than in the other islands: many of the farmers are educated and enlightened proprietors; and in the cultivation of the currant and vine, Zante is superior to Cephalonia and Ithaca.

---

Santa Maura (formerly called Neritos, afterwards Leucadia) is insulated, being cut off by a channel from the mainland of Acarnania. Cephalonia lies ten miles to the southward, and Corfu thirty-five to the north-west; Santa Maura itself being situate in 38° 40′ N. lat., and 20° 46′ E. long., and having an area of 180 square miles; an extreme length of twenty-three; an extreme breadth of ten; and a circumference of about sixty miles.

The island was anciently known under the appellations of Neritos and Leucadia. According to Eustathius, Pterelaus had three sons; Ithacus, who gave a name to Ithaca, Neritus to the Acarnanian promontory, and Polyctor to a place called Polyctorum. The island, on its separation from the mainland, was at first solely inhabited by Acarnanians; at a later period, it became a dependency of the Corinthians. Homer, in his *Odyssey*, mentions that the Leucadians furnished their contingent of men and vessels in the famous siege of Troy, and served under Ulysses, together with the Ithacans, the Cephalonians, and the men of Zante and Corcyra. Æneas, on his return, touched at this island:—

> "At length Leucate's cloudy top appears,
> And the sun's temple, which the sailor fears:
> Resolved to breathe awhile from labour past,
> Our crooked anchors from the prow we cast."
> *Æneid*, lib. iii.

By this it evidently appears that the temple of Apollo Leucas was feared by the sailors of those times; and the superstitious custom, in the present day, of throwing money in the sea beneath it, originated from the sacrifices formerly offered to propitiate the favour of the fabled deity. Oxen were sacrificed on the altar of this temple, which custom the Romans strictly followed whilst in possession of the island. The Leucadians entered into the famous league of the Greeks against Philip of Macedon.

Dion, in his expedition against Dionysius, the tyrant of Syracuse, was assisted by Tymonides, at the head of a considerable force of Leucadians. After the fall of the various small republics of Greece, the island passed under Roman domination. Lucius G. Flaminius conquered it. In the reign of Pompey, the famous temple of Apollo was pillaged and reduced to ruins by pirates. After the fall of the Eastern empire, Santa Maura was governed by a succession of princes whose names are lost: it was afterwards conquered by Logan, the Turkish admiral of Mahomet II. Pesaro, the Venetian general, captured the island from the Turks in 1502; but the senate at Corfu restored it to that power on the conclusion of peace. In 1684, Morosini attacked and subdued the island, after an obstinate resistance from the Ottomans. When the Morea was overrun by the latter, in 1715, the Venetians razed the fortifications, and fled; but returned in the following year, and remained there until the French destroyed their shadow of a republic.

In the year 1810, the English, under the command of General Oswald, successfully besieged the fortress, which has since remained in our possession.

* For population, see "Corfu," p. 139.

Physical Aspect.*—Santa Maura presents a mass of mountains, of which St. Elias, the highest, rises 3,000 feet above the level of the sea. The figure of the island is somewhat triangular; the north-west coast, which forms the base line, runs straight and perpendicular, the land rising a considerable height above the level of the sea; and the surface inclines irregularly towards the eastern coast, giving nearly the whole an eastern inclination. The ridge-line of the north-west face being, as it were, levelled off, gives a strip of land of about twenty miles in length a gentle slope towards the north-west; and this tract, despite its limited extent, contains many populous villages and much cultivated ground, and is, from its great height and free exposure to the northerly and westerly winds, peculiarly healthy during the hot summer months. The north-west coast, perpendicular nearly throughout, contains no single harbour or roadstead, and opposes a mass of pure limestone to the heavy surf rolled in by northerly and westerly winds towards the bottom of the Gulf of Prevesa. It would appear, that the constant action of this great body of water has given the land its present form; and that the *detritus*, or loosened matter, swept along the coast by the southerly and westerly winds, and carried round the north-eastern point of Santa Maura, has caused the present isthmus. This may account for the otherwise irreconcilable difference between the descriptions of ancient writers and the actual state of the island, as well as explain more recent changes.

The south-eastern extremity is narrow for about ten miles, giving the island a disproportionate length. The hills towards Cape Ducato are singularly grouped: they form a regular series of cones, diminishing gradually in size to the cape; and are, as it were, cut upon the north-west faces by a plane, which is parallel with their axis, and continuous with the north-west coast of the island. The faces shown by these sections are of dazzling whiteness; one of them—Cape Ducato, which has a perpendicular height above the sea of about one hundred feet—is famous as the scene of Sappho's leap. Their convex surfaces are turned to the southward in rounded slopes, covered with evergreen shrubs down to the water's edge. Their figure is so near mathematical proportions, that the south-east coast is here indented with regular spherical angles. From the sea this singular formation is not so evident, but it is very striking when viewed from the tops of the cones, upon returning from a visit to Sappho's Leap. The change in the point of sight readily accounts for this; as, in the former instance, the curves and angles are seen clearly, the eye being in the same plane with them; whereas, in the latter case, the spectator is placed almost perpendicularly above them.

The next remarkable feature in the topography of the island is the new isthmus. From the north-east angle of the island a narrow and irregular waving strip of land, about four miles in length, extends across the mouth of the channel towards the coast of Acarnania, which it reaches within a hundred yards; and then runs parallel with that coast for about half a mile, forming a channel of equal length. From near its extreme point it sends off a ledge of rocks, of singular appearance and composition, at a small angle towards the north. When seen at even a short distance, it bears a perfect resemblance to a mole running out into the sea, and is by many believed to have been a work of the Romans. The ledge is about half a mile in length, and from twenty to thirty feet wide, with deep water at each side. Its breadth and direction are nearly uniform throughout, which heightens its special appearance. The rock of which it is composed consists of gravel and sand, accumulated there by the water, and formed, according to the size of the particles so brought together, into sandstone or pudding-stone. The substance which unites them is become as hard as the particles themselves; for upon breaking the mass with a hammer, the fracture goes through them equally with the interstitial matter;—the result is an exceedingly hard stone, capable of taking a certain degree of polish, which is used for building, as also for making stones for flour-mills and oil-presses. The loose gravel forming the isthmus seems to have been deposited on this rock as on a basis.

*Amaxichi*, the chief town, about a mile in circumference, is situate on a beautiful plain two miles long and one broad, thickly covered with olives. About 6,000 persons inhabit Amaxichi; the remaining population are scattered among thirty-two villages, some located on the very tops of the moun-

* I am indebted for this description to Surgeon Goodison, who resided for several years at Santa Maura.

tains. There are no rivers, but numerous springs and natural fountains.

Like the other Greek islands, Santa Maura was at one time a place of considerable importance. The extensive ruins of the former city of Leucadia are situated about three miles from the present town, near the coast. The former capital was built by the people of Nerikos, a colony of Corinthians who had settled on the opposite coast; but who, probably for the sake of security, removed to the island.

The fortress is a strong, irregular, six-sided building, flanked by towers and outworks, its largest diameter running north and south. It stands on the isthmus which once connected the island with the adjacent continent, there termed Acarnania; has the open sea on the north and north-west, on the south and south-east a lagoon, and is completely insulated by wet ditches on the other points. The castle was built in the 13th century, by a Venetian prince of the house of Facchi, who likewise constructed the aqueduct that runs from the isthmus to the town: this causeway, which is upwards of half a mile in length, serves as a bridge, having 365 arches; in height it is nearly three feet above the surface of the water; but in breadth so narrow, that two persons cannot securely walk abreast. The aqueduct was repaired by Bajazet, the Ottoman emperor, but is now useless; the pipes having been destroyed by an earthquake, and some of the larger stones removed for building purposes.

Geology and Soil.—The basis of the primary ridge, running nearly north and south, in the direction of the Cassiopæan range, is secondary limestone. Lesser ridges traverse the island, generally in a south and east direction: they are composed of crystallized, compact, fibrous, and earthy carbonate of lime and of gypsum, the lime always predominating. The soil is poor, but in a few places alluvial; it seems adapted for the growth of the vine, olive, and currant.

---

Ithaca (called *Thiaki* by the natives, *Val de Compare* by the Venetians), in 38° 25′ N. lat., 20° 40′ E. long., is about eight miles distant from Cephalonia, and is bounded on the east and north-east by the channel of Zante and a group of small islands, the ancient Echinades; on the north by a part of Santa Maura; and on the north-west, west, and south-west by the channel which runs between Santa Maura and Cephalonia. Somewhat more than thirty miles distant, in a south-east direction, lies the opening of the Gulf of Lepanto. Ithaca is irregular in shape: its extreme length, from north to south, is eighteen miles; extreme breadth, five; but in some places not more than a mile and a-half; the circumference is about thirty, and the area forty-four square miles. Whether this little island was the celebrated Ithaea of Homer, is not yet a settled point; its very name was forgotten until of late. But the modern inhabitants call their home *Thiaki;* and Sir William Gell has endeavoured to prove it the actual birthplace and patrimonial kingdom of Ulysses. The aspect is dreary and unprepossessing, the island being a series of heights running in an irregular ridge east and west; or it may be considered a single mountain divided into rugged and mis-shapen rocks. Homer's description is still correct:—

"Horrid with cliffs, our meagre land allows
Thin herbage for the mountain goat to browse."

Again—

"The rugged soil allows no level space
For flying chariot or the rapid race."

Mount Stephanos and Mount Neritos are the two highest points, the former rising immediately to the south, and Neritos to the eastward, above the chief town called *Vathi,* situate in one of the inlets of a bay four miles deep, and one of the most secure harbours in the Mediterranean.

Vathi is little more than a single street, upwards of a mile long, containing from three to four thousand inhabitants; the houses are built of stone, and the town remarkable for cleanliness and salubrity. The site of the alleged ancient capital of Ulysses is to the south-east of the present town; immense masses of hewn stone indicate the spot, as does also the situation of several gateways; and the remains of a suburb flanking the walls are distinctly observable. Near this place several sepulchres have been discovered; and coins, bracelets, bronze figures, chains, with other articles of exquisite workmanship carried from thence. An entire skeleton was found in one of these catacombs, having the head encircled by a gold coronet, the arms and legs by solid bands of gold; and an emerald ring of great value on one of the fingers.*

A cave wherein, according to Homer, Ulysses was placed while sleeping, by the Phæacians, is situate at a small distance below the entrance of the harbour. On the

* Kendrick, p. 78.

isthmus near Aito, or the Eagle Mountain, are some ruins, or cyclopean walls, said to be the relics of the castle of Ulysses; and the famed fountain of Arethusa is pointed out on the recess of a declivity four miles from Vathi, and nearly covered with shrubs. Korax, a white limestone cliff, eighty feet in perpendicular height, fronts the sea upon the south-east coast, and somewhat resembles a bird with extended wings.

The antiquarian or classic student, desirous of fuller details regarding this romantic isle, will find gratification in following the researches of Sir William Gell, and the interesting descriptions of Assistant-surgeon Goodison.

Geology.—Like the other Ionian isles, Ithaca is a mass of secondary limestone; the rock is mostly found in loose insulated masses on the surface, in some places forming gigantic heaps—in others, worn into water channels by the mountain torrents. The soil, as may be expected, is exceedingly stony; and the declivities, where the vine and currant are cultivated, so great as to require terraces, which resemble the benches of a theatre; and, in contrast with the surrounding bleakness, give a picturesque character to the landscape. The fruit produced is excellent, and the wine superior in flavour to that of any of the other islands. The orange, lemon, and citron flourish, as does also the oak, which produces the velonia, or acorn, used by woollen dyers as a mordant to fix the colour of their cloth.

The Ithacans are hardy sailors, and are possessed of some shipping. Several islands, or islets and rocks, lie in the channel between Ithaca and the continent: the chief of these is Kalamos, near the mainland. Ithaca sends one member to the senate at Corfu, and has a municipality for the management of local affairs.

---

Paxo, an oval-shaped island, in 39° 12′ S. lat., 20° 12′ E. long., has an area of twenty-seven square miles, and a circumference of twelve miles. It is nothing more than a single mountain, and was probably, at one period, a part of Corfu, from the southernmost point of which it is only seven miles distant. *Port Gai* affords good anchorage for a few vessels; and there is an inner harbour formed by an islet, with a circular battery commanding the town, the houses of which are scattered in an irregular manner along the beach.

Paxo was first inhabited by colonists from Corfu; and by an ancient tradition, St. Paul is said to have landed and preached the gospel, after which he banished all reptiles from the island. To the southward of Paxo is Anti-Paxo, chiefly inhabited by fishermen, and, while the Venetians held sway, a notorious retreat for pirates, who levied heavy contributions on all who fell within their power.

---

Cerigo and Cerigotto.—Cerigo, the most southern island of the Septinsular Union, in 36° 6′ N. lat., 22° 50′ E. long., is situated at the entrance of the Archipelago; to the the north of Cance, and south of the Morea; five miles distant south from Servi, and fourteen E.S.E. of Cape Malie. Its area is 116 square miles, extreme length twenty, extreme breadth twelve, and the circumference about fifty miles. The island was anciently known (according to Pliny) by the name of Porphyris, from its possessing abundance of that description of marble. Ptolemy attributes the name of Cythera to Cytherus, the son of Phœnix, who established himself in the island. According to some, Cerigo was first peopled by the Lacedæmonians, who in the eighth year of the Peloponnesian war, were expelled by the Athenians under the command of Nicias. At a subsequent period it passed under the dominion of the Spartan republic, and served as a retreat to Cleomenes, who on the approach of Antigonus, King of Macedon, took refuge in Cerigo. Ptolemy, King of Egypt, was afterwards lord of Cerigo; the Romans next came into possession, then the Venetians; and it shared the fate of the neighbouring islands. Relics yet extant denote the former greatness of the place; "Pælo Castro" ruin, to the northward of the harbour, is said to mark the site of the ancient capital of Menelaus, the deserted husband whose wrongs caused the siege of Troy: the bath of the faithless Helen is still shown. Six miles to the east of the harbour of St. Nicholas, stood the former city of Cythera; and a little further to the south are some ruins, supposed to have belonged to a temple dedicated to Venus Cytheræa.

At the north of the island is Cape Sparti, with a chapel on its extremity: to the south is Cape Kapello, close to which is situate the chief harbour, and the capital of Cerigo, called Kapsali, which contains about 5,000 inhabitants, whose ill-constructed

tenements are mostly of wood. The harbour is small; and vessels are sometimes wind-bound for several months off Cerigo. The island is scantily covered with soil, and subject to violent winds, which destroy the vineyards and plantations, so that it is very partially cultivated. The oil is of excellent quality, and brings a good price; the inhabitants, however, resort chiefly to fishing for their support, and are in a less advanced state of civilisation than those of the other Ionian isles.

Four miles to the south of the harbour is an insulated rock, of a sugar-loaf form, called "*l'Ova*," or the *Egg*, on which is found a shell-fish, partaking of the characteristics of conchilia, and yielding a colouring matter, supposed to have formed the basis of the famous Tyrian dye. Two miles off Cape Kapello, are two rocks called "*Kuphonisis*," or baskets. To the east of Cerigo lies the small island of Cerigotto, formerly known under the appellation of Ægilia, and now chiefly inhabited by Greeks and Turks, but subject to Corfu, as are also the isles of Strophades, Maganissa, Panorno, &c. Strophades, about twenty miles south-east from Zante, is about five in circumference. On its east coast stands the celebrated convent of the "Redeemer," built of white freestone, resembling marble, ninety feet high, divided into four parts, each protected by a tower. It is only accessible by a door leading to the vaults, which is closed up immediately on an alarm being given, when the monks are drawn up by means of baskets, after the manner of the Copt monasteries in Egypt. The establishment consists of about sixty brothers, with a grand and sub-prior, &c., supported by a revenue derived from landed possessions in Greece and Russia. The brothers of the order include several nobly born and well-educated men, possessing a good library and every comfort that rigorous seclusion can admit of. The building was erected by Prince Tocchis, but owed its celebrity to San Dionisius, who, after residing in Strophades several years, accepted the bishopric of Egina, but finally died at Zante in 1624. Several Zantiotes reside on the islands.

Government.—The civil government is composed of a legislative assembly, of a senate, and of a judicial authority. The *Assembly* consists of forty members, including the president: of the forty, eleven are permanent members, and twenty-nine elected from the various islands in the following proportion:—Corfu, seven; Cephalonia, seven; Zante, seven; Santa Maura, four; Ithaca, one; Cerigo, one; Paxo, one. Each of the three last, in the rotation in which they stand (exclusive of that island whose regent becomes an integral member of the legislative assembly), elects a second. The members are chosen (on a double list formed by a majority of the votes of the primary council) from the body of the *sincliti*, or noble electors of each island. The elections, and all civil appointments, are valid for five years; and the session of the parliament of the states is held every two years. The votes are delivered *vivâ voce*, and the sittings open; ten members, and the president, or vice-president, constitute a legal meeting; and conferences with the senate, &c., are managed by the eleven integral members of the assembly, who form, with their president, the primary council. These eleven members, in the case of parliament having expired after lasting the whole five years, comprise the president and five members of the old senate, the four regents of the chief islands during the late parliament, and one of the regents of the smaller islands; but in case of a dissolution, instead of the regents, the lord high commissioner names five members of the late legislative assembly.

The *Senate*, or executive power, is composed of six members, viz., five and a president, entitled "his Highness;" while the senators are styled the "Most Illustrious;" the senators are elected out of the body of the legislative assembly in the following proportion, viz., Corfu, one; Cephalonia, one; Zante, one; Santa Maura, one; Ithaca, Cerigo, and Paxo, one. The power of placing a member of the assembly in nomination for a senator rests with the president, to whom an application is made in writing, signed by four members and the candidate himself, requesting such nomination; the election takes place three days at furthest after the meeting of the assembly, and is decided by the majority; the president has a casting vote in case of an equality. The sanction of the lord high commissioner is necessary to the validity of the election. The vacancies occasioned by the promotion of five members of the assembly to the senatorship are filled up by the transmission of double lists of names from the primary council to the sincliti of each island. The senators remain in office

five years; his highness, the president, half that period, eligible, however, to be re-appointed by the lord high commissioner. The senate names its own ministerial officers, with some exceptions, and has the power of nominating to all situations under the general government; the regents to the different local governments; the judges in all the islands; and generally to all situations, except merely municipal ones, with certain renovations. During the recess of parliament the senate has the power of making regulations which have *pro tempore* the force of laws; and can originate, as well as disallow, those passed by the legislative assembly. The lord high commissioner is appointed by the Crown; his excellency names in each island a resident, or representative. The regent, advocate, fiscal, secretary, and archivist of each island, are appointed by the senate, subject to the approbation of the lord high commissioner. The various municipal administrations consist of five members, independent of the president (who is the regent), appointed by the electors of each island, out of their own body, from a list of names approved by the regent and his assessors. Ten members being chosen by the sincliti from these "lists," five are selected from them by the regent to form the municipal body.*

The qualifications of the "noble electors" are, I believe, usually hereditary, and the pursuit of any trade or business is a disqualification. To form a legal meeting, one-half of the sincliti of each island must be present.

The respective powers of the assembly and senate are set forth in the Constitutional Charter, which those who are curious in examining the different forms of government, will be interested in perusing; it owes, I believe, its origin to the late Sir Thomas Maitland, and is a singular specimen of constitution making.

The *Judicial Authority* in each island consists of three tribunals—civil, criminal, and commercial; the judges are appointed by the senate, subject to the approval of the lord high commissioner. Independent of these courts, there are in each island tribunals for the trial of minor criminal offences, and for the adjudication of small civil suits; these are presided over by justices of the peace, appointed by the local regent.

At the seat of government there is, in addition to the foregoing courts, a superior or high court of appeal, denominated the "Supreme Council of Justice:" it consists of four ordinary members (judges)—two English and two Greek, and two extraordinary members, viz., the lord high commissioner, and his highness the president of the senate. Trial by jury does not exist; nor are there any assessors to aid the judges. No crimes but those of murder and high treason are punishable with death,—which penalty is now rarely inflicted. Lawyers are very numerous: it has been calculated that every tenth individual is connected with the legal profession, and suits are known to have been protracted through several successive generations. The laws were formerly partly Venetian, partly Greek: a code has been framed for the islands, and was much needed, particularly as regarded the law of entail, now abolished, and that singular enactment by which a purchaser was compelled to restore a property to the seller, after the lapse of several years, for the same price at which it was vended—a measure that of course struck a blow at the root of improvement.

The gaols seem to be well managed: wherever the localities will admit, the debtors are separated from the felons; the cost for each prisoner is about 5*d.* per diem; the average of hard labour nine hours per diem, varying with the season. In Cephalonia those who work at the hand corn-mills receive half of their earnings, the gaoler one quarter, and the remainder is paid into the police chest. The prisoners are supplied with coarse clothing.

The Revenue obtained from customs, stamps, local rates for roads, &c., was, in 1833, £165,000; in 1854, £138,000; of this latter, £23,000 came from import customs and duties; £36,000 from export duty on olive oil; £29,000 from export duty on currants; £1,000 from export duty on wines. The salary of £5,000 to the lord high commissioner is paid by the Ionians, who have also, since December, 1849, contributed £25,000 per annum in aid of the military expenditure by Great Britain, which amounted, in 1854, to £110,000. The local revenues raised by the several island municipalities, average £50,000 per annum.

The imports amounted, in 1854, to £781,121, of which £372,277 consisted of goods in transit. The exports for the same year were valued at £374,366. Shipping inwards, in 1854—tons, 451,950: of this quantity there was, under the Ionian flag, 150,281;

* *See* Ch. iv., Art. 9, "Constitutional Charter."

under that of England, 34,107; and under Austrian colours (principally steam-packets belonging to the Trieste Company), 163,101 tons.

The exportable produce consists chiefly of currants, olive oil, wine, silk, cotton, fruits, &c. A large extent of the islands is in a state of nature, and absolutely pestilential, for want of a proper system of draining and tillage. Few proprietors cultivate their own lands, but usually let them out on short leases, the tenants binding themselves to return a fifth, or even a third, of the produce.

Manufactures.—Oil is the principal manufacture, and the machines employed in it are of the rudest possible construction. The olives are pressed under a perpendicular stone wheel, which revolves in a large-sized horizontal stone of a circular form, somewhat hollowed in the centre. A horse or mule sets the machinery in motion, and a peasant runs before and shovels the olives under the approaching wheel, the action of which is necessarily confined to a limited space, while its power is very insignificant. The bruised mass is then transferred to a bag made of rushes or mat, which is subjected to heavy pressure, increased by means of a screw, wrought by two men at irregular intervals; for the labour is so violent, that it could not possibly be long continued. They ship two strong bars, after the manner of a capstan, and then, with a savage yell, urge them forward by a simultaneous push, the effect of which is marked by a quantity of oil oozing through the mat, and falling into a hole cut in the ground for its reception. After the interval of forty or fifty seconds, the labourers rush forward again with similar violence, and with a bodily effort which must strain the whole frame. The quantity of oil that two expert labourers can express in a day, is estimated at ten or twelve jars of rather more than four gallons each. Some steam-engines have been recently introduced.

The wine would be decidedly good were it judiciously manufactured.

Salt is prepared in large quantity by evaporation under the rays of the sun. Soap, leather, and pottery are made, but of a coarse kind, and not to any great extent. There are also dealers in silk, lace, snuff-makers, confectioners, dyers, tanners, bell-founders, basket and mat-makers, &c., scattered throughout different districts.

The number of acres of land under cultivation throughout the Union is more than half a million [625,106.]

The protection of the Ionian Islands by England is an object of national importance; for, in conjunction with the positions of Malta and Gibraltar, they form a chain of maritime posts, and of commercial depôts, which establishes her power in the Mediterranean. In a Christian point of view these territories are valuable as nuclei for the diffusion of a tolerant faith, and of political liberty among neighbouring states.

---

## SECTION XI.—HELIGOLAND.

The island of Heligoland, in the North Sea, or German Ocean, is situated in 54° 11′ N. lat., 7° 51′ E. long., and from twenty-four to twenty-six English miles distant from the mouths of the Elbe, the Eyder, the Weser, and the Jahde. It is of considerable importance to vessels bound to these rivers, not only because its church and lighthouse form an admirable beacon, but also because ships may here be supplied with experienced and licensed pilots.

In August, 1714, the island was conquered from the Duke of Schleswig by the Crown of Denmark, which retained possession of it till the 5th of September, 1807, when it was occupied by the English; and in 1814 a formal cession was made to Great Britain, under whose government it still continues. The island is in form an acute angled triangle: it is now only about one English mile in length from north to south, one-third in breadth from east to west, and two miles and one-third in circumference. It was anciently of much greater extent, but there are no authentic records to determine how far it may have

stretched into the sea and approached the continent. In 1721, Heligoland and Sandy Island were connected by a low isthmus: a storm separated the islands, and the latter has since been gradually decreasing. Heligoland consists of an upper part, called the Oberland, and a lower, or Unterland, which lies in a south-easterly direction. The height of the Oberland, at its most elevated point on the western side, is 200 feet above the level of the sea, the eastern side being lower. The island is visible at a distance of sixteen and twenty miles; its first appearance is very striking, and the interest augments on a nearer approach.

The climate is mild, and resembles that of the midland counties of England, the heat and cold being tempered by the sea-breezes; the air is pure and very salubrious. Heligoland has been especially frequented by visitors from various parts of Germany, Prussia, Poland, and Russia, since the erection of baths in 1826; the waters being considered by physicians as the most efficacious in the North Sea.

The number of inhabitants is about 3,200. The population, which is increasing, is considerable for so small a spot, especially as many families have emigrated within the last twenty years from the want of employment at home. They are chiefly engaged in the fishery or navigation, and many also are brought up as pilots. There is a brewery and a distillery, and the number of mechanics and shopkeepers is commensurate to the wants of this small colony. The number of houses is 470. The Heligolanders are of Frisian origin, and speak a dialect of that language; but at church and in the school the high German alone is used. They are a tall and strong people, with handsome features and florid complexions; their habits are very simple, and their indolence and timidity on shore are as remarkable as their industry and daring courage at sea.

There is one church, St. Nicholas, built in 1685, situated in the Upper Town, capable of containing from 700 to 800 persons; about 250 generally attend. The clergyman receives £74 per annum, and has likewise a house found him, together with two pieces of ground, one 48 fathoms long and 27 broad, and the other 140 fathoms long and 13 feet broad. The junior clergyman instructs the upper class in the school; the other two classes being taught by two schoolmasters. The total number of children in the schools is about 350.

By virtue of the capitulation concluded with Admiral Russel, in 1807, the inhabitants were permitted to retain their ancient constitutions and Danish laws—an agreement which has been strictly adhered to. The affairs of the island are administered by a governor (salary, £500), and a court composed of six municipal councillors, who are chosen from among the inhabitants. The finances and police are superintended by sixteen elders, and eight adjuncts, who with the municipal councillors constitute the government.

There are no manufactories, mills, or works, &c., of any kind. There has been one ship built in the colony of fifty tons burthen. There are about sixty boats employed fishing for haddocks and lobsters; between seventy and eighty thousand of the former, and about 27,000 of the latter are caught annually, the whole of which go to Hamburg and Bremen, with the exception of seven or eight thousand lobsters annually sent to England; value of haddocks, £3,333; value of lobsters, £675: total, £4,008. There are no horses; and very few horned cattle, sheep, or goats in the island.*

* Lieutenant-governor Hindmarsh, referring, in 1845, to the species of birds which visit the island, says—"Birds are found here whose habitat extends northward from 75° N. lat., as Larus Sabinii; together with such as have their nesting-place in the tropics, such as Grus Virgo, the Numidian crane. The Himalaya mountains, Siberia, the United States of North America, and other countries, furnish the island with specimens. The astonishing number of 300 different species have been obtained in this island. Among them, besides those already cited, the following are worthy of notice:—Falco Islandicus; Falco Rufipes; Turdus Whitei (belonging to the Himalaya; the specimen of this bird figured in Gould's *Birds of Europe:* plate 21 was from Heligoland, though there described as from Hamburg); Turdus Bechsteinei (*Atrogularis*); Turdus Lividus; Sylvia Galactodes, several times (Gould, plate 112); Sylvia Coerulecula (the blue-throated warbler, but having a red spot in the blue throat instead of a white one), in great numbers; Regulus Modestus (*Dalmatian Regulus*, Yar. *Brit. Birds*, vol. i., p. 355); Anthus Ricardii, Anthus Rufugularis (Gould, plate 140); Metacilla Melanocephala (sometimes in considerable numbers), and another Wagtail, which has not yet been placed in the lists of European birds; Alanda Alpestris, Alanda Brachydactila; Emberiza Melanocephala, Emberiza Rufibarba (*Syrian Hortulan*), Emberiza Rustica (Gould, plate 177); Emberiza Pusilla, five or six times; Caprimulgus (Gould, plate 52); Charadrius Viginicus; Tringa Rufescens (Yar. *Brit. Birds*, vol. iii., p. 57), &c. These and other rare and interesting specimens found on the island, are prepared and stuffed in an ingenious manner, and assembled in a collection interesting to every ornithologist."

# CONCLUSION, AND PARTING ADDRESS.

A self-imposed task is ended,—the result of five-and-twenty years' study, expenditure, and travel, in each quarter of the globe, is now before the public; and a testimonial (not a monument) has been constructed, illustrative of the maritime dominion and power of England in the middle of the nineteenth century.

In bidding farewell to those who have honoured his labours with their support, the author cannot but gratefully express his lively satisfaction at having been sustained to the completion of a national undertaking, without incurring the imputation of being swayed by party predilections or government influence; his position throughout the period of publication having been entirely independent. He earnestly hopes that, while endeavouring to convey some idea of the vast territorial power of England in every region of the earth, and explaining the direct influence exercised over the physical and moral state of more than a tithe of the human race, he has not failed to set forth the serious responsibility incurred by the governing nation to Him who giveth or withdraweth dominion according to its application and use in good or evil stewardship.

When time has been given for the dissemination of this history throughout the empire, and the value of "colonies" become more justly appreciated by statesmen and economists, the author and his readers may again meet to discuss topics intimately associated with the present position and future state of Britain.

The points which require elucidation are briefly these:—*First.* The rise and progress of England, as a maritime nation, in intimate connexion with the acquisition of colonies, and the consequent development of commerce and manufactures. *Second.* The effect of colonial dominion in producing an elevated tone of society and more catholic views, resulting in an extension of civil and religious liberty. *Third.* The beneficial influence exercised on the physical condition of the British public, by the encouragement held forth to enterprise, and scope for energy offered in the outlying, thinly-inhabited, but fertile domains of the Crown. *Fourth.* The lucrative and honourable employment furnished in the various local governments to intelligent members of the upper and middle classes of society, who, as in India, Canada, Africa, Australia, and elsewhere, are placed under a description of training which experience has proved singularly favourable to the formation of eminent statesmen and warriors. *Fifth.* The conversion of several million paupers into prosperous emigrants, profitable instead of useless consumers of the national resources. *Sixth.* The establishment of reformatory penal schools at the Antipodes, where banished felons, removed by half the earth's circumference from their accustomed haunts and vicious associations, may and have been taught to lead a new life, and to earn for themselves, and bequeath to their children, the fruits of honest industry. *Seventh.* The varied products of diverse climates, indispensable to the steady progress of manufacturing and commercial operations, are supplied with regularity and economy, and for the most part in annually increasing quantities, from sources wholly unaffected by the friendly or hostile disposition of foreign cabinets, while the same regions afford unfailing markets beyond the reach of prohibitory tariffs: in a more general sense, the colonies ensure a constant flow of wealth and power, from every quarter of the globe, to Britain;—the mother country, in return, acting as the heart of a gigantic frame, sends the vigorous life-blood through every member of the body corporate. On the continuance of this joint and healthful action depends (under Providence) the duration of a mighty empire. *Eighth.* The naval and mercantile marine—the pride and safeguard of the nation—is inseparably connected with its colonial dominion; was twin-born, and has ever since grown with its growth, and strengthened with its strength. *Ninth.* In a military point of view, England owes scarcely less to her colonies; for, without them, how could the marshalled ranks of her standing army find place within the sea-bound shores of the United Kingdom, without giving umbrage to popular feeling, if not, indeed, without endangering public liberty? In the *Tenth* and last place, it may be well to name the less definable but not less real advantages attached to the *prestige* of wide-spread dominion. To intelligent foreigners the British colonies are a source of never-failing interest; and "John Bull" may well be pardoned a little self-congratulation regarding the possession of an empire on which "the sun never sets."

# GAZETTEER

## OF CITIES AND TOWNS IN THE COLONIES AND TRANSMARINE POSSESSIONS OF THE BRITISH EMPIRE—INCLUDING INDIA AND THE ADJACENT TRIBUTARY, DEPENDENT, AND ALLIED STATES.
